And we shall have faith that out of this formula will come, before long, a happier world for all of us.

George Mason

EXTENSION OF REMARKS OF

HON. HARRY FLOOD BYRD

OF UTPGINIA

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by Mr. R. Carter Pittman, a very distinguished member of the Georgia bar, entitled "George Mason, the Architect of American Liberty."

This address was delivered at the fall meeting of the Georgia Society of the Sons of Colonial Wars at Savannah, Ga., on November 17, 1954.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From Vital Speeches of December 15, 1954] GEORGE MASON: THE ARCHITECT OF AMERICAN LIBERTY

(By R. Carter Pittman, attorney, Dalton, Ga., delivered at the fall meeting of the Georgia Society of the Sons of Colonial Wars,1 Savannah, Ga., November 17, 1954)

On Wednesday, June 23, 1779, the flagship Sensible, a French frigate of 36 guns, under Captain Chavagnes, was at half sail on a choppy sea 6 days out, en route from France to America. To starboard and to larboard were the Bonhomme Richard of 42 guns, under Capt. John Paul Jones, and the Alliance, under Captain Landais. In the convoy were three other able ships of the line, gunned. To complete the convoy were two ill-constructed and aggravating tubs whose sail seemed to ship more water than wind. Five knots in a fair wind was about all they could do. Trailing the convoy since the preceding Saturday were from 2 to 6 English privateers yawning for, yet fearing, the chance to close in for the kill. A few shots across their bows discouraged cordiality. On Tuesday night they had peeled off to be seen no more.

Aboard the Sensible was a French Commission deputed to a fledgling nation in the throes of the birth of freedom under the laws of God and man. Aboard also was John Adams and his 12-year-old son, John Quincy. The cargoes of human flesh and sinews of war were the answer of France to the subtle, yet fervent, plea of the Declaration of Inde-Thomas Jefferson, John Adams, Benjamin Franklin, Robert Livingston, and Roger Sherman had pieced together the Declaration of Independence from the products of American minds and the sentiments of the day and had deposited it in the laps of the gods as a hopeful prayer for aid in the American struggle for life over death.

Something about the sea, the mission, and the great part John Adams had played, and was yet playing, lifted him out of himself. At no hour of life had he felt so near the ideal of independence toward which American patriots had staggered so long, to find always beyond reach. The danger of capture at sea was now past. Something less

Footnotes at end of speech.

than relaxed conversation would have been out of place. Something less than sincerity would have been a travesty on the Sensible

M. Marbois, secretary of the French Commission, fell into easy conversation with Adams on deck during the afternoon of that Wednesday. In that conversation John Adams told a few secrets that the world has either overlooked or ignored. After the evening meal, the second future President of the United States put John Quincy, the sixth future President, to bed in his hammock and then retired to his nearby cabin. The conversation of the afternoon was rebounding in his mind. Sollicquy tortured him, Philadelphia haunted him, and drove sleep westward many knots. As the Sensible seemed to slumber, John Adams recorded in his diary some of his conversation with Marbois. Here is a part:

"All religions are tolerated in America," said M. Marbois; "and the ambassadors have in all courts a right to a chapel in their own way; but Mr. Franklin never had any."
"No," said I laughing, "because Mr. Franklin had no"—I was going to say what I did not say, and will not say here. I stopped short, and laughed. "No," said M. Marbois; "Mr. Franklin adores only great nature, which has interested a great many people of both sexes in his favor." "Yes," said I, laughing, "all the atheists, deists and libertines, as well as the philosophers and ladies, are in his train—another Voltaire, and thence—" "Yes," said Mr. Marbois, "he is celebrated as the great philosopher and the great legisla-tor of America." "He is," said I, "a great philosopher, but as a legislator of America he has done very little. It is universally be-lieved in France, England, and all Europe, that his electric wand has accomplished all this revolution. But nothing is more groundless. He has done very little. It is believed that he made all the American constitutions and their confederation; but he made neither. He did not even make the constitution of Pennsylvania, bad as it is. The Bill of Rights is taken almost verbatim from that of Virginia which was made and published 2 or 3 months before that of Philadelphia was begun; it was made by Mr. Mason."

That of "Philadelphia" (meaning Pennsylvania) "was begun" in late August 1776. The original draft of "that of Virginia—made by Mr. Mason" reached Richard Henry Lee in Philadelphia, in the handwriting of Mason, in late May 1776. It appeared in the June 1 issue of the Virginia Gazette which reached Philadelphia 4 days later. On June 6, it reappeared in the Pennsylvania Evening Post. On the 12th it reappeared in the Pennsylvania Gazette. The first paragraph was:

"That all men are born equally free and independent, and have certain inherent natural Rights, of which they cannot, by any Compact, deprive, or divest their Posterity; among which are the Enjoyment of Life and Liberty, with the Means of acquiring and possessing Property, and pursuing and Obtaining Happiness and Saftey." 2

Franklin, though a philosopher, was unwilling to deface those lines that firmed for the ages the profound wisdom of the Cato of his country. He copied Mason's words "almost verbatim" into the Pennsylvania Declaration of Rights, as follows: 4

"That all men are born equally free and independent, and have certain natural, inherent and inalienable rights, amongst which are, the enjoying and defending life and liberty, acquiring, possessing and protecting property, and pursuing and obtaining happiness and safety."

Adams could not remember the first name, "George," so he let it go as "Mr. Mason." Seventy-five years later Charles Francis Adams, son of John Quincy and grandson of John, could remember neither the first nor

the last name. Nevertheless he recorded in the Works of John Adams, vol. 4, page 220, et seq., that his grandfather had no sooner disembarked from the Sensible to embrace his wife, grandmother of Charles Francis, than he was called away to write the Massachusetts Declaration of Rights. The grandson disclosed that in August 1779 his grandfather did exactly what Benjamin Franklin did in August 1776. He too copied "almost verbatim" from the Virginia Declaration of Rights, As prepared by John Adams the first paragraph of the Massachusetts Declaration of Rights was as follows: 4

"All men are born equally free and independent, and have certain natural, essential, and unalienable rights, among which may be reckoned the right of enjoying and defending their lives and liberties; that of acquiring, possessing, and protecting their property; in fine, that of seeking and obtaining their safety and happiness."

It was in the month of June 1776 that John Adams, Benjamin Franklin, and Thomas Jefferson were in Philadelphia struggling to compose the Declaration of Independence. It was easy enough to catalog the sins of George III and call him what he was. That had been done by many others many times. The South Carolina Constitution of March 1776 and Judge William Henry Drayton's charge to a grand jury at Charleston, S. C., in April 1776, were certainly used as models. But their combined wisdom was not equal to the task of framing a powerful preamble justifying revolution with an appeal to the hearts, the reason, and the sense of justice of all men. Nothing like that had ever been penned by man. Finally they saw the manuscript in the hands of Richard Henry Lee and later saw it in newspapers. Eureka! "Where Eureka! Mason get it?" No one knew. Richard Henry Lee knew the man of Gunston Hall better than any other in Philadelphia so he was appealed to. Here is the answer re-ported by Jefferson in a letter to Madison near a half century later:

"Richard Henry Lee charged it as copied from Locke's Treatise on Government." 5

That was just one other time when Richard guessed wrong. George Mason was a prophet. Like Ezekiel, he had learned the gift of prophecy from the roll of a book, multiplied thousands of times. In his ample library at Gunston Hall he had filtered 5,000 years of history. The principles of the Virginia Declaration of Rights were the distilled essence of history's bitter fruits gathered from her Garden of Gethsemane.

Revealing as the John Adams Diary was, it did not tell all. It did not concede that the preamble to the Declaration of Independence was but a slight variant of the first three paragraphs of Mason's Declaration of Rights. The variance substituted the specious doctrine of equality of birth for the commonsense doctrine of equality of freedom and independence. It also substituted a fruitless pursuit of happiness for the ownership of property and attainment of happiness. The pursuit of happiness is but vain drudgery if it is not to be obtained. Happiness and safety may not be obtained in this world without the means of acquiring and possessing property.

and possessing property.

Franklin and Adams consented to deface Mason's words in their appeal to France in the Declaration of Independence, but they were unwilling to deface them as a rule of life for Fennsylvania and Massachusetts. The Declaration of Independence was written as an appeal to the simple-minded peasants and philosophers of France. Those who prepared it knew that it would never breathe the first breath as living law in America—and it never has. The Mason concept became living law in every American Constitution and is now in every world constitution except those of Russia, Mongolia,

Ukraine, and Guatemala. Disillusioned France struck the doctrine of unbounded equality from her motto in 1940 and from her Declaration of Rights in 1946. Equality beyond the range of legal rights cannot thrive in free soil. It thrives only in the sewers of Slavic slavery.

Alexander Hamilton expressed the idea well on the floor of the Constitutional Convention in Philadelphia on June 26, 1787: "Inequality will exist as long as liberty exists. It unavoidably results from that very liberty itself." Equality beyond the range of legal rights is despotic restraint. Liberty wears no chains. Equality homogenizes so that cream no longer rises to the top. It puts the eagle in the henhouse, that he may no longer soar.

Who was the "legislator of America"? His name was "Mr. Mason" aboard the Sensible in 1779. John Adams seemed never able to remember even that much of his name again. The biographers of Adams, Franklin, and Jefferson have likewise suffered equal lapse of memory.

George Mason was a delegate to the Constitutional Convention in Philadelphia in 1787. He refused to sign a proposed Constitution that sanctioned human slavery and omitted the rights of men. The first six words of his Objections were heard in every hovel and on every frontier of America: "There is no declaration of rights." He carried his deathless struggle for a Federal Bill of Rights to the people, and lived barely long enough to see his efforts crowned with victory and his name drowned in oblivion because of the bitterness engendered in that struggle.

Something about the man and his story sounds like a play back of a few tragic scenes along the road to the Cross, and to Tower Hill. Liberty must have her martyrs in every age. It is blood drained from their veins and abuse heaped upon them that neutralizes arbitrary power in governments and reasserts man's natural right to be let alone. Martyrs to human liberty and dignity are those who think in terms of ages gone and to come—ancestry and posterity. Mason thought of the ages, while others thought of the hour.

The best minds among the proponents of the Constitution tried in vain to answer Mason's Objections under a variety of pseudonyms. One of the efforts appear in the Virginia Independent Chronicle of January 30, 1788, over the pseudonym Civis Rusticus. This article seems to have never been reprinted or noted elsewhere. It contains one of the most remarkable tributes by one adversary to another to be found in all literature.

Civis Rusticus opened his attempted reply to Mason with an apology, and, as he put it, "with that deference, which is due to this respectable and worthy gentleman; to whose great and eminent talents, profound judgment, and strength of mind, no man gives a larger credit than he who presumes to criticize his objections * * *."

After attempting to answer each of Mason's objections categorically, he then said:

"I have now finished what I proposed to observe on these objections, and trust no person will conclude my design has been to condemn this respectable gentleman for not putting his signature to the Constitution. On the contrary, thinking as he did, I commend him. The man of abilities, firmness, and integrity will dare to think, to judge, and act for himself. His principles have not the pliancy of his gloves, neither has he his mind to make up at every revolution. An hour's authority with him is not the guide to truth, nor does infallibility rest in numbers. He has a surer monitor: his own judgment and the dictates of his conscience. Of such stern matter is the mind of Mr. Mason composed, if I am rightly informed, that it is never yielding itself up, when convinced of its rectitude, at the arbitrium of the popular breath, nor giving in to opinions that are not its own."

That picture, drawn in the heat of bitter controversy by an unknown adversary, aids us to understand why Jefferson regarded Mason the wisest man of his generation; why Madison described him the greatest debater he had ever heard speak, and why Patrick Henry named him the greatest statesman he had ever known.

At the Virginia ratifying convention of 1788 in Richmond, Mason prepared proposed amendments that were sent to New York and which formed the basis of the amendments proposed by the New York ratifying convention. He prepared those proposed by the Virginia Convention. Practically all of those proposed by North Carolina originally flowed from the pen of Mason. The amendments proposed by the committee in the First Congress were taken almost seriatem from those originally drawn by Mason and transmitted from the Virginia ratifying convention. Thus it was that the first 10 amendments to the Federal Constitution, that we cherish as our Bill of Rights, adopted in 1791, was a monumental attempt to satisfy with Mason's own proposed amendments some of Mason's objections to the Constitution. The 11th and 22d amendments were belated attempts to satisfy other Mason objections that time had proved to be otherwise unanswerable. The ill-fated Bricker amend-ment, defeated in the last Congress, was a proposed answer to another of Mason's objections to the Constitution. Others remain to be answered in ages to come.

As we have said, the Declaration of Independence never breathed its first breath as living law, while the Bill of Rights lives and shields our helpless people from tyrannical government every hour of every day. Since the anniversary of the Declaration of Independence is celebrated annually, thought not to be improper to celebrate the anniversary of the Bill of Rights if done once in 150 years. December 15, 1941, was the 150th anniversary of the Federal Bill of Rights. A committee was formed to celebrate the occasion headed by Herbert Bayard Swope as national chairman. Franklin D. Roosevelt was honorary chairman, and it seemed that every living man who had ever been President or who had ever run for President or who had ever aspired to be President was named as honorary vice chairman. Down below in small print the national committee was crowded in. It was an imposing list of people with awesome titles and chronic publicity seekers. This committee published a book entitled "Our Bill of Rights, What It Means To Me." It consists of short essays by so-called leaders of thought at that time. As one might expect, the chairman led off with the essay that set the pattern. In it, he said:

"Jefferson, shocked by the omissions in the Constitution, as promulgated in 1789, while he was United States Minister to France

* * drafted the additions to our great charter. Thus we were given the four free-doms * * *" etc. With all due deference to Mr. Swope, Jefferson drafted no provision of our Bill of Rights or the Constitution to which it was added. In fact, Jefferson never drafted a single liberty-preserving provision of any constitution or bill of rights that has ever been adopted in America. He never attended a constitutional convention in his life. He spent much of his life writing constitutions for Virginia that were all rejected by his contemporaries because they liked the one Mason wrote for them too well. The only connection Jefferson ever had with our Bill of Rights was that he favored it from Why Swope and many other Americans should believe that Jefferson was the author of or had the inspiration for our Bill of Rights is one of the great unsolved mysteries of the New World.

Swope was not the only leader of thought to skin his ignorance on the Bill of Rights. Many of the 59 contributors to that book skinned their ignorance in the same place, Justice Felix Frankfurter paid his usual lipservice to liberty and conceived that the Bill of Rights and Constitution are just convenient vehicles in which the people may ride helter-skelter, and with reckless abandon in a wild pursuit of happiness. He insisted that the "pursuit of happiness" is the one real inalienable right in America. He didn't reveal the obvious truth that happiness may be pursued in prisons or in chains or in the mines of Siberia with even more zeal than in freedom. The liberty to pursue happiness is enjoyed by slaves. It is nothing. Liberty to obtain happiness is everything. Happiness may be pursued in Russia but it is not obtainable there. It may be obtained only in a government in which every unnecessary restraint on the individual is expressly forbidden by stubborn laws, and where laws rule the rulers as well as the ruled with the same force. The difference between pursuing happiness and obtaining it is the difference between the fantastic philosophy of alien doctrinaires and the intelligent realism of Mason.

The late famous journalist William Allen White said his piece in that book. He tells us that "the libertles that are guaranteed to the American people by the Bill of Rights . . came straight out of the impulse of the Declaration of Independence. *

MIRABILE DICTU

George Mason's pen was the first in all history to elevate freedom of speech and of the press to the dignity of constitutional status, yet Mr. White knew him not.

Those of you the least acquainted with the truths of American history and who have a strange sense of humor will enjoy reading The Bill of Rights, What It Means to Me, by the leaders of thought in America.

Mason's contribution to liberty under law in the solid framework of the Federal Constitution and Bill of Rights and in those of the American states and many nations of the world is a story too long to tell here. He was not only the legislator of America, but may be justly called the legislator of the non-Communist world. He is history's grand champion of the guarded liberty and dignity of men against everencroaching governments, and is also her most forgotten man. As a libertarian he stood at the opposite pole from so-called liberals of our day.

In October 1792, George Mason was buried at the edge of an old field near Gunston Hall 13 miles downstream from Mount Vernon. His body was placed as close to the side of Ann, the wife of his youth and mother of his children, as her tomb would permit. He wanted it that way. Her tomb thus became his own. For 19 years his heart had been there anyway.

On the following day the 5 sons and 4 daughters gathered in the library of Gunston Hall for the reading of his solemn will. It had been written in 1773, just after the death of Ann and before the Revolution had begun. One paragraph of that will mirrored the man:

"I recommend it to my sons from my own experience in life to prefer the happiness of independence and a private station to the troubles and vexation of public business, but if either their own inclinations or the necessity of the times should engage them in public affairs, I charge them on a father's blessing never to let the motives of private interest or ambition to induce them to betray, nor the terrors of poverty and disgrace or the fear of danger or of death, deter them. from asserting the liberty of their country and endeavoring to transmit to their pos terity those sacred rights to which themselves were born.

Abnegation of self is not a creed. It is not a philosophy. It is a way of life. Narrow is its way and straight is its gate. Those who travel that way find few vistas through which to look down for a glimpse of mundane glory. Their vistas lie straight ahead and up. Straight ahead is in any and all directions unless the course is set by that from whence we came. is the way of philosophy. The latter is the way of experience. That is the chief reason why no frame of government has ever survived whose architect was a philosopher. The light of experience is never shed upon utopias. Such are not in the vistas of evolution's pioneers. Such are not in the vistas of the martyrs to human liberty and dignity. The crowns they wear are of thorns. The garlands they bear are crosses. They don't stand in marble on public squares. Had it been tinseled garlands they sought, they would not have traveled the narrow way and entered the straight gate.

¹ The introduction to Glimpse of Glory, by Marian Buckley Cox, published on the 10th of this month by Garrett & Massie, Inc., Richmond, Va., contains a part of this talk. Glimpse of Glory tells a story about the home life of the Masons at Gunston Hall. Royalties from the sale of the book are to be used for the benefit of Gunston Hall by the National Society of Colonial Dames, from whose membership the regents of Gunston Hall are selected. Mrs. Cox is a member of the society and the New York representative on the board of regents.

As revised by the Convention, the first

paragraph was:

"That all men are by nature equally free and independent, and have certain inherent rights, of which when they enter into a state of society they cannot, by any compact, deprive or divest their posterity; namely, the enjoyment of life and liberty with the means of acquiring and possessing property, and pursuing and obtaining happiness and

¹ Thorpe, American Charters and Consti-

tutions, vol. 5, p. 3082.

'The Works of John Adams, vol. 4, p. 220. The Convention changed the first line to read: "All men are born free and equal," thus substituting the specious doctrine of equality of men for the original Mason concept of equality of freedom and independence.

The Writings of Jefferson, Ford ed., vol.

VII, p. 304.

National Correct Posture Week

EXTENSION OF REMARKS OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. HRUSKA. Mr. President, on behalf of the Senator from Colorado [Mr. ALLOTTI, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement prepared by him concerning National Correct Posture

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ALLOTT

I wish to call attention to the increasing importance of a vital phase of our national welfare-the general health of all our citizens.

It has long been realized that the stress and strain of modern living have contributed materially toward the present-day afflictions of the American people.

The so-called high-pressure mode of living has brought an increasing awareness of the mental ills which beset the people of this Nation in disturbing numbers. The formation of many new mental-health associations attest to this fact.

Much work is being done by the National Chiropractic Association, which again this year—from May 1 to May 7—is acting as sponsor for National Correct Posture Week.

This association, through activities in connection with the special week and throughout the year, is bringing a simple, elemental, yet often overlooked basic-health fact to the attention of the Nation, and that is the importance of correct posture.

From the formative years of school age, on through to adulthood, it is vitally important that our people maintain their good posture as a firm foundation for general good

health and well being.

The value of this special week is indicated by the fact that many of our mayors and governors have issued special proclamations urging the people to participate in the special educational activities during National Correct Posture Week.

It is significant to note that our Nation's schools are paying special attention to this worthy program of training for our young

people.

I attach for the RECORD a statement prepared by Dr. Emmett J. Murphy, of Washington, D. C., who is director of public relations of the National Chiropractic Associa-

STATEMENT PREPARED BY DR. EMMETT J. MURPHY

No greater contribution can be made by the chiropractors of America to the Nation than by improving posture and thus increasing the efficiency of all our workers. Poor posture is expensive, and poor posture habits are responsible not only for many days of lost time, but for poor response to job needs, and eventually for a shortened life of top

The problem of poor posture and the low efficiency of workers which it brings on can

be approached in two ways.

The first is a long, careful, and well-planned program to teach Americans how to walk and stand and sit in ways which will promote health and efficiency. We have such an educational program underway, and it is having its effect.

However, that takes time. many postural faults can be helped by ditreatment, or the bad effects can be

modified or eliminated.

CHIROPRACTORS PLAY DECISIVE ROLE

In both programs individual chiropractors can play a decisive and important role.

They can continue to carry out the program of education. They can explain to their patients how to walk, stand, sit, and lie for the best effect on health. They can give their patients the publications of the National Chiropractic Association on the subject and win their cooperation.

They can also continue to relieve the bad results of poor posture by correcting the misalinements of the spine. Every chiropractor knows that the most minor displacements in the spinal column can bring on sharp pains, often far removed from the spine itself, which disappear under chiropractic treatment.

TEST YOUR POSTURE

Good posture is a result of holding your body in a balanced position. The easiest way to attain it is to think of an imaginary line running (side view) from the tip of the skull through your neck, shoulders, hips, knees, and insteps. When the head is bent forward, the abdomen thrust out, or the back bent, the line of gravity is shifted, and a strain placed on muscles to keep the body from falling.

To test: Stand with back to wall with head, heels, shoulders, and calves of legs touching it, hands by sides. Flatten hollow

of back by pressing buttocks down against the wall. Space at back of waist should not be greater than the thickness of your hand.

Stand facing close to wall, palms of hands touching front of thighs. If chest touches wall first, your posture is probably excellent, or at least good; if head touches first it is only fair; if abdomen touches first, your posture is really bad, and you should see a chiropractor.

Standing

When you stand straight your head should be balanced and erect. Your shoulders are relaxed and low; your chest is held high. Your lower back should curve to just a slight degree. Your abdomen should be flat. Have your knees straight but not stiff, and feel your weight in the outer borders of your feet.

Sitting

You should sit with your feet flat on the floor. Do not slump in a chair, but keep your back straight and your abdomen flat. As in standing, your head should be erect and well balanced. When you lean forward, lean from the hips, not from the waist.

Walking

Movement should start at the hips. Your head and upper part of your body should remain at right angles to the ground. Swing your arms freely. Look ahead, never down, Point your toes straight ahead. Knees should be relaxed and free.

EECOND LARGEST HEALING PROFESSION

Chiropractic, as an organized professional body, is 58 years old, and now ranks as the

second largest healing profession.

Licensed by law in 44 States, District of Columbia, Hawaii, Alaska, Puerto Rico, and 7 Provinces of Canada, there are some 22,000 chiropractors in the United States (against a population of 161 million) and 1,030 in Canada (against a population of 15 million).

Chiropractic is an established but growing and dynamic profession, which has adopted high professional standards and ethics through formal action of the National Chiro-

practic Association.

Officials of the National Chiropractic Association believe it to be the most democratic professional body in the United States. It employs no sanctions of legal or economic force against nonmembers and strives to achieve its goal of professional unity through education and in a manner discussed and approved by the national membership.

FOUR-YEAR COURSE IS EDUCATION STANDARD

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain accredited ratings from the committee on educational standards of the National Chiropractic Association. A basic course of 4,400 hours is recommended.

The curriculum and hours of study parallel the minimum requirements of the American Medical Association for class A schools.

Up to 2 years of preprofessional (college) education is required by State chiropractic laws of licensure. A large percentage of students entering approved chiropractic colleges today have college degrees.

CHIROPRACTIC COMPARES WELL

In every way chiropractic as a healing profession, compares well with other professions.

Sound chiropractic education is encouraged not only by the national council on education of the National Chiropractic Association but also by the student loan fund and other devices designed to provide aid for gifted students.

Chiropractic education has a lower gross cost than that of other professions, but average incomes for practitioners fall into the median group of all professions.

BASIC CURRICULUM

The following typical or basic curriculum for approved chiropractic colleges is based on the National Chiropractic Association

code for a minimum of 4,000 hours in a 4year course:

Subject:	Hours
Anatomy, including embryology and	
histology	740
Physiology	240
Biochemistry	180
Pathology and bacteriology	520
Public health, sanitation, hygiene_ Practice of chiropractic (principles and technique, neurology and psy- chiatry, pediatrics, dermatology	160
and syphilology, urology, ophthal- mology, otolaryngology, first aid and minor surgery, roentgenol-	
ogy)	1,960
Obstetrics and gynecology	200
Total	4,000

Jefferson-Jackson Day Address by Hon. Clinton P. Anderson, of New Mexico

EXTENSION OF REMARKS OF

HON. SAMUEL J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Jefferson-Jackson Day address delivered by the Senator from New Mexico [Mr. Anderson] at Raleigh, N. C., on February 5,

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Governor Hodges, Senator ERVIN, Senator Scott, members of the North Carolina congressional delegation, represent-atives of the Democratic National Committee, and the North Carolina State Democratic Committee, my fellow Democrats, ladies, and gentlemen, it is not from allegiance to a political party that I visit North Carolina today. I am not here because the Democratic National Committee selected me to speak at this occasion. Instead I come in the name of friendship and long association with men whose lives have touched my own-men whose fine character helped strengthen me in difficult days and whose confidence sustains me and will as long as I may live.

In such a list is your fine Governor. Thirty years ago we sweltered in the June heat of a Dallas hotel room and struggled to bring about the election of a fine citizen of North Carolina to the presidency of the World Rotary movement. We began then a friendship which has lasted through the

True friendship, of course, permits an occasional imposition upon it, and I imposed on Luther in an hour of great difficulty. It is a story that I must repeat here tonight.

When I took the oath of office as Secretary of Agriculture, the President made me as well War Food Administrator which led to the added chore of Chairman of the World Food Board. On the first day, I was handed a receipt which I was obliged to sign—a receipt for \$1.5 billion worth of garden seeds, cotton, corn, wheat, and potatoes-heavy on the potatoes—owned by Commodity Credit Corporation. I signed it, and then I phoned New York and found that Luther was back in North Carolina.

I notified Luther that we had just bought a business. He asked how much we paid for it and I told him a billion and a half dollars. There was silcnce on the other end of the phone line and finally I felt obliged to ask him, "Luther, do you have any questions?" "Yes," he said, "I would like to know what

we bought, where it is, and what shape it's in."

"Good," I told him, "Come to Washington and find out those three things for both of us."

Thus began a distinguished chapter of service to the American people. Luther Hodges sought to find out how the Department of Agriculture which had been required to ship billions of dollars worth of food and fiber to our armed services, both at home and abroad, and to allies across every sea and in every part of the earth, could now account for these enormous shipments and at the same time develop an inventory of the goods then on hand. He brought into the Department of Agriculture experts on physical inventories. He took in pay only an amount which covered a portion of each day's hotel bill; but at the end of his service, the Commodity Credit knew what it had, where it was and what shape it was in. There have been numerous investigations of Government agencies, charges and countercharges about fur coats and deep freezes, but the Department of Agriculture came out of that period without a breath of scandal. For that rare good fortune I owe complete thanks to a handful of men including the present distinguished Governor of North Carolina, Luther Hodges.

When he informed me that the Democrats of North Carolina were having a Jefferson-Jackson Day dinner and asked me to make an address to the Democrats, I welcomed the chance because I have long desired to pay public testimony to his work and rejoice again in the privilege of calling Martha and Luther our friends as you delight to call him your governor.

Grant me now the privilege of a few words

about some other Carolinians.

North Carolina bows to no State in the excellence of its representation in the United States Senate. I am proud that SAM IRVIN

and KERR SCOTT are Democrats.

Few men in my time have so quickly achieved the Senate stature of your senior Senator, Sam Ervin. Long respected and esteemed here in North Carolina for his great judicial ability and dedication to high principle and purpose, he was little known in the Nation when, last June, he succeeded the beloved, late Senator Clyde Hoev.

Then suddenly he was named to the Senate select committee which handled the McCarthy censure resolution. His distinguished service on that committee was not only a great credit to North Carolina, to the Senate, and to the Nation; it also brought him nationwide attention and acclaim.

Many have predicted that Senator Ervin's speech on the censure resolution will rank among the great speeches of the Senate. It was a masterplece of logic and eloquence. Listen to these words from that famous address:

"The Senate," said he. "Is trying this issue: Was Senator McCarrhy guilty of disorderly behavior in his senatorial office? American people are trying another issue. The issue before the American people transcends in importance the issue before the Senate. The issue before the American people is simply this: Does the Senate of the United States have enough manhood to stand up to Senator McCarthy? The honor of the Senate is in our keeping. I pray that Senators will not soil it by permitting Senator McCarthy to go unwhipped of senatorial justice."

From that day on, the stature of Sam ERVIN in the Senate of the United States was established. His ringing words fell on the consciences of reasonable men. You know the verdict, and we know our colleague!

May I turn now to your junior Senator?

I first had the great pleasure of working with KERR SCOTT when I was Secretary of Agriculture. He was then your Commissioner of Agriculture, and an excellent one.

In 1948 we both left the immediate arena of agriculture. I went to the Senate. KERR

Scott became your Governor.

Under his vigorous, progressive leadership, North Carolina set a new pace of progress in many fields. Your new rural roads and highways, your hospitals and schools, your expanded electric-power facilities are monuments to an era of action. They are living tributes to the zeal, energy, and high purpose Of KERR SCOTT.

I would not want to forget those members of the North Carolina delegation who serve in the House of Representatives. When I came to the House in 1941, I found HER-BERT BONNER near me in the Old House Office Building. He had entered the House to take the place of the beloved and highly respected Lindsay Warren. Tonight I gratulate the State of North Carolina on HERRERT's elevation to chairmanship of the Committee on Merchant Marine and Fish-

Of course, I have had many opportunities to watch the work and the fidelity to his task of the dean of your delegation, HAROLD COOLEY, chairman of the House Committee on Agriculture, and one of the top figures of our Congress in importance to his State and to the Nation. While Secretary of Agri-culture I had the benefit of his experience and counsel. Now in the Senate I take some interest in agricultural legislation; and while HAROLD COOLEY and I are not always on the same side and frequently are on opposite sides of agricultural questions. nothing has impaired my admiration for him, nor altered my conviction that he is a true friend of the farmers of the United States.

Obviously I must not prolong my praise of your congressional delegation of this remarkable State, but surely I would never forgive myself if I did not mention Carl DURHAM, who is my opposite number on the Joint Committee on Atomic Energy. When the Democrats control again the House of Representatives in the 1956 elections, CARL DURHAM will become chairman of the joint committee, and a very fine chairman he will We all admire him for the quiet, gentlemanly way in which he goes about his tasks. The Nation will be fortunate to have a man of his stature as head of that very important

With GRAHAM BARDEN, a long-time member of your delegation and now the able chairman of the Committee on Education and Labor, these are the Congressmen with whom I served when I was a Member of the House of Representatives. You have added other capable and talented men and I would like to consider each one; but I will content myself with saying that this collection of strong men in the House of Representatives is a great political and economic asset for the State of North Carolina, and the Democrats over the Nation rejoice in your good fortune.

This mention of rejoicing seems automatically to bring me into the current economic and political situation. The last time I was moving around the country making Jefferson-Jackson Day speeches in any number was in 1948. That was a period when we were taking a rather vigorous pounding from critics across the Nation, and as a member of the Truman administration, I was allergic to the subject of mink coats and deep freezes, even though I had purchased my own deep freeze and had a legitimate, well documented sales slip to prove it. But in the recent campaign I found that the Republicans have developed a few deep freezes of their own. The most noted one from my standpoint was on display in the 83d Congress when the then junior Senator from Kentucky, John Sherman Cooper, sought to get into the White House to tell the President of the United States the facts of life about the Tennessee Valley Authority and the Dixon-Yates contract. When Senator Cooper got to the desk of Sherman Adams, whether in person or on the phone, he learned what a deep freeze really was (he couldn't talk to the President); and even though he got a momentary Presidential handclasp in the closing days of his campaign, it never succeeded in thawing out from the minds of the people of his State the autumn frostbite given him at the White House, and he went down to defeat by the

old warrior, ALBEN BARKLEY.

These and other Republican activities helped in additional Democratic victories in November. They made it possible for our party to redeem the Congress and bring it under Democratic control. We saw what Secretary McKay's partnership in resource development could do to the race of a conservative Senator like Guy Cordon of Oregon. We saw what an unsympathetic attitude on unemployment could do to a vulnerable Senator like Homer Ferguson of Michigan. We saw how vigorous campaigning could win for Senator Joseph O'Mahoney in Wyoming against the heaviest barrage of slush and slime that any western candidate ever faced. But most of all we saw Democratic candidates for governor sweep the Republican strongholds and show by their victories that there was an abundance of popular support for Democratic principles in every part of the Nation, and that the support was so widespread and deep rooted that a Democratic victory in 1956 seemed virtually as-

Let's take a quick look at the effect of those governorship races. We gained 9 governorships without losing a single one. made the greatest increase in governorships which was ever made in a 2-year period by either major party since the great Democratic landslide in 1932. Governors were elected in 1953 and 1954 in 36 States and we won 21 of them. Even in the States that we lost, the Democratic percentage of the popular vote improved in every one of them except two-Idaho and Massachusetts-and we think there definitely were local conditions which caused our troubles in those States.

When we count the States that swung into the Democratic column in these elections of 1953 and 1954, we sense that in the 21 States where the Democrats elected governors, there are 284 electoral votes. Now our Republican friends captured 15 States but those States had total electoral votes numbering only 124. As a matter of fact, if you add States where Democrats have hold-over Democratic governors to the ones we won, we then count 27 States which together have 347 electoral votes—far more than needed to make a Democrat President and about two-thirds of the total. So the future looks bright.

What brought this swing to Democrats? What helped us carry New York and Pennsylvania, and kept Ohio and Michigan heavily in our fold? What won back our governorships in Colorado, New Mexico, and Arizona which had become part of the great Democratic desert?

For my part, I want to look at the plight the American farmer, for I think he may still influence deeply the economics of this Nation and that his distress has been the symbol if not the source of Republican political decay.

So let's talk about farming. Yours is a great agricultural State, and you have as deep an interest in farming as any State in the Union.

One of my hobbies has been checking on farm income, and I have made calculations to show what parity would have produced for the American farmer through the years and contrasted that with what the farmer actually received. I start with the year 1910 because that was the beginning of the parity base

We use 1910 through 1914 as the 5 years which are the golden age of American agriculture. Conditions were so ideal during that period that parity on many products and originally on all products was figured on that base.

So I've gone back to the beginning of that period and checked the income of American farmers from 1910 to 1953, and have discovered that farm income depends upon the zeal of the administrator of farm programs and not solely on the text of the current law.

Since 1910 Republicans have held power for 16 years. In that period full 100-percent parity income would have been \$103,153,-000,000. Actual farm income was \$92,030,-000,000, a deficit of \$11,123,000,000 during Republican control.

The Democrats were in for 28 years, and in that time estimated parity income, full 100percent parity, was \$209,208,000,000. Actual income to farmers was \$265,921,000,000, a surplus of \$56.713.000.000.

In other words, while the Republicans were in, farmers of this country got \$11 billion less than full parity. While the Democrats were in the farmers of this country got \$56,713,000,000 more than full parity.

That suggests to me that the party which knows how to do the job of protecting the American farmer is the party which has built the price support program, which set up the machinery, and which understands that no farm program is worth its salt if it doesn't save the farmer from the sheriff.

I'm going to talk about farm income this evening because I see things on the agricultural front that I don't like. Farm debt is getting bigger. There has been a 63-percent increase in farm mortgage debt in 8 years and yet we had 90-percent supports every one of these years and good administration of farm laws during many of them. I'm convinced that we will never do the job by price supports alone; that we have to do it by active markets at home and abroad, and have at the same time Secretaries of Agriculture who are fighting to get the highest possible level of agricultural income in this country. Secretaries who want to get the top dollar-not a part of it-for the farmers of our Nation.

I say that because I realize that the net income to farmers from farming in 1953 was only 4.3 percent of the national income. That was the lowest it has ever been in the history of this country. I look back for comparison at the figures when I was in the Department. In 1946 farm income was 9.4 percent of the national income; in 1947 and 1948 it was an even 9 percent of national income. And yet, the last year for which figures are fully available—1953—the percentage was 4.3 percent, the lowest we have ever known.

But brace yourselves, because 1954 will be found to have been even lower. Even in 1932, which was the year of depression, the farmers received more than 5.5 percent of the national income, but the preliminary figures for 1954 indicate that farmers' net income that year was less than 4.2 percent of national income-an all-time low. The farmer didn't get his share of prosperity but he gets more than his sshare of recesgion.

That's why I say that in the Department of Agriculture we need not so much a set of rules as a ruling spirit, not so much a program of supports as a Samson who will tear down but hold erect the pillars of agricultural prices. This Nation has not reached the peak of national income. Statisticians and economists predict that income will reach \$500 billion by 1975 and probably earlier than that. If the farm areas of the country then receive a full share, our farm income would be more than double what it now is. But instead of that, the figures reveal that since 1947 national income has increased more than \$100 billion; and farm income, instead of following it up and thereby increasing five to seven billion dollars since its 1947 peak of \$1634 bil-lion, has dropped \$414 billion. It is that tragic trend which must first be stopped and then reversed before farm prosperity is possible in America, and only Democrats will do the job.

I realize that some may comment that I have supported the President's Secretary of Agriculture. What possibly is overlooked is that he recommended an agricultural program which I had presented to the Congress 9 years ago, which incidentally had its beginnings in the flexible support system written into the Agricultural Act of 1938 and advocated with more or less consistency through the years of Democratic administration. Naturally, I was pleased to to find him recognizing the merits of Democratic programs. That wasn't the only Democratic agricultural program which he embraced. He sent us a wool bill which we incorporated into the last agricultural act. It followed the principles of a wool bill submitted to Congress in 1947 but its method of farmer payment was on all fours with the Brannan plan for supporting perishable farm prod-On top of that the perplexing dairy situation turned the Department again in the direction of the Brannan proposal to such a degree that the U.S. News & World Report commented that "Republicans, with a farm problem on their hands * * * are even exploring a modified Brannan plan," and the Scripps-Howard newspapers which were and are strong Eisenhower backers, published a headline reading, Brannan Plan Still Very Much Alive.

I predict, of course, that if the Department finally trics to sell butter, cheese and milk powder on the Brannan formula, the Secretary of Agriculture may catch the same sort of heat in his domestic problems that the Republican Senate leader poured on the President in foreign affairs. Of course. if Mr. Benson gets into hot water on the Brannan plan, it will be no novelty to him. No one could watch his handling of the Ladejinsky matter without realizing that he has a passion for hot water and 1 or 2 more plunges into it will be no novelty either for him or for the Republican administration. I wish him no misfortune. I seek only to keep the record straight on the origin of his agricultural programs.

That has been the best part of the Eisenhower administration—the facility with which it has adopted good Democratic doctrine.

In the very first state of the Union message, President Eisenhower announced that he was "unleashing" the forces of Chiang Kai-shek so that they might attack the Chinese mainland from Formosa. Here are his "I am issuing instructions that the 7th Fleet no longer be employed to shield Communist China." But here are his more recent words: "The Nationalist Chinese navy and air force have been ordered to cease attacks on Chinese Communist mainland targets as a result of United States The experience of 2 years with pressure a difficult Formosa problem has brought him to the point where he now favors an open commitment for all the world to heed and remember that we will prevent Red China from selzing the Pescadore Islands and Formosa-precisely what President Truman proclaimed 5 years ago. All Democrats should be glad that such a good American doctrine has found a new home.

I hear more favorable words these days about the doctrine of mutual aid and the Marshall plan. We find a new feeling of appreciation for trade, not aid; and an occasional comment as to how we may achieve a better balance in world trade by falling

back on the wisdom of a great Democrat. Cordell Hull.

Let us talk just a little about Mr. Hull's program of reciprocal trade. It seemed to find a new home when on March 30, 1954, the President sent to the Congress his message on foreign trade. He described as its main provision the continuance of the Reciprocal Trade Agreements for another 3

Those of us who were appreciative of the fact that only by an alert and aggressive foreign trade can we save our farmers were warmed by the President's strong message. We knew that once before he had put off a fight with those old-guard Republicans in Congress who believe in the highest of pro-tective tariffs, but now he seemed in his firmly worded message to be telling them that he was ready to fight it out.

Yet within 2 months he made public a letter revealing that he would not fight for his 3-year tariff-cutting program, but would settle for a simple 1-year extension. We Democrats thought that he shouldn't give up so easily. Senator Albert Gore, of Tennessee, led off a 90-minute debate on foreign trade in which the Senate Democrats freely joined, but not a Republican said a word.

Eighteen of us joined with Senator Gore in offering an amendment which would carry out the President's fighting words of only a few months before. We stood ready to make the fight even if the President wouldn't. The roll was called in the Senate, and 84 percent of the Senate Democrats supported the President's trade program, while 100 percent of the Republicans voted for the weak and feeble 1-year bill. Pretty soon we will be at it again, but this time we will be wondering how much help we will have from the followers of the President in putting across the President's program. These Democratic policies could be dusted off and win if we could only get some Republicans to follow the Republican leadership.

We Democrats enjoy comparing the promise with the performance.

The budget? The general in the 1952 campaign said, "We can reduce our budget * * * we can live within our means." But Treasury sources today say the deficit was big in 1953, big in 1954, will be big in 1955, and

that will continue to be the story.

The national debt? The 1952 Republican platform said, "Our goal * * * is a reduced national debt." But today the Treasury Department is preparing its annual request for permission to raise the debt limit.

Farm prosperity? The Republican plat-form of 1952 said, "The Republican Party will create conditions providing for farm prosperity and stability." The figures I have given you already tonight show that farm net income will be the smallest percentage of national income we have ever known, even in the bottom of the depression.

Family quarrels? The general in the 1952 campaign said, "We shall not allow our Government agencies to fight at the expense of the American people." CARL DURHAM and CARL DURHAM and I know something of their family fights. Indeed, I watched Admiral Strauss and Comsioner Murray of the Atomic Energy Commission argue one day face to face before our committee and I knew then that family quarrels were the order of the day.

Of course, I know what the Senator from Wisconsin has said about the man in the White House; what the Secretary of Commerce says to the Secretary of Labor; what the Senator from California has said about Formosa; and when I went home that evening after watching the argument in the Atomic Energy Committee I opened the Bible that lies beside my telephone and my easy chair and, strangely, my eyes fell on the 17th verse in the 4th chapter of Nehemiah: "They which builded on the wall, and they that bare burdens, with those that laded, everyone with one of his hands wrought in the work, and with the other hand held a weapon." If ever there was a spot where the Commissioners worked with one hand and held a weapon with the other, it was and is the Atomic Energy Commission, and we are promised a replay of that record on Tuesday of this coming week.

Why, the battles of Washington determine even our dreams. One night after a particularly bitter day, my dreams took the pattern of an old-time minstrel show—end men, buck and wing dancers, barbershop quartets,

and all the trimmings.

Ed Sullivan had just put on television his tribute to the radio industry and that pageant may have colored my phantasy, for on stage strutted a male chorus, and they sang:

"I wish I were in the land of Dixon Big deals there are ripe for fixin',

Giveaway, giveaway, giveaway Dixon-Yates."

Then the fade-out and a strong singer with a parody on Gilbert and Sullivan—and

the Captain of the King's Navee.

What he sang proved that my dreams were getting better all the time—better and closer to reality. Dr. Lawrence Hafsted, the AEC expert on reactors, had just been hired by the Chase National Bank, the public relations man had joined a New York publicity firm, and the general manager himself had resigned to take a huge salary because he couldn't live on the \$20,000 we were paying him. So the singer on my dream stage sang: "Now friends and pals, wherever you may be

You'll never get rich in the AEC.

If you want to make a mark and a dollar

too,
Just take this advice I give to you.
The advice that I give is all for free

Get a new job in industry."

As they left our schooling and went out into the world of more and bigger bucks, they sang in tribute to their training ground and

their alma mater:

"There by Mississippi's waters
On a bank of mud
"Sits our generating station
Covered by a flood."

The real target of the Dixon-Yates feud, of course, was the TVA and the salute to TVA came in Clementine:

"In a canyon, in a valley
Generating tax-free juice
"Stands a hydropower project
Socialism on the loose."

Suddenly the male chorus sang again—this time the Notre Dame Victory March:

"Cheer, cheer for old Dixon-Yates, Cheer while we boldly jack up the rates

Send the bill to AEC
Pray that they keep from bankruptcy
What though our taxes be great or small
Old Uncle Sam will pay for them all.
Here's to those who foot our bills, and

Forward to Solvency."

Yes, in spite of the Gore amendment,
Uncle Sam will pay the taxes. Even my

dream wasn't wrong on that.

Of course, the Yale men didn't sing the
Notre Dame song. They just tip-toed around

in the currency singing, "Moola, Moola,"

But then the last scene—just Mr. Dixon

But then the last scene—just Mr. Dixon and Mr. Yates alone on the stage for a final number.

What do you suppose they were singing? "My Country 'tis of Thee?" No. "America, the Beautiful?" No. "Carolina in the Morning?" Never that. "Bringing in the Sheaves?" Well, that's close, but they were really singing: "There's a Gold Mine in the Sky."

Now for a few words that I want to say on my own. I have been steadily in Washington for the past 14 years and had spent much time there in the previous ten. The battles over social security, collective bargaining, public resource development, and the like, which agitated us so severely decades ago, seem now about ended.

But we have some new problems: the menace of long-run inflation, the menace of long-run militarization, and the menace of mutual destruction through building our defenses so strong that they give security to none

Long-run inflation is all about us. Every time the stock market moves up, some trading specialist finds a new formula to explain the phenomenon. But in my book none is needed save the fact of our constant failure to balance the budget and the steady increase in the manufacture of personal and industrial credits.

industrial credits.

I stood in 1947 with Jesse Jones in his proud city of Houston while he pointed out to me the rising landscape as he brought his buildings up to a uniform height of 22 stories. I asked him why he did not retrench rather than expand.

"Because," said he, "we will be in an inflation cycle for years to come. We can't afford a depression with our huge national debt. We can't let the dollars shrink." How wise he was.

Long-run militarization we know too well. The powers of destruction gain faster than our ability to control them. Every year the planes fly faster and higher. Every year as their speed increases, the power to resist attack is lessened. But the planes of our enemy likewise improve until no man is safe, even in his own house.

So we come to the menace of mutual destruction—the odd chance that some desperate leader may trigger an atomic or nucleonic war where there can be no victory but only the destruction of all.

A week from tonight many of us will prepare to leave for a proving grounds to see if there is a new and promising crop of fantastic weapons. That is our responsibility and we must certify to the Congress that this Nation is ready.

Ready for what? To blow another people into powder or be decimated ourselves? Ready to loose new forces that we but partly understand, and whose potency surprises even the magicians who make them? I cannot believe that is the best this Nation can contrive.

Rather I would believe that our Senate leader, Lyndon Johnson, spoke for all the Democrats in Congress when he declared:

"I shall fight to keep my party on the road of freedom and progress for America. * * * I shall never permit partisan zeal to become the instrument of discord that will tear America apart in the face of a threatening enemy. * * I should like for the President to think, with justification, that Americans will back him—not as Republicans and not as Democrats—but as Americans who place the salvation of their Nation above all else."

This is a dark and troublesome hour in world affairs, but we can find our way to final peace if the Democrats of this Nation measure up to that leadership and determine that good faith to their Nation is more important than good fortune to their party.

North Carolina can help us to that goal.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily Record at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U.S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

COVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Wheat Certificate Plan Provisions of H. R. 12 Are Unsound

> EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. BEAMER. Mr. Speaker, as a farmer, as a consumer, and as a legislator, I am vitally interested in H. R. 12 which deals with price-support programs for basic commodities, wheat, and dairy products.

The 83d Congress enacted legislation which would help to improve the farmers' condition and it does not go into effect until the 1955 crops are marketed. Government price fixing has produced lower returns for the farmers and surely we do not want to have H. R. 12 continued since the results of that type of legislation have been so detrimental to the farmers' interests.

I would like to place special emphasis upon the unsound provisions of the wheat-certificate plan in H. R. 12 as an example of the weakness of that entire

piece of legislation.

The certificate plan for wheat is a device for dumping surplus wheat in other people's markets. It calls for supporting a portion of the domestic wheat crop at a high and very profitable level so that wheat producers will be able to produce to capacity and dump their surpluses in the export food and domestic feed markets. As such, it is a proposal to authorize the most vicious, unfair type of subsidized competition imaginable. It would be unfair competition with wheat growers in every other country in the world. It would be unfair competition with every American farmer who grows corn or other feed grains such as oats, barley, and grain sorghums.

Foreign countries would be quick to take retaliatory measures against the adoption of any such scheme by this country. Importing countries, almost all of whom have some domestic wheat producers, would seek to protect these producers by imposing various types of trade barriers against a flood of cheap wheat from the United States. In competing exporting countries retaliatory actions probably would be directed against other American export crops, such as cotton, soybeans, lard, tobacco, fruits, and vegetables. The end result might well be a net reduction in our exports of both wheat and other farm products. Canada now buys 200,000 to 400,000 bales of our cotton and millions of dollars worth of other farm products annually. Do you think that we can

maintain our agricultural exports to Canada undiminished if we are going to adopt what Canadians certainly would consider to be an unfair method of competition in the world wheat market? I do not think so.

In view of American agriculture's urgent need for expanded export markets, we cannot afford to antagonize other trading nations, whether they are

wheat importers or exporters.

Why would the certificate plan be unfair competition? Let us look at it from the standpoint of the Canadian wheat farmer. Sponsors of this legislation say they only want to compete for the world market at the world price, but they only want to take the world price for the portion of their crop that is not used domestically as human food. The Canadian wheat farmer makes his living by selling wheat at the world price. He does not have a program which gives him a much higher price for half his production.

Let us look at it from the standpoint of our own corn farmers. The wheat farmer obviously has to realize a certain average price for his wheat if he is to pay his expenses and realize a satisfactory income. If he is to be permitted to sell a part of his wheat at a high and very profitable price in a protected domestic food market, he obviously can sell the remainder for a much lower price and still come out with a satisfactory average. In effect, the high price received in the protected market subsidizes cutrate sales in the unprotected market.

If he got enough for food wheat, the wheat farmer could give away his surplus without any pain. Would he produce a surplus under such condition? He certainly would under the certificate plan as now proposed, for each farmer's right to sell wheat in the protected domestic market would be based on the normal yield of the acreage he planted to wheat in the 3 years immediately preceding each food quota year. Any farmer who reduced his wheat acreage would risk a reduction in his share of the national food allotment. Therefore, he would try to produce to capacity as long as the average amount he received for his total production was satisfactory. This might be partially controlled by supplementary acreage allotments, however, H. R. 12 prohibits the use of acreage allotments when the certificate plan is in effect. If we were to have acreage allotments as well as food allotments, we certainly would compound our administrative problems without doing very much to improve the wheat farmer's plight. With uncontrolled production, the average or blended price of wheat might, and probably would, drop to the level that would prevail on a free market without any program. Under such conditions, the average wheat farmer would get no benefit from the proposed program.

The corn farmer makes his living by feeding corn to livestock or by selling it to others who do so, just as the Canadian farmer makes his living by selling wheat at the world price. If the wheat farmers are going to be allowed to dump hundreds of millions of bushels of surplus wheat into the feed market, the producers of corn and other feed grains certainly are going to be hurt. The inevitable results of subsidizing wheat into the feed market will be increased livestock production, lower livestock and corn prices, and a greatly increased movement of corn and other feed grains into Government bins under the pricesupport program. What will it profit us as a nation to reduce the wheat surplus by subsidizing the creation of an offsetting surplus of corn and other feed grains?

It will be argued that the amount of wheat that would be fed under the certificate plan would be small in relation to the total feed-grain supply. The facts, however, are that the quantity of wheat that could be fed under this program is neither small nor insignificant. On July 1, 1954, we had a carryover of more than 900 million bushels of wheat. Our 1954 crop under marketing quotas amounted to 970 million bushels, or about 135 million buhsels more than 1953-54 exports and domestic consumption. This adds up to a wheat supply that exceeds our present markets by more than 1 billion bushels. A billion bushels of wheat is the feed equivalent of nearly one-third of a normal year's corn crop.

Laying aside for the moment the difficulties involved in liquidating our accumulated wheat surplus, what would this program mean in terms of a continued annual addition to the feed market? On the basis of the record, we can easily produce 1,250 million bushels of wheat per year. Domestic consumption and exports amounted to only about 835 million bushels in the 1953-54 marketing year. There is no assurance that wheat exports would increase under the plan. If exports did not increase, the plan could throw as much as 400 million bushels of wheat into the feed market in a normal year. This amount of wheat may seem small in comparison with our annual consumption of over 3 billion bushels of corn, but it is the feed equivalent of two-thirds of the corn crop produced in Iowa, the leading corn State, in 1953. Iowa's 1953 corn crop was 592 million bushels.

Furthermore, we already have a more than adequate supply of corn. Acreage allotments were imposed in 1954 to reduce corn production, and are in effect again this year. Our 1954 corn carryover of approximately 920 million bushels was the largest on record. Despite drouth damage to the 1954 crop, this year's January 1 corn stocks were the highest on record for that date.

Corn farmers are perfectly willing to compete for the feed market provided the power of the Government is not used to stack the rules of the game against them. If the wheat farmers will accept support prices based on the feed value of their product in relation to the support price of corn for their entire crop, corn farmers will share the feed market with them on a competitive basis without complaint.

The argument is made that the certificate plan will make it possible for farmers to feed wheat in areas where little or no corn is grown. This in no way reduces the competitive impact of such a program. The end product of feed is livestock, and the livestock market is a national market. Any livestock that is injected into this market at any point affects the total national supply and the national price picture. If the corn farmers could be guaranteed 100 percent of parity in their major markets. I am sure they would be willing to accept a lower price in other markets. For example, they probably would be willing to absorb freight charges so as to undersell wheat in such areas as the Pacific Northwest. Or, if the corn producers could be assured full parity on all the corn that is fed to cattle and hogs. they undoubtedly would be willing to take a substantially lower price for the corn that is fed to poultry. Would this be fair competition for the hog and cattle producers, or for the producers of other products that are used in poultry feed? Of course not, but if we are going down the road of letting one commodity group charge a monopoly price where it has the least competition, so that it can sell at cut rates in the areas of greater competition, the producers of other commodities have every right to demand that they be allowed to take counter

The end result of this approach could well be a complete system of Government-administered prices and a collateral Government control over every aspect of American agriculture.

It is proposed that the certificate plan be placed in effect only if it should be approved by more than one-half of the wheat farmers voting in a referendum. This departs from the established legislative policy of requiring that control programs must be approved by two-thirds of the farmers voting in a referendum. Furthermore it would exclude from the polls many farmers whose income would be affected by the outcome.

In view of the fact that this is a proposal to subsidize the dumping of cheap wheat into the feed market, the producers of corn and other feed grains should be allowed to vote on the same basis as wheat producers. Wheat producers who grow less than 15 acres also should be allowed to vote.

Under the proposed program wheat producers could be required to comply with acreage allotments, production goals, and marketing practices—excluding marketing quotas—as a condition of eligibility for price support and marketing certificates. This provides a neat device for keeping corn farmers from establishing a base for a food wheat quota, but if we are going to allow wheat farmers to dump their surplus production into the feed market, it would seem that fair play would require that we let the feed producers go into the wheat business and get a pro rata share of the food marketing certificates on the basis of their production of wheat.

A little while ago, I said that there is no assurance that the proposed certificate plan would bring about an increase in wheat exports. In this connection, the Pacific Northwest Cooperative Extension Bulletin "Which Wheat Program"? recently issued by the State Colleges of Idaho, Washington, and Oregon says: "The plan has little effect on quantity offered for export, since wheat at corn support levels probably would be above world wheat prices most of the time"

We currently are paying subsidies that run as high as 76 cents per bushel on wheat exports both under the International Wheat Agreement and outside of it. If the proponents of the certificate plan believe that this plan would increase wheat exports, the burden of proof is on them. What countries would buy more United States wheat under this plan, how much more would they buy, and at what prices?

Let me elaborate on this point. Total world trade in wheat has been declining while wheat supplies have been building up in the major exporting countries. Our present supply of wheat exceeds our domestic needs by enough to supply the entire world market for well over a year. The United States, Canada, Australia, and Argentina together have enough wheat available for export and carryover to meet the present world demand for more than 2 full years. Competing export countries, and especially Canada. are prepared to sell wheat and to fight for their respective shares of the world market. We already have had some evidence of this. When we dropped the export price of wheat 10 cents per bushel a few months ago-by increasing our export subsidy-the Canadian Wheat Board promptly cut its export price by 101/8 cents. There is no doubt that we could break the world price by throwing our surplus wheat onto the world market. as proposed in the certificate plan, but would we sell more wheat? The certificate plan would not increase our quota under the International Wheat Agreement. It would not solve the problems that result from shortages of dollar exchange, and the fact that our wheat is not always competitive in terms of quality.

I recognize that the proposed certificate plan carries authority for the establishment of a price floor for surplus wheat through loans, purchases, or other operations, based on certain considerations, including the support level for corn, provisions of the International Wheat Agreement, and the foreign trade policies of friendly exporting

countries. Parenthetically, I would like to say that if we adopt this program, there probably will not be any such thing as a wheat exporting country that is friendly to the United States. The provision in the plan for a floor under surplus wheat prices in no way changes the nature of the proposal. It is still a scheme to get a monopoly price in a protected market, and to use monopoly profits to cut prices in other markets. Corn producers are perfectly willing to accept a support price of less than parity and to have their support price adjusted from time to time to take account of changing supply and demand relationships, in accordance with the principles of the Agricultural Act of 1949, but they don't want surplus wheat used to set a ceiling on corn prices at the support

Sponsors of the certificate plan sometimes call it a two-price plan, but it would end up as a multiprice plan. would have one price for human foodmaybe one for bread flour, a second for cake flour, a third for breakfast food wheat, and perhaps a fourth for dog biscuit wheat-then we would have a feed price governed by the support level for corn, and then we would have to have one or more export prices, since other countries could undercut any supported price. The whole program would take us in the direction of complete Government price fixing at home, and state trading abroad.

The certificate plan not only would work an injustice on domestic producers of feed grains and foreign wheat producers, but also would create inequities between domestic wheat growers. Wheat is not a single commodity. Different grades and types have different uses. The surplus problem is much greater for some types than for others, as the attached table I shows. The domestic consumption of hard red spring wheat in the 1952-53 marketing year amounted to more than 100 percent of our 1952 production, while the domestic consumption of white wheat was only 42 percent of the 1952 production.

The following table indicates the percentages of the production of the major classes of wheat that have been used domestically for all purposes in various recent periods:

Percentage of production for marketing period used domestically

Class	1949-53 average	1952-53	1953-54
Hard Red Winter Soft Red Spring Hard Red Spring Durum White All classes	50. 9	37.8	46. 3
	76. 0	68.8	67. 1
	77. 4	100.5	63. 0
	90. 1	121.7	114. 3
	44. 7	42.2	34. 5
	60. 2	53.4	52. 5

Under the proposed certificate plan, food wheat certificates would be distributed to all wheat producers on the basis of past wheat production without any regard to their historical participation in the domestic food market. This means that the growers of durum and hard red spring wheat, most of which is consumed domestically as human food, in effect would be taxed to subsidize

the dumping of surplus wheat of other International Wheat Agreement, is a types into feed and export markets. Further inequities would be created among the producers of the various clauses of wheat, for not all wheat of a given class is equally acceptable for domestic use as human food. Instead of rewarding the producer of high quality milling wheat, this plan might well tax him for the benefit of the producers of low quality wheat.

If the certificate plan were in effect today, a producer or processor of durum wheat could go into court and show, first, that this type of wheat is selling for above parity prices in the market, second, that the certificate plan, therefore, is unnecessary to return parity to the producers of durum wheat, and that as a result; third, the processing of durum wheat is being taxed in an arbitrary and discriminatory manner to provide benefits to the producers of the types of wheat that are in surplus. The same thing is true to a lesser degree in the case of certain qualities of hard red spring wheat. Is it fair to impose a tax on a type of wheat that is selling above parity to provide benefits to the types that are below parity? How do you think a court would decide this question?

Thus far, I have been dealing primarily with probable effects of the proposed certificate plan on foreign trade and on various groups within agriculture. Now let us look at some of the more general considerations involved in this proposal. The requirement that processors buy certificates in proportion to the volume of wheat they mill for domestic human consumption is in effect a processing tax. It might well be called a bread tax, in view of the fact that it ultimately would be passed on to the purchaser of bread and other wheat products. This inevitably would be brought to the conusmer's attentionperhaps in a printed eve-catching notice included with each loaf of bread. How do you think consumers would react to such a development? Is it constitutional to levy such a tax and use it directly for the benefit of a special group without going through the procedure of covering the revenues into the Treasury and then appropriating funds for the program by separate action? I doubt it. Processors historically have opposed processing taxes. They succeeded in getting the processing taxes established under the original Agricultural Adjustment Act of 1933 declared unconstitutional. They undoubtedly would attack the constitutionality of the current proposal and might well win their case in the courts.

The proposed plan would require a large amount of government administrative and enforcement machinery. The opportunity to make large profits by evading the purchase of certificates for wheat used for domestic human food inevitably would lead to enforcement difficulties. The fact that unscrupulous operators are known to have mixed Canadian feed wheat with higher grade United States wheat, which subsequently was milled or exported under the

clear indication that evasions would be attempted. It is quite true that the price of wheat makes little difference to the consumer who buys a loaf of bread at retail, but it is just as true that the price of wheat is very important to a miller or a baker.

The plan would provide a real incentive for research to develop ways of producing wheat products with less wheat. In some cases, this could lead to the discovery of substitutes with the capacity of permanently shrinking demand for wheat as a food. For example, it may prove possible to increase the use of surplus potatoes in bread if we get the price of wheat high enough.

The entire Nation has an interest in the conservation of the soil resources which are the basis of our abundant production. There is no question but what the good wheat prices of recent years have encouraged farmers to expand wheat production in areas where such action was not consistent with good land use. The return of the Dust Bowl problem is the result. The proposed certificate plan would encourage farmers to keep marginal land in wheat production. This in turn would require large appropriations for programs to remedy the damage caused by overcropping marginal land. If by chance we should be able to increase wheat exports under the program, we in effect would be subsidizing the export of our soil fertility.

Is it fair to the wage earners in this country to raise the domestic price of wheat by a tax so that wheat farmers can produce surpluses to sell to competing workers in other countries at a substantially lower price? This sort of program would provide an argument for increasing tariffs on the industrial goods we are going to have to import if we are going to build farm exports.

By proposing a multiple price plan for wheat, the sponsors of the certificate plan are admitting that the present support price of wheat, based on 90 percent of old parity, is too high to serve the long-run interests of the wheatgrower. Economic studies of the cost of producing wheat in efficient areas bear this out. Studies at the Kansas State College indicate that the cost of producing wheat on the basis of 1941-50 yields and farm costs at about the 1952 level runs as low as 71 cents per bushel in efficient producing areas. If, as appears to be true, the present wheat support level is too high, it is up to the sponsors of the certificate plan to prove that a multipleprice plan is the best way to lower the support level. This they cannot do because of the effects such a plan would have on other groups.

Farmers and Members of Congress who are interested in the support programs for other commodities had better take a careful look at this proposal. If it is sound to finance a program for wheat through what amounts to a processing tax, why would it not be sound to put the burden of other price-support programs on the producers, processors, and consumers of the supported product?

Our present wheat situation is admittedly difficult. It will take some time to make the necessary adjustments, but we can work out of this situation by gradually shifting to variable supports. based on a modernized parity, by recognizing wheat quality in the support program, by taking marginal land out of wheat, by selling wheat for foreign currencies, as recently authorized by the Congress, and by working with other countries to expand the total world demand for wheat. As a part of solving the problem, we probably will have to feed some of our surplus wheat. It is one thing to feed a part of our existing surplus as a part of an overall program for solving the wheat problem, and quite another to ask feed producers to take over the burden of absorbing a continuing surplus of wheat at cut-rate prices year after year. We cannot solve any problems by adopting a multiple-price plan designed to give the wheat farmers a monopoly price in the food market so that they can continue to produce surpluses and use them to disrupt the domestic feed and international food markets. The certificate plan should be rejected by the House.

Table I.—Analysis of the production, supply and disappearance of wheat in the 1952-53 and 1953-54 marketing years, and supplies for 1954-55 by classes

Congressional Investigating Committees: Their Need, Their Enemies

SPEECH

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1955

Mr. HOFFMAN of Michigan. Speaker, a former very able, patriotic, and experienced member of the House Un-American Activities Committee, Kit Clardy, on February 12, 1955, at Chicago, in an instructive talk, made clear the need for congressional committees and the procedure they follow. That talk is as follows:

CONGRESSIONAL INVESTIGATING COMMITTEES: THEIR NEED, THEIR ENEMIES

(Speech by Kit Clardy at Chicago, Ill., February 12, 1955)

A year ago last November while making a speech at Flint I was summoned to the phone on a Washington call. It was then that I learned that the chairman of my committee, Mr. VELDE, had just subpensed Harry Truman and Tom Clark. By sheer coincidence I was interrupted in the midst of advocating precisely the course the chairman had followed.

At the chairman's request I boarded the next plane for Washington. The next few days and weeks were indeed hectic and crowded. The left-wing columnists, radio and television commentators and those they could influence poured out their vitriol. We were the subject of abuse from one end of the country to the other. And all because we had dared to suggest that those who had guilty knowledge of how Communists had gotten into and remained in high places in government ought to be compelled to explain their part in the whole dirty business.

I'll come back to the Harry Dexter White case and what it really means but first I shall try to set the stage, so to speak. There are many things we must understand if committee investigations are to have meaning. We must get away from the misleading small talk and the smear campaigns. If the need for congressional investigations is to be really understood. And we must know the real enemies of such committees-we must know why they attack and smear. We must understand that their attacks are not accidentalthat they are in fact all part of a planned campaign.

What would you think if I told you that a number of past and present Members of both Senate and House have been either witting or unwitting members of or cooperated with Communist fronts? Yet, as I shall show you later it's literally true that even Members of Congress have been sucked in by the Communists and their friends or dupes.

Now I don't want it thought that I'm calling such folks Communists. I'm merely trying to show you just how effective the Communists have been in putting over their planned program of infiltration. I'm doing it to show you how really necessary congressional investigations are if an informed people are to defeat the Marxist determination to destroy us. I'm doing it to show you the lack of awareness we face in this fight.

Lenin long ago said that it was vitally necessary to Communist plans of conquest to get Soviet politicians into Parliament and that they must then disrupt the Parliament to prepare the ground for the Soviet's forthcoming task of dispersing Parliament. There's much more along this line but it all adds up to the fact that part of the Communist plan of conquest embraces the duping of folks in all levels of society including particularly people in government.

I'd like you to now ask yourselves some questions. What do you think would be the situation today if Dick Nixon and his committee had not gone after Alger Hiss hammer and tongs? What if they had not opened up the Harry Dexter White scandal? What if the Amerasia case had not been investigate? What if Truman's red-herring coverup had been successful? What if the tremendous unmaskings made by MARTIN Dies had been prevented—as Roosevelt tried to do?

And I'd like you to ask yourselves some questions along another line. What would be the world situation today if the early work of MARTIN DIES and those who followed him on my committee had been studied and used in making both foreign and domestic policy? Is it not plainly apparent that if, when Dies gave Roosevelt a list of 2,000 Communists in Government way back in 1941, the executive branch of Government had acted as it should, we would not be in trouble in Asia, in Europe or anywhere else on the globe? Has not there been enough disclosure of facts to show plainly that we were betrayed from within time after time? Not just at Yalta, Teheran, Potsdam or the other formal conferences, but day after day in little decision after decision so that the end result was a policy that surrendered everything the Communists wanted?

The Congress of the United States is not just a lawmaking body. As one of the three branches of Government, it has other functions that our left-wing enemies would have us forget. Congress has the all-important duty of keeping the people informed-of let-

ting them know what's going on behind the scenes in all the other branches. Woodrow Wilson put it most effectively when he said:

"It is the proper duty of a representative body to look diligently into every affair of government and to talk much about what it sees. It is meant to be the eyes and voice of its constituents. Unless Congress have and use every means of acquainting itself with the acts and the disposition of the administrative agents of the Government, the country must be helpless to learn how it is being served; and unless Congress both scrutinize these things and sift them by every form of discussion, the country must remain in embarrassing, crippling ignorance of the very affairs which it is most important that it should understand and direct. The informing function of Congress should be preferred even to its legislative function."

The history of the past two decades should dispel all doubts about the wisdom of those words. But yet another man said something in 1936 of even more direct application. Hugo Black, now on the Supreme Court has this to say:

"This power of the probe is one of the most powerful weapons to restrain the activities of groups who can defy every other power. Public investigating committees exist always in countries where people rule. They have always been opposed by groups that seek or have special privileges.

And another in the liberal tradition. Sen-

ator George Norris, said:

"Whenever you take away from the legislative body of any country the power of investigation, you have taken a step that will eventually lead into absolute monarchy and destroy any government such as ours."

Now ask yourself another question. What would have been the result if the self-serving denials of wrongdoing that issued from the executive department in the Teapot Dome case had been the end of things? What if the Congress had silently accepted these proclamations of virtue and taken the position it was none of the business of Congress?

Of course even the self-styled liberals of today will not agree that Congress should investigate graft and corruption. then do they balk at investigating a subject and a field far more important and danger-Why do they constantly attack everyone and every committee engaged in exposing and fighting a conspiracy we all know is dedicated to our destruction as a free

I think I know the answer. It's a manysided one. Of course, some of this opposition is honest even if wrong and based on misinformation or misunderstanding of the true situation. But most of it is definitely inspired by the Communists and their dupes. My friend MARTIN DIES, points out that:

"There were some 10 million gullible people who were enmeshed in the Communist conspiracy. * * * When it suddenly dawned on the country that these organizations were under the control of Moscow these people bitterly resented the exposure. Many of them claimed to be intellectual. * * * A great majority of them turned on the committee with great resentment and began to atack the committee in order to defend themselves."

But some of the people and groups are lined up solidly with the Communists because they want to be on that side. Some of them may honestly think they're in the right but the greatest percentage known better. You can put all the Communist fronts in the class of those who know the score. Let's look at a few samples.

The Communist Party put out a pamphlet last year entitled "The American Way to Jobs, Peace, Democracy." You may have seen it. On page 14 they say:

"We urge an end to the witch-hunting, the abolition of all congressional witchhunting committees, and a halt to Gestapo-like political activities of the FBI. The atempts to outlaw the Communist Party and to deprive Communists of their citizenship rights must be defeated. The Smith and McCarran Acts should be repealed."

Now, let's look at the published platform of a group that's been the loudest in urging the very things I've just cited for you from the Communist document. Americans for Democratic action is the leftwing outfit I They've written and said a great many things on the subject but a few sen-

tences will tell the story. They say:
"We oppose any legislation outlawing any political party. * * While we recognize the right of Congress to conduct investigations, the House Un-American Activities Committee has proved itself a threat to freedom of political opinion. We, therefore, call for its abolition."

And on the question of the FBI they said something that ought to be long remem-bered. They defended Judith Coplon and atacked the FBI with these words:

"It has given the public a chance to see how silly an FBI report can really be."

ADA goes right along with the Communist Party in advocating the claimed right of teachers and pupils to be Communists and to do their work without having to bother with loyalty oaths or tests. They grow quite indignant over attacks on teachers who are shown to be Communists or who teach communism. And they say no one should question the right of a Communist to be on the Government payroll.

ADA has long been promoting the idea of "peaceful coexistence" with Red Russia. And they favor our recognizing Red Chinaand admitting her to the United Nations. These and many other things openly advocated by the Communists are part of the

written platforms of ADA.

Yet this outfit parades before the American people as an anti-Communist organization. They depend on the inability of the people generally to learn of the things I've told you today. And so when they launch an all-out attack on my committee or its members it's almost impossible for the public to properly and accurately evaluate their statements. And in this they're helped by such leftwingers as the Alsops, Childs, Stokes, and others.

And while we're about it we should remind ourselves that the same crowd that runs ADA is the moving force in the outfit calling itself the "Committee for an Effective Congress." That's the gang that supplied Senator Flanders with his dirt last year. Let's look at some of those doing the planning and plotting for ADA and this "committee."

Now I haven't time for more than a thumbnail outline but here goes. Arthur Schlesinger, Jr., is probably the most prolific in his writings and propaganda. Well back in 1929 the New York Times published a statement attributed to him in which it is

"I happen to believe that the Communist Party should be granted freedom of political action and that Communists should be allowed to teach in universities so long as they do not disqualify themselves by intellectual distortions in the

There speaks one who either lacks understanding of the Communist or who is deliberately promoting the cause. I can't believe he is naive. Freedom of political action means freedom to destroy us-nothing less. Over and over again from Lenin and Mark down to Malenkov they have told us this. I cannot believe anyone with an eighth-grade education could be mislead. and teachers and professors do not turn their Communist ideas on and off as they enter or leave a classroom.

Earlier Schlesinger was one of those urging that the deportation order of Harry Bridges be canceled. He was sponsor of a civil rights congress appeal for a meeting to be held at Detroit on April 27 and 28, 1946. This is the organization dedicated to the defense of Communists and which was cited as subversive and Communist by the Attorney General. My committee branded it as controlled by individuals who are either members of the Communist Party or openly loyal to it (September 2, 1947) and he re-cently rushed to the defense of J. Robert Oppenheimer in a long magazine article.

I could name other groups with which his name has been associated but I think this enough to give you the idea. Perhaps this will give you some insight into how groups work and why Flanders was used as the front man. And I have checked on some 14 members of the committee for an effective congress as listed in the CONGRESSIONAL RECORD last year by Flanders. I have not had time to run down the records of the balance but I found everyone I checked associated in one way or another with anywhere from 1 to 14 front groups. While one of them, Paul Appleby, has testified before my committee that:

"A man in the employ of the Government has just as much right to be a member of the Communist Party as he has to be a member of the Democratic or Republican

Party.

And several others have belonged to Communist fronts, I am not charging them with being Communists. That's something that could only be determined through hearings.

But that's not the point. I'm merely trying to show that people with sympathies of that kind are the ones chiefly responsible for the blatant demand that all investigations into communism be abandoned. These people may honestly believe the stuff they put out but that doesn't change the fact that they are doing for the Communists that which they cannot do themselves. J. Edgar Hoover, whom I admire very much, puts it

"The pseudo liberal can be more destructive than the known Communist because of the esteem which his cloak of respectability

Which brings to mind the name of another bleeding heart-Robert Hutchins-formerly with the University of Chicago. He has recently blown off steam on this subject as he has been doing for years. When in Los Angeles a little more than a year ago he was extensively quoted as being violently opposed to congressional investigations. He said that Cardinal Spellman was all wrong in saying that no one was being hurt in America by such committees. He said that:

"Congressional committees which pub-lished lists of subversive Communist and Fascist organizations were run by a bunch of characters. And that the lists should not be published."

He went on to say he didn't believe in loyalty oaths for teachers or professors. And

he said:
"I do not feel the Communist Party as dangerous as professed. Some people take it for granted that just because a person is a member of the Communist Party he is dangerous. This is not true."

Is it possible this man is that ignorant? He must know better. But that attitude pretty well sums up the apparent or public thinking of nearly all those who want an end to congressional investigations. It's exactly the same as the Communist Party posi-In the pamphlet I mentioned earlier the Communists say:

"Communism is not the issue in this country today or in the near future. * * * American Communists * * * deny that the Soviet Union or any country led and ruled by working people threatens our country, or could threaten our country. * * * But while the issue today is not communism, the

true nature of the Communist Party and the role which it plays in American life is very much an issue. The American people must know the truth about this issue lest the monstrous deception now practiced on them lead to the loss of democracy and freedom they prize so dearly."

I presume Hutchins knows these things, Draw your own conclusions as to whether he's promoting the cause of communism when he tries to sell the idea that communism and Communists are really fine and

pose no threat to us.

Hutchins and those like him who seek an end to investigations would have us forget the history of the last two decades. No one charges that the whole Democratic Party as such is guilty of condoning all the terrible betrayals that took place. I know many deplore them as strongly as any of us. But I don't see how anyone can avoid agreeing that their leadership did deliberately try to sweep all the dirt under the rug. Surely we have not forgotten that the guilty knowledge about Communists in Government was revealed to both Roosevelt and Truman years before it was brought out into the open by congressional committees.

Let's take the White case as an example, since it's typical. On December 4, 1945, the FBI informed Truman that White was in contact with six persons involved in the Amerasia case. That was some 3 years before our committee hearings. And it was 3 years before our committee exposed Alger Yet the FBI had told Truman all about Hiss, Abt, Pressman, Collins, Perlo, Kramer, and others along with White. And about 60 days after the first report the FBI

handed up another on the subject.

The first FBI report told of Chambers' statements of 1939. All of this of course long before the famous Pumpkin Papers episode. And Harold Glasser was named. He was an assistant to White. Yet after getting all this information Truman appointed White as United States Director of the In-

ternational Monetary Fund.

Now observe carefully what this sequence of events means. The FBI did a magnificent job. But it could get no results-except in reverse. When it made known to the President the information it possessed it could go no further. It is part of the executive branch. It has no power to compel action and it is commanded by law to keep its mouth shut. It cannot go to the public as can a congressional committee in an effort to force the President to act. And so in the White case every thing was cozy. Despite the obviously heroic efforts of the FBI to force action the Executive was the bossand so began the coverup. Nothing happened. The people of the country were entirely in the dark. In the words of Woodrow Wilson, "the country (was) helpless to learn how it (was) being served." The country was in embarrassing, crippling ignorance of the very affairs which it is most important that it should understand.

Is it too much so say that if, instead of covering up, the President had moved swiftly to clean out the nest we could have avoided Korea at the very least? Do you think we would now be debating what we shall do in Asia. Is it not clear that the Nation is now paying the penalty for enforced ignorance of its own affairs? Do you think that Congress would have gone along with the insane things done after things were privately revealed to the Execu-Rather do you not think that world would be free of most of the Communist inspired trouble?

But now observe what happened with passage of time and as a result of the energetic work of my committee. Elizabeth Bentley, Whittaker Chambers, and others came before the committee and began to unfold the sordid story we now all know. It was done with difficulty for on March 21, 1947, Truman thought to protect himself by issuing his

now famous order preventing Congress from getting at the records. Neverthless, the dis-closures broke things wide open with the results we now know. Of course there remains much to be done. The files of the Executive Departments, if opened to the Congress, could tell stories that would dwarf all that's been thus far revealed. I've had a glimpse--I know.

Now does anyone really think that the clean-up, reluctant as it has been, would have been started if the committee had not gone ahead regardless of the brickbats? Truman's famous " red herring" remark was far from the worst thing said about the committee and its work. The Washington Post, the Post Dispatch, the Sun Times, the Los Angeles Daily News and the Pittsburgh Post to name a few took out after the committee in hot pursuit. The practically accused the committee of committing a crime in even examining White in hearing Bentley. Completely without foundation the Post Dispatch said the committee "often shows scant respect for civil rights"-referring especially to the examination of White. Tom Stokes went overboard as usual in these things and said that "White has been a victim of a special sort of tyranny." the hearing was an, "American-style inquisi-And that prominent lady who is always quick to jump to the defense of anyone called before a congressional committee, Mrs. Roosevelt, pulled out the favorite of the Communists, character assassination, and called Miss Bentley, "this evidently neurotic lady.'

Now I hope you will bear these things in mind when you read or hear these papers, columnists, and others bearing down on congressional investagtions. I could cite many more examples of how they operate—and show how they have consistently been wrong. I remind you of just one more example-Alger Hiss.

I think it self-evident that those who constantly cry out, "Let the FBI do it." really mean something far different. The reccord shows plainly that the FBI can't do it unless those at the top are wholly in sympathy. And even then there is much the FBI cannot do or is prohibited from doing. Above all it is the duty of the legislative branch to exercise its watchdog and informative functions.

Of course its absurd to say that the Executive Department should be depended on to handle its own checkup and inspection. Its grown to such size that no one man can even know the limits of its domain. And you can depend on it that each man out for himself and doesn't seek trouble. Its sheer folly to argue that Congress should leave the policing job to those whose house is to be inspected. That's been the policy of the past-and its responsible for the situation we now know about. The FBI and the many other security agencies are all part of the executive branch. branch must always be suspect if we are to preserve our liberty for that's the only branch where real tyranny can arise.

But now I come to a very real and important reason why congressional commit-tees are to be preferred over the FBI or any of the other executive department agencies. The FBI cannot even touch the thing that's most important of all-the factor of political or other influence on policy and decision. Only a congressional committee can lay bare the facts about outfit like the Institute of Pacific Relations or any one of the more than 1,200 Communist fronts now operating within our borders. The FBI can act only in criminal matters. Even then it cannot speak out. It cannot subpena witnesses. It can never expose the secret workings and influence of the men and groups that seek to betray us from within.

We're in trouble all over the globe today, because the evil influence of men who could not be prosecuted for a crime, reached into the high councils of government and produced a Yalta, a Potsdam, a Tehran. We're in trouble, because congressional committees were denied access to files and information before and while things were happening. We learn too late something of the baneful influences that sold Chiang down the river and lost China, Korea, Indochina, central Europe, and now threatening even greater losses unless we're prepared to make a lastditch fight.

And don't make the fatal mistake of thinking it won't ever happen again, so long as the instinct of self-preservation exists, men in government will always cover up. The man at the top will never know; he can't unless Congress moves in. And since the Communists work 24 hours each day, the pressures will never cease. Congress should be on guard every day of the year if we are to be saved.

There has been much said about committee methods and procedure. Practically all of this started with the left-wing ADA crowd after prompting by the Communists. have only to attend committee hearings to find that witnesses are not abused. All this talk about civil rights started with the Communist Party's handbook. It's been taken up by people who either do not know the facts or are willfully helping the Communist cause. It's the committee that's on the receiving end. The Communist Witnesses are instructed on how to use their appearance as a means of putting over the party line. They are told to "bring out the class issues at the trial." And in answering questions they are instructed to "either answer your own way or not at all."

Those who accuse the committees of destroying civil rights never become specific. They cannot. Instead they set up a straw man to demolish. It's too bad they never sit in on our hearings. But then that would

ruin their story..

Now, earlier I said something about Members of Congress being taken in by the Communist conspiracy. Let me give you just a few examples. The American Committee for the Protection of the Foreign-Born was long ago stamped a Communist front. It is per-haps the oldest and best known of the lot. The National Council of American-Soviet Friendship has been identified as a front These facts have been common knowledge for a long time. Yet despite these wellknown facts, several Senators have taken part in or lent their names to the activities of both these groups. Of course, each one can point to the others and use that as an excuse for being duped. But that's no real excuse. A moment's investigation would have revealed the true nature of these groups. The fact that these men did not use the simple precaution of investigating ought to be a warning to others, and certainly argues for the necessity of investigating committees

One Senator supported a number of groups, including one of the most important Communist fronts while it lived-the American Youth Congress. That Senator has been listed as a member of the National Advisory Board of the American Friends of the Chinese people and as a sponsor of the American Investors' Union. Both were known Communist fronts. The first of these groups openly espoused the cause of the Chinese Communists. This Senator may say he didn't know these things, but in the face of known facts that would be hard to believe. And his record as an ADA member belies any such defense.

Several others were affiliated in one way or another with the independent citizens' committee of the arts, sciences, and professions. The Communist Party started that outfit. It has now been succeeded by the National Council of the Arts, Sciences, and Professions. Both have been exposed by the committee of which I was a member.

But why go on? This should give you ome idea of what I mean when I say that the Communists have reached up into the Congress itself with their influence. I'm not calling these men Communists, but the use of their name and influence with their consent has undoubtedly given aid and comfort to the very ones these men should be fighting. It may have been unconscious, but that does not change things for America. And does it not prove J. Edgar Hoover right when

"The pseudo-liberal can be more destructive than the known Communist, because of the esteem which his cloak of respectability invites."

The really frightening thing about all this is that it evidences a complete lack of understanding of what's going on in the world, and what the Communist conspiracy is doing and how it operates. It's obvious that these men do not yet understand that this Nation has been at war with communism since its birth in Russia in 1917. Of course, the real war against us started in a big way when Roosevelt made the greatest blunder of allthe recognition of Red Russia in 1933. It's been all-out war since that day. These men and many others do not understand that this is a war to the death; that the basic philosophy of the Communist world is that we must be destroyed. And that we must be first softened up from within by the very front method I've discussed.

Over 20 years ago those attending the Lenin School of Political Warfare in Moscow were told:

'War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down we shall smash them with our clenched fist."

Earlier Lenin had outlined the general plan of attack. It's passing strange that more people do not understand. Yet, as we know, Hitler's plans were laid out for all to see, but practically no one read or believed. Well, back in 1922. Lenin had this to say:

"First we will take eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion We will not have to attack; it of capitalism. will fall like overripe fruit in our hands. We must secure the good will of teachers and professors in schools and universities, of liberal ministers of religion, and of the pacifists and reformers of the world in order to create a mental barrage in the minds of capitalistic youth, which shall forever bar them from participating in a carnal conflict with the Communist order."

Have not the past two decades brought us proof that these words were not idle ones? Is there anyone so blind as to not see that the Communist timetable has been followed right down to the present. Have they not used the means and methods they so plainly told us they intended using? Is there reason to doubt that they intend plowing straight ahead on the furrow they've been following?

Congressional investigating committees are part of the frontline troops in this very real war between godless communism and those of us who still believe in Christianity and individual freedom. We are the only important organized group combating the subversive influences that seek to lure us to our

doom. It's part of the duty of such committees to see to it that the Nation is not lulled to sleep. It's part of the committee job to see to it that the Communist conspirators are not allowed the luxury of surprising us. I am in complete agreement with Woodrow Wilson when he says that the informative function is to be preferred above the legislative one. I agree with Justice Black and Senator Norris in their appraisal of what can be expected if investigating committees are ended.

Those who would destroy the investigating committees looking into the Communist threat have scant knowledge of history. If our liberty is to be preserved, it will be because the elected representatives of the people make it their business to protect it. The eyes and ears of Congress are its committees. The Communists know this. Events of the last year should warn us that they have sucked in far too many to do their bidding. If Congress should now suddenly decide to call off the hunt for subversives there would be great rejoicing in Moscow, for that's their No. 1 goal at the moment. Let's not be suckers.

I am convinced that the concerted efforts the Communists made against all of us on these committees was but part of their overall plan to put out the eyes of the Nation so that, blinded, we will walk over the cliff into totalitarian slavery. You have their word for it that they're counting on us to do this.

I am now temporarily on the sidelines, so to speak, but my interest has not flagged. So long as the Stevenson, Reuther, ADA, leftwing philosophy retains control of the Democratic Party machinery—so long as they put up candidates who subscribe to the theory that we have nothing to fear from the Communists within our midst—the hope of the Nation must rest on the Republican Party and those real Jeffersonian Democrats who have not forgotten their heritage. God forbid that we go soft. If we do, the cause is lost forever.

Quirk of Photoplay

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article written by Lawrence J. Quirk of Lynn, Mass., concerning his uncle, James R. Quirk, who for many years was the publisher and editor of Photoplay magazine:

QUIRK OF PHOTOPLAY—HE EDITED THE BEST OF THE FAN MAGAZINES AND SET THE PATTERN FOR ALL OF THEM

(By Lawrence J. Quirk)

The movie fan magazine of today is largely the creation of a colorful little man named James R. Quirk, who edited Photoplay magazine during its heyday.

A great many of the fan magazine's staple features, including the all important inside personality story, were Quirk innovations. While he himself usually wrote about movies with what Terry Ramsaye called glamorous appreciation, Quirk had his caustic moments. "Assistant producers," he once said, "are mice studying to be rats."

Producers, and even assistant producers, were fond of him. And no wonder, for he helped keep the masses movie conscious. And Quirk was shrewd enough to know he should regularly remind the movie industry of this fact. His reminders were reiterations of the following editorial advice: "Anybody who tries to get \$1.50 for a 50-cent movie is trying to pick your pocket."

Quirk was born in Boston—September 4, 1884—and at 18 got a job as a stenographer on a Boston newspaper. He quickly became a reporter, studied law at night, and landed a plum: he became private secretary to John F. Fitzgerald, an ex-mayor of Boston and father-in-law of Joseph P. Kennedy, at a time when Fitzgerald found it convenient to own a paper called New Republic (no; not the liberal weekly).

In 1906 Quirk removed to Washington, D. C., and utilizing the things Fitzgerald had taught him, rose in 3 years from rewrite man to managing editor of the Washington Times. He also got married—to Elizabeth North, by whom he had two daughters, Frances and Jean.

In 1909 Quirk was hired to go to Chicago and get Popular Mechanics out of its circulation doldrums. He succeeded in doing so, largely by enlivening its writing and typography. By 1912 Popular Mechanics was in the black.

Quirk then went to Wyoming to be a land operator. After a disappointing year ridding the State of fraudulent land grabbers, he returned to Chicago and opened an advertising agency. He and his wife and baby lived on crackers and milk.

Two well-to-do executives of the prosperous W. F. Hall Printing Co.—Robert M. Eastman and Edwin Colvin—had acquired, for an unpaid bill, a 3-year-old entertainment leaflet called Photoplay. It had little or no advertising and an uncertain circulation of 13,000. They needed someone to run it and offered Quirk the job. He and his wife were tired of crackers and milk and the starting salary promised an occasional lamb chop. Movies had meant little to Quirk, but since they now meant lamb chops, he boned up at a furious rate. He also set about finding writers—and ideas.

The first writer Quirk acquired was Julian Johnson, a Broadway press agent he heard about from Bob Davis—R. H. D.—who was then editing Munsey's Magazine. Here is Johnson's version—years later—of his first meeting with Quirk:

"Bob Davis called me at my office in the Princess Theater and characteristically delivered himself of the following: 'Kid, quit that press-agent stuff and get back in the real writing game. I'm sending a good guy around to meet you tonight at 8 o'clock—name's Quirk—has some sort of motion-picture publication—new field—great fellow—he'll make it—regular magazine doctor—big chance—get out of this town and make a stake for yourself and be happy—you'll team up nicely—I'm busy—so long."

"At 8 o'clock that night this fellow Quirk showed up. That was the first and last occasion on which either of us ever thought of keeping an appointment with the other on the minute, or even on the hour.

"We had a program of one-act plays at the Princess Theater and I was busy. Quirk saw the show and afterward we adjourned to the Claridge. He was wearing a tuxedo and all the garniture, from hat to toe, and used quite a lot of big words and told me no funny stories. I got the impression I was going into an Atlantic Monthly sort of atmosphere. I think that was his selling point—from press agent to highbrow in one jump—and it fascinated me.

"The audacity of his project also fascinated me. A magazine, edited by sensible men, and gotten out as a business proposition, devoted to the movies. I knew nothing about 'them.' As a lifelong reporter and dramatic critic my working years had been closely bound to the theater. The Birth of a Nation hadn't yet been produced, and like all theatrical fellows in 1914, I

regarded the difference between the nickel, or at most, the dime, one paid to see a movie, and the \$2 or \$3 one paid to see a play, even by an inferior company, the best yardstick of their respective merits.

"Quirk told me that he and Robert Eastman and Edwin Colvin had acquired a bankrupt little pamphlet called 'Photoplay' which had no standing, no advertising, and represented nothing but an increasing fan interest in the cheapest of amusements. But, oh, the visions of the future he had for it. Two or 3 weeks later I joined him in Chicago and the fun began."

Quirk's next acquisition was a young Irish girl named Kathryn Dougherty who began as office girl and general trouble-shooter and in time became the secretary-treasurer of the corporation, and for a while after Quirk's

death, publisher.

Miss Dougherty, who later became known in the film industry as Kay Dee, says that in 1914-15, when Quirk was welding his organization together, soliciting ads, keeping costs down, and worrying his head off in general, his blue eyes would snap and sparkle whenever he sensed her doubts. here," he would say, "this job is pretty nearly as new to me as it is to you, but you're Irish and I'm Irish and the Irish are never licked." She says Quirk believed all is well when we have the courage to face life with a laugh. "One of his favorite stories," she says, about a man who fell off a skyscraper and in his downward passage observed, 'I have just passed the 16th story and everything is safe so far.' "

The rest of Quirk's original staff consisted of Margaret Ettinger, cousin of Louella Parsons and now a well-known Hollywood press agent, Al Cohn, Randolph Bartlett, and Delight Evans. They outgrew their first office in Chicago's Hartford Building in a year.

In 1915 Chicago was quite a film center. Hollywood was still in its infancy and the Essanay and other studios were in active production. Film personalities regularly stopped over in Chicago on their way to and from New York and the coast, and Quirk's office became a meeting place. "Jim used to call his office the grand crossing because so many stars, directors, and producers met there," says Martin Quigley, editor of the Motion Picture Herald, and an early friend of Quirk's. "Jim had a gift for winning confidences. The stories that came from his lips and those he set down on paper were but a small part of what he knew about the living, loving, striving communities we call Hollywood and Broadway."

Quirk believed in getting out and meeting people and picked up some of his best story ideas that way. He frequented de Jonge's famous cafe on Monroe Street and was a moving spirit in "The White Paper Club" which met there and included in its membership James Oliver Curwood, Emerson Hough, Bob Munsey, Ray Long, Terry Ramsaye, Edgar Rice Burroughs, Edwin Balmer, and Watterson Rothacker, owner of the Rothacker film laboratories. Ray Long and Rothacker were two of Quirk's closest cronies.

In the nearby projection room of Mutual Pictures some of the "white paperites" began studying Chaplin films seriously. They were perhaps the first to nail down the essentials of Chaplin's art: a pantomimic technique that made the character of a tramp seem alternately pathetic and hilarious and caused audiences to recognize in the tramp's frustrations their own defeats, and in his small triumphs their own resiliency.

Quirk was one of the earliest Chaplin admirers. But when Chaplin tried to go arty, as he did in two pretentious flops released in 1919—Sunnyside and A Day's Pleasure—Quirk pleaded in Photoplay for Chaplin to "come back." Said Quirk: "Sunnyside was anything but sunny; A Day's Pleasure anything but pleasure."

Marshall Neilan, who knew both Chaplin and Quirk intimately, says that Quirk had a strong influence over the great comedian, and that had Quirk lived Chaplin would not be as discredited as he is today. Indeed, Quirk saw Chaplin for what he was—an idealist with the artist's touch of naivete, brilliant, simple, and profound when transposing his inner vision through the art of which he was master, ill-advised and inept when attempting to couple that inner vision with personal or socio-political theories.

Quirk induced some of the "white paperites" to write for Photoplay and one of them, Terry Ramsaye, became the foremost American film historian. Ramsaye was then a reporter on the Chicago Tribune and his first article for Photoplay, signed Terrence Eugene Ramsaye, was a report on how Ida Damon, of St. Louis, received the news that she had won the \$10,000 grand prize for her 100-word solution of the Million Dollar Mystery movie serial.

One of Quirk's first circulation gimmicks was refusing all motion-picture school advertising and announcing that "no ads to which the least suspicion is attached shall be allowed in this publication." The resulting publicity attracted the type of advertiser Quirk wanted. He kept this ball rolling by printing letters from leading scenario editors.

Capt. Leslie T. Peacoke, of World Film Corp., wrote that in the 2 years he was a staff writer with Universal no scenario was ever accepted from a pupil of a so-called school. John T. Pribyl, of the Selig Polyscope Co., said "the art of photoplay writing cannot be taught by correspondence." Lawrence McCloskey, of Lubin, declared "the only persons these schools appeal to are of such mental caliber as precludes their writing usable stories, even though they succeed in acquiring the 'hokum technique' the schools dispense." Added Horace Plimton, of Edison: "I have looked into the matter of manuscripts received from people who have taken a course of photoplay instruction, and none has ever been accepted."

Then, in May 1915, Quirk hired Captain Peacocke, who had written 400 produced photoplays, to conduct a new department called Hints on Photoplay Writing.

Quirk also went after promoters who offered stock in wildcat or nonexistent motion-picture-producing companies, and printed an article by Paul H. Davis, an authority on movie finance, who began his exposition of how movies are actually made, sold, and paid for, by saying: "Every great new industry's first tide of success is followed by a phalanx of kid-glove gentlemen and well-meaning but worthless promoters." Added Quirk in a foreword: "It is not the purpose of this article to close and bar the door against any investment in picture companies."

Another of Quirk's early editorial ideas was a questionnaire to 1,000 newspaper editors all over the country: "Do you consider the word 'movie' as applied to a motion-picture theater, or film, a good one, and do you approve of its use in your newspaper?" National discussion in newspapers resulted, "Movie" was approved 511 to 222 and Quirk ran a two-page spread with the head: "The Question Is Now Settled."

Although Quirk printed all the good writers he could find, some of Photoplay's bylines were fictitious, e. g., Cal York, the name over the gossip column containing the news from East to West, was an abbreviated combination of California and New York; Frances Denton and Jean North were the given names of Quirk's daughters. Quirk and Julian Johnson wrote under fictitious names for many years and used to boast they could put out three issues of copy a month if need be.

Photoplay's first Department of Comment and Criticism on Current Photoplays appeared in November 1915, and was edited by Julian Johnson. Said Quirk: "The reviews will be * * * without fear or favor * * * there is not today one authoritative department of screen criticism in any popular periodical."

In 1916 Quirk ran a beauty and brains contest in collaboration with the World Film Corp. The professed idea was to find the 11 most beautiful and intelligent young women in the United States and Canada and give them photographic and dramatic trials at World Film's studios in Fort Lee, N. J. The judges included Lillian Russell, William A. Brady, Lewis J. Selznick (father of David and Myron, and then general manager of World Film Corp.), and Julian Johnson. Those who did not pass the final trials were to be returned to their homes in a first-class manner and without any expense to them whatever.

The response amazed the Photoplay staff, to say nothing of Lewis Selznick. To indignant young males clamoring to know why Photoplay didn't allow men to compete, Quirk replied: "Ladies first, you know, is the law of contests as well as of the sea. Wait, your chance will come later."

Photoplay was soon boasting 250,000 circulation. Articles on how to plot a photoplay; new exposés; 3- and 4-installment articles telling behind-the-scenes stories of Chaplin, Griffith, Pickford, Lillian Gish; summaries of movie plots; rotogravure photos of stars; really discerning reviews; James Montgomery Flagg and Neyas McMein portrait covers—by trial and error the first great fan magazine evolved.

In one of his own byline articles in 1918 Quirk stated his ideas on what makes an authentic movie star: "Principally brains. Next to brains, physical attractiveness. Dramatic talent comes under the general heading of brains. Imitative dramatic talent is nothing by virtuosity. * * Mary Pickford holds her place by dominating mental force."

Two writers who became celebrated Hollywood figures—Adela Rogers St. Johns and Louella O. Parsons—first appeared in Photoplay in 1918. Mrs. St. Johns, the daughter of Earl Rogers, a well-known California criminal lawyer, had gone into newspaper work at a very early age, had retired briefly to domesticity after marrying her city editor, Ike St. Johns, and returned to writing as Quirk's gal Friday at the California end of Photoplay's news-and-feature lifeline.

As western editor of Photoplay, Mrs. St. Johns contributed scores of byline features. Her widespread personal contacts—she had lived in Hollywood since childhood and had known it as an expanse of open fields—proved invaluable and Quirk regarded her as one of Photoplay's greatest assets. Later her husband also wrote for Quirk.

Scriptwriter Herb Howe once described a typical Adela St. Johns day in the film capital in the early twenties: "Interview of a murderess for a Los Angeles paper in the morning; lunch with a star for a Photoplay story; an afternoon spent partly in Mrs. Wally Reid's pool and partly at her desk banging out a story for Cosmopolitan; partying and nightclubbing at night to pick up feature ideas and tidbits for the Cal York column of Photoplay."

Louella Parsons in her autobiography, the Gay Illiterate (1944), says Quirk gave her a helping hand when she lost a Chicago newspaper film reviewing job because of a change in publishers. "One bright spot in the whole mess was the encouragement James Quirk, editor of Photoplay, gave me. Jimmie was a lovable Irishman with a devastating wit. He had been my friend for many months, so when he telephoned I hastened to keep the appointment. I must have been the picture of woe, for he took one look at me and said, 'Look here, I used to think you were the gayest, brightest girl in this town and the most promising writer. Maybe I was wrong. If you don't believe in yourself how do you expect me or any other editor to believe in

you? The place for you is New York. But first, pull yourself together and write me a story on the part the movies are playing in the war effort (World War I) and I'll feature it.'"

"Jimmie pald me \$25 for an article he titled 'Propaganda.' It appeared in September 1918 and was, as he promised, featured on the cover. It was a wonderful lift to my morale."

A year after Louella had her first article in Photoplay her 12-year-old daughter Harriet contributed a byline interview with 4-year-old George Beban, Jr., son of the Italian film actor. Quirk billed it: "Daughter of the Press Interviewed a Son of the Screen Until Someone Mentioned Ice Cream."

Quirk's long friendship with Rupert Hughes began in 1919 when Hughes got into a controversy between Channing Pollock and Julian Johnson. Johnson had asked Pollock to discuss the movies from the author's standpoint and Pollock had seized the opportunity to lambaste the movies in toto. Johnson and Quirk took umbrage. Johnson called Pollock "a mad dog," and lashed out at "Prussian writing men." Rupert Hughes, fresh from a major's uniform, rebutted the observations of "the mad dogs" in the August 1919 issue of Photoplay in an article called "The Film and the Child." In a subsequent article, Hughes declared: "Instead of shovelling abuse on the frontlersmen of movie history or making too much ado about the rough ways or easy money of the early settlers, we should pay the proper tribute to their enterprise and appreciate the conditions that they endured rather than made."

In 1920 Burns Mantle, the Broadway dramatic critic, reviewed movies for Photoplay. Mantle's version of how he was hired: "Quirk asked what I knew about pictures. 'I know what I like,' I told him. 'Write it, then,' he replied. 'Write what you know about pictures and what you like.' 'Does that mean,' I asked, 'that I can write about even those I don't like?' 'It does,' Quirk said with a smile, 'and may the fillum Gods be with you.'"

Robert E. Sherwood also wrote for Photoplay. "I first started reviewing motion pictures for the old Life in the fall of 1920." Sherwood says. "Shortly thereafter began a friendly relationship with Jimmy Quirk. In 1921 the Arbuckle case, and the next year the Taylor murder, really put Hollywood on the map as the citadel of sin. Jimmy Quirk decided that we-he, Adela Rogers St. Johns and myself-should write The Mirrors of Hollywood, a la the best-selling The Mirrors of Downing Street. As I remember, Jimmy had discussed the idea with Ray Long, who was very enthusiastic and wanted to buy the serial rights for Cosmopolitan. The project was surrounded by the strictest secrecy for, like the other Mirrors books, ours was to be anonymous. Adela came to New York and we had many discussions in Jimmy's

"We drew up a list of principal subjects for dissection. It included all the prominent producers, directors, and stars of that period, with special emphasis on those about whom we could be most candid and unflattering, as the success of the Mirrors books depended largely on their debunking of important people.

"In the winter of 1921-22 I went for the first time to Hollywood, primarily for the purpose of gathering material for this proposed book, although I had a valid ostensible reason for the trip because, as a critic, I naturally wanted to study the processes of production on the west coast. Adela and her husband, Ike St. Johns, showed me great hospitality and facilitated introductions for me all over the place. Adela's brother, Bogart Rogers, was also extremely kind and helpful.

"Nothing ever came of the Mirrors of Hollywood project. I became more and more engrossed with my editorial work at Life and a couple of years later became editor, and my interest in motion pictures diminished. But I think the main reason for our waning enthusiasm was that exposés of Hollywood became commonplace."

In 1920 Quirk did the thing many regard as his chief claim to fame: Commissioned Terry Ramsaye to write a history of the

movies.

"I had grown weary of the making of much film," said Ramsaye, who had been editing newsreels, "and had fied to the pinelands of Long Island to raise a garden and dig clams. Jim and his business associate, Robert Eastman, came along to lure me back to labor to write a history of the motion picture 'to run in Photoplay a chapter a month until it is through.' It was of a piece with Jim's outlook on the industry to believe that a sincere telling of its whole story, shorn of myth and the elutter of falsehood which was deeply coloring all its traditions, would be a contribution to that industry.

"There is a tribute to Jim's professional integrity in the fact that he was willing to wait through almost 2 years of research before a chapter went into type, and that he most generously supported a continuously widening field of inquiry, here and abroad, for 3 years (1922-25), and printed no less than 36 installments of The Romantic His-

tory of the Motion Picture.

"About the time I sent him chapter 18, going into the second year, I was fishing a delectable pool in the Canadian wilds where Lake Nipigon starts down the wildnerness stairs to Lake Superior. A courier du bois, a glum Cree Indian, paddled 40 miles upriver from the railway to deliver me a telegram from New York: 'What year in your story will we get to Mary Pickford? Jim.'

It was his encouragement and enthusiasm, too, which helped me pile on more research and do the whole job over again and write

A Million and One Nights."

When Burns Mantle withdrew from Photoplay and resumed reviewing stage productions, Quirk worked out the mode of movie reviewing Photoplay used until he died, Quirk called the review section The Shadow Stage. The first pages featured the 5 leading films of the month and contained a still photograph from each film with a 7-line caption review. Nine smaller cuts, attached to capsule reviews, occupied the next two pages, which were devoted to what Quirk called B-grade pictures. Third-raters were reviewed together back in the magazine without cuts. Quirk himself wrote many of the seven-line caption reviews of the better films.

In 1920 Photoplay bestowed its first goldmedal award for the best picture of the pre-

ceding year to Humoresque.

By that time Quirk was visiting Hollywood regularly and was much courted, for Photoplay had become one of the instruments by which starlets were transformed into stars, and Quirk was often consulted before a decision was made to give a particular starlet

the all-out buildup.

In 1922 Quirk and Samuel Goldwyn cosponsored a contest to find new stars. not to be another hunt for girls who looked like Pickford, Talmadge, or Swanson, but a seach for "a real girl-not an ingenue, not a coquette, not a wise girl, not a beauty, but a real American girl." No girl would be con-No girl would be considered "regardless of the symmetry of her features, whose facial expression does not possess qualities of understanding, imagina-· · needs tion, and feeling. The screen * personalities capable of portraying mental as well as physical action in an individual way." The winner was to get a year's contract from Goldwyn, who would have a 3-year option on her services.

Quirk had to hire extra help and office space to handle the flood of photographs.

The winner was Jean Haskell, a Seattle society girl. She may have been too much the all-American girl—she did not make movies her career.

Notwithstanding his participation in such ballyhoo, Quirk believed motion pictures had reached a stage of development that entitled them to be considered a contemporary art. He also believed that apathetic audiences were to blame for bad films. "When you see a bad picture, kick," he wrote. "When you see a sex picture foisted on you under the guise of a picture with a moral, kick. Don't just tell your friends. Tell the man who got your money. Hunt for the owner or manager of the theater and tell him that you feel you have been cheated. Tell him the man who sold him the picture cheated him and that he in turn cheated you. Tell him he isn't going to get any more of your money if he shows inferior pictures. Don't be afraid of hurting his feelings. He wants to know what you think. He doesn't want to show pictures you don't want. He's a busi-nessman."

Quirk claimed that Photoplay had 2 million readers and that its movie reviews saved

them millions of dollars a year.

When, shortly after World War I, Photoplay moved from Chicago to New York, it roosted in offices at 25 West 45th Street. In 1922 Quirk moved to the top floor of 22I West 57th Street, where he got himself a paneled office in the rear overlooking Central Park. Photoplay was still printed by the Hall Co. in Chicago, and publishing and advertising headquarters remained there, with Kathryn Dougherty in charge. There was a west coast office in Los Angeles' Taft Building.

In 1926 Quirk acquired a controlling interest and became the publisher of Photoplay as well as editor.

Also in 1926 he remarried (his first marriage ended in divorce). The second Mrs. Quirk had been May Allison, the movie actress. They lived in the Buckingham Hotel on 57th Street, a few blocks from Quirk's new office.

Between 1928 and 1930, in addition to running Photoplay, Quirk worked for Hearst trying to put some vitality into the Hearstowned Smart Set and McClure's. The depression ended his hopeless task. Hearst continued to invite Quirk to San Simeon, however, to get his advice on Marion Davies' screen career.

Quirk also visited at Pickfair and was one of those who advised Mary Pickford to change her type. When her more sophisticated roles in Lubitsch's Rosita and Marshall Nellan's Dorothy Vernon of Haddon Hall were not appreciated, Miss Pickford asked Quirk to publish in her name an appeal for suggestions as to what she should do. This elicited 20,000 letters. The preponderant majority wanted "America's Sweetheart back."

Photoplay rarely ran pictures of men on its covers, but there was one Hollywood male who fascinated Quirk—Erich von Stroheim. Quirk could never make up his mind about Stroheim and would attack him in one issue and defend him in the next, and his reactions to Greed were typical of this. He said Greed was sordid, brutal, and depressing, but "reeks with good acting and wonderful direction. If only Von Stroheim could get rid of that little mental twist that inspires him to show dead cats instead of morning glories open to the sun, there wouldn't be a director who could surpass him."

Quirk had no such ambivalence about Garbo. He featured her in Photoplay but he eventually said in print that the reason Garbo was silent was she had nothing to say. Whereupon MGM removed its advertising. "If they can afford to keep their advertising out," Quirk said, "Photoplay isn't the magazine I think it is." The advertising was restored. Quirk was equally imperturbable in the face of denunciatory letters from Garbo fans. He believed that "if a magazine doesn't make its readers mad it has no vitality."

Quirk, who had once asked the newspapers of the country if they approved the word "movies," ran a contest in Photoplay to find out what the talkies should be called. He put Harriet Parsons in charge of it—the same Harriet who had written for him at the tender age of 12. The name that won the contest has never been heard since: Phonoplay.

Quirk was generous with writers and one of them, Adele Fletcher, went to him with an idea for an article: Is it beauty, brains, or backbone that makes a star? Quirk told her to expand the idea into three articles for which he would give her \$500 apiece. And he gave her a check for \$1,000 as an advance. "He sent me to my typewriter," says Miss Fletcher, "with more than the \$1,000—with faith in my idea and the desire to live up to his expectations. Today we are more and more aware of the miracles enthusiasm can work. Jim Quirk knew all about that long ago."

Quirk was also generous and loyal to stars he liked. For years after the Fatty Arbuckle scandal he tried to get Arbuckle reestablished as a director. He protected the reputation of Mabel Normand-the first star he had interviewed-during the debacle of her last years. He fretted over the cost to Lon Chaney's health of the extreme lengths to which Chaney went in his make-up for deformed and grotesque roles. When John Gilbert's first talkie was ridiculed because of Gilbert's weak voice, Quirk merely said "in a talkie you miss the vivacity and expressiveness of his eyes," and later praised all of Gilbert's pathetic attempts to regain his public. Quirk supported Valentino in the latter's famous fight with Paramount, and subsequently vainly tried to dissuade Valentino from going "arty." Long after Gloria Swanson ceased to be a boxoffice draw Quirk presented her in Photoplay as a ranking star.

There were others he did not shield. In fact, in the last months of his life Quirk was sued for libel—unsuccessfully—by the mother of Alma Rubens.

Quirk died at 47 in Hollywood on August 1, 1932, from heart failure induced by a stomach disorder. The physician at his deathbed was Louella Parsons' husband, Dr. Harry Martin.

¹ Among other writers who wrote for Photoplay from 1928 to 1932 were Ruth Waterbury, Frances Kish, Ruth Biery, Harry Lang, Katherine Albert, Mark Larkin, Gladys Hall, Sara Hamilton, Leonard Hall, Marquis Busby, Donald Ogden Stewart, Jimmy Fidler, Mark Hellinger, "Sylvia" (the beauty expert), and Rilla Page Palmborg.

Denver Needs Water

EXTENSION OF REMARKS

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. ROGERS of Colorado. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement made by the Honorable Quigg Newton, mayor of the city and county of Denver.

We of the metropolitan area of the city and county of Denver are in desperate need of water. Our future growth and development is limited unless adequate water supply is assured. Adequate relief can be secured if pending legislation is adopted. The situa-

tion is well explained in the statement, which is as follows:

STATEMENT OF QUIGG NEWTON ON BEHALF OF THE CITY AND COUNTY OF DENVER, BEFORE THE SUBCOMMITTEE ON IRRIGATION AND RECLAMATION OF THE COMMITTEE ON IN-TERIOR AND INSULAR AFFAIRS OF THE HOUSE OF REPRESENTATIVES, 84TH CONGRESS, 1ST SESSION, MARCH 1955

My name is Quigg Newton. I am the mayor of the city and county of Denver, Denver owns and operates its own municipal water system upon which over 600,000 people are totally dependent for their water supply. Of that total about 485,000 people reside within its city limits and the additional 115,000 reside in adjacent suburban areas. The population served by Denver's system has grown over 20 percent in the last 5 years; it has fully doubled since

At the present time Denver gets about twothirds of the water it uses from the South Platte River. It has not been able to make any substantial increase in the amount of water it gets from that source for the last because all of the waters of the South Platte have been completely developed for the use of the 825,000 people dependent on it for domestic, agricultural, and industrial water. Denver gets the remain-ing one-third of its present supply through transmountain tunnels from small tributaries of the Colorado River, such as Fraser and Williams Fork. Denver's total water plant investment is fully \$75 million, of which more than one-half represents reservoirs, tunnels, and canals for the diversion and storage of raw water.

Denver has less water than it needs right now. In part, the reason is severe drought for the past 2 years. In part, the shortage comes from our rapid rate of growth. By extension and complete development of its Praser and Williams Fork collection sys-tems—on which work is presently being pressed-Denver can increase its water supply enough to take care of an urbanized area of just about 800,000 inhabitants. We will have that number within the next 8 years unless within that time regional population

trends change radically.

To support our growth beyond that point we have no practicable source of supply other than the Blue River, which is one of the tributaries of the Colorado River within our own State.

Denver has made an appropriation of water from the Blue River and our engineers have designed a tunnel 23 miles in length and 2 large reservoirs to catch this water during flood periods of the year and bring it into our water system. These 3 structures are the things called the Blue River project in section 11 of House bills 2836, 270, and 4488 presently before this committee. Denver has spent to date on this project over 81 This has covered detailed plans, million. rights-of-way, and geological tests and studies. The tunnel part of the project, which will take fully 8 years to complete, is under construction and has been driven over a mile and a half.

The completed project will cost over \$75 million, which Denver now expects to finance without Federal contribution. That project is designed to yield in average years, when fully complete, about 175,000 acre-feet of water per year. That amount of water added to our present sources will supply Denver in a continued growth to about 1,600,000 people. We believe that point may be reached in the next 25 to 40 years.

To make that growth possible and even to protect the number of people who will assuredly be dependent upon our water supply within the next 10 years, Denver needs the enactment by the Congress of the provisions embodied in section 11 of Senate bill 500 and House bills 2836, 270, and 4488. The reason we need this legislation is very simple. The date of Denver's Blue River water appropriation has now been finally established by our supreme court as June 24, 1946. That is a date several years junior to the priority date to which the United States is entitled for its Green Mountain Reservoir and powerplant located on the Blue River some 35 miles downstream from the intake point for

Denver's tunnel.
That United States powerplant is big enough to take all the water of the Blue River, including what Denver needs for continued growth. Denver believes that under the terms of the Colorado River compact and of the Boulder Canvon Project Act, which followed the compact, the use by the United States of this Blue River water whenever that use is solely for generation of electrical power is subservient to Denver's taking of water for municipal uses and cannot interfere with or prevent diversion of water by Denver, even though Denver's priority date is junior to that of the United States. Final decision of that legal point may take years and no matter how it is decided the need of administrative power clearly to solve all possible problems of conflict will still exist. The United States still owns much of the land on which Denver needs to build the 2 reservoirs for its Blue River project, and at 1 of these sites the United States has withdrawn the land as a Federal power site. Direct authority in the executive branch of the Government to sell, for value, the required areas is needed to facilitate the project. Applications for acquisition of some vital items have been pending for many years under the usual routines of permits and land exchanges.

If Denver is to take any flood water from the Blue River and if concurrently the United States is to make maximum lawful use of its reservoir and powerplant, it is very necessary that there be express power in the appropriate agencies of the United States to negotiate with Denver's engineers a workable modus for operation of both projects with minimum interference, including, if that be necessary, relinquishment by the United States of some water which would otherwise be used solely to generate power. Section 11 makes such negotiation possible. Denver needs it

I want to make it very clear that in asking legislation to facilitate this adjustment of Federal power uses to Denver's municipal needs, Denver is not seeking, and under section 11 would not get, any right to interfere with the operation of the Colorado-Big Thompson project at its maximum agricultural and municipal possibilities. Neither is Denver asking to impair in any way the efficient functioning of Green Mountain Reservoir as a supplement to the water rights of other users in western Colorado for agricultural or municipal purposes.

There are many water rights in Colorado on the Colorado River system long senior both to Denver's Blue appropriation and to Green Mountain Reservoir. These must continue to be recognized both by the United States and by Denver. We ask no change in that.

Green Mountain Reservoir has two primary storage functions aside from any utility for generating electricity. One is to catch and store replacement water for the Colorado-Big Thompson project. About one-third the capacity of Green Mountain Reservoir accomplishes this purpose, even under extreme conditions. We seek no right to interfere with that. Green Mountain Reservoir also acts as a supplement to the water supply of the group of canals that serve the Grand Junction area. 1954 was a very dry year. Much less than one-third the capacity of Green Mountain Reservoir proved adequate to give those canals the water they needed for agricultural and municipal purposes even in that drought year. We seek no right to interfere with the continuation of that prac-

What we do ask is to be able to negotiate with the United States for the reservoir sites we need and for an operating modus governing our respective projects, which may invoive relinquishment by the United States of some of its power water. That power water yields the United States only about \$1.35 per acre-foot. Denver expects the cost of development of water for its vital municipal purposes to be so great that every acre-foot it gets from the Blue will represent over \$20.

Denver feels a strong sense of obligation to be able to continue its service of water to the many Federal installations dependent on its water system in the Denver area. Requirements arising from Federal installations alone require about a fifth of the total capacity of the Denver water system.

The Denver area represents nearly half the total population of Colorado. Denver needs water from the winter snows of western Colorado for its continued development.

This involves what is commonly called transmountain diversion. Such a diversion is perfectly lawful. It is the same sort of lawful diversion by which Los Angeles, at a considerable distance from the Colorado River, receives over 4 million acre-feet of Colorado River water per year, as shown in the Senate hearings on this legislation.

Denver is not as large as Los Angeles, but it is second only to Los Angeles in size among the cities dependent upon the Colorado River. Denver asks the chance to complete, at its own expense, a project which when fully developed and operated at capacity will not divert more than 180,000 acre-feet of Colorado River water in any year.

The inclusion of Denver's Blue River project in this legislation was expressly approved by the Colorado Water Conservation Board in resolutions adopted January 14, 1954. That board is the official policymaking body of Colorado in all water matters. That support has never been withdrawn or modified.

EXPANSION POSSIBILITIES OF DENVER	WATER

South Platte: Fully appropriated—no expansion feasible except by extinguishing present profitable uses in agricultural areas of permanent value.

Moffat: System now being completed by:
(a) Full extension of collection system as rapidly as possible.

(b) Completion of 42,000 acre-feet reservoir No. 22 by spring, 1955.

(c) Completion of South Boulder Creek Channel improvements. In an average year these improvements will add 40,000 acre-feet; in a dry year 20,000 acre-feet.

Williams Fork: Studies are rapidly being completed to determine the best method of taking Williams Fork water directly into the city distribution system, present use being through exchanges.

In an average year these improvements will add approximately 20,000 acre-feet, and in a dry year 10,000 acre-feet.

"SECOND CAPITOL OF UNITED STATES" PROBLEMS

1. Within the political limits of Denver there is located \$36,902,000 of tax exempt federally owned property. (1953 city mill levy 39.55 mills; \$145,947.41 lost taxes). One-sixth of Metropolitan Denver's population consists of Federal employees or dependents. Denver supplies these people with all municipal services without the benefit of a corresponding industrial tax base, the most prolific source of revenue to meet the cost of government, or for that matter, any other commensurate tax base.

2. Denver has a split water rate, one rate applying to Denver citizens who have invested almost \$74 million in their water plant, and the other, a higher rate, for outside users. Most of the Federal installations using Denver water are outside Denver's political limits, but enjoy the lower rates.

Subsidy to the Federal Government from this source in 1953 was \$82,433.19.

INDIRECT BENEFIT TO FEDERAL GOVERNMENT FROM DENVER-BUILT BLUE RIVER PROJECT

Diversion of an average of 177,000 acrefeet of water into the Denver water system will result in return flow to the South Platte River through Denver sewers of 140,000 acrefeet of water per year. If additional reservoirs are built to catch and hold this return flow for release during the irrigating season, more than 50,000 acres of what is now dry, unproductive land northeast of Denver can be irrigated. The annual benefits thereby derived, computed in the same manner as those reported for H. R. 236 (Frying Pan-Arkansas project), are as follows:

Direct benefits each yearIndirect benefits each year		
moto!	ene	000

If no additional reservoirs are built, the return flow to the river during the irrigating season, plus some increase in supply for existing reservoirs, could be used beneficially. Under these circumstances, about 21,000 additional acres could be irrigated, and the annual benefits would be:

Direct benefits each yearIndirect benefits each year	\$558,600 964,300
Total	1.522.900

Conference of Jewish Organizations

EXTENSION OF REMARKS

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following program of the Conference of Jewish Organizations, March 5-6, 1955, Shoreham Hotel, Washington, D. C.:

Conference of Jewish Organizations, March 5 and 6, 1955, Shoreham Hotel, Washington, D. C.

Representatives of 20 national Jewish organizations participated in a conference on March 5 and 6 in Washington to consider recent developments in the Near East.

They included representatives of Zionist and non-Zionist organizations, the three major religious bodies-conservative, orthodox, and reform-and the leaders of local Jewish communities in major cities. organizations were: American Jewish Congress, American Trade Union Council Labor Israel, American Zionist Committee for Public Affairs, American Zionist Council, B'nai B'rith, Hadassah, the Women's Zionist Organization of America, Hapoel Hamizrachi Organization of America, Jewish Agency, Jewish Labor Committee, Jewish War Veterans of the United States, Labor Zionist Organization of America, Mizrachi Organization of America, National Community Relations Advisory Council, Progressive Zionist League, Union of American Hebrew Congregations, Union of Orthodox Jewish Congregations, United Synagogue of America, United Zionist Labor Party, Zionist Organization of America, and Zionist-Revisionists.

The declaration of policy adopted by the conference follows:

The representatives of the major American Jewish organizations have gathered in Washington to consult together and recommend action on problems of common interest and mutual concern.

This conference is the first in many years to bring together the representatives of so many organizations of varied viewpoint. The fact of this assembly is in itself a source of gratification, for it is clear evidence of the desire of the vast majority of the Jewish people of the United States to work together in the pursuit of common objectives:

The defense of America and the welfare

of its people;

The spread of freedom and the attainment of peace throughout the world; and

The attainment of peace, development, and security for the people of Israel in their ancestral homeland.

We are dedicated to our country's welfare, and to the preservation of individual freedom and to the strengthening of our democratic institutions. We shall defend and maintain and advance our country's high ideals and moral integrity.

In common with all Americans, we are concerned with the security and welfare of the free and democratic world. The deterioration of international morality, which be-gan after World War II and which has continued in the postwar period, shall not deter or deflect us from the purpose which has sustained democracy through this long period of conflict and which has assured and will eventually attain victory over totalitarianism. We shall continue to support all effective measures by our Government, taken by itself or carried on in concert with other freedom-loving democracies through the instrumentality of the United Nations, to combat the threat of Communist aggression throughout the world and to spread freedom to the four corners of the earth.

The American Jewish community has always been concerned with the welfare of Jews in other lands and has been eager to obtain for them the security and freedom with which we have been blessed in our own beloved country. This concept of aiding others to live in human dignity is consistent with American tradition. One of our proudest chapters in 30 decades of history was the contribution of the American Jewish community to the rebuilding of the land of Israel.

We take pride that our Government has championed the cause of Israel's redemption and that both the administration and the Congress have approved generous assistance to Israel to enable her to receive and absorb the refugees who have sought sanctuary on her shores and to develop her economy.

Through the gift of our own resources, we have helped Israel carry out a historic and humanitarian mission, the rescue and resettlement of 750,000 Jews, the survivors of Nazi brutality, Communist persecution, and Arab hostility.

Hundreds of thousands of Jews live behind the Iron Curtain, helpless witnesses to the grinding destruction of their religion, culture, and civilization by Communist totalitarianism. Tensions and civil strife in north Africa and other parts of the world have exposed Jews to new danger, and many thousands more are now on their way to Israel in escape from their mounting peril. It is our task to maintain our support for Israel so that she may receive and integrate those who may win their way to freedom.

Israel's progress has been due, in large measure, to the economic development assistance and the technical assistance given by our own Government. We hope that our Government will maintain this assistance to guarantee continued progress and to speed the day when Israel becomes self-supporting. independent of external aid.

It is a source of deep anxiety that, 7 years after her establishment, Israel has not yet been afforded peace and the opportunity to live as a normal and free people, undisturbed by the continued threat of war.

This conference meets as tensions in the Near East have once again taken a deplorable toll of life on both sides of the Arab-Israel frontiers. The continuation of these incidents makes it manifest that the existing armistice agreements are inadequate to maintain order and emphasizes the need for renewed efforts to transform the armistice agreements into a durable peace.

We trust that our own Government and other democratic nations in the United Nations will take effective steps to bring about peace in the Near East. Such a peace can best be secured by direct and honorable negotiations, carried on by the Arab States and Israel in fidelity to the purposes and principles of the United Nations.

An Arab-Israel peace is indispensable to all the peoples of the Near East and to the defense of democracy and the free world, for it would inaugurate a new era of cooperation in which all the states of the region could work together to raise and improve levels of living, strengthen and stabilize democratic institutions, and complete regional arrangements for effective defense against subversion and external aggression.

It is our conviction that the friendship of all the peoples of the Near East may be won for democracy if we help them improve their intolerable economic, social, and cultural conditions and if we help them gain the human rights which are now denied to them. Our country should give them the tools to lengthen life and to help them to proficiency in their use.

We fail to understand how the cause of peace, stability, development, and defense is served by the grant of arms to governments which persist in open hostility toward their neighbor. The grant of arms to Arab countries without the requirement that they end their war against Israel will encourage them to believe that an Arab-Israel peace is not imperative, and, however well-intentioned the grant of these arms, in the absence of such a peace, there are no effective guaranties against their reckless misuse in new aggression against Israel.

We call attention to the fact that while arms are being offered to Arab States which waver in their allegiance to democracy, Israel's request for arms has gone unanswered.

If the system of treaties and alliances now under negotiation in the Near East is to strengthen democracy's resistance to subversion and aggression in this region, this objective is not attained by the palpable exclusion of the most stable democracy most dedicated to the cause of democracy's defense. There has been no indication of how Israel is to be integrated into the defense arrangements for the region. Such an exclusion from the fraternity of our defense and security arrangements—particularly in view of the tangible security advantages accruing to the Arab States from their network of treaties and agreements with the Western Powers-increases Israel's vulnerability to attack and deprives the Western World of an impressive security potential.

We believe it just and in the best interests of democracy that our Government should make it clear that Israel will be included in whatever arrangement will be developed for the defense of freedom in the Near East. Such an undertaking would contribute to stability and peace, for it would discourage aggression, encourage reconciliation, and thus promote true regional cooperation.

In summary:

I. We urge our Government to make a determined effort to bring about direct negotiations between Israel and the Arab States, looking toward a peaceful settlement.

II. In the absence of an Arab-Israel peace, we urge the suspension of arms shipments to the Near East, particularly in view of the fact that no arms are being given to Israel.

III. We believe that Israel must be in-

cluded in any defense arrangements for the

region.

IV. We favor continued economic and technical assistance to Israel and the Arab peoples to raise living standards, facilitate the resettlement of refugees, and strengthen and stabilize democratic institutions.

V. We shall continue to promote friendship between our own democracy and the de-

mocracy of Israel.

We believe that this program will contribute constructively to the attainment of peace, development, and defense in the Near East, and thus faithfully serve the highest interests of the security and welfare of the peoples of the United States and the free

Gas Rates Affecting the Cities of Kentucky

EXTENSION OF REMARKS OF

HON. BRENT SPENCE

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I include the following statement issued recently by Hon. John J. Moloney, mayor of Covington, Ky., in regard to the existing controversy as to gas rates affecting the cities of Kentucky:

Utility rates can become involved. Historically, the more involved they become the more they increase. Also the consumers, de-fense is weakened as the complication of rate structures stretches out into unknown fields.

Oil and gas companies have studied rate structures for many years. They have a wealth of experience behind them. There are few things that they do not know about the subject. Originality is one of their chief assets. While experience is a valuable asset, a monopoly is of far greater value than ex-perience. And the oil and gas producers do have a monopoly.

The dictatorships criticize the democracies because they claim their form of government is more efficient. This is quite true, but the efficiency rests in the fact that there is no opposition; if there is the slightest suspicion that opposition is forming it is quickly liquidated. Monopolies are dictatorships.

The present gas-rate case is one of the most startling examples of how a monopoly works; it is estimated that there are 4,000 gas-producing companies in the United States: but about 2 percent of them supply more than 85 percent of all the gas that is sold. This makes them a close-knit organization, monopolizing the industry and holding, if permitted, a dictatorship over the consumer.

On the consumer's side of the case, such a monopoly is hardly possible. There are 20 million gas consumers in this country, whose interest in the gas rate is only aroused when the rate is increased. He doesn't know why he must pay more and if he inquires, such a deluge of exhibits, figures, and charts are showered upon him that he wishes he had not asked in the first place. This is because rate structures have become involved; the monopoly has made them that way. He usually gives up by saying that he supposes everyone is entitled to protect his investment.

But what of this investment? The 20 million consumers have over \$3 billion invested in gas-burning equipment. The gas producing, carrying, and supplying companies, in fact the entire industry, have little more than half of that amount as a total investment. In a democracy it would seem that the greatest number of people, with the greatest amount of money invested, should be protected first. The monopoly is trying to bring about conditions whereby they will be protected and the consumer must pay and pay to satisfy their greed which will never be quite as great 1 year as it will the following year.

And what is the relationship of the protection of the consumer against the producer? The consumer's investment is strictly an out-of-pocket-expense, for which he is guaranteed nothing. He pays for it with his own money and many continue to pay for long periods of time through finance companies. (The finance companies charges are not part of the \$3 billion investment.) The producer, on the other hand, is allowed a 27½-percent depletion charge. This means that out of each million dollars he collects he has \$275,000 free of taxation. He is also given the same exemption for explora-

tory expenses.

The theory behind the depletion allowance is that a well will not produce forever. is quite true they will not go on indefinitely producing large quantities of gas or oil, hence the depletion charge. The owner is given an opportunity to lay a nest egg aside. it need not be an ostrich egg. If a well will yield a million dollars a year for 5 or 10 years, the owner will have better than a quarter of a million dollars tax free for each year and the remainder subject to no more than normal taxation. The allowance, as it stands, practically says that each company or individual who owns an oil or gas well, must by some unaccountable reasoning become a millionaire because the life of his income from this source is limited. The earning period of an athlete's life as an athlete is also limited but he is given no such depletion allowance.

But the depletion allowance is designed to make a few multimillionaires in the fields of the Southwest; the remainder of the industry has other means of raising their income at the expense of the consumer. This can be done with or without increasing the unit wholesale rate. The complicated maze of pipelines leading to the consumers, undermany companies of various names, provides ample opportunity to raise costs at as great a distance from the consumer as possible. To understand this, it is best to trace the gas as it follows its tangled way from the wells in the Southwest to the consumer.

Gas, at the well-head, cost 1%0 cents per thousand cubic feet to produce. At the farthest point from the market, the cost to the first pipeline is 81%00 cents per thousand cubic feet. At the wells closest to the consumer the unit price usually rises on the basis of the fact that it would cost to pump from farther points so this is added so the gas producers gets the advantage of geography. The fact that it does not have to be pumped and thus the consumer could be saved this cost does not enter into it. It is strictly a seller's market and his every move is to protect himself against the consumer and avoid regulation as much as possible.

The first pipeline company usually carries the gas to a processing company. It is the function of the processing company to take moisture and other materials from the gas. Some of these other materials, while they do not detract from the burning or heat-producing qualities of the gas are marketable, but not to any great extent. In the overall it does add some expense to the production chain.

It may or may not be significant that the processing companies are not subject to any

regulation by either Federal or local regulatory bodies. Their charge is strictly their own business, although they do form a definite function in the production and distribution lines of a vital utility.

From the processing company to the consumer the mystery deepens. There is a maze of pipelines all over the South, moving ever northward and eastward, reaching out to pick up markets in thickly populated centers as they go. Most of these lines are in some way interlocked. Each has a name of an owner company.

The gas itself cannot be identified. It can move over any of these lines to any point beyond a line from any source. There can be little doubt that there are times when the draw on one line is heavier than on other lines. At such times the system proves valuable in that it is flexible. The supply for the lines that are heavily used can be drawn from the lines where the demand is lighter. But there is no way for the consumer, or the retail supplier to know just what lines his gas actually follows.

It is not known how closely the lines are united or the means whereby they are bound together. There does seem to be a very close working agreement between them. One thing is apparent from the beginning: they all follow the same pattern.

There are many things common to all carriers. Facilities are needed that the nature of the industry require. This is not peculiar to any one company but necessary in greater or lesser degrees to all of the lines. Principal among these needs is storage facilities. Much is made of such a requirement and there can be little doubt that such needs are expensive to install and require continuing charges for operation and maintenance. They are usually installed in out-of-way places, where land values are rather low as are taxes, because they are far removed from urban centers. This peculiarity may add some to continuing costs, but certainly reduces installation expense.

Storage is nothing peculiar to the gas industry, but is something necessary to nearly all types of commercial or industrial enterprise. Certainly the retail grocer must be able to carry more than one of each item on his shelves because the convenience of his patrons make it mandatory. He theremust have ample space for storage which adds to his costs. His wholesaler must have considerable warehouse space, in most cases on ground that is very costly because they are usually located in thickly populated areas subject to high taxation. This also adds to costs but they make no special issue of the fact because it is generally accepted and recognized costs. Both the wholesaler and retailer, in the instance of the grocery business, must expand these storage facilities as their volume of business increases. There should be nothing peculiar about the gas industry being subject to the same commercial axiom.

Yet much is made of these storage facilities in all of the charts and exhibits presented in supporting the tariffs they propose for acceptance by the regulatory bodies of the Nation.

There can be little doubt that such facilities add to the assets of the companies and increase their value. Such values add to the total wealth of the company and on such they are entitled to a fair return on investment. But this is not what they seek, as an analysis of their rate structure will demonstrate.

Returning to the physical structure of the industry and the entire system as it serves this area and the cities to the north and east of us, it becomes apparent that any increase either at the wellheads themselves or any point beyond the wells would necessarily increase cost to carriers and suppliers that follow in natural or unnatural sequence.

A natural sequence would exist if the lines followed each other in direct sequence, but this is not necessarily the case. Conceivably the rate could be raised by a small pipeline in northwest Alabama which, in turn, would increase rates on all of the lines north and east of this point. The gas may even move through this line and, no doubt, in some instances would. But the source of the cost is so far removed from the consumer that it becomes a difficult matter for those representing him to learn just who is increasing his rate. This is what is meant when the cities say that they find themselves confronted with a phantom foe.

By divorcing themselves, either partially or wholly from retail outlets, monopolies can make as much money selling wholesale as they could from both wholesale and retail. This has the added advantage of relieving

them of local resentment.

When the Union Light, Heat & Power Co., and the Cincinnati Gas & Electric Co. publish notices of their intent to raise these rates they were naturally asked, Why? Their reply was that their supplier, Kentucky Central Fuel Co., had raised their rates; Kentucky Central's reply was that their supplier, United Fuel, had raised their rate. Kentucky Central and United Fuel are both part of the vast Columbia system, Columbia's reply was that their suppliers, Tennessee Pipeline and Gulf Interstate had raised their costs.

And so it continues, through devious ways, to confuse the consumer and make the cities who must represent the consumers strain their every resource in their efforts to keep

rates fair and equitable.

But in the quest for the head of the trouble it was discovered that something far more vicious than rate increases had been added to the rate structure. This is the contract-demand clause. It is something new and in this we must recognize all of the experience that the gas monopoly has in rate structures as well as give due credit for originality.

The contract demand brings to American commerce a different type of rate structure as well as a new method of capital financing. Its novelty must be admired but its purpose deserves no plaudits as it certainly contains no designs on public interest or consumers consideration. Because of its viciousness and novelty it deserves a separate study within itself.

Carriers of all types of commodities are entitled to some protection on their investment in their carrying units. Their tariffs usually set up this protection in some form of minimum to assure a profit on the full use of the container. A truck or freight car is designed to carry a given amount of weight. Should a shipper choose to utilize the full capacity of these shipping containers, but load it with a commodity that by its nature is comparatively light, his tariffs will contain a rate that is considered fair for the commodity to be shipped and a minimum weight to be used as the basis for the bill should the commodity weigh less than an amount that would make it economically sound to allow its use for the period of the shipment. When the shipper has no use for the container, the carrier cannot expect to collect from him.

The contract-demand clause is based on the minimum charge commonly allowed carries of all commodities. But it goes far beyond the actual purpose of the minimum allowed carriers to protect investment as to make it more a compulsory investment item in which the investor is not entitled to a return as it is a carrier's protective safeguard.

The basis of the contract demand is that the highest day's use of 1 year provides the minimum use for all days' use of the following year. They have allowed two 5-percent easements under certain conditions,

which in effect means that a retailer in 1 given year must pay the supplying line for at least 90 percent as much gas each day as he paid for when he needed the most gas

for 1 day in the previous year.

As gas is used primarily as a heating medium, it is certain that more gas will be consumed in the winter than in the summer months. Summer months use being confined to water heating and cooking while space heating, a considerably larger item, is added in the winter months. It therefore follows that less gas will be consumed in July than the cold days of January or February. Yet under the contract-demand clause the retailer knows that he will have to pay for at least 90 percent of as much gas on any summer day as he did on the coldest day of the previous year.

Under these conditions the rate becomes incidental so far as the amount of money that the wholesaler will collect is concerned because he has established a minimum so high that his income is no longer effected by warm weather, but is set by the coldest weather. The retailer has no choice other than to adjust his rates to meet this in-

creased cost.

Of course, they must in some way try to justify this exorbitant minimum. The gas and oil producers claim that certain storage facilities are necessary to meet demands of cold-weather consumption, and use this as the basis for this unusual minimum.

Storage facilities are necessary and desirable if they are to be able to assure their consumers an ample supply of gas when needed. The installation of these facilities is expensive and certain expenditures are necessary to their maintenance. But this is not peculiar to the gas or oil companies. It has already been established that nearly all commercial enterprises must be provided with storage facilities.

In establishing these facilities they also add to the value of their properties, which is nothing more than raising the capital assets of the company. On the basis of these property or capital assets they are entitled to a fair return on their investment. As the assets increase so should the investment.

Under most such conditions a company would issue more common stock to raise the money, or have bonds or some other form of guaranteed security issued, in which some of the current profits would be sacrificed to pay for the increased assets. The former method would stretch the profits over more shareholders and the latter would assure a greater income per shareholder after the obligations issued against the profits were retired.

But the contract demand immediately strikes for quick amortization; in fact so quick that the consumer, through the increased rates forced on the retailer, pays for the increased storage facilities. The consumer therefore pays for the added assets of the gas-carrying company, and in effect donates it to the carrier so that he (the carrier) can ask for increased rates as a fair return on an investment that he did not make.

The real evil in this procedure is that the consumer makes the investment, but the gas-carrying company receives the return on the investment and the consumer must pay the bill. He not only in this way increases his present bill, but all future charges, because the carrying company will show this as increased investment on which he is entitled to a return.

We must give due credit for originality in this proposal, but we cannot overlook its evils. For it is nothing more than a plan to socialize an investment to form an oligarchy. Historically, we know their method of operation, and in view of proposed legislation to further supplement the plan, it can only result in the most despotic form of dictatorship over a vital utility.

Permanent Peace in the Middle East

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. ROOSEVELT. Mr. Speaker, over a period of the last month I have had a most interesting and informative exchange of correspondence with the Department of State. The matters of principle which are involved and their effects on the possibilities for the development of permanent peace in the Middle East are of such importance that I believe my colleagues will be glad to give it their attention. I am, therefore, inserting under unanimous consent three items-first, my letter to the Secretary of State: second, the reply from the Honorable Thruston B. Morton, Assistant Secretary of State; third, my reply to him. In order to bring them within the limitations of material allowed in the Appendix, I have divided them into two separate insertions on subsequent legislative days-i. e., first, the letter to the Secretary of State; and, second, Mr. Morton's answer and my reply.

FEBRUARY 4, 1955.

The honorable the SECRETARY OF STATE,

Washington, D. C.

My Dear Mr. Secretary: May I venture to write to you in connection with recent developments in the Middle East.

Like many of my colleagues, I am particularly interested in the attainment of a peaceful settlement in that troubled region. Like most Americans, I was very proud that our country was able to play an important part in the establishment and the growth of the State of Israel. It is one of the significant achievements of the last decade. I am fully aware of your deep interest in the difficult problems in this area, and I am familiar not only with your own personal contribution in the establishment of Israel but also with your efforts to strengthen the entire region.

The issue which dictates this letter is the news that we have now sent military equipment to Iraq. I had been pleased to hear several weeks ago that the administration was evaluating its whole policy in the Near East. I had been looking forward, therefore, to the measures which the administration planned to take to reassure both Israel and the Arabs against any renewal of hostilities. Accordingly, it had been my hope that, pending some revision in the attitude of the Arab situation or the development of some positive program to promote an Arab-Israel reconciliation, we would have refrained from sending arms to the Arab countries.

I am sure that it is not necessary for me to review all the arguments against the supply of arms to the Arab countries. But I am firmly convinced that this policy will neither strengthen our defenses in the area nor will it win us new friends. On the contrary, I have felt that the program will weaken our defenses because it will make peace more difficult to attain; it will certainly tend to weaken the one country that is firmly alined with the West; it will raise false hopes among Arab leaders; and, in the end, it will earn us more enemies than friends.

If we give arms without requiring that there is substantial progress toward a real and lasting peace between Iraq and Israel as a condition of our support, we would be failing to utilize one of the few remaining instruments for peace at our disposal. Moreover, if we pour arms into the Arab countries, we shall whet unhealthy appeties. No matter how much we give, we shall reap a harvest of disappointment. In this connection, I call your attention to the interesting dispatch from Baghdad which appeared in the New York Times on January 14. I quote:

"Considerable disappointment was expressed here when the first United States shipment, said to have been composed exclusively of vehicles and engineer equipment, arrived as Basra December 19. Opposition deputies in Parliament wanted to know why heavy weapons had not been delivered and they charged that the United States program had been cut to \$25 million a year.

"The Government replied that United States material would be initially devoted to increasing the mobility and improving the communications of Iraq's forces. Negotiations on larger items are now in progress, it was said."

This suggests that our experience may not be dissimilar from that of the British who learned to their bitter disappointment that the gift of their assistance and weapons did not necessarily win them friendship.

I do not imply that our policy indicates any lack of friendship or good will for Israel. But the course we pursue may have the appearance of coolness toward Israel and may be interpreted in the Arab world in a manner opposed to the best interest of peace and cooperation. Under the circumstances, it is my hope that the administration will soon come forward with a clear program which will, without question, clarify that their goal in the Middle East is the friendship and reconciliation of all the peoples there. To attain that goal, it seems to me to be imperative that we suspend further arms shipments until the Arab States have agreed to the machinery of negotiation with Israel and to call off their present boycotts and blockades. Unhappily, I see no indication of this today. Indeed, the Egyptian reaction to our criticism of the Suez blockade indicates that Egypt remains firm in its hostility toward Israel and has little or no inclination toward a program of peace. (I hasten to add that it was most gratifying to see that our United Nations delegation spoke so definitely on this issue during the recent discussion at the United Nations Security Council.)

I am keenly aware of the strategic importance of Iraq, of their inclination to be friendly with the other objectives of the United States and of the necessity of our development of this friendship. I hope that we are not compelled to go forward with further arms shipments to Iraq, but if we are for some unknown reason to me, I would like to see an expression from the administration to the effect that Israel is being included in our regional defense planning. It is difficult to see how we can justify the exclusion of the Israel fighting forces from our program.

Above all else, however, it seems to me that the time has come for some assurances that none of the arms shipped to any country in the Near East will be used in acts of aggression against any other country with which we have relations, and most certainly we need the assurance that these arms will never be used except for a strictly defensive To this date I have seen nothing from Baghdad which expressly assures the Western World that our arms will not be used against Israel. On the other hand, I have seen belligerent statements from Premier Faris el Khoury of Syria summoning the Arabs to accept our arms for use against Israel. The alarm thus caused is, therefore, substantial and real.

The kind of guaranties which could be meaningful or feasible under these circumstances can best, of course, come from the studies of the State Department made on this problem. If, however, a positive pro-

gram and statement could be made that any aggressive military action by any country of the Near East to whom we have given military or economic aid and assistance would immediately justify our active intervention to prevent its spread, it would, I believe, receive widespread congressional and nationwide support. I am certain that many of my colleagues, as well as our constituents, share our deep apprehensions on this issue.

I would appreciate hearing from you.
With assurance of my high respect and
desire to be of constructive assistance, I am,
Very sincerely,

JAMES ROOSEVELT.

House Resolution 164

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. TUMULTY. Mr. Speaker, on March 2 I introduced House Resolution 164, the purpose of which was to have the Weather Bureau to desist from the trivial handling of hurricanes. The policy at present is to name hurricanes after feminine names. I include herewith an editorial entitled "Hurricanes Not Funny," which appeared in the March 18, 1955, issue of the Standard-Times, New Bedford, Mass., which is very much to the point. The editorial follows:

HURRICANES NOT FUNNY

Representative Tumulty, of New Jersey, along with millions of other eastern-seaboard inhabitants, knows from experience that hurricanes are deadly serious business. Tumulty is determined to do something about the Weather Bureau's inappropriate use of feminine names to designate tropical storms.

The Congressman will seek House approval of a resolution requesting the Weather Bureau to abandon its present system of naming hurricanes and to replace it with some form of designation which would convey to the public the seriousness of these death-dealing storms. His resolution would not have the force of law, but Mr. TUMULTY believes House adoption of the proposal by a large majority would be sufficiently persuasive to spur the Weather Bureau to remedial action.

The first hurricane of 1955, which formed in the West Indies in January and remained at sea, was named Alice. The next one will be called Brenda, followed by Connie, Diane, Edith, and so on to Zelda, although there seldom are more than 10 hurricanes a year.

As Congressman Tumulty said, these names tend "to treat a serious matter frivolously and may even add to the deaths, injuries, and destruction" caused by hurricanes by unconsciously encouraging the public to regard them lightly. He attributed the use of feminine names to a "poor sense of humor" on the part of weather officials. "After years of dealing with disasters," Tumulty said, "the Bureau may think they are funny. But they aren't funny to the people who have to go through them."

New Englanders, recalling the hurricanes of 1954 and previous years, will echo Mr. Tumulit's sentiments, as will residents of other States who know firsthand the terror and havoc that result when nature goes on a rampage.

Hurricanes are not to be treated lightly and they should not bear lighthearted names.

It is to be hoped Congressmen from all sections of the country will support Representative Tumultry's resolution and the Weather Bureau will take steps promptly to rectify its distasteful practice.

ment loan insurance covenant not to discriminate against minorities in the sale and rental of housing.

It short, the colored homeseeker must no longer be required to "pay the hangman's fee to have his neck broken for a crime he did not commit."

Federal Housing Program—This Is a Serious Charge

EXTENSION OF REMARKS

HON, CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. DIGGS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Washington edition of the Afro-American, dated March 18, 1955, which graphically points up how the Federal Government is a party to discrimination against non-whites in the sale and rental of housing. Information is continually being brought to my office which substantiates this claim. No true American can evaluate these facts without becoming alarmed about the inaction of the Veterans' Administration and Federal Housing Administration in developing a policy which will guarantee protection of minority group members in this field. In view of the deep social significance involved, our patience has become threadbare.

The editorial follows:

THIS IS A SERIOUS CHARGE

A serious charge was leveled at the Federal Government and its agencies during the meeting of the National Committee Against Discrimination in Housing held here on Monday.

Loren Miller, a Los Angeles attorney, an expert on racial segregation in housing, accused the Government and its agencies of sanctioning and giving support to segregated housing.

"Government agencies which are giants in the regulation of everything from interest rates to floor covering become quaking pygmies when they are asked to use their power to curb discriminatory practices," Mr. Miller asserted.

He described the widely heralded 1949 nondiscrimination policy of the Federal Housing Administration as more a myth than fact

It was pointed out that while borrowers of FHA money are prohibited from practicing racial discrimination, the builders are left free to discriminate in sale and rental of such housing.

As a result, only 2 percent of housing units built with FHA-insured loans were open to nonwhite occupacy as late as 1950.

This undemocratic and unjust practice has exacted a tremendous dollar and cent toll from colored homeseekers.

More important, however, is the fact that racial residential segregation can practically nullify the effect of the Supreme Court's 1954 school decision.

If the Government is serious about the promise of equality for all, FHA must discontinue its sanctioning and support of segregated housing.

It should immediately adopt a policy which would require every applicant for Govern-

Secretary Humphrey's Blooper—A Billion-Dollar Blunder

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. PRICE. Mr. Speaker, the St. Louis Post-Dispatch said editorially a few days ago that Secretary of the Treasury Humphrey appears to have contracted a case of the affliction that has bothered some other officeholders before him—a peculiar infirmity or virus under the spell of which Humphrey has become obsessed with the idea that he cannot afford to admit having made a mistake.

That "bug" showed up in the Secretary when he testified before the House Committee on Ways and Means on what some committee members have called Humphrey's billion-dollar blooper.

The committee was concerned about a loophole in the Eisenhower 1954 tax law, under which corporations can reduce their tax liability substantially by taking double deductions for certain business expenses.

Humphrey admitted to the committee that the loophole exists and he now proposes amendment of the law to remove it.

However, the Secretary attempted to pass the buck to Congress in fixing the responsibility for the loophole.

"You gentlemen passed the law, we didn't," Mr. Humphrey told the committee. "If you made a mistake, I'm sorry."

An ungracious remark from an Eisenhower Cabinet member, if I have ever heard one, and especially coming from Mr. Humphrey, who quickly took credit for the Eisenhower administration on excise-tax reductions last year which he and President Eisenhower actually opposed when they were under consideration in committee, after being proposed by Democratic members.

Mr. Humphrey's strange contortions places him in the position of taking all credit for things that turn out well and disclaiming all mistakes. For the past year Humphrey has been hailing the Republican tax law of 1954 as the greatest work of tax architecture in history. His tax experts labored for months over the bill. They should have been aware of the billion-dollar bloopers that were in it.

And, of course, the committee had responsibility. Its tax experts also should have caught the loophole. But need I remind anyone that the Eisenhower tax law was completely in Republican hands, both from the department level to the committee level? From this we can fairly conclude that whether it was Hum-

phrey's billion-dollar blooper, or the committee's billion-dollar blooper, it most certainly was a Republican and an Eisenhower administration billion-dollar blooper.

The billion dollars, of course, went to big business.

A Trinity for St. Patrick's Day; a Laugh, a Tear, and a Prayer

EXTENSION OF REMARKS

HON. JAMES C. MURRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. MURRAY of Illinois. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an address delivered on March 17, St. Patrick's Day, at the Mayflower Hotel, before the Friendly Sons of St. Patrick, Washington, D. C., by the Honorable T. James Tumulty, Representative from New Jersey. Mr. Tumulty's address was eloquent, thoughtful, and moving. Mr. Tumulty was with Chief Justice Earl Warren, guests of the Friendly Sons.

The address follows:

St. Patrick's Day is a holy day but a happy day. It is a day which can be described by three words: "A laugh, a tear, and a prayer." Certainly we must laugh when we see how everyone wants to get into the act, a la Durante. The English try to crash the party by claiming that early Christianity in Ireland was the work of the English saints. The French, not just because they have a brandy by the name of Hennessy, claim Patrick was born in France. The Italians claim Patrick was an Italian. The Israelites climbed on the bandwagon by pointing to Douglas Hyde's Literary History of Ireland where they tell the story of Gael Glas who was wandering in Palestine years before the Irish discovered Ireland. Gael, the leader of the Irish, was bitten by a snake and cured by Aaron, the brother of Moses, who predicted the Irish would find their isle of destiny on the rim of the world. When later the Irish did discover and land on Ireland, they gave it among other names the name of Innisfail, the Isle of Destiny. The Chinese—the free Chinese—have a St. Patrick and they erected a pagoda to him, except that their St. Patrick was a soldier of fortune named, "Fighting Pat McCarthy," who used to direct the old empire's armies. The Spanish claim the right to tango on Paddy's Day because the Irish traveled through Spain in their search for Ireland and the armada was wrecked on Irish shores. The Danes, Finns, Norwegians, Normans, etc., etc., all lived at one time or another in Ireland. So it is, indeed, laughable to see the Irish celebrate a day in which they have so little part originally and a day named after saints, neither of whom were

It's a day when the Irish outboast the Russians in claiming for themselves all the great inventions and discoveries of the world. Sure I had direct from my Irish grandmother that the first one to discover America was an Irishman. In fact, there are two claimants for the honor. The first none other than St. Brendan, the busy voyager, whom I am going to nominate for the patron saint of the Committee on Merchant Marine and Fisheries sailed for Greenland, and when he arrived in America, introduced bingo to the North American Indians who played it with

beads and later called it wampum—the Gallic word for bingo.

Also, never forget Willie Gallagher from Cork who sailed with Columbus and was the 7th son of a 7th son and so he had preternatural gifts and could see through the dark dead of night better than a cat. Willie was in the prow of the Santa Maria on the great voyage of discovery when one night after Columbus had left the bridge to go below and get some sleep, leaving Willie at the prow piercing the dark night with cat's eyes, when sure enough didn't Willie spy land and didn't he "Lep" over the prow, swim ashore and become the first man to set foot on American soil and if you don't believe me there is to this day in the Dublin Museum his salty shorts and sneakers, worn on that historic occasion.

Another historic landmark occurred on the occasion of the settling upon the 17th as the true date for St. Patrick's day. As you know, the day we celebrate is the day of the death of St. Patrick, that is the second St. Patrick (Patrick of Britain). At one time there was an argument over the date. St. Patrick of Britain died near midnight on the 8th or 9th of March according to the old calendar. So when they, in the long ago, started to celebrate, some celebrated the day on the 8th, some on the 9th, and some both days. Things got confusing, not to say exhausting, so a grand meeting was called on the high hill of Tara, as my grandmother told me, to decide whether it was the 8th or 9th. Well, they argued and argued till my great, great, great, great, great aunt Molly Griffin—the first suffragette in history—rose up to say, "Quiet, the whole lot of yez. Add the two dates to-gether and celebrate it on the 17th and all will be right," which they promptly did and it has been so celebrated to this day.

Then we all know, and it can be revealed for the first time, that St. Patrick discovered the secret of the atom and the H-bombs. Patrick discovered the secret and was experimenting with the bomb to see if he could use it for good when it exploded in a remote part of Ireland and scared all the living creatures off the island. St. Patrick was saved by a miracle but the causeway leading to Scotland now known as the Giants Causeway, was destroyed and all the snakes were driven out of Ireland and a hurricane ensued. Thus the date in history has been placed as the year of the big wind or the year when Paddy chased the snakes out of Ireland. St. Patrick, because of the awesome nature of the H-bomb, placed a formula into a bottle and threw it into the sea where it floated for thousands of years until it was picked up by Einstein while walking on the beach at Long Branch, N. J. Since Einstein recognized Gaelic as a relative language to Hebrew he had no difficulty translating the formula and perfecting the H-bomb as we have it today. All the foreging I have on the authority of my grandmother.

Laugh as we do with these stories of the past, laughter is never very far from tears. The tear we should drop today is for a man who symbolizes the greatness and heroism of the men called to the greatest vocation the world has known, the priesthood or ministry of God. I am not speaking of the Patrick after whom the day we celebrate is named. I now mean the forgotten Patrick whose mission, through no fault of his own, did not succeed. In 431 the Patrick who landed in Ireland was Patricius Palladius. He has been called by some the elder Patrick. He and his companions were of Fallic and Italian origin, and they brought Ireland into direct contact with the Continent. There is some dispute as to how long the forgotten Patrick labored in Ireland.

The Two Patricks, Dublin Institute for Advanced Studies, 1942, Thomas F. O'Rahilly declares that he labored for 30 years before he died.

The Review of Politics, July 1948, Ludwig Bieler, however, states that the mission of Patricius Palladius was short lived and says that "Perhaps the truth about his death is contained in a faint and sporadic tradition to the effect that he suffered martyrdom." It is typical of the "Irish luck," as O'Rahilly 'Ireland has two Patricks, either of whom could be considered its national apostle. The first and forgotten Patrick brought, as did the traditional Patrick, the faith to Ireland, but in addition, the culture of the Continent. Too bad for him, cirthwarted his mission brought it to an end, erasing his name from history. The second Patrick from Britain-Patrick the Great-established for all time Christianity in Ireland.

Although Patricius Palladius was the first bishop of Ireland, nevertheless, "The Lord gave Ireland not to Palladius but to Patrick, because nobody can take from the world that which is not given him from above."

At any rate, the Patrick who failed is the subject of my remarks tonight, because he represents so many thousands of priests and clergymen whose missions are doomed to failure because of the rising tide of atheism. Thousands of modern Patricks like the forgotten Palladius are today being harassed and hunted from place to place all over the world. Clergymen of all sects, like Cardinal Mindszenty and Lutheran Bishop Ordass are languishing in prison. Thousands of them are marked men, and today on the holy day we pause before the tomb of the unknown Patrick, not only to remember him but to think of the persecuted men of God, these fugitive apostles of charity, of the hunted men of heaven, who today in obscurity forgotten by the free world are suffering in Red jails. For them and for the forgotten Patrick let our tears drop and crystalize as they flow and be carried as a rosary of remembrance for the suffering ministers of God of all sects. For them we can but give a prayer which completes the trinity of my talk tonight. You will remember I said St. Patrick's Day could be described with three words-a laugh, a tear, and now a prayer. The prayer I offer tonight is the prayer of the great St. Patrick, the traditional St. Patrick whose mission was successful and who gloriously and miraculously was preserved from all harm.

Patrick made this hymn It was made in the time of Loegaire son of Niall. The cause of its composition, however, was to protect him and his monks against deadly enemics that lay in wait for the clerics. And this is a breastplate of faith for the protection of body and soul against devils, men, and vices. When anyone shall repeat it everyday with diligent intentness on God, devils shall not dare face him, it shall be a protection to him against every poison and envy, it shall be a defense to him against sudden death, it shall be a breastplate to his soul after his death. Patrick sang this hymn when mabuscades were laid against his coming by Loegaire, that he might not go to Tara to sow the faith. And then it happened, it appeared before those lying in ambush that they (Patrick and his monks) were wild deer, with a fawn (Benen) following them, and its name is Deer Cry of Patrick's Breastplate.

"I arise today
Through the strength of Heaven:
Light of sun,
Brilliance of moon,
Splendor of fire,
Speed of light,
Swiftness of wind,
Depth of sea,
Stability of earth,
Firmness of rock,

"I arise today
Through God's strength to pilot me:
God's might to uphold me,

God's wisdom to guide me,
God's eye to look before me,
God's ear to hear for me,
God's word to speak for me,
God's hand to guard me,
God's way to lie before me,
God's shield to protect me,
God's host to secure me—
Against snares of devils,
Against temptations of vices,
Against inclinations (?) of nath
Against everyone who shall wish me ill
Afar and anear,
Alone and in a crowd.

"I summon today all these powers between me (and these evils)—

me (and these evils)—
Against every cruel and merciless power
that may oppose me body and soul,
Against incantations of false prophets,
Against black laws of heatherry,
Against false laws of heretics,
Against craft of idolatry,

Against spells of women and smiths and wizards,

Against every knowledge—that endangers man's body and soul.

"Christ to protect me today
Against poison, against burning,
Against drowning, against wounding,
So that there may come abundance of
reward.

Christ with me, Christ before me, Christ behind me.

Christ in me, Christ beneath me, Christ above me,

Christ on my right, Christ on my left, Christ where I lie, Christ where I sit, Christ where I arise,

Christ in the heart of every man who thinks of me. Christ in the mouth of every man who

speaks of me.

Christ in every eve that sees me.

Christ in every eye that sees me, Christ in every ear that hears me,

"I arise today

Through a mighty strength, the invocation of the Trinity.

Through belief in the Threeness, Through confession of the Oneness Toward the Creator.

"Salvation is of the Lord,
Salvation is of the Lord,
Salvation is of Christ,
May Thy salvation, O Lord, be ever with us."

So on this holy day we celebrate, I offer you a toast to the suffering and forgotten priests and clergymen of the world now enduring their Gethsemane. Wherever they may be, may God protect them, may God preserve them, and may God bless them.

Imports of Canned Ham From Communist-Dominated Countries

EXTENSION OF REMARKS

HON. PHIL WEAVER HON. ROBERT D. HARRISON HON. JACKSON B. CHASE HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following resolution:

"Legislative Resolution 14
"Whereas farmers are watching their hogs sink to new price lows; and "Whereas imports of canned hams imported from Communist Poland increased 55 percent over January 1954, or from 2,339,000 pounds to 3,627,000 pounds; and

"Whereas imports from the Red-dominated country during 1954 ran up to almost 20 million pounds; and

"Whereas it has been revealed that further tariff cuts on canned hams are under consideration: Now, therefore, be it

"Resolved by the members of the Nebraska Legislature in 67th session assembled:

"1. That the Congress of the United States be urged to investigate the importing of canned ham from Communist-dominated countries and take immediate action that such imports be stopped.

"2. That copies of this resolution be transmitted by the clerk of the legislature to the Vice President of the United States as President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each Member from Nebraska in the Senate of the United States and in the House of Representatives of the United States.

"C. J. MANNER,
"President of the Legislature."

I, Hugo F. Srb, hereby certify that the above is a true and correct copy of legislative resolution 14, which was passed by the Legislature of Nebraska in 67th regular session on the 17th day of March, 1985.

Hugo F. SRB, Clerk of the Legislature.

Need for Pay Increase for Classified Federal Employees

EXTENSION OF REMARKS

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. BALDWIN. Mr. Speaker, with your permission, I would like to insert in the Congressional Record the following statement which I made before the House Post Office and Civil Service Committee on Friday morning, March 18, relative to the need for a substantial pay increase for classified Federal employees:

Mr. Chairman, I am appearing before the House Post Office and Civil Service Committee in behalf of a substantial increase in the pay scales of the classified Federal employees.

In my district in California there are four large Federal installations. These are: Mare Island Naval Yard, with approximately 11,500 Federal employees; Benicia Arsenal, with over 3,000 Federal employees; Travis Air Force Base, with approximately 1,000 Federal civilian employees; and Port Chicago Naval Magazine, with approximately 1,000 Federal civilian employees. In addition, many other Federal workers live in my district who are employed at Federal installations in Alameda County and in San Francisco.

I have discussed the necessity of adequate compensation for Government civilian employees at length with the commanding officers of Mare Island Naval Yard and Benicia Arsenal. These employees have rendered a tremendous service to our Government over the past years. We have called upon them for literally heroic work at times during periods of crisis, such as the urgent days of World War II and the Korean war. They have always responded and done a remark-

ably effective job. The work of the Federal employees at these military installations has been outstanding.

At the present time, we are in danger of losing our most competent employees because of the fact that their pay scales are not comparable with the pay scales of comparable positions in private industry. This would be a tremendous loss to the efficiency of the Federal service. It also would have an adverse effect on the appeal of the Federal service to new young people who are considering it as a career.

For these reasons, it is most essential, in my opinion, that this session of Congress grant a substantial increase in pay to our Federal classified employees. I believe that this increase should be at least comparable in amount to the increase that has been proposed for Federal Post Office workers. In other words, if the Congress adopts an increase for Federal postal workers of somewhere between 7½ and 10 percent, as now appears likely, it would appear essential that an increase of at least comparable proportions be granted to Federal classified employees.

A New Way To Combat Communism

EXTENSION OF REMARKS

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter from Mr. R. D. Russell, of Seattle, Wash. Mr. Russell, in writing of the proposed visit of the Russian farmers to this country, makes a highly interesting comment on the history of high rigid price supports:

Bringing these Russian farmers to our country to inspect our farming program is one of the most constructive steps ever conceived to combat communism.

If the Russians are shown the true picture about our farm program and then institute it into their country, not only will it create overwhelming deficit spending in the Kremlin but it will tie up their boats in such a useless manner that any idea about war would be asinine. Their airplane hangars would be so full of grain the Air Force would be stifled. Guns, tanks, planes, etc., couldn't be built because all their taxes would be exhausted by subsidies. Why, they couldn't even hide from an atomic bomb attack because their caves would be filled with eggs, cheese, butter, and peanuts. Even their warehouses would bulge with meat to such an extent that they would have to invent the phony hoof and mouth disease to shut out imports. Thus, trade with their allies would be so impaired that they, too, would have to give billions in foreign aid.

Just think how many of their soldiers would have to be used in guarding all this storage. At least half of their armies would be necessary as I understand the Russians do not permit graft as we do. The Commies are noted for perverting the truth and this would be a good opportunity to prove that Solomon was wrong when he said in Proverbs II: 26: "He that withholdeth corn, the people shall curse him; but blessing shall be upon the head of him that selleth it."

Yes, by all means, bring those Russian farmers over here. Let them see for themselves how socialism will destroy communism in their country as socialism has ruined our free enterprise.

Utilization of Surplus Property

SPEECH

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 17, 1955

Mr. SPRINGER. Mr. Speaker, this bill is a simple one. However, it does have a very important and far-reaching effect on the possible physical facilities throughout the country of universities, colleges, schools, and hospitals. The basic intent of the bill is to improve the administration of the program for the utilization of surplus property of the Federal Government, for schools and hospitals.

A short history of the background of this bill should be stated at this point in the Record. The Federal Property and Administrative Services Act of 1949 provides that property, both real and personal, which becomes surplus to all Federal requirements may be donated to schools and hospitals. The act also permitted the donation of real property for

hospital purposes.

In addition, the Congress has in recent years enacted some 15 pieces of legislation designed to make available to schools and hospitals quantities of property acquired largely for war activities. The Congress has repeatedly decided that the best course of action is to give schools and hospitals this surplus property if useful and needed.

The Congress has been fully aware of the small return to the Treasury from the sales of surplus property made to date. It is my understanding that the average return of the cost of the property

has been only 5.7 percent.

The legislation before the House today is necessary because of a decision of the Comptroller of the Department of Defense which practically nullifies previous legislation on the donable property program. To the credit of the Comptroller. may I say that the misunderstanding has been honest and has been pursuant to a regulation drafted by the Army, Navy, Air Force, Bureau of the Budget, and the General Accounting Office. It was their understanding that under one regulation of the Department of Defense-no consideration could be given to the donable program. This bill today clarifies this situation beyond any doubt.

My own State of Illinois has benefited from this donable program of personal and real property to schools and hospitals since 1946 to the extent of \$37,834,795. This is no inconsiderable sum. I find on investigation that much of this property has gone to communities and areas which would have been unable to acquire this property in any other manner. That is, due to the local tax situation, it would have been impossible to purchase the property.

Section 2 (a) of the bill clarifies the authority of the Secretary of Health, Education, and Welfare to enforce compliance with the terms and conditions of the donated property. The committee in bringing in this bill has taken a strong

position that any donated property must be put to a maximum continuous use in order to enhance the educational and public-health programs of the Nation.

Another new feature has been added in section 3. The Secretary may now enter into cooperative agreements with State departments of health or education and with other State agencies for the utilization of surplus property for educational and health purposes. This section will greatly implement the program. It will permit voluntary agreements between the Department of Health, Education, and Welfare and State agencies with respect to standards of requirement, audit, and inspection.

Sections 4 and 5 are intended to facilitate and reduce administrative costs at both the Federal and State level. In addition, the Secretary will be required to submit quarterly reports as to the amount of both real and personal property donated and, also, who is actually in possession. This will enable the appropriate committees of Congress to determine whether such property is being equitably distributed among the States.

This, in short, is a review of the previous program and the effect of the legislation before the House today. Mr. Speaker, in my opinion this is one of the most appropriate humanitarian proposals that has been brought forward in this session. During the recent war there was a heavy and necessary demand by the military on a major share of our taxes. Both health and education suffered during those years. This, in a small way, is helping to add to those services which were handicapped during all those years that we were engaged in mortal conflict.

Hospitals, universities, and schools will be enabled as a result of this legislation to acquire needed facilities which are made available by our Government.

I have received a number of communications from local school boards and other educational agencies of my district who are struggling to provide adequate education—all strongly in favor of this bill. I am sure that any property made available to the hospitals and schools of my area will be well used.

In my opinion, this bill serves a wholesome and needed purpose and I am pleased to urge and support its enactment. I also support the rule which would allow the bill to be heard.

To Our Irish Neighbors

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial entitled "To Our Irish Neighbors," which appeared in the Nowy Swiat, of New York, N. Y. As an American of Irish descent I am grateful to the gallant

Americans of Polish descent for their greeting on St. Patrick's Day. The Americans of Irish descent in turn pray for the day when the great Polish Nation is again free and independent. The editorial follows:

TO OUR IRISH NEIGHBORS

We shall be watching you today while singing and playing, your banners high, your faces aglow with joy and faith, you will be marching and telling the world.

From Dublin to New York.

And you will be wearing the green, the color of spring and hope—Ireland's color.

Your patron saint fought and died for God and freedom. So do you to this day. So do the Poles.

You have the fight in you against oppression and slavery. You have the faith in you, in justice and victory, and you hate snakes.

No one understands you better, no one has more compassion and admiration for you than have the Poles who, like you, know what oppression and slavery mean. We also hate snakes. Nobody loathes subversion and compromise with evil and power more than the Irish and the Poles.

Know then that on this, your day of joy and hope, we salute you, our good neighbors.

Your faith is our faith. Your hopes are like our hopes.

Top o' the day to you.

Was News of Scandal in Handling Surplus Food for School-Lunch Program Held Back To Protect Republican Candidates in Illinois?

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial which appeared in the Collinsville (III.) Herald on March 16, 1955. The editorial, entitled "Abusing Freedom by Neglect," follows:

ABUSING FREEDOM BY NEGLECT

Newspapers generally maintain the right of freedom of the press. But those who insist upon it most strongly often are the most guilty of violating it. They exercise the freedom not to print news which they find unpalatable,

Such a situation has arisen in connection with the dealings of Vernon L. Nickell, State superintendent of public instruction, with James W. Dunbar, of Springfield, in the hauling of Government surplus food to the schools of the State.

Some 2 months ago the Chicago Sun-Times broke the story about Nickell awarding a contract to Dunbar, probate clerk of Sangamon County, and a contributor to Nickell's campaign fund, on Dunbar's terms. The other Chicago papers refused to touch the story at that time, and the Chicago Tribune ignored it until a week or so ago when the matter was taken up in the Congress at Washington. Federal investigators have stated that Dunbar has made enormous profits out of the business, estimated at \$600,000 to \$800,000, or 310 percent. Nickell disputes this percentage of profit, but has announced

cancellation of Dunbar's contract effective April 1.

But the most recreant attitude of the Chicago papers now appears to be the fact that they were told of this contract and its fraudulent possibilities before the election last November. All of them at that time declined to give the affair any publicity, presumably for political reasons—the expose would have hurt Nickell's chances for reelection. David Mallett, candidate for State treasurer, who was defeated by a majority of less than 1 vote for each Illinois precinct, thinks that the expose would have hurt the Republican candidates enough to have assured his election and probably the election of Nickell's Democratic opponent, Mark Peterman. Judging by the present furor about Dunbar, I agree with him. The expose of Governor Green's dealings with coal mine operators and Peoria gamblers in 1948 resulted in his defeat by half a million votes while Governor Dewey was losing Illinois for President by only around 30,000 votes.

Unequal Competition

EXTENSION OF REMARKS

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. HESS. Mr. Speaker, the President now has before him a decision which will have a profound effect upon one of the basic premises for the continued progress of the Republic—free competition and free enterprise. Northwest Airlines now enjoys a monopoly on its traffic to the Orient via the Great Circle Route out of Seattle.

Pan American Airways seeks to fly this route in free competition with Northwest. Since pioneering days into South America in 1929, across the Pacific in 1935, and to Europe in 1939, Pan American has been paralleled over virtually every one of its routes by at least one United States flag carrier. In every instance Pan American has had tremendous competition from foreign-flag lines which, in almost every case, are owned by foreign governments and heavily subsidized by those governments.

Pan American does not enjoy the privilege of flying domestically. Northwest Airlines has direct operations out of Washington and New York to Seattle, giving that carrier a tremendous preliminary advantage.

Mr. Speaker, it seems to me that the significant points of an argument for free competition is best illustrated by an editorial which appeared in the Cincinnati Enquirer on March 12. Under leave to revise and extend my remarks, I include the Enquirer editorial in the Recorn:

[From the Cincinnati Enquirer of March 12, 1955]

UNEQUAL COMPETITION

Some time ago, Northwest Airlines was given the right to fly from Seattle to Tokyo, on the principle that competition is a good thing. Pan American Airways, already flying the Pacific, should not have a monopoly of American-flag service, it was argued. That

was sound logic, except for one thing. Northwest received the privilege of flying the great circle route, which is 4,770 miles. But Pan American was required to continue via Honolulu or Wake Island. By that route, it is 6,970 miles.

That imposes on one airline a handicap of 2,200 miles to the Orient from Scattle, and about 1,000 miles from San Francisco. That is not the way to create competition. Furthermore, it obliges many travelers to make a stop they do not want to make. And in addition, it costs the taxpayers excessively. For as long as overseas airlines are subsidized, as they now are, each weekly round trip by the circuitous route costs the Government \$220,000 a year.

There was a good reason for the original requirement of the Hawaii route, for airplanes in earlier years could not fly the Pacific nonstop in any case. Now, however, Pan American is buying DC-7's which will be able to make the Seattle-Tokyo flight nonstop—all the time eastbound and most of the time westbound. An arbitrary rule demanding a midocean stop cancels out the gains achieved by improved aircraft.

gains achieved by improved aircraft.

We hold no brief for either of these competing airlines over the other. And obviously there is room for both of them on the Pacific route, in competition. But the competition ought to be fair. And it is not fair while one airline is compelled by Government regulation to fly 1,000 to 2,000 miles farther, to take equivalent passenger loads to the same destination.

If the Government wants competition on overseas air routes, for which there is much to be said, it should set up rules to make the competition equitable.

Ninety Percent Politics

EXTENSION OF REMARKS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the Record the editorial entitled "Ninety Percent Politics," which appeared in the Washington Post and Times Herald of this morning.

The editorial pertains to H. R. 12, reported by the House Committee on Agriculture, to return to 90 percent mandatory price supports of certain farm products.

That is it, Mr. Speaker, just "90 percent politics," and nothing more. By this bill it is proposed that we return to a program that has not proved successful without or even so much as trying the flexible price support program we enacted into law last year but which has not yet gone into effect.

NINETY PERCENT POLITICS

More political mesmerism than economic logic is reflected in the bill approved by the House Agriculture Committee to raise mandatory basic farm price supports to 90 percent of parity. The committee makes a convincing case that farm income has gone down 22 percent since February 1951, that the January parity ratio was the lowest since 1941 and that farm debt is increasing. This is all true. What the committee neglects to point out, however, is that these conditions developed during a period when basic price supports were pegged at 90 percent. The

new law permitting flexible supports down to 82½ percent this year had nothing to do with these conditions, because it will not take effect until new crops are harvested.

No one ought to be deluded that flexible supports are a complete answer to the problems in agriculture. The law came too late to prevent the accumulation of \$7 billion worth of surpluses; and it may not be flexible enough. We should like to see the Department of Agriculture give more attention to the problems of low-income farmers through retraining and resettlement. But rigid price supports in the main have helped big farmers, not little ones; and it is the little farmer who is hurt the most by the acreage restrictions that inevitably stem from high fixed supports. High income, in other words, does not necessarily accompany high supports.

Rigid supports, moreover, produce other bad consequences. A good example is the bastardization that has taken place in wheat. Only about one-fifth of the present billion-bushel carryover is millable wheat; the remainder is inferior quality fit only for feedbut still eligible for support. So long as this inferior wheat is commingled, it doubtful how much more wheat the country could expect to export even under the twoprice system the committee recommends. The investigation in Texas has amply demonstrated that a racket has developed in the commingling of inferior wheat with quality wheat for export purposes. The committee might well give some attention to curbing such abuses by requiring the Department of Agriculture to recognize quality as a basis for acreage quotas under the price-support system.

But while there is plenty of room for improvement in the price-support operation, it makes no sense to argue that the remedy for today's distress is the same system that helped cause the disease. This is what the House committee is arguing, and we hope that the House will understand the fallacy when it considers the bill this week. Even opponents of flexible supports ought to recognize that the flexible principle cannot be tested until it has a chance to work.

Postal Legislation

EXTENSION OF REMARKS

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from Postmark of March 1955:

LEGISLATIVE COMMENTS

As this is written, we are waiting anxiously to learn what action will be taken by those who have the power to improve our marginal status. We have presented the facts honestly and fairly and a just decision should prevail. But never before, has such a determined effort been exerted to prevent enactment of an urgently needed pay adjustment.

Previously, unity of purpose and desire was the firm axis around which the postal service revolved. And it was this service, held in high esteem by the public we serve, that placed the Post Office in the enviable position of being universally trusted and respected by our entire society.

Now, this unity is gone, smothered out by statistics. It was deliberately and ruthlessly destroyed by the Department in an effort to gain certain objectives which, we are told, will benefit all and greatly improve the service.

The death knell for unity sounded when the Department-sponsored bill was introduced and the tactics being used to gain its enactment into law show the lengths to which the Department will go to force its adoption.

This bill provides large benefits for only the minority groups and has thus gained their support. The clerks and carriers, which are the two largest groups, will get but a pittance. So they are forced to carry the brunt of the battle. The Postmaster General insists on reclassification and has taken the unprecedented action of promising a Presidential veto unless his demands are granted. Is this a change in the democratic method of lawmaking?

We have been taught since birth, or shortly thereafter, that a legislator voted as his conscience dictated; that his conclusions were reached only after careful, unimpeded hearings and investigations. Some of our friends in the Congress who have voted for beneficial postal legislation in the past have now become reluctant to state their views. We have been told that it would be poor policy to vote for something which they knew would be vetoed. Is this a just decision based on facts? Oh, what manner of men are these and what has caused this condition to come about?

Just what is this reclassification that is so vital to the Department? Reporter John Cramer, of the Washington Dally News, has written an article on this subject titled "Job Racket Exposed." The first paragraph reads:

"The often-phony Government job-classification racket got itself caught bare naked yesterday—and just as you suspected, it has bow legs and wears falsies."

The article goes on to expose misrepresentation, doubletalk, and phony job descriptions. Some of the bill was so obviously phony that even its strongest supporters agreed to delete or rewrite many of the provisions it contained. Remember, this is the bill which the Department contends is designed to improve the service.

Imposing statistics have been compiled to justify the Department's claims but statistics per se are worthless; they can be used to prove or disprove anything, and it is indeed unfortunate that the Department seems inclined to maximize statistics and to minimize human values because statistics cannot expedite and deliver mail. Mail is handled by people, men and women who are grossly underpaid.

It seems likely that the Department will be successful in attaining many of its objectives, but is the victory worth the cost? Possibly the service will be improved by uprooting and destroying unity and creating cleavages and maybe the end will justify the means. It is not for us to judge.

We have been misrepresented as greedy, grasping creatures when all we asked for was the chance to earn a decent living. Our needs have been ignored so that the statistics will work out and we are counted religiously every 6 minutes. But, come what may, we are sure of one thing.

If the intransigence of any man, or group of men, prevents us from getting what we need and earn, we will not falter or deviate from principle. We will always strive for the improvement and betterment of the service to the public for whom we work.

We are dedicated toward that end, and it is this dedication which will sustain us in what could well be our most dismal hour.

THOMAS NOLIN, Legislative Representative.

The Yalta Papers

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following newspaper editorials:

[From the New York Times of March 20, 1955]
WHAT COUNTS IS THE FUTURE

What happened at Yalta 10 years ago this month is less important than what is going to happen this year and next year and 10 years from now. The Yalta Conference, concerning which readers of this newspaper have had the opportunity to read several hundred thousand words, was the result of forces then in operation. Likewise it released new forces. We may argue as long as we like about the effect of personalities on history and the importance of isolated events. Yalta was not and could not be isolated. It touches all our lives today.

The forces acting in the world during that historic week were already visibly crushing Germany. Japan was as surely defeated as was Germany. The trouble was, as far as the United States and Britain were concerned, that this truth was not fully realized American troops were locked in the bloody battle on Iwo Jima, which was to cost us more than 4,500 dead. They still had to take Okinawa at a loss of more than 12,500 dead or missing. Manila fell on the eve of the Yalta Conference. Wise military men estimated casualties in landings on the main island Japan by the hundreds of thousands. The A-bomb was known to the President and his advisers to be "reasonably certain" "produce the equivalent of a 10,000-ton TNT explosion."

Still, it was thought necessary to persuade and cajole the Russians to stay in the war in the West and to go into the war in the Far East. The Western Powers accepted a government in Poland which could not be, and was not, free. They accepted unfair Polish boundaries. They gave concessions to Russia in the Far East at Chinese expense—and felt so unhappy about this that the facts were not made public for some 2 years.

As one reads or skims these tragic documents one gets two impressions: first, that the chief participants did not know all the factors with which they were dealing; second, that they were, so far as the Western Powers were concerned, caught in a struggle between two moralities—the morality of the democratic process versus the morality involved in saving lives. Mr. Roosevelt, particularly, was desperately anxious to prevent the shedding of American blood in an unnecessary assault in the Pacific. He could be political when he thought of the Polish vote in this country. He could also be deeply humane.

The Russians suffered from no such handicap. Human life literally means nothing to Premier Stalin if it came in the way of any purpose of his. Respect for promises or respect for truth did not stand in his way, either. There is something sadly naive in the hopes and intentions expressed at Yalta that the future of Europe and of the liberated Axis satellite nations be settled "by democratic means." We know now that Russia never had the slightest intention of settling such problems by what we would call democratic means.

Yalta is in the past. We can learn much from it, including the imperfections of the leaders of men, the limitations on their knowledge, even the desirable course of future top-level meetings. In any future meeting, for example, we might assume that words without effective guarantees would not be accepted as sound currency as they were in 1945, when Russia expended so many such words.

Ten years after Yalta we in this country at least know with some precision where we stand in most parts of the world and on most international questions. We stood for freedom in central and Eastern Europe in 1945. We still stand for freedom there, but we will not go to war in the hope of liberating the satellite countries. We stand for freedom in Korea, but we will not violate the truce to liberate North Korea. We stand for freedom in Indochina, but we will not shed American blood to extend it. We stand for freedom on the mainland of China, but we will not start a war or encourage a war in the hope of restoring it.

We will fight if we or our friends are attacked on certain boundaries. In Europe these boundaries are well known. In the Far East they are not so well known—and they should be made known. They should be made known, not to cause war but to prevent war.

One of the two western heads of state at Yalta had only 2 months to live on the day after the conference closed. The other lives on, has regained the titular power he lost and talks again of high-level conferences. Some parts of the American record of what happened at Yalta seemed to him inaccurate and the revelation of other parts dismays him. But this is no time to judge the living or the dead. It is no time for politics. It is a time to draw from past mistakes and past victories guidance for the months and years to come.

[From the New York Times] REACTION IN BRITAIN

LONDON, March 19.—The British Government was professionally dismayed at the publication of what it considered the one-sided and tendentious accounts of the Yalta Conference so soon after it took place.

Sir Winston Churchill, the only surviving member of the Big Three, said with restraint, "If this became the established practice, it might hamper the free exchange of views at future conferences."

The public reaction was influenced more by the manner of publication than by the contents of the papers. Secretary Dulles is widely blamed for weakness and clumsiness in letting the documents be forced out by partisans in Congress. The London News Chronicle called this "one of the least glorious (stories) ever told about any foreign office anywhere."

The Times, London, dealt with the motivation of the publication in measured words:

"There can be little doubt," the newspaper wrote, "that the United States administration's motives in publishing * * * are bad. Not one single objective reason can be found for making public the whole mass of papers * * * at the present time. It is an act of domestic political warfare."

The Times said the administration's political leaders "scarcely trouble to deny it. They wish to discredit the late President Roosevelt, and through him, the present leaders of the Democratic Party."

So securely established is Franklin Roosevelt in British hearts that his secret approaches to the Soviet dictator over Hong Kong did not seem to have cut very deeply.

The British Government's basic rule about such documents is that full publication is

permitted only after 50 years. But the rule is flexible and allows interim declassification of masses of relevant material of much more recent date.

[From the New York Times] REACTION IN GERMANY

BONN, GERMANY, March 19.—The publication of the Yalta documents by the United States rudely awakened the Germans from their pleasant dreams and forced them to look on a moldering cadaver they had been trying to forget.

The Germans became grumpy and irritable. They asked why it was necessary to remind them now that not so long ago they were described as savage. They also wanted to know why it was necessary to remind them of plans to amputate German national territory and destroy Germany as a national state.

They say these events are a part of history and an understandable part of history when the temper of 1945 is taken into account. But to resurrect this bitterness and violence, after the vigorous courting by Washington, is regarded as little short of folly by Germans who are genuinely concerned with the psychological preparation of their people for an active role in the Western alliance.

"This is another unfortunate example of hitching one's wagon to American domestic policy when acting in concert with the States in the field of foreign affairs," one pro-United States deputy said.

Fortunately the disclosure of the Yalta documents came after ratification of the Paris and Saar agreements had been decided.

Chancellor Konrad Adenauer's government had good cause to refrain from commenting on the publication of the Yalta documents. Most of the coalition leaders, recognizing the peril, took refuge in silence. But this was not the case with the West German press.

The front pages Friday morning were devoted to the publication story.

The newspapers considered the publication of the Yalta documents embarrassing but said the documents contained little that was new to historians. They all underlined one theme—why was it necessary to publish the documents at this time?

[From the Washington Star of March 20, 1955]

ANGRY EUROPEANS DERIDE UNITES STATES FOR RELEASING YALTA PAPERS—MALICE AND STU-PIDITY CHARGED—EXPLANATION NOT TAKEN SERIOUSLY

(By Crosby S. Noyes)

PARIS, March 19.—Europeans are not buying American explanations as to why the Yaita papers were made public last week. The more they think about it the angrier they get.

Their almost unanimous conclusion is that the motive behind publication was compounded in equal parts of malice and stu-

The explanation that the State Department was forced to release the material to prevent premature unofficial disclosure is not taken seriously. Nor is the argument that the Department acted out of pure devotion to historical accuracy in an effort to prevent distortion by setting the record straight.

"DELIBERATE MISCHIEF"

The fact that the papers were published in accordance with a program and an appropriation established by Congress 2 years ago does not help, in European eyes. Regardless of all explanations, most conservative European comments start from the assumption that release of the documents at this particular juncture was a piece of dangerous and deliberate mischief on someone's part.

This is a fact with which Washington must

reckon, whatever Secretary of State Dulles' intentions may have been.

From the European viewpoint, the damage done by the Yalta publications is obvious. It is all very well to argue that there is much in the record that is not new. The point is that this is a poor time to reopen even the oldest wounds and to spread bitterness and controversy over the front page of every newspaper in the Western alliance. And this has been the immediate result of the Yalta publications in this part of the world.

BRITAIN MOST AGITATED

In Britain, where election fever is in the air, the outcry against the State Department action is fiercest. Prime Minister Churchill, as one of the leading figures of the Yalta drama, is caught up in a whirlwind of controversy, and there is new talk of his resignation as a direct result.

And yet there can be little doubt that, in relation to American interest, the major damage of the Yalta papers may be done in France, where the whole future of Western policy hangs on the upcoming debate on ratification of the Paris treaties by the French Senate.

No one would predict that the Yalta texts by themselves could defeat the treaties. But it is hard to think of anything the American Government could have done to make the verdict more doubtful or embarrass the French Government more in its efforts to force an unpopular measure through Parliament.

INSULTING TO FRENCH

In France the suspicion of malice is particularly strong. No one has falled to notice the fact that the "censored" portions of the papers are gratuitously insulting to the French, and that a number of these passages can be clearly read through hastily inked deletions. These comments, quite naturally, have been produced in full in every French newspaper.

Specifically the French seize on three portions of the Yalta papers which bolster the case against the Paris treaties. They start with the most obvious: The overwhelming hostility to the Germans which obsessed Western leaders at the end of the war, and the harsh measures of repression then considered, which stand in such dramatic contrast to demands for German rearmament now being pressed on the French people.

now being pressed on the French people. Second, much emphasis is given to highly cynical statements of the Messrs. Roosevelt and Churchill regarding France's status as a member of the great-power team and the dependability of France as an ally. Sir Winston's comment to the effect that France deserved no place in the club and should be satisfied with such small crumbs as participation on the German Control Council has drawn fire from all sides.

NO HELP TO FAURE

Interesting as they may be, these historic recollections are no help to French Prime Minister Faure in his present job of convincing the French Senate that France's position as a respected member of the free world depends on ratification of the Paris treaties. Says Le Monde: "For those who still cherish delusions as to the love and attention given us, the publication of this text will erase any kind of doubt."

Finally, the late President Roosevelt's mercliess judgment of Gen. Charles de Gaulle and his lack of sympathy for the French problem in Indochina provides grist for the opposition mill. It is an unfortunate fact, perhaps that ratification of the Paris agreements depends on the dubious support of certain followers of General de Gaulle in the French Senate, most of whom base themselves on a strongly nationalistic philosophy.

Behind European criticism of the release of these documents there lurks a dark suspicion. They ask themselves: Are the Yalta papers an attempt by our State Department to discredit big-power conferences as such?

Soon after the Paris treaties are ratified the United States can look forward to a concerted move from its European allies for talks with the Russians. Sir Winston has not abandoned his hope of a top-level agreement on control of atomic weapons. The French and Germans—for widely diverging reasons—will plug for a broad overall settlement to remove major causes of friction between East and West, agreements which might conceivably make German rearmament unnecessary.

Until now the attitude of the State Department to these suggestions has been chilly. If there should in fact be any thought that they can be headed off by the publication of 10-year-old documents, someone has made a very poor guess.

[From the Washington Star of March 20, 1955]

FRENCH ARE BITTER—CENSORED PORTIONS OF PAPERS PUBLISHED

Paris.—Here, as quoted in French papers, are censored portions of the Yalta papers which have caused particular bitterness in France:

From page 614 of the Record: "The Prime Minister (Sir Winston Churchill) replied that he felt that he could anticipate what would be French opinion and repeated that he did not wish France to be included in the present club which he felt was very exclusive, at least for a while. He added, however, that he felt the fact of permitting France to join the Control Commission would keep them quiet for a while."

From page 621 of the RECORD: "Prime Minister: I do feel that if the French are given this little sop it will keep them quiet, for I feel strongly that they should not be at this table. This is an exclusive group (smiling) and the entire subscription is at least five million soldiers or the equivalent.

"Stalin: At least three million."
In the documents as released in Washington, these pasages were lightly inked out.
It is understood the deletions were respected in the American press. French correspondents, however, featured them in their dis-

patches. The censor's ink merely saved them the time they otherwise would have had to spend looking for the offending sentences.

[From the Washington Star of March 20, 1955]

EAST GERMANY CHARGES "PLOT" IN YALTA RELEASE

Berlin, March 19.—The party newspaper of Communist East Germany said today the United States State Department released the Yalta documents to overcome worldwide opposition to West German rearmament.

Neues Deutschland claimed it was part of a plot to prove that Russia is responsible for the division of Germany.

for the division of Germany.

"Unluckily for the liars, there exist undisputed documents which tell the truth," the paper said. "Authentic" documents—"signed by leading Western statesmen"—prove that Stalin was the only man who fought plans to divide Germany, the paper said, adding that Stalin did this at the Potsdam conference, 5 months after Yalta.

[From the Washington Star of March 20, 1955]

INDIAN PRESS CRITICIZES RELEASE OF YALTA
PAPERS

New Delhi, India, March 19.—The Indian press continued sharply critical today of United States State Department release of the Yalta papers. The influential Times of

India said "neither Dulles nor anyone else in the State Department is able to provide a coherent explanation of why the documents, rich with potential embarrassment and misunderstandings and which undoubtedly place the Western Powers in the darkest possible light, should be released for the edification, if anyone, of the Commu-

The nationalistic Hindustan Standard said "the suspicion hardens that perhaps some domestic need for damaging the Democrats lies at the back of these disclosures.'

State Department's Blunder in Yielding to Political Pressure on Yalta Papers Could Have Bad Effects on Future International Negotiations

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial which appeared in the Washington Evening Star on March 18, 1955. Titled "Yalta, Yesterday and Today," the editorial follows:

YALTA, YESTERDAY AND TODAY

Although the prospect of independent newspaper publication probably made the action inevitable, the State Department hardly merits congratulations on its on-again-off-again handling of the massive collection of documents covering the Roosevelt-Churchill-Stalin talks at the 1945 Yalta Conference. For the sudden decision to release these papers, even though not likely to be nearly so harmful as some overseas reactions suggest, certainly has rekindled national and international controversy in a way that promises to be less than helpful to American foreign policy in the present delicate and dangerous world situation.

Thus, to begin with, Prime Minister Churchill, our best and most powerful friend abroad, has not only challenged the accuracy of this American version of Yalta, but has also indicated that he and his government regard the State Department's action as a blundering departure from normal diplomatic usage—a departure that could have a bad effect on future international negotiations. Further, wholly apart from the propaganda howls to be expected from the world behind the Iron Curtain, there can be little doubt that some of the released documentssince they will be read out of the context of the temper prevailing in 1945-will stir up resentment against our country among the free Germans, and perhaps to a lesser extent among the French, the Chinese, the Japanese, and others. And finally, in terms of our own domestic situation, it seems obvious that the papers will revive a lot of demagogic "politicking" at a time when nothing could be more important than bipartisan cooperation in foreign affairs.

Yet, in fairness to the State Department, which has been under extremely heavy pressure in this matter, certain other facts need to be kept in mind. After all, for one thing, the released documents-which contain deletions and fall far short of being a precise stenographic account of the Yalta proceedings-have been published at this time, instead of some months from now, primarily because of an apparently inescapable forcing action. More than that, as far as substance is concerned, they actually disclose nothing that has not been disclosed before in piecemeal fashion. Their chief significance is that they supply much greater detail than the earlier revelations. But beyond thatat least on the first reading-they do not seem to offer basic new material impressive enough to settle the long-standing controversy over whether or not the late President Roosevelt, who was then entering upon his last sickness, sold out to Stalin and thus paved the way for the Kremlin's present menacing position in both Europe and Asia.

In other words, the American version of the fateful Yalta Conference does not substantially affect the pro and con arguments that have already been heard at great length. That is to say, depending on one's viewpoint and preconceptions, the papers just released by the State Department can be read in support of either side without really settling anything. In truth, because there is no way of exactly measuring what went on in the minds and hearts of the principals involved, it would seem that this issue can never be satisfactorily resolved. For the simple fact is that nothing has been revealed to date to destroy the pro-Roosevelt theses (1) that Yalta's provisions for free elections in Poland and neighboring East European countries failed only because of the Kremlin's bad faith and (2) that the concessions granted Russia for entry into the struggle against Japan were based on the urgent feeling that otherwise the war would cost a tremendous amount of American blood.

Hindsight, of course, is a wonderful illuminator of past events, and most of us know now, with its help, that the late Presidentwho did not have it at his disposal-could have been much tougher, much wiser, and much more farsighted in his dealings with Stalin. But yesterday is dead, its opportunitles lost beyond recall, and what we must chiefly think of at this stage is today, the present-a period so full of devasating and harrowing potentialities that resolute unity is imperative among all Americans and likeminded peoples everywhere. The publication of the Yalta documents should not be allowed to distract anybody in the free world from that overriding central reality of our

The Way of Reason

EXTENSION OF REMARKS OF

HON, HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. SEELY-BROWN. Mr. Speaker, one of my constituents, Mr. William E. Dickinson, Spring Street, Deep River, Conn., has brought to my attention a thought-provoking editorial printed in the St. Louis Post-Dispatch on Sunday, February 27, 1955.

At Mr. Dickinson's request, I ask permission that the editorial may be printed in the RECORD so others may have the opportunity to read it.

The editorial follows:

THE WAY OF REASON

A disarmament conference opened in London Friday. It is a measure of the jaded state of world opinion that nobody seems to be taking it very seriously.

Yet if men could behave the way reason tells them to behave, every one of the five powers participating in this London conference would be treating it as the first order of world business, an indispensable condition for the survival of civilization. All other matters, national and international, would be laid aside until the world's leaders worked out an agreement for enforceable general disarmament.

Consider the meaning of the Atomic Energy Commission's belated report on the devastating character of radioactive fallout from hydrogen bombs. Is it not the most wicked kind of self-deception to pretend to ourselves, after thus contemplating the dreadful power of hydrogen and atomic weapons, that a war fought with these weapons is a practical, thinkable, feasible instrument of national policy?

It is utterly fantastic to think of engaging in a war in which hundreds of millions of people try to live off the countryside while their cities are being destroyed, and then, after waiting for the fallout to decay, creep back among the blasted craters and the windrows of corpses to take up the production of more hydrogen bombs for the devas-

tation of more continents.

We can talk all we like about contriving new plans of civil defense, about radar nets and yellow alerts, about grandiose plans for urban dispersal (a peaceful way of accomplishing what the war would accomplish), about evacuation plans and shelters and fighter interception. But all this talk only conceals the basic fact.

The basic fact is that a war of atomichydrogen weapons is inherently irrational, a stratagem of madness. So long as men make any pretense to being reasonable beings, nuclear warfare must be ruled out of the range of consciously willed possibilities.

Yet it is not ruled out. On the contrary, nuclear warfare is made the keystone of military planning-in this country, among our allies, among our potential enemies.

Some Americans, like Elmer Davis, believe that the world has already gone beyond the point of no return-that nuclear warfare cannot now be avoided, that our only hope is to make sure that we win it. But the evidence is abundant that "victory" in a nuclear war would be almost indistinguishable from defeat. We dare not accept the counsel of despair which regards such a war as inevitable.

Some Americans believe that the possession of nuclear weapons by both sides creates a balance which neither side will dare upset. The belief has much sound backing. But there is always the risk of miscalculation, of the trigger being pulled by accident. Nuclear stalemate would be safe only so long as no one were foolhardy enough to break it. We dare not stake so much on the hope that all men will be uniformly wise and prudent.

And so there are really only two alternatives-either continue the nuclear arms race with all its risks, or find a way to disarm the world.

Within the framework of a national struggle for power, of course the arms race must continue. When national security rests entirely on national strength, and no instruments of enforceable international law have yet been forged, of course national armaments must exist. Unilateral disarmament would be folly. Disarmament without international inspection and supervision would be folly.

What is needed, however, is some way of changing the emphasis-of making disarmament the primary object, rather than a remote ideal subordinated to the immediate goal of more and bigger weapons. We need to break out of the propaganda arena, where each side tries to prove that it favors disarmament without actually disarming, onto a new plane of action.

Is civilized mankind really incapable of the effort it would take to achieve a workable and safe disarmament plan? We do not know. We only know that an effort of the magnitude required has not yet been made. There has been much talk of disarmament, but not enough facing up to the truly basic changes in attitude required to achieve it.

All nations would have to be willing to revise their military thinking in a drastic and revolutionary way. All would have to consent to thoroughgoing international inspection and supervision. All would have to give up the weapons in which they excelled, as well as those in which they lagged—disarmament must be general and universal. At every point, national decisions would have to be subordinated to international agreement. As every major nation's military power would be reduced, the major nations would have to rely less upon power and more upon persuasion to express their influence.

Yes, it would be an extraordinary task, But no more extraordinary than the weapons which create the crisis. Surely the human powers which created hydrogen bombs can create means to control them, if only they are given the chance, and the needed political leadership.

Why should not that leadership come from the United States Government?

Why should it not come from President Fisenhower?

Why should not the American people call on their Government and their President to make a supreme effort to lead the world in the way of reason?

Roosevelt Was Right

EXTENSION OF REMARKS

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the March 18, 1955, issue of the Montgomery (Ala.) Advertiser:

ROOSEVELT WAS RIGHT AT YALTA

The uncorking of the Yalta papers is causing a misbegotten effort to discredit the war leadership of Franklin Roosevelt * * *.

The current controversy over Yalta is an effort to prove that our troubles with Russia would not exist had Roosevelt not made unnecessary concessions to Stalin in order to get Russia to come in against Japan.

Many mistakes were made concerning Russia, and you can argue to good effect that Roosevelt's enormous vanity led him to suppose that he could handle the Russians. But making concessions to get Russia into the war against Japan was no error. He could not have done otherwise without betraying a million and more American soldiers and their families.

It must be remembered that at the time of the Big Three meeting at Yalta, Germany had not been vanquished. The A-bomb success was 5 months off. As Churchili records in his Yalta memoirs, American war planners thought it would take 18 months after the surrender of Germany to defeat Japan.

It was further thought that the storming of the Japanese islands would be one of the bloodiest events in the history of warfare.

But it would be much less bloody if the Russians joined in, assailing Japanese forces on the one hand and preventing the large and powerful Japanese Army in Manchuria from marching to the defense of Japan.

This reinforcement with Russian forces was a great prize to be won, and we should not forget how anxious we were in those days over whether Russia would come in. With the frightful vision of the bloody Japanese beaches before him, Roosevelt would have

registered a colossal failure indeed had he not nailed down the help of the Russians. He owed that to every American soldier, sailor and airman.

There are a lot of wise ones today croaking and rasping that Japan was by this time already used up and hence it was not necessary to entice Russia into the fray. Such was the case, but the same military leaders who had provided the brilliant victory in the ETO were convinced that Japan would slaughter many Americans in her death convulsion.

There are those who contend that, actually, there was no way to keep Russia out of the war on Japan. Probably that is true, but there never was a time when any man, not even Churchill, knew what the Russians would do in a given situation.

As for the Yalta Agreement, what matter is it what Russia might have been induced or coerced to sign? Russia would not have honored the agreement in any event.

New Era Dawns for Philadelphia

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the New York Times of March 20, 1955:

New Era Dawns for Philadelphia—City Gains Repute as Honest and Progressive— Serves as Model of Civic Reform

(By William G. Weart)

PHILADELPHIA, March 19.—Once known as corrupt and contented, Philadelphia today is gaining a reputation as honest and progressive.

That has been the view of officials and civic leaders who have come here from many cities to "pick up ideas that could be used back home." These observers have complimented the metropolis on its recent achievements.

Delegations from New York and Detroit were impressed with steps taken to keep traffic moving through narrow center-city streets, most of which were laid out in the horse and buggy era.

Chicago and Newark have studied the advantages of Philadelphia's new home-rule charter, a set of ground rules designed to modernize local government. A delegation of 60 from New Haven noted the emphasis being place on the "urban renewal" problem.

Officials of the city's first Democratic administration of the century contend that if a 275-year-old city, such as Philadelphia, is to survive, it must renew itself. Thus far, the main advances in this field have been in slum clearance and construction of low-cost housing.

The switch from what Mayor Joseph S. Clark, Jr., calls "Republican misrule" to "good government" has been attributed largely to a suicide note left by a city-hall official in May 1948.

In the note, Wiliam C. Foss, head of the amusement-tax office, named himself and eight others as thieves. Subsequent investigations disclosed widespread graft, corruption, mismanagement, and outright thievery. These revelations brought arrests and convictions.

FREE HAND FOR MAYOR

In the municipal elections of 1949 and 1951, Philadelphia voters uprooted the Republican machine that had ruled city hall for 67 consecutive years. Mr. Clark, a Harvard graduate with a law degree from the University of Pennsylvania, and Richardson Dilworth, a crusader with a law degree from Yale, carried the Democratic standard to victory at both elections.

In 1949, they were elected city controller and ity treasurer, respectively, and in 1951 they were elevated to 4-year terms as mayor and district attorney.

Under the new charter, Mr. Clark had a free hand in the election of subordinates. He recruited department heads with outstanding records in other communities. The GOP called them "carpetbaggers" and patronage-minded Democratic politicians took up the cry in vain.

Today, Mayor Clark feels that his administration, all things considered, had done a good job. What is more, he is convinced the people like the way things have been going. To impartial observers, that appears to be so.

Mayor Clark contends, without contradiction, that the municipal government has been restored to the people, that the spoils system has been abolished, and that the alliance between corrupt politicians, the police department, and organized crime has been broken.

Among other accomplishments, Mr. Clark lists increased services, the redevelopment of many blighted areas, the erection of a \$15,000,000 airport terminal building, increased port business and facilities, a greatly expanded recreation system, traffic and parking improvements, and the establishment of a civil service that prohibits political activity by city workers.

Also the adoption of the 40-hour week for some 26,000 municipal employees along with a pay and classification plan that enables the city to compete with private industry for personnel of ability.

There have been complaints of waste, extravagance, and an increase instead of a promised decrease in the number of employees on the payroll. Also the Chamber of Commerce of Greater Philadelphia has been especially bitter over a 3-mill mercantile tax on gross business.

Walter P. Miller, Jr., president of the

Walter P. Miller, Jr., president of the chamber and an independent candidate for the Republican mayoralty nomination in 1951, said the mercantile tax had driven business firms from the city.

SHORTCOMINGS ADMITTED

The mercantile levy and a 1-percent tax on real-estate transfers were passed by the Democratic-controlled city council in 1953. Together, Mr. Miller charged, they have provided surpluses that will get the administration through this election year without additional taxation.

Mayor Clark agreed that the mercantile tax was a bad one. But, he insisted that under the State constitution there was no other method of making business, in general, and corporations, in particular, pay their fair share of city taxes.

He also asserted that his administration, now in its final year, had fallen short in some areas. Generally, he said, the short-comings have been due to the inadequacy of city resources or the fact that crime, traffic congestion, air and water pollution, and similar problems ignore city, county, and State lines.

Mr. Clark said he was getting a little tired of repeating for the benefit of the paid staff at the chamber of commerce that many more than 2,000 drones have been dismissed or have resigned.

He explained a 2,875 increase in the city's payroll by noting that 1,012 new workers were required by the installation of the 40-hour week and 589 represented women guards for school crossings. The remainder, he said, resulted from the expansion of services and additional hiring to eliminate overtime and thus save \$65,000 this year in the streets department.

Reappraising Yalta

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. O'HARA of Illinois. Mr. Speaker. under leave to extend my remarks in the RECORD, I include the following editorial from the Youngstown Vindicator dated March 20, entitled "Reappraising Yalta":

In the renewed discussion of the Yalta conference two factors must be kept constantly in mind. One is that the meeting took place during the most terrible war in world history, with Germany our foe and Russia our ally. The other is that the destruction of liberty which followed Yalta was wrought, not by Roosevelt and Churchill, but by Stalin.

Anyone old enough to recall the violently agitated days of World War II can remember their atmosphere. Tremendous, history-making events were taking place on the battlefields and in the governments of nations. The psychology of the time was molded by fervent determination utterly to destroy Hitler's Nazi regime and all it stood for.

The men who met in the Crimea had the paramount goals of completing what General later called the Crusade Eisenhower Europe, and then of winning the war against The general belief was that purposes required wholehearted cooperation by Russia. In this conviction Roosevelt and Churchill went further than they should in granting Stalin's cold-blooded demands.

Even so, there was no handing of territories and peoples to Russia on a silver platter. The western leaders exacted from Stalin pledges of free governments based on fair elections in Eastern Europe. In the Far East, Stalin was to assist Chiang Kai-shek's government, and a time limit was put on the concessions he was given in Manchuria, which was to be governed by Chiang.

Russia held a dominating position which the western powers could not modify. Her armies were on the spot in Eastern Europe and Manchuria. The Yalta pacts may in fact have limited the extent of Russian gains.

The damage came after Yalta, when Russia broke all her pledges. The central fact is that liberty was destroyed, not by Roosevelt and Churchill, but by Stalin. The seizure of China and the enslavement of Poland Czechoslovakia, Hungary, Romania, and Bulgaria were the evil work, not of the democratic West, but of the Communist east.

Later events of 1945 (the Yalta Conference was held in February of that year) offer a greater cause for American self-reproach. Churchill, highly suspicious of the Russians, urged Eisenhower to take Prague and Berlin in order to reduce the Russian advance into Europe. When Eisenhower refused, Churchill went to Truman. The new President had come into leadership wholly unprepared. He took the advice of his military leaders and allowed the Red army to march into the heart of central Europe. Yet this decision, too, must be appraised in the light of the time when it was taken.

All this was known before the Yalta records were published. The dismay and anger abroad over the publication are aroused by details-remarks made in passing or in jest which now look serious in cold print. Also there is anxiety that such revelations may hamper ratification of the Western European union.

Yet now there is to be more of the same. The State Department announces it will

publish records of the Teheran and Potsdam Conferences, and a statement intended to refute the white paper issued by the Truman administration, which laid heavy blame

on Chiang for the loss of China,
Particularly in respect to China, the intention seems unwise. If the paper is factual it will have to tell of gross corruption and incompetence in the wartime Nationalist Government. If it glosses over the Nationalist abuses which impelled the Chinese population to welcome the Reds, it will be unrealistic. Now that the Chiang government has been reformed and we are supporting it to the point of war, the old scandals should not be raked up.

Because of these considerations, publication of the Yalta and other memoranda in these times seems to have mainly a political motive. This view is supported by the demands of Republican politicians for the Yalta record. Secretary Dulles' obvious unhappiness over it, and Senator Knowland's demand that the new revelations be made next year, during the Presidential campaign. rom this view the matter has the aspect of a fresh attempt by some Republicans to win an election against Franklin D. Roosevelt.

Hidden Profits in Dixon-Yates

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial entitled "Blue Sky in Dixon-Yates," which appeared in the St. Louis Post-Dispatch on March 1, 1955. The editorial follows:

BLUE SKY IN DIXON-YATES?

A startling new objection to the Dixon-Yates contract—that its recipients might obtain \$5 million to \$10 million a year in hidden profits on a \$5,500,000 equity investment—has been brought forward. The objection cames from Walter von Tresckow, of New York, head of a group of 8 financial, engineering, and legal interests which tried to compete for the Atomic Energy Commission contract but was brushed aside.

Mr. Von Tresckow explains the possibility of these exorbitant and hidden earnings thus: Dixon-Yates is allowed under the terms of the contract to sell its operating companies all power produced at the new steam plant which TVA does not require to the city of Memphis. The Memphis demand will amount to only about 60 percent of the plant's capacity.

The remaining 40 percent of capacity would thus be avallable for sale by the two holding companies in the Dixon-Yates combine to their operating companies. Mr. Von Tresckow says the contract allows Dixon-Yates to sell this surplus at a price exclusive of overhead costs, since overhead would be paid for out of the amount required for Memphis.

This would mean, the financier says, that Dixon-Yates could sell 40 percent of the plant's capacity to its operating companies for less than 2 mills a kilowatt-hour, and that the Dixon-Yates operating companies would resell it at 5 or 6 mills or more a kilowatt-hour and pocket the difference for

their holding companies.

This difference is what Mr. Von Tresckow estimates as possibly amounting to \$5 million or \$10 million a year. Such hidden profits, he said, would not be affected by a

fixed ceiling of \$600,000 a year which the contract puts on profits from the plant. For these hidden profits, the fixed ceiling would be the sky.

Mr. Von Tresckow's charges deserve the closest examination by the Senate-House Joint Committee on Atomic Energy, headed by Senator Anderson, of New Mexico. Here is a new reason, on top of plenty of old ones, why this committee should go into Dixon-Yates with a fine-tooth comb, and why the contract meanwhile should be held up.

Ike Should Repudiate Hoover's Banker Bills

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an article from the editorial page of Labor under date of March 19:

IKE SHOULD REPUBIATE HOOVER'S BANKER BILLS

Just as Mike and Ike used to look alike in an old cartoon series, the Hoover Commission and the Eisenhower administration now seem not only to look alike but to think alike-to have the same policies and the same philosophy of government.

That adds to the significance of a report Issued this week by the 12-man Commission, which is headed by former President Herbert Hoover. He and three other members were appointed by President Eisenhower. other eight members were picked by Vice President Nixon and Congressman Joseph W. MARTIN, Republican, of Massachusetts, when he was Speaker of the House.

Judging by the Commission's report to Congress, the banker bills proposed by the administration up to now were only warming-up practice for more and bigger such bills still to come.

In general, the report recommends: First, that Uncle Sam stop lending money at low interest rates to farmers, rural electric coops, small-business men, and other groups; second, to let private bankers do all the lending at higher interest rates than Uncle Sain now charges.

If Congress enacts that program, it would largely undo historic reforms and humanitarian legislation passed since 1913-in the Woodrow Wilson administration, even in Hoover's administration, and particularly during the New Deal and Fair Deal years.

For example, farmers could no longer get Government loans to tide them over periods of low farm product prices. Farm mortgages would be turned over to the tender mercies of the bankers from whom Uncle Sam rescued debt-crushed farmers in the depression 1930's. The low-interest loans which help farmers get cheap electric power through their REA systems would end, and control be handed back to the bankers and the power

All sorts of housing loans would be stopped, particularly the public-housing loans which help poor families get decent homes at rents they can afford. Uncle Sam would still assume the risk of sium-clearance loans, but bankers would get all the profit. War veterans' housing programs would be allowed to die as soon as possible.

Those are only a few boiled-down samples

of the 48 recommendations in the report.

Mixed in with them are some proposals which would end a few of the private profit at public risk schemes which Labor has been pointing out and criticizing. In these cases, however, bankers would get more control and bigger profits in return for giving up Government guaranties.

Four members of the Hoover Commission dissented on a few of the recommendations, particularly one which would reduce Government short-term loans to exporters, and leave this foreign-trade field exclusively to bankers.

The only member who registered a sweeping dissent was Congressman CHET HOLIFIELD, liberal California Democrat. He acknowledged that some of the report's proposals may have merit, but then added this:

"By and large, the recommendation would

"By and large, the recommendation would make it harder for American citizens to buy homes or to get loans for their farms or businesses. The recommendations would tighten agricultural credit, slow down housing construction, restrict rural electrification, and limit aids provided by the Federal Government.

"These programs intimately concern the affairs and well-being of millions of Americans and the strength of the Nation's economy.

"Congress created the Hoover Commission to study the organization of the Government. I do not believe Congress wanted advice from the commission on public policies of every sort. This report indicates that the commission is willing to roam far and wide in the field of public policy."

Holifield pointed out that the Hoover Commission—while charging that Uncle Sam's loans are "subsidizing" ordinary people—made not a single proposal to end the multibillion-dollar Government subsidies to "manufacturers, publishing firms, ship operators, airline companies and other big business interests."

The California Congressman recalled that "Congress has authorized subsidies throughout our history, to develop the Nation and keep it strong. The Hoover Commission made no systematic study of the whole subject of subsidies. It compains only of 'subsidies' which bring widespread benefits to all the American people, particularly those of modest means."

Labor hopes President Eisenhowet will make it clear to Congress just which parts of the Hoover report he approves and disapproves. Hoover left the White House as the most discredited President in American history. No President can afford to have the country think the policies of his administration are being dictated by Hoover.

(EDITOR'S NOTE.—"It is doubtful if the American people understand the powerful influence Herbert Hoover exerts on the Eisenhower administration," Columnist Thomas L. Stokes said this week, "Hoover has come back strong. He offers advice in many fields to the Eisenhower regime. The latest Hoover report recommendations would turn back credit control, with a nice profit, to the bankers. More and more, this administration is taking on the colors of a bankers' administration.")

United States Constitution Stands Tests of Time

EXTENSION OF REMARKS

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. ELLIOTT. Mr. Speaker, I was impressed with an editorial expressing

faith in the Constitution of the United States which appeared February 17 in the Cullman (Ala.) Tribune, a newspaper published in the Seventh Congressional District of Alabama. I believe Members will get a renewed inspiration in the Constitution from reading it. The editorial follows:

STANDING THE TEST

The way a plan works after it has been drafted and put in operation is the important test.

One is impressed with the bigness and the greatness of the plan—the Constitution of the United States—that has endured for more than a century and a half. During this period has been the industrial revolution, two global wars, and the coming of the atomic are

And the strength of the United States, built on the Federal Constitution, is the greater when one considers Russia, France, and China. The Soviets, with their one-party system and dictator, changed leaders a few days ago. They are trying to find someone like Stalin. The French, with their many political parties, are organizing another government. And the Chinese are cursed with civil conflict.

Effect of Imports of Japanese Tuna on the American Tuna Industry

EXTENSION OF REMARKS

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. WILSON of California. Mr. Speaker, the hard-hit tuna industry, which has been imperilled by a flood of imported frozen tuna, has just received disconcerting reports that Japanese interests are now planning to flood the country with tuna packed in brine. It is my understanding that the administration does not intend to let established domestic industries go down the drain because of foreign competition, yet this danger exists today unless official steps are taken immediately to protect this vital food-producing industry.

Under unanimous consent, I include as a portion of my remarks the following letter on the subject from Mr. Harold Cary, spokesman for the great tuna fishing fleet of California.

AMERICAN TUNABOAT ASSOCIATION, San Dicgo, Calif., March 15, 1955. The Honorable Bob Wilson,

United States House of Representatives, Washington, D. C.

DEAR BOS: Upon leaving Washington I promised that I would keep you currently advised as to the trend of events in the tuna industry. I think there are a couple of items which have a direct bearing upon the statement I made before the Committee for Reciprocity Information and before the House Ways and Means Committee in regard to H. R. 1. This latter statement contained a restatement of the material presented to the Committee for Reciprocity Information.

The deliveries of tuna to Southern California canneries are an item of interest and a measurement of our activity. For the first seven weeks of 1955 domestic vessels have delivered 9,936 tons to these canneries. In 1954 domestic vessels delivered 20,369 tons, Therefore, we have had a decline in deliveries of 10,433 tons.

Imported fish has shown a completely opposite trend. In 1954 deliveries for the 7-week period were 2,453 tons, while this year they totaled 6,516 tons. Therefore, there is an increase of 4,063 tons in the amount of fish imported by southern California canners.

In the aggregate, therefore, canneries have received 6,370 tons less than the comparable period of 1 year ago, although that reduction of fish purchases by them embraces an increase of 4,063 tons in imported fish and a decrease of 10,433 tons in fish bought from domestic vessels.

The decline cannot, of course, be attributed to a necessity to purchase abroad in order to supplement suplies, inasmuch as somewhere between 8,500 and 9,000 tons of tuna is in the holds of fishing vessels in the ports of San Diego and San Pedro at the present time awaiting purchase. The canners thus far have not been interested in negotiating an agreement to take this fish and, inasmuch as we went out on a gamble that they would take it, thus far no solution has been reached.

Another important development has been the release of statistics by the Japanese Fisheries Agency. I believe you have in your files a copy of my statement before the Committee for Reciprocity Information. page 30 of that statement there is an Item entitled "Tuna Fleets—A Comparison." The statement is made there: "In November of 1954 it is reported that there are 30 large tuna vessels in the 300-500 gross-ton class now under construction in Japan." The Japanese Fisheries Agency figures indicate that for vessels ranging from 101 gross tons upward (from approximately 50 tons carry-ing capacity and upward) there have been 31 wooden vessels added to the fleet, totaling 4,559 gross tons, and there have been 17 steel vessels added to the fleet, totaling 6,746

If, then, the figures given in the presentation to the Committee for Reciprocity Information are updated it will show that as of December 31, 1954, the Japanese tuna fleet of roughly comparable size to our own totaled 436 vessels and 89,989 gross tons, as of December 31, 1954.

This may be compared with the trend in our own fleet. Since December 31, 1941, we have declined a total of 42 vessels and something over 6,400 tons. The Japanese, in the meantime, have increased 164 vessels and something over 49,000 tons. In fact, their fleet has more than doubled in this period of time. If this represents any need for concessions to Japan to stimulate her tuna industry I would like to have that proved If it demonstrates that our fleet is in a healthy condition I would likewise like to have that demonstrated. I believe it appropriate that that question be asked of the Department of State and of the Trade Agreements Committee people.

A further comment on the activities of the Japanese Fisheries Agency is that it has a currently effective policy (that is, effective until July 1955) to encourage the conversion of fishing boats from the inshore fisheries to the offshore and high seas fisheries, which are largely for tuna. Therefore, there is no end in sight of this expansion of the Japanese fleet.

I think these two items of information would certainly be compelling if they were placed before people of reasonable judgment. It is my intention to write to the President and various others pointing out these facts and again pointing out to them the necessity of concluding an agreement with Japan, even though it is informal in nature, which will cover this tuna situation.

I read with interest President Eisenhower's letter to Joe Martin and am giving some thought to just how the statements made in there square up with the actions which appear in this set of facts which I

have given you and which have previously been shown in the Committee for Reciprocity Information presentation.

Maybe you ca figure out some type of communication to somebody to ask what they think of all this.

Yours sincerely,

H. F. CARY, General Manager.

Alabama's Waterways

EXTENSION OF REMARKS

HON, KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include editorials which recently appeared in the following newspapers: the Anniston Star, the Montgomery Examiner, the Selma Times-Journal, and the Talladega Daily Home. These editorials are in reference to a meeting held in Montgomery, Ala., on March 5, 1955, and are entitled "Exploiting Coosa Potentialities," "General Pick and Our River," "Alabama's Waterways," and "An Important Meeting," respectively.

The editorials follow:

[From the Anniston Star of March 6, 1955] EXPLOITING COOSA POTENTIALITIES

While one could have wished for a more positive and definitive approach to the problem by the organization itself, there were hopeful indications that yesterday's meeting in Montgomery of the Coosa-Alabama River Development Association will speed consideration by the Congress of navigation locks in the dams soon to be built by the Alabama Power Co.

The presence at the meeting of Calhoun County's Kenneth A. Roberts, as well as Congressmen Grant and Selden, augurs well for helpful assistance from Alabama's congressional delegation. Congressman Rains, of Gadsden, who has done yeoman work on the project, was prevented from attending because of illness and other representatives sent messages of endorsement and promises of assistance.

Secondly, and highly important, was the presence at the meeting of representatives of Governor Folsom, who promised aid and action in connection with the Governor's industrial development program.

The immense potentialities of the Coosa-Alabama were perceived by pioneer citizens of this area who, despite repeated frustrations and disappointments, never flagged in their efforts to bring their great dream to fruition.

Indeed, it is to their everlasting credit not only that they labored so tirelessly themselves, but also that, in notable instances, they were able to pass on their enthusiasm to younger men who now are carrying forward in their image.

Mr. Everett "Pat" Lay, of Gadsden, heads the organization led for years by his father. Other officers include Mr. Robert Henry, of Montgomery: Mr. James Mann, of Rome, Ga., and Mr. Walter B. Mills, of Gadsden.

The Anniston Star believes the organization should be placed on a sounder economic footing, with sufficient funds to establish a permanent office with a paid official. He would work unceasingly with the agencies concerned with the engineering, land acquisition, political steering, and finally, keep

the general public informed with respect to the progress of the overall program.

For this position, we would like to nominate Gen. Lewis Pick, retired, who served 37 years with the United States Corps of Engineers, and who has had direct charge of planning the development of a number of river basins. Personable, capable, enthusiastic in his chosen field, he has many contacts that would be valuable to the Coosa-Alabama organization, and he would lend substance, sincerity, and success to any venture to which he directed his valuable talents.

Alabama has over 2,000 miles of waterways, greater than any State in the Union. The Warrior-Tombigbee development is well underway as the result of efforts of a similar organization in that part of the State. The same results can accrue—but in larger measure—to our own great watershed.

The Alabama Power Co. is proceeding with plans to build a series of integrated dams on the river for generating hydroelectric power, but since the Nation's earliest days, the Federal Government has shouldered the respensibility—and properly so—for providing navigation facilities and terminals on inland waterways.

This newspaper has pointed out time and again that there is no way of assessing the benefits that could be expected from Coosa-Alabama Rivers development.

The hydroelectric potential is enormous, and in addition, the Coosa River area would enjoy the great economic benefit of cheap water transportation, plus improved flood control and greatly expanded recreational facilities.

[From the Montgomery Examiner of March 7, 1955]

GENERAL PICK AND OUR RIVER

After retired Gen. Lewis A. Pick had made his fine speech on the proposed development of the Coosa-Alabama River here on Saturday, Congressman Kenneth A. Roberts said to a friend, "I wonder if Alabama realizes how lucky it is to have a man like him living in the State and making his great knowledge available for nothing, when other States and other countries are trying to get him at great expense?"

General Pick is a native Virginian who, on retirement from Chief of the United States Corps of Engineers last year, came to live at Opelika. As one of the Nation's top engineers, he helped build the famous Burma Road in World War II, had much to do with the St. Lawrence Waterway, built the great Louisiana-Texas coastal canal back in 1928. River basins and harbor developments in many places are his monuments.

At Saturday's meeting of the new Coosa-Alabama River Development Association, to which the Montgomery Chamber of Commerce played host, and in which the Alabama Power Co. is taking such a leading interest. General Pick said:

"I, for one, have found romance in studying river basins; I, for one, have found romance in developing our great natural resources; and development of our natural resources is only just beginning."

Plucking from his memories great engineering projects of the past 30 years, he showed how most industries seek abundant water. He quoted amazing figures to show industrial growth which has followed river basin developments. He drew particular attention to the Missouri River Basin billion dollar development, and the results it is already bringing; "and they had much less to work with in Missouri than you have here in Alabama," the general said.

He pointed out the number of industries already huddling along the two rivers from Rome, Ga., to Montgomery. "Open up the river and industries will bloom," he said, admonishing his listeners that they already

had spent too much time talking about the project, and that they should by now be up and doing something about it.

Only last week General Pick refused a splendid offer for his services in Lebanon to advise on the development of a river basin in about the oldest part of the old world.

The Examiner thinks we need General Pick in the most rapidly growing part of the New World—Alabama and the Southeast.

But the Congressmen need help before they can get help from the Congress for this proposed development. They need the support of a well administered publicity campaign to acquaint other parts of the Nation with Alabama's needs; what the development of the river will mean to the economy of this whole region, and how important that will be to the entire Nation. Alabama is sold on the project—we've got to sell the idea to other regions, so that Congressmen from all States can justify their votes needed to secure Government aid.

[From the Selma Times-Journal of March 9, 1955]

ALABAMA'S WATERWAYS

Alabama will probably see more industrial expansion than ever before if and when the contemplated system of waterways in the State becomes reality. Indications are that it has at least a good chance.

Strenuous efforts are being made by counties which flank the Coosa-Alabama Rivers from Rome, Ga., all the way down to Mobile, to persuade the Federal Government to install locks for navigation in the dams proposed along that system by the Alabama Power Co. Communities vitally affected include Selma, Montgomery, Childersburg, Pell City, Gadsden, Centre, and Rome, Ga.

The Warrior-Tombigbee system, running from Mobile up through Demopolis, Eutaw, Tuscaloosa, and Birmingport, is being modernized.

North Alabama is already extremely fortunate in having the Tennessee River navigable the entire width of the State. Tonnage each year continues to set new records.

Huntsville, not to be left in the cold, has an industrial committee working on a program to develop commercial dock facilities in the Whitesburg area.

Gen. Lewis Pick, former head of the Army Corps of Engineers. Saturday told a group of river boosters that no large city today can continue to grow without taking advantage of the most economical form of transportation possible—water.

Alabama seems ready to do just that. (The Huntsville Times.)

[From the Talladega Daily Home of March 7, 1955]

AN IMPORTANT MEETING

Of importance to all inhabitants of this region of potential industrial greatness was the meeting at Montgomery last weekend of the Coosa-Alabama Rivers Development Association.

Maj. Gen. Lewis Pick, head of the United States Corps of Engineers, summed up what these important waterways already have meant to the people of Alabama and Georgia.

"Along the rivers at the present time." he said, "are hundreds of textile, coal, steel, and papermaking mills and plants."

And of the era ahead:

"With the opening of the river system from Mobile to Rome, Ga., the production in these plants can be expanded and the cost of shipping the raw materials as well as the finished product cut by 20 percent."

Of primary interest to people of the Coosa Valley now is the giant \$100 million development program inaugurated by the Alabama Power Co. under a Republican administration which looks with a kindly eye toward

private progress with its resultant rich re-

wards in the form of payrolls and tax pay-

Engineering studies now are well underway and it should not be too many months before the company announces specific plans for building the first of the great dams to be constructed, with the entire project glated for completion in a 10-year span.

Industries already are finding this region

attractive.

With the Coosa development this is certain to be within the lifetime of most of those now living in one of the major industrial regions, of the entire United States.

Any agency which works for that end deserves the support and the appreciation of

us all.

The 7th Fleet

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial which appeared in the January 26, 1955, issue of the St. Louis Post-Dispatch. The editorial, entitled "As to the 7th Fleet," follows:

As TO THE 7TH FLEET

While supporting President Eisenhower in his request for a resolution on defense policy in Asia, Congressman Paick, of East St. Louis, calls attention to an aspect of the message that corrects the Presidential record in an important particular.

In his 1953 state of the Union message, Mr. Eisenhower said: "I am issuing instructions that the 7th Fleet no longer be employed to shield Communist China." This charge that Harry S. Truman, as President, had sent the 7th Fleet into Formosan waters to protect Chinese Communists was a political statement intended for political consumption. It was spoken in the flush of the GOP victory at the polls in 1952.

As Congressman Price points out, the President now takes a different view entirely when he says in his extraordinary message to Con-

"Our Government was prompt, when the Communists committed armed aggression in Korea in June 1950, to direct our 7th Fleet to defend Formosa from possible invasion

from the Communist mainland."

The purpose Mr. Eisenhower now gives was of course the reason why Harry S. Truman put the 7th Fleet on guard duty. Mr. Truman did not want the war in Korea to spread through Communist attacks on Formosa or some abortive attempted invasion by Chiang Kai-shek against the Chinese mainland.

It took 2 years to get this record set straight and while it requires each citizen to contrast the President's 1953 statement and what the President says now, straight at

last the record is.

This gain can be credited to the change in party control in Congress and the President's desire for bipartisan support of his policy.

As for employment of the 7th Fleet, every American citizen may hope it will not be necessary to consider using our Navy in evacuation of Chiang Kai-shek's troops and sup-plies from the Tachen Islands. The first evacuees have already arrived in Formosa. If the Chinese Nationalists will get busy and remove their personnel and equipment from these indefensible coastal islands as rapidly as possible an evacuation crisis may be avoided entirely.

Armed Robbery of Government Property

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. MINSHALL. Mr. Speaker, early last Friday 2 masked gunmen raided the 107th Light Armored Cavalry Regiment Armory in Shaker Heights, Ohio, and wounded a warrant officer while stealing 4 federally owned machineguns.

The FBI immediately joined local police officials in the search for these desperadoes and a statewide alarm was put out for their apprehension. The FBI should be commended for their swiftness in joining this important search for two men dangerously armed and presumed to be on the path of further robbery and violence.

Mr. Speaker, this is an appalling situation. But it could be even worse if these men were part of a conspiracy to overthrow our Government by force-if they were part of an uprising against civil authority-or if they were bent upon sabotaging our defense effort.

We must take-we are compelled to take-stringent measures to assure that a similar robbery will not be attempted again. There are two ways of obtaining such assurance. One is to increase the criminal penalty for armed robbery of Government property and the other is to increase the security guard of all weapons storage centers.

Today I have introduced two bills. One increases the present penalties for robbery and burglary of Government property and the other provides new statutes providing a stronger penalty for the burglary and roberry of weapons and firearms. The texts of these bills are as follows:

Be it enacted, etc., That section 2111, title 18, of the United States Code, be amended as follows:

"Whoever, within the special maritime and territorial jurisdiction of the United States, by force and violence, or by intimidation, takes from the person or presence of another anything of value, shall be imprisoned not more than 25 years."

SEC. 2. Section 2112, title 18, of the United States Code shall be amended as follows:

'Whoever robs another of any kind of personal property belonging to the United States shall be imprisoned not more than 25 years."

SEC. 3. Section 641, title 18, of the United States Code shall be amended as follows:

"Whoever embezzles, steals, purloins, or knowingly converts to his use or the use of another, or without authority sells, conveys. or disposes of any record, voucher, money, or thing of value of the United States or of any department or agency thereof, or any property made or being made under contract for the United States or any department or agency thereof; or

"Whoever receives, conceals, or retains the same with intent to convert it to his use or gain, knowing it to have been embezzled, purloined, or converted-

Shall be fined not more than \$10,000 or imprisoned not more than 20 years, or both; but if the value of such property does not exceed the sum of \$100, he shall be fined not

more than \$5,000 or imprisoned not more than 5 years, or both.

"The word 'value' means face, par, or market value, or cost price, either wholesale or retail, whichever is greater."

Be it enacted, etc., That whoever within the special maritime and territorial jurisdiction of the United States, by force and violence, or by intimidation, takes from the person or presence of another any firearm or weapon, shall be imprisoned not more than 50 years.

SEC. 2. Whoever robs another of any weap-

on or firearm belonging to the United States shall be imprisoned not more than 50 years.

SEC. 3. Whoever steals, purloins, or knowingly converts to his use or the use of another, or without authority sells, conveys, or disposes of any firearm or weapon of the United States or any department or agency thereof, or any firearm or weapon made or being made under contract for the United States or any department or agency thereof; or whoever receives, conceals, or retains the same with intent to convert it to his use or gain, knowing it to have been stolen, pur-loined, or converted, shall be fined not more than \$50,000 or imprisoned not more than 50 years, or both.

Mr. Speaker, also, I have dispatched letters to the Secretaries of Defense, Army, Navy, and Air Force asking them to immediately take an inventory of all Government weapons and to increase the security guard on all places where weapons are stored. And I have also asked the FBI to join with the Defense Department in an appraisal of the entire weapons storage problem.

In these days when our national security is threatened from within as well as from without, we must take all steps necessary to prevent any group from taking our own weapons and using them against us. If it is this easy to get weapons out of Government arsenals, then potential revolutionaries would have no trouble at all in arming themselves on the eve of an attack. We must prevent this.

Make Columbus Day a Legal Holiday

EXTENSION OF REMARKS OF

HON. FRANK M. CLARK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. CLARK. Mr. Speaker, I wish to express my views on making Columbus Day a legal holiday.

Christopher Columbus' name stands supreme among the world's daring explorers. In selfless service to his fellow man, to Spain, and to God, he ventured out on uncharted waters, with a reluctant crew, in frail and tiny vessels, and kept on, through murmurs rising to threats of mutiny, until that glorious moment when a seaman's cry brought all on deck to view a new world shining in the dawn. That is a moment to remember. That is a moment to celebrate. The city of Genoa and the land of Italy are proud to claim Columbus as a native son. Spain counts it among her chief glories that Columbus sailed under her banner. But all we of the Western Hemisphere can look upon him, not as our son or servant, but as father of us all.

In token of this filial reverence, most of the countries of this hemisphere, and most of the States of the Union, already observe Columbus Day as a bank holiday or a school holiday, and as a day for ceremonies in honor of Christopher Columbus and his discovery.

I am glad to add my voice, on behalf of my constituents, to the enthusiastic support being given in this House to H. R. 577, a bill declaring October 12 to

be a legal holiday.

Nation's Postmasters Approve Increase of Postal Rates

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. ARENDS. Mr. Speaker, under leave to revise and extend my remarks. I am inserting in the RECORD an editorial which appeared in the Commercial News, Danville, Ill., on March 2, 1955.

I am definitely in accord with the view therein expressed that our postage rates should be made realistic so that our Post Office Department may be operated on a businesslike basis.

The editorial follows:

NATION'S POSTMASTERS APPROVE INCREASE OF POSTAL RATES

For the first time in its history the National Association of Postmasters, including John Wherry, of Danville, went on record in favor of increasing postal rates on first-, second-, and third-class mail to bring the Post Office Department on a more nearly paying basis.

For years politicians of varying philosophies have argued the question of whether any Federal Government Department should be operated at a profit or whether, as a service to the people, its deficits should auto-

matically come from taxes.

Today, official and unofficial opinion leans in favor of operating the Post Office Department on a businesslike basis. It is viewed as a business-type enterprise within the Government, requiring the use of the most modern methods, practices, and policies so that the American people may receive the best possible service at the most economical cost.

At present the Department is being operated on a prewar-price level and a postwarcost level. Hence, it is losing money at the rate of at least a million dollars every working day. The loss totals \$4 billion since World War II. Interest alone on this debt costs taxpayers \$100 million a year.

The mailing charges for a letter, magazine, or a book have been called the "biggest bargains on earth." Most other nations, including Canada, run the post office on a break-

even or profit basis.

Raising postal rates is quite understandably not a popular issue. But Americans always face up to financial necessities-when they understand them. The American people are adult enough to know they only deceive themselves by keeping postal rates artificially low, and taxing themselves to pay the difference.

Recent Gallup poll results published on January 23, 1955, show that majority opinion today favors raising the rate on first-class mail from 3 to 4 cents. Other surveys showed substantially the same sentiment. Obviously, somebody has to pay for postal services. Low postage rates are misleading when the difference is paid by the taxpayer. It is fairer to charge those who receive the direct benefit rather than transfer a large part of the cost to the general taxpayer.

With these views in mind, the Post Office Department has proposed to Congress moderate increases on first-, second-, and thirdclass mail. It has also recommended establishment of a permanent Postal Rate Commission to provide a flexible system of scientific rate adjustments under policy guidance of Congress.

President Eisenhower on January 11 stated that "approval of this program will be in the public interest for it will further assure efficient service by the Post Office Depart-

Most Americans do not realize that postage rates on first-class letters are the same today as they were in 1932. Costs since that time have almost doubled. Since 1932 there have been five general wage increases for postal employees and another may be on the way.

First-class mail service under present rates does not carry its fair share of postal costs. In 1954 the cost of handling the average first-class letter was 3.12 cents and the Department predicts it may rise to 3.35 cents in 1955. This contrasts with 1.89 cents in 1932. If the letter rate was fair in 1932, it is obviously too low now.

The proposed 4-cent letter rate will still be a bargain. Compare it with the 5 cents paid in Canada; the 8.5 cents in Sweden; the 9.6 cents in Germany, and 4.17 cents in England.

Proposed legislation would increase postage on first-class letters by 1 cent on the first ounce only. This would hike revenue by \$237 million and go a long way toward eliminating the deficit. The proposals also would increased postage on domestic airmail by 1 cent on the first ounce only. Moderate increases also are proposed for second-class mail consisting principally of magazines and newspapers. Rates will remain the same for nonprofit religious, educational, scientific, and like organizations. The increase on second-class mail would increase publishers' rates by about 15 percent per year.

Hard commonsense indicates there is only one way to solve this dilemma-namely to increase postal rates equitably so that the Post Office Department may operate on as nearly a pay-as-you-go basis as is practical-with the actual users of mails paying a larger share of the costs instead of transferring this financial burden to the shoulders of American taxpayers.

New Code of Fair Play For House Committees

EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. WOLVERTON. Mr. Speaker, the proper procedure to direct or control the committees of the House in the conduct of hearings of an investigatory character has long been a subject of consideration. The Rules Committee of the House has arrived at a conclusion. We realize the sincerity with which the study has been carried on by the Committee. It is gratifying to realize that it has met with approval. In this latter connection, I include as part of my remarks an editorial appearing in the Courier-Post newspaper, published at Camden, N. J., in the issue on Saturday, March 12, 1955. It reads as follows:

NEW CODE OF FAIR PLAY FOR HOUSE COMMITTEES

March 21

The Rules Committee of the House of Representatives has completed the draft of a fair play code for investigating committees which the House will be asked to approve.

The code is the outgrowth of excesses by some committees and subcommittees (of the Senate as well as the House). It would apply to all House committees, including those which (like some Senate committees) have adopted fair play codes for themselves but of course lack the authority to do so for any groups but their own.

The Rules Committee recommendations are mild and moderate. They seek to strike a middle ground between permitting abuse of the investigative power and letting irresponsible or guilty witnesses go undis-

ciplined.

Under the new code, individual committees would still draw up their own rules, but these would have to conform with the minimum standards set forth by it. Some of the regulations that would be generally applied:

Each committee would fix the number of members required to constitute a quorum for taking testimony; this number must be at least two, to eliminate the one-man hearings that have caused such protests in the

Witnesses would be given a reasonable idea of what they were to be questioned about, so as to have answers prepared, but the committees could go beyond the original questions as material new angles developed in the testimony.

Every witness would get a copy of proce-

dural rules for his guidance.
Witnesses would be permitted counsel to

advise them of their constitutional rights. Testimony would be taken first in closed session, and closed-session testimony would not be made public without the approval of the whole committee or subcommittee.

Committee chairmen could punish breaches of decorum and legal professional ethics, by citation for contempt of Congress if so determined.

Persons accused in testimony would have the right to appear as voluntary witnesses in their own defense.

Despite the criticism of committee procedures that has been so widespread during the last year or two, and despite the Rules Committee's present report, it is a difficult task to get either the Senate or the House to change their rules in such a way as to restrict the freedom of members or committees. Many members, while agreeing with recent criticism of investigation procedures, do not believe that formal changes in the rules will bring about a cure.

However, the changes the Rules Committee has recommended have a better chance to be adopted than such proposals normally do. There is less likelihood of similar changes in the Senate, though the Democratic members of its Rules Committee are planning hearings on a list of recommendations.

The proposed changes in House and Senate would tend to bring committee procedures more into line with those of the courts. Yet most Congressmen agree with former Senator Guy Gillette (D., Iowa) that committee hearings "cannot be subjected to the rules of evidence, determining this is material and that is immaterial."

Most Congressmen also are aware, as the public is not, that the situations which have given rise to criticism of committees are relatively few in proportion to the thousands of hearings held annually.

In short, most Congressmen, Democrats as well as Republicans, think the problem is a bit more complex than the public realizes. They are inclined to say you can't substitute rules for a sense of decorum and decency.

Nevertheless, most of them want to operate under the best rules possible. The ones the House Rules Committee recommends seem worthwhile, and it may be hoped both House and Senate will adopt codes approximating at least the minimum safeguards these embody.

Aid to Education

EXTENSION OF REMARKS

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. RABAUT. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I should like to have entered my testimony before the House Education and Labor Committee which was considering prospective legislation for Federal aid to school construction.

The testimony follows:

Mr. Chairman and gentlemen of the committee, may I first say that I greatly appreciate the opportunity to appear before this committee to testify on the very important matter before this forum. I sincerely hope that my request for hearing will not be construed as indicating a personal presumption of my expertness on the varied problems plaguing our educational system. I am sure that this committee has heard, or is scheduled to hear, qualified educators in regards the technical aspects of the question. message I should like to bring this committee deals with the broader governmental concepts that rest at the base of our important social, economic, and political problems.

This committee has recently heard from our very able colleague from Arizona, Representative STEWART L. UDALL, who very concisely disclosed two very important, as he termed it, "stumbling blocks" that have blockaded much of the thinking in the area of Federal aid to school construction. The clarity of his reasoning, I am sure, has shed a brighter light upon a segment of our thinking made dark by such ominous forebodings of late as: "Get government out of buselness, get government out of public power," and "Keep government out of education." Even the most credulous individual cannot fail to recognize the fraility of these manifestations—it smacks more of emotion than reason; and as such, I fear, unable to cope with the immense problem of properly providing our youth with adequate educational facilities.

In deference to the plan proposed by the administration, which I'm sure this committee is giving arduous study, I feel that its half-way approach fails theoretically to understand this Governments obligations to its citizenry by subjecting the school districts to an unreasonable indebtedness. Our desperate school districts cry for relief, but their supplications, I fear, have been answered by a master bond-issuing program designed, not for their relief, but rather their insolvency. To peg an unrealistic interest rate on our Nation's school districts for the sake of attracting risk capital to the safe confines of municipal securities, which guarantee a safe return, is neither a service to our school system nor a discharge of our responsibility to it. Educating America's youth is a public responsibility historically vested in the local community through the instrumentalities of the city, county and State governments; and, if the situation so requires, ultimately with the Federal Government. When Federal assistance to the health and welfare of the several States falls suspect, then, indeed,

the entire edifice of our great constituted system of Federal Government, which has served us well, must be reexamined. I, for one, harbor not such dismal fear those who do have somewhere parted company with a great tradition.

THE GENESIS OF THE PROBLEM-RAPID GROWTH OF POPULATION

We have had occasion to point with singular pride to the robust expansion of our population in the last 15 years. (Approximately 30 million; a yearly average increase in excess of 2 million). Latently contained in this national asset lies the cause of the present problem. The dislocations of one major war, the continuing condition of world unrest which necessitates a priority to national security problems, and the parallel high level of consumer-goods production have diverted our energies to these important areas to the exclusion of schools and their educational plants and facilities. No doubt this fact has been generally regarded as a pre-established axiom with those of us who have concerned ourselves with the question. The significance of this fact, I feel, finds its force in the realization that the stauration point has been achieved; and in many areas superseded, so as to be justifiably termed disaster areas. We have provisions to meet this crisis in the actual physical sense; but have failed to affect like remedial machinery for our educational disaster areas. I see Federal Government to meet this challenge. INCREASED COMPLEXITY OF OUR EDUCATIONAL SYSTEM

As populations have grown so have the corresponding accompanying needs of that increased citizenry progressed. The simplified curriculums offered in my grade school days now appear skeletal alongside the courses of study given our youths today. The entire machinery of education has become more complex, and in turn, has required a greater competence of its administrators. The problem is real, complex, and enduring; the need must be answered realistically, intricately, and with far reaching vision. Any legislation that falls short of achieving these minimal requirements must be termed inadequate. Any legislation that makes these considerations secondary to the dreams of certain fincial interests, for the sake of prividing a safe harborage for bond purchasers, misinterprets, I feel, the basic interest of the majority of the American people.

THE PROBLEM FACED IN THE STATE OF MICHIGAN AND ITS PLANS TO MEET IT

With the committee's permission, I should like to commend to its study and perusal, without burdening the official record, a report by the Department of Public Instruction of the State of Michigan. It aptly demonstrates the type of efforts which I am sure are being put forth by similar State agencies throughout the country. I am proud to be associated in the service of government with such able and dedicated public servants as we have in our great State of Michigan. As this report indicates, much thought and planning has gone into estimating our State's educational needs in the coming 5 years. Their work is clearly demonstrative of their efforts to seek first a solution to their shortages which took into account the State's own resources before considering direct aid from the Federal Government. I think that this is a fair and honest approach to the matter and commend it as an example worthy of emulation.

Significantly, it will be noticed on page 68 of the report (Michigan Public School Building Needs, 1953-60) that the area of Government financial assistance is only contem-plated for "hardship areas." This is a proper concern for the Federal and State Governments, since these hardship areas often exist

through forces beyond the scope of the local school district means to afford a remedy. Of our State's 534 school-service areas, 117 are estimated to be hardship cases. Such factors as shifting population, realty de-valuation, and lack of adequate local taxing powers have been inextricably intertwined at the base of the school district's inability to raise funds. As a direct result of the presence of these variable determinants, our State faces in the school year 1959-60 a deficit of \$50 million for needed school construction. In this predicament, I am quite sure, gentlemen, that the plight of Michigan is neither unique nor singular.

Therefore, gentlemen of this committee,

may I commend to your deliberations a course of legislative action that affords expeditious aid by direct grant in participation with the several States to our "educational disaster areas" adequate to meet their critical needs. I further recommend that such plan be so designed as to avoid imposing upon our school districts a continuing finan-

cial burden.

We are dealing here in the critical commodity of human resources. Let us afford it the priority parallel to the great role it must play in our Nation's destiny.

Thank you kindly.

Could Dixon-Yates Wind Up With a White Elephant?

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD. I herewith include an editorial entitled "Memphis' Ace-High Trump." appeared in the March 7, 1955, issue of the St. Louis Post-Dispatch:

MEMPHIS' ACE-HIGH TRUMP

Now that the Dixon-Yates combine has its engineers on site and is moving rapidly toward the start of construction projected plant at West Memphis, Ark., the next question is what the city of Memphis, Tenn., will do. Mayor Frank Tobey of that city said only a couple of weeks ago that "if the construction of the plant is commenced. Memphis will take immediate steps to build its own plant."

Memphis believes that it has ample reason to be concerned. The contract which the Dixon-Yates combine has signed with the Atomic Energy Commission at President Eisenhower's direction calls for power to be supplied to AEC for the Tennessee Valley Authority. TVA would use this power to supply the growing demands of Memphis.

Memphis is not a party to the contract, Thus, it would be dependent for a major part of its power supply upon a private syndicate which bears no responsibility toward it of any kind.

Mayor Tobey and the president of the city's light, gas and water department, Maj. Thomas H. Allen, do not think that would be a sound business arrangement for Memphis. Moreover, they say they have had con-versations with three major Memphis banks and the First Boston Corp. about financing a city-owned plant and that these institutions were ready to go ahead as soon as the city was ready.

If Memphis is not bluffling, the Dixon-

Yates plant when built would be that whitest of elephants, a source of supply without a market. Whatever other means might succeed in stopping the Dixon-Yates project, therefore. Memphis plainly seems to hold the ace trump. Though much of the Dixon-Yates story to date borders on the improbable, it is hard to believe that the Government would go ahead with it under those circumstances. The West Memphis plant would be useless to the Government which would be paying for it, while the private power companies that built it could draw off however much or little power they wanted from it at dump rates, as other private power companies did from Muscle Shoals before TVA. That was a costly mistake which surely no one would want to repeat.

Address by Secretary of Agriculture Ezra
Taft Benson Before the Pacific Dairy
and Poultry Association, Salt Lake
City, Utah, March 19, 1955

EXTENSION OF REMARKS

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. BUDGE. Mr. Speaker, the following is the portion of Secretary of Agriculture Ezra Taft Benson's remarks at Salt Lake City, Utah, on March 19, 1955, which relate to the general farm program:

Now I should like to turn to a matter which concerns not only the poultry and dairy industries but all of agriculture and, in fact, all of the people of this Nation. That is the basic question of what kind of a farm program we are to have. Shall we move forward in our efforts to establish a soundly conceived, long-range program designed to bring about better balanced agricultural production, broader financial stability, and greater freedom for farmers? Or shall be continue the unrealistic, stopgap, emergency program of high, rigid price supports which has already demonstrated its inability to cope with the problems of a peacetime agricultural economy?

Congress clearly rejected this second approach only a few short months ago when it adopted the Agricultural Act of 1954 and voted to permit flexible price supports for the basic commodities to become effective, as scheduled, in 1955. Now the whole issue has been revived. The House Committee on Agriculture has reported favorably a bill which would, among other things, continue rigid price supports at 90 percent of parity for the basic commodities for 3 more years.

The principal argument put forward by the proponents of this measure is that it will halt the steady decline in farm income which has been underway since 1947. What they fall to mention is that this entire reduction has come about while we had rigid 90-percent supports for the basic commodities. What they are recommending, in effect, is another dose of the same medicine that has made the patient progressively sicker.

The fixed price support advocates, reinforced by labor leaders turned farm experts, are shouting from the rooftops that farm prices are being wrecked by flexible supports. It just isn't so. Not 1 bale of cotton, not 1 bushel of corn or wheat, not 1 sack of rice, not 1 pound of peanuts has yet been placed under loan or sold to the Government at less than 90 percent of parity. Flexible price supports don't become operative until the 1955 harvest—still several months away—and even then the levels of support will be unchanged for some commodities and most modest for others, in line with President

Eisenhower's recommendation for gradual adjustments.

The attempt to saddle the failures of the old program upon a new one which hasn't even been tested yet is unlikely to meet with very broad acceptance among farmers who know the facts. The issues at stake are of such great importance to every farmer, however, that I believe the record must be set straight for all to see.

Flexible price supports have been a part of our bipartisan farm programs for many years. They have been endorsed at one time or another by every Secretary of Agriculture for the past 20 years and by every major farm organization. They were advocated in the platforms of both major parties during 1948 and by the then occupant of the White House.

In fact, it was from this unanimity of opinion that the agricultural acts of 1948 and 1949 were distilled. Both of these measures called for fiexible price supports for basic commodities. The effective date of the flexible program was repeatedly postponed, however, the last time until 1955. This year we are finally scheduled to employ the flexible price support provisions which almost everybody once agreed were essential to the effective operation of a long-range, peacetime agricultural program.

For some time now, many would-be political leaders have been using high, fixed price supports as a smokescreen to cover up one indisputable fact—the fact that it was the unprecedented demands of war, together with inflation, that kept farm prices high during the 10 years following Pearl Harbor. The parity ratio averaged between 100 and 115 during those years. Actually, it was ceilings, fixed by law at the top—not the 90 percent floor below—which set farm prices. Every farmer knows he would have received even more for his products during this period had there been neither ceilings nor price supports.

Mounting surpluses, increasing costs, and declining farm prices are evidence enough that high, rigid, emergency supports offer no solution to our peacetime agricultural problems. If they were the solution, there would be no problems. Even though farm prices have declined under the program which we inherited from the preceding administration, this administration is willing to assume its share of the responsibility. But let me make it very clear just what our share is.

Between February 1951 and January 1953, when this administration assumed office, the parity ratio tumbled from 113 to 94. This is a downward plunge of 19 points. Since January 1953 the parity ratio has declined from 94 to a current level of 87—a change of 7 points. It has averaged about 90 over the last 2 years.

Thus, it will be seen that nearly three-fourths of the drop in farm prices which has occurred since the Korean war peak in 1951 came under the preceding administration. So, as I have said, we are willing to assume our share of the responsibility. Let our predecessors face up to theirs.

Today it seems to me that the situation which has developed with respect to wheat pinpoints the major fallacies and contradictions of high, rigid price supports. Wheat is a most important crop, not only in this area, but over much of the United States. And wheat is also the Government's biggest problem in the field of price supports. Here is a commodity which actually has been supported at about 105 percent of modernized parity. And still it is in worse trouble than any other crop.

The United States had on hand for the current marketing year an all-time record supply of 1,878 million bushels of wheat. At the present rate of disappearance, this unprecedented supply is enough to meet all our domestic and export requirements for more than 2 full years.

The Commodity Credit Corporation today has investment in more than 1 billion bushels

of wheat—660 million bushels owned outright in inventory and the rest held as security against price-support loans. This involves a commitment of approximately \$2.7 billion of CCC funds. It represents well over one-third of the CCC funds now invested in all price-support activities.

For 1955, the national wheat acreage allotment has been reduced to 55 million acres, the minimum provided by law. This compares with a 1954 allotment of 62 million acres and represents a cut of 30 percent from 1953, when no acreage allotments were in effect. Without the minimum amount provided by law, the allotment for 1955 would have been sharply below the 55 million total. In view of the record supplies of wheat on hand for this year, the formula in the law called for a national allotment of only about 19 million acres if no minimum had been provided.

The very substantial cut in our national wheat acreage creates serious operating problems for many farmers. Even after this sharp reduction for 1955, the minimum national acreage will, with average yields, produce almost as much wheat as we are now moving into domestic consumption and foreign markets in a year. Insofar as exports are concerned, we need to keep in mind that at our present level of price support, wheat shipments to foreign countries are made possible only by active programs of United States assistance. United States sales of wheat abroad will involve subsidies of at least \$175 million for the current crop year.

One fact that stands out is that this Nation's carryover of wheat next July 1 will be larger than it was a year earlier despite everything we are trying to do to bring about a reduction. Although we have succeeded in boosting wheat exports somewhat during the current crop year, there are limitations upon what the world markets will take even at the wheat agreement price or under the new program which permits sales abroad for foreign currencies. There are legal restrictions upon selling wheat in the domestic market at less than 105 percent of parity, plus carrying charges.

With total wheat supplies increasing in spite of production controls last year, it now appears that our carryover in 1955 will approach 1 billion bushels, for a new all-time record. It is expected that CCC will own some 850 million bushels of this vast surplus. The yearly storage charges alone on this inventory, not counting interest or deterioration, will be near the \$140 million mark.

In talking about this wheat surplus problem, we lump all wheat together—spring and winter—hard and soft—red and white—high protein and low protein. Yet farmers know there can be at least as great a difference between different types of wheat as there is between Holstein and Hereford cattle.

At a time when we have a record-breaking surplus of wheat in the United States, there is an acute shortage of durum wheat and a tight situation with respect to high protein milling wheat. Flour has been selling at the highest prices since 1920.

Farmers in some parts of the country have been concentrating upon exceptionally high-yielding wheat, rather than upon quality wheat. Since the grain is produced for sale to the Government at a fixed, guaranteed price, rather than for conversion into bread, the sole objective is to grow as many bushels as possible on the allotted acreage.

Unrealistic price supports have brought about a sharp rise in wheat production outside the area we normally think of as the commercial wheat country. The Corn Belt has become the source of more wheat. So have the grasslands of the Southern Great Plains and the dairy regions of the northeast.

In Illinois the 1953 wheat acreage was 51 percent above the 10-year average, In Michigan it was up 46 percent. Even in New York the increase was 36 percent. One "dust bowl" county of eastern Colorado, which reported a mere 5,000 acres of wheat in 1939, had 365,000 acres in this 1 crop by 1952 as the "suitcase" farmers and speculators moved in.

Now, farmers in the low-cost areas where most of our wheat has been produced in recent decades find themselves in the same production straitjacket as growers in States less favorably suited to efficient wheat production. The man who has been growing quality wheat for the market gets cut back on the same basis as the man who grows wheat for the Government loan.

I would like to see us produce wheat in the regions where it can be grown most efficiently. Many of these areas are not well adapted to the production of profitable crops

other than wheat.

Wheatgrowers understandably are dissatisfied with the conditions which have been forced upon them under this system of high, rigid supports. Perhaps more than any other major producer group they are actively seeking a new approach to the whole problem. They want a program which will give them greater freedom—a chance to utilize more fully the potential of their land.

I am sympathetic to those wishes. Recently I requested the National Agricultural Advisory Commission to review the entire wheat situation, giving special attention to possible means of expanding consumption, as well as to grades and classes of wheat and land-use programs. The study will also be directed toward the merits of production controls established on a bushel rather than an acreage basis.

I believe the flexible price-support program which becomes effective with this year's harvest will help to bring wheat supplies and utilization into better balance. But it is going to take time because of the mountainous surplus built up under high, rigid

supports.

Certainly agriculture has had its problems during this period of adjustment from war to a peacetime economy. Yet it is also true that we are making the changeover this time with far less hardship than farmers experienced in the years following the First World War.

The flexible price-support provisions of the Agricultural Act of 1954 can be of real assistance in making an orderly transition from an emergency program to a permanent, peacetime farm plan. Let us not turn back the clock at this point. Instead, let us give the new program a fair chance to operate.

Let us work toward a well-balanced agriculture—one in which farmers themselves will make most of the management decisions right on their own farms. Let us seek to build a thriving farm economy in which dairymen, poultrymen, and all other segments of agriculture will share fairly and fuily.

Our national economy is sound and prosperous. That, in the long run, is the best guaranty of a brighter tomorrow for Ameri-

can agriculture.

Let us push toward those horizons beyond. Let us continue resolutely to work toward a stable, prosperous, and free agriculture here in this choice land which God has blessed above all others.

The Ramparts We Guard

EXTENSION OF REMARKS

HON, BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. WILSON of California. Mr. Speaker, one of my distinguished con-

stituents has recently, for the third time, been accorded the George Washington award by the Freedoms Foundation for an outstanding address in the cause of freedom. He is Rear. Adm Leslie E. Gehres, United States Navy, retired, a distinguished career naval officer who fought gallantly to defend our freedoms during World Wars I and II, and who now speaks eloquently of the need to continue the fight in these perilous times. Admiral Gehres was the skipper of the carrier U. S. S. Franklin, which was seriously damaged during the Pacific campaign. Although ordered to abandon ship, Gehres and his gallant crew stayed with their mortally damaged carrier and brought her safely home, saving the lives of hundreds of men trapped below the decks. He has received the Navy Cross, Purple Heart, and many other commendations. He knows whereof he speaks. Under unanimous consent, I include his award-winning speech as a part of my remarks:

THE RAMPARTS WE GUARD

(Speech by Rear Adm. Leslie E. Gehres, U. S. Navy, retired, to the 34th annual convention of the Military Order of World Wars, at Pasadena, Calif., October 1, 1954)

Commander in Chief Clark, officers, and companions of the Military Order of the World Wars, ladies, and gentlemen, I am tremendously complimented to be accorded the privilege of being the speaker at this 34th an-nual convention banquet of our order. When our general chairman, Colonel Younglove, invited me I accepted instantly. Now that I am here I have a feeling that maybe I had better heeded the sage advice of an old hand when I first went into the Navy as a seaman. He told me that the way to get along in the outfit was to keep my eyes and ears open, my mouth shut, and never volunteer. While I did not exactly volunteer for this detail, I certainly did open my mouth so now I stand here before many men who were my seniors in the service, and many of whom, I am sure, are better qualified to address you than am I. What I bring here tonight those of you from San Diego County have already heard me say, and I expect that all of you have lately heard much of it from many sources.

You see, ever since it became apparent that our fighting men were not going to be permitted to take the victory they had won in blood and suffering in Korea, that our hard-won position in the Far East was endangered by a spirit of weak-kneed appeasement I have been speaking about war and communism and foreign policy and the vital import of the Asian struggle to the safety of our Republic, in whose service you and I spent most of our lives.

When I started there were not many important people except men like General MacArthur and Senator Knowland who appeared deeply concerned with the course of events in Asia. But now, since the dramatic and tragically unnecessary disaster at Dien Bien Phu spotlighted the impending loss of Indochina at Geneva, everybody has gotten into the act. Men of the highest authority have been sounding the warnings which in my own small way I was trying to do. Now I feel like a minor prophet whose cries have been taken up by the majors. That is very gratifying in a conceited sort of way, but I am beginning to know how an echo feels.

Be that as it may, what started me on this personal campaign was hearing so many people who should have been informed talking about communism with no idea of what communism really is; talking about peace and peaceful coexistence as though the temporary cessation of shooting meant that we were not at war; criticizing our foreign policy on the assumption that the purpose

of foreign policy is to win the love of other natons; nodding approval to vast giveaway programs in the belief that bought allies will stay bought; hoping that someone else would guard the ramparts of the freedom they took for granted.

So I took it on myself to try to make what people I could reach think seriously on these subjects—to create in my own small sphere a climate of public opinion which would support our national leaders in their efforts to forge new and firm policy weapons to defend our fortress America.

When Colonel Younglove called me for the title of my speech (he insisted he must have a title for the program), I was looking at an advertisement which was illustrated with a picture of Francis Scott Key standing on the deck of a British vessel in Baltimore harbor watching through the night the bombardment of Fort McHenry. month, you know, was the 150th anniversary of that action. Of course, Francis Scott Key could not foresee that the verses he composed under the title of "The Defense of Fort McHenry" would become the national anthem of a great Republic, stretching from sea to sea. He could not have even dreamed that one of his phrases, "the ramparts we watched," would in time become the watchword of a people whose spiritual devotion to human liberty would be the last rampart protecting not just a single fort, not a single Nation, but all men who claim freedom as a divine gift.

Francis Scott Key watched the rockets' red glare from afar—but not so those within the besieged fortress. Theirs it was to man and guard the walls. Today we Americans are in an analogous situation. We cannot stand apart and watch others, even though they be on the other side of the world, fight for freedom. We ourselves must stand to the ramparts and fight through the long night of Communist attack. It is becoming ever more crystal clear that no one else will guard these ramparts for us.

You men, by the very nature of your profession, have had intimate contact with the basic facts of life and death. You know that human beings in trouble, in sorrow, in fear, in the face of death, are sustained by the most part by faith. Faith that there is meaning to life, faith that there is a divine plan by which our human destinies are guided, faith that man is the child of God and that freedom and dignity are his proper environment.

It was this faith by which was built this country which we love so much and which we have been so proud and privileged to serve. The ramparts of freedom were laid up, not with the material resources of this magnificent continent but by and with faith and trust. Trust in God, trust in the integrity of our fellowmen, trust that each generation would fulfill its obligation to pass on to its posterity the heritage of freedom which it had received in trust from its own forebears.

Neither our Nation nor any other free community could long endure in a world in which that quality of faith had been erased from man's character, a world in which trust had been crushed under the heel of atheist brutalitarianism. Yet that is the great central danger which we face today and too many of our people do not understand it, cannot believe it, or are distressingly apathetic about it.

We Americans are such a hopeful and optimistic people. We are friendly. We believe in honesty and truthfulness and in helping others. Because we are like that, too many of us allow our hopes to run away with our understanding of what we face in the war for survival in which we are engaged—and this struggle with the worldwide Communist conspiracy is a war for survival. The winning of this war will call for hard decisions and firm action, supported by all the patience, all the fortitude, and all the understanding of which we are capable. In this

bitter 37-year-old war there can be no easy escapes, no cheap victories. Appeasement accelerates disaster, peaceful coexistence is just the digestive period of the nation-

eating Communist tiger.

I think it has been the widespread, popular misunderstanding of the nature of communism, and the nature of war, which has made it possible for our enemy to win battle after battle until today, only a few short years after the successful conclusion of a world struggle to eliminate another agressive tyranny, we face the catastrophic fact that a third of the world's people are now captive to our enemy and millions more in southeast Asia are being readied for the same fate.

This lack of understanding is natural enough and in a way does credit to the basic idealism of Americans of which I spoke. We know we seek peace, and when we say "peace" we know we mean living in a world of honest good will. We know we covet no other people's lands or goods. We bear no enduring hatreds from one generation to another. So we find it hard to believe that other people can pervert the meanings of beautiful words like "democracy" and "peace" to tyranny and death; and exalt as the highest morality any deceit or treachery, or base strategem which will advance their voctory in the class war they force upon the world.

Yet that, exactly, was Lenin's exposition of the Communist ethic before the Young Communist League in 1920. It is today still the Communist ethic. Just as they reject religion and defiantly proclaim their disbelief in God, so do they reject any ethical or moral concepts which do not derive from the necessities of the class struggle. see, their words are not our words. place no trust in them, for they have no God by whom to swear truth or faith.

With us, truth is an attribute of Deity. Acknowledging no Deity, the Communist must accept as absolute truth whatever the party decrees. This is basic to the nature of communism and we must keep it always in the forefront of our minds if we are to correctly evaluate the enemy's moves in this life-and-death struggle. It is vitally important that we remember this now, when the momentarily satiated conqueror preaches trade and peaceful coexistence.

Too many among us have in the past accepted, and today still contend, that communism is an economic theory, or a political belief, whose proponents could be loyal to our constitutional Republic, faithful in public office, and trustworthy teachers of

Despite the Communists' derision of all religion, communism today is itself a form of religion seeking to establish its concept of socialist materialistic morality upon all mankind. It has been advanced with the same crusading fervor, the same ruthless determination back by military power which marked the sweep of Islam over the same portion of the world which is the Communists' immediate target—Asia.

This atheistic religion has for its devotees a body of revealed incontrovertible scientific "truth"—the writings of Karl Marx. It has had its messiah-Lenin. It is an orthodoxy-and heresy is punished with quick death. Like all crusaders, the Communists have the conviction of ultimate victory. They firmly believe that time and history are on their side. They are willing to endure, and make others endure all manner of hardships for their belief. They are in to back up, when they must. By constant but carrying pressure they weary and frustrate the free world. They exploit the fears and hopes of the impatient west, playing one against the other. Subversion, treachery, sabotage, the enormous lie, are their preferred and most effective weapons.

Their revolutionary strategy, like their revolutionary theory, are long-term concepts little concerned with short-range Such are in the field of tactics. Their strategy embraces the application of their revolutionary theory to the world situation as it may exist at any given period. It takes into account favorable and unfavorable situations, and directs when and how to shift to defensive or offensive tactics as a particular campaign may require. Advance and retreat; blow hot, blow cold; a threat here, a concession there—they zigzag toward their ultimate goal just as a battleship zigzags in enemy waters but always making a percentage good along the base course.

As military men you know there are times when it may be necessary to liquidate an unfavorable situation to cut losses to an acceptable figure. But even in retreat you try to salvage some advantage. The Comexperts at applying this prinmunists are ciple to political situations and they are ruthless in their use of it. They ease off the pressure when they encounter firmness— lay it on when they detect weakness and

indecision.

The abrupt abandonment of the war in Greece, the lifting of the Berlin blockade, the apparent softness toward the revolts in East Germany in June 1953, the truce in Korea, and their repeated but always deceptive pre-conference willingness to meet and -these were and are loss-cutting tactical moves to improve their position in what the Communists have always recognized as

a global struggle.

You and I, whose profession was war and strategy, must help our neighbors understand that Russian imperialist communism is a predatory conspiracy dedicated to the destruction of freedom. Like the spotted leopard, it camouflages itself by ceasing to move when it scents danger, but it does not change its spots thereby. Neither does communist predator's objective ever change. It is and always has been world domination and they know that these United States are the citadel they must ultimately reduce. The ramparts we guard are the last barriers between them and the free world's desolation.

Most Americans, despite three wars in one generation, have not understood the nature of war, nor their intimate daily concern with foreign policy. Foreign policy is essentially an extension of domestic policy. a free self-governing people it must reflect their will, their ideals, and moral values if it is to be viable. To be successful it must promote their wellbeing. It must be based on enduring principle, not bent and twisted by the winds of political expediency

It must be so stated that other nations will know what we mean and know we mean what we sav.

You officers, out of your knowledge and experience and your proven devotion to our country, can do much to build public interest and understanding of these matters in the communities where you make your homes. Too many of our breed, out of the long habit of silence on public matters, fail in retirement to speak up when they should but, instead, content themselves with private grumbling.

We have seen in recent months how an administration attempting to develop and express a strong and positive foreign policy has been forced to backtrack and hedge, to the delight of our enemies, because the public and our wavering allies have protested even the acknowledgment of danger. The appeasers, the world-first-and-American lasters have been vocal enough but where have the patriots been? Not all dead surely, but certainly silent while the frightened summer soldiers surrender another section of the world's freedom.

I believe that had he been backed by the understanding support of the Nation, Mr. Dulles' strong and forthright statements made earlier this year could have stopped the Communists cold at Geneva. They came there fearful of American strength and what seemed to be determination. But those who have so little faith in freedom that they fear war more than they do slavery pulled the rug from under him. They made it apparent to our enemy that our statesmen were not leading from strength, but from the weakness of irresolute allies abroad and a people at home not yet awake to the meaning of southeast Asia to their own future safety. Mr. Dulles' apparent strong hand became a bluff, and the Communists promptly called that bluff at Dien Blen Phu and forced us to throw in our cards at Geneva. Red China emerged as an acknowledged world power with a contract of conquest signed, sealed, and delivered and which we have promised not to upset by force of arms. So there is sealed, also, the ultimate fate of Thailand, and Burma, and, eventually, Indonesia, and the enemy gathers strength and moves a little closer to the ramparts we guard.

What we are faced with, as I see it, is the natural result of a long-continued tragic misconception of the principle and purpose of all successful foreign policy. The basic principle is intelligent self-interest. Starry eyed altruism, a burning desire to do good to other people, always so expensive to satisfy, have no proper place in the development of foreign policy.

Doing good to others requires a skill far beyond that possessed by most humans, if possessed by any at all. If we will refrain from doing others harm and let them decide what is their own good, we will accomplish something.

In the field of foreign policy if we intelligently pursue our own national self-interest (and that, of course, rules out greed and aggression) and refrain as best we can from doing harm to those who mean us no harm. allowing them to do good to themselves according to their own ideas of what is good, we would get along a lot better in the world. We might be no better loved, but we would be far more respected, which is far more important. Everybody understands self-interest. They can and will believe that a nation will act thus. They will not believe the opposite.

We are distrusted and actively disliked around the world today for the simple reason that the recipients of our vast bounty cannot believe that we are altruistically motivated and not because, as some of our disappointed politicians say, we are reappraising our commitments abroad and taking vigorous action to flush out the traitors inside our home ramparts.

There has been too much of this business of highly placed Americans, of both sexes, going abroad and apologizing for the growing and quite proper feeling that the allies we have supported should support us. There is very real danger in these returning travelers taking to the stump and telling us and the world that our principles are rigid, that we should be more flexible, more willing to compromise with what we know is evil, that because we are growing intolerant of treason our prestige abroad is falling and we are no longer loved.

Prestige attaches to the individual or the nation which stands firmly for the right as God gives them to see the right. The strong and the wealthy are never loved. To seek love with gifts and surrender of principle, by giving largesse to those like the Indians who comfort our enemy, is to find only scorn and envious hatred.

Both respect and prestige will be ours if re apply these primary tests to all our pol-cles—"is this good for America?" Not "is this good for England, or good for China, or good for Germany, good for India, the Arabs, or the Jews"—but "is this good for America?"

Nothing will be good for America if it does preventable harm to any of those others, or if it makes liberty anywhere less secure. Refraining from doing harm to those who mean us no harm is something we may be able to do if we work carefully and intelligently at it. Deciding and then attempting to others what we think is good for them is beyond our wisdom and capacity-and too often turns out to be bad for America. Witness the tragic results of our deciding that it would be best for China if Chiang Kaishek were persuaded or coerced to take into his government the Chinese agrarian reformers. He knew such a course was definitely not for the good of China, but we decided otherwise. So we lose China to the Communists, suffer bloody defeat in Korea, followed by disaster in southeast Asia.

We who guard the ramparts of freedom can best help others to hope to hold or regain their freedom by preserving our own strength and vigor. We will do them irreparable harm if through profligate waste of our men, money, and materials around the world we sap our own strength and destroy their self-esteem.

Of course, we should help our friends when they really need help, and when helping contributes to our own welfare. But in the interest of mutual respect there must be a mutuality of benefit. Mr. George H. Wilson, president of the California Farm Bureau Federation, after returning from an extensive tour throughout friendly Asia as a member of a Presidential commission, testifies to this. He found appreciation for our past generosity but also a real desire for nongovernmental trade and finance relationships. As one Indian businessman put it, point 4 and things like that are very nice, but when they are discontinued they leave behind no enduring personal or business contacts in the United States. It is business and banking and trade arrangements between private enterprises which build enduring relationships and understanding.

In the 9 years since the end of World War II we have given away, in one form or another, \$80 billion. After the straight altrulstic thrill of giving for the sake of giving had worn off, the ostensible purpose was an investment in allies, to build strength to match our own.

What dependable allies have we won with this extended giveaway program? England? Prance? India?—they who have had the greatest share? England in whose Parliament the United States is almost daily attacked; England, trading with the enemy while her sons were engaged in combat in Korea, that England who should know better than any other that any goods and services which a people need or can in any way use adds to their warmaking potential, and on this knowledge enforced the tightest of blockades and worldwide embargoes through two world wars. France?-incapable of stable self-government, unwilling to face up to her own internal weaknesses, smothering her own child, EDC, and still hedging and blocking the substitute Brussels treaty extension? India?-accepting our grain, our money, our point 4 help while incessantly lecturing us on our uncouth belligerence While playing up to the Communist tiger which will most certainly eat her up in turn.

How different the case in Greece, Turkey, Spain, Pakistan, the Philippines, South Korea, and Formosa. There is the full rollcall of the ones we can really count on to fight beside us when the chips are down. With these nations we have traded what we had that they needed for what they had that we wanted and the bargains are bound with the cement of mutual self-interest and mutual respect.

Foreign policy, either in its application or development, is not some esoteric mystery to be left to the State Department alone. It is not something outside the lives and interests of ordinary people. It is the most important thing in their lives, for to a large degree, the kind of life they and their children and grandchildren will live, yes; even if they are to live at all, depends upon the wisdom, the success, or failure of their Government leaders in this field.

Among the wisest things our present Secretary of State had done have been his nationwide reports by radio and television following each of his more important foreign meetings and conferences. Here, truly, has been an example of taking all the people into partnership, acquainting them with progress and the problems of international affairs.

Yet, on many occasions when I have asked some friend the following morning, "What did you think of Dulles' report last night on television?" the usual answer has been to the effect that he didn't hear or see it—he was watching the fights or I Love Lucy. How many of you officers here have ever written to Mr. Dulles after one of those broadcasts and expressed your opinion, your approval or disapproval? Our leaders need support and constructive criticism and you should give it and encourage others to do likewise.

Although we've had three major wars in our time, most people, except the professionals (and some of us) mistake the nature of war. War is commonly thought of in terms of shooting when, in fact, big shooting is a last desperate resort in modern war.

War is an extension of policy by means other than peaceful. It is a business of pressures. The pressure can be political. psychological, economic, or violently physical, or any combination of these elements. The Communists, with their long-range strategy, their inhuman patience and their understanding that the whole world is their field of battle, have developed this war of varying and combined pressures to a point where what remains of the free world seeks not victory, but only a lessening of ten-The perfect correlation of the violence at Dien Blen Phu to the Geneva Conference, of Quemoy to Brussels, are perfect examples. Dien Bien Phu was unimportant as a military position but the psychological effect of victory there was decisive at Geneva in winning a new and uncontested foothold for further Communist advances into southeast Asia.

For 37 years the Communists have waged this war against us. Every time we've shown signs of recognizing the struggle for what it is and stiffened our resistance, they have eased the pressure; offered a concession here, another there; made new promises to replace the old broken ones, made big talk of peace and disarmament, and peaceful coexistence.

David, King of Israel, described them perfectly in the 55th Psalm, "The words of his mouth were smoother than butter, but war was in his heart; his words were softer than oil, yet they were drawn swords."

And we have listened. In our hopeful optimism, in our belief that because we hold to truth and honesty and faith, others must also. We have over and over again permitted ourselves to be deceived, to be lulled into believing that a compromise with evil is possible to sustain. Our European allies are today under this spell, their leaders drinking the toasts of friendship with the executioners of freedom. There is an increasing number among us who would have us do likewise.

As we have belatedly come to realize, our enemy has his fifth column within our ramparts working in devious ways to convince us that Russian and Chinese communism is something we can coexist with, the while they prepare us for nonexistence. Britain, France, and India, with their tired and weary voices, tell us—and there are Americans who repeat it—that we are too firm in what we believe to be the right. We are told that the door to the conference room is the sure door to peace if only we will enter and give enough.

The door to Yalta opened on Korea. Potsdam sealed the doom of Poland. The door at Panmunjom led to the loss of victory for which 40,000 young Americans spilled their blood and lives to win twice over. Berlin and Geneva consolidated the Communists' political and military victory in Korea and confirmed their conquest of new lands and millions more humans in Indochina.

We must not let our people deceive themselves with the belief that if we will just once more sit down in sweet reasonableness the enemy will grant the weary world what was not forced from him in the trial at arms. That is just childish wishful thinking.

The shooting and the dying is ended in Korea and Indochina, for the time being at least. And that is good, for victory in Korea was made impossible by our U. N.-directed foreign policy and in Indochina we had fallen into a false position of supporting a European colonial regime which had too long dragged its feet in granting freedom to a people asked to fight for the free world.

But let us not deceive ourselves that either of these struggles ended with honor to us, or that the United Nations "threw back the aggressor" in Korea or "contained" communism in the south. You and I, as military men, know only too well that the Communist forces threw us out of North Korea, back to the line of the 38th parallel where the war started and that in Indochina we suffered the gravest political and strategical defeat in all Western history. Truly, General MacArthur said, "In war there is no substitute for victory."

These things are not pleasant to recall. They are not nice to think about. I repeat them as I have been doing for the past year because you may be sure that all Asia remembers them.

Our President has repeatedly told the country that the struggle in southeast Asia was a farflung flank of the battle we fought in Korea, linked also to the threat in Europe. If we consider Japan and the Philippines vital to the security of the United States, and in this transonic-hydrogen-fusion age they most certainly are, then what happens to Formosa, Indochina, Thailand, Burma, and Indonesia is equally the concern of our intelligent self-interest. And now comes a man who may well be the next Prime Minister of Britain proposing that we give Formosa to the Communists and incarcerate our faithful ally of many years, the Generalis-simo, in "some safe place." Truly, this is the counsel of despair to offer to a people who believe that human aspirations for individual freedom and dignity are of Divine origin, and on whose coins appears the motto "In God we trust."

A year ago last June the masters of Russia were off balance. They sat uneasily on the departed dictator's pedestal. They faced a united West strengthened by new and firmer leadership in America. For a time it appeared we had at last gained the initiative, that at long last we could call the tune and make the bear that walks like a man dance to it. But the spirit failed us. Peace and trade in our time, any lessening of tension, seemed so much easier than the sacrifice and self-denial which might be the cost of insuring to our grandchildren the freedom into which we had been born.

We have been outmaneuvered because we lack the enemy's single-minded intentness on the ultimate goal, because we have been unwilling to recognize that we live in an age of danger and that the joys of peace are not for us while evil incarnate stalks the world with power in its godless hands. Having released the awful genie of neuclear power, we cower in its towering shadow. "No Place To Hide"—was not that the title of a recently best-selling book? What a motto for the land of the free and the home of the brave. As though men who sought only a place to hide could ever gain or deserve freedom, let alone deserve it.

But the enemy now has the dread hydrogen bomb cry the fearful ones. What does that mean except that he can now threaten us with the same weapon with which we have long threatened him? Shall we now surrender? Shall we abjure the principles by which we have lived? Shall we run from the ramparts of freedom and abandon our children's and their children to the horrors of a godless Communist world?

We of the armed services know the value of tradition, the inspiration of past great deeds. Out of our history we find the answer in the burning words of Patrick Henry: "They tell us, sir, that we are weak, unable to cope with so formidable enemy and adversary. But when shall we be stronger? Will it be next week, or the next year? Will it be when we are totally disarmed? Shall we gather strength by irresolution and inaction? Shall we acquire the means of effective resistance by lying supinely on our backs and hugging the delusive phantom of hope, until our enemies have bound us hand and

Terrible as war is, and you and I have seen more of it than most of us like to remember, there are worse things. Slavery is worse. The mental, spiritual, and physical slavery imposed by communism is worse than death to men who believe that freedom is a divine principle. That is the rampart upon which freemen must stand and fight or forever surrender all claim to kinship with

divinity.

foot?"

Our forefathers manned that rampart in their time and guarded it with their lives, their fortunes and their sacred honor. We have a greater obligation than they for we have lived and grown great in the freedom they won for us and men of good will everywhere look to us now to keep liberty alive upon the earth.

We Americans profess to believe that our way of life is in accord with the will of God whom the signers acknowledged in that first great Declaration as the giver of our rights and freedoms. Communism denies all this which we hold to be self-evident truth. So, between us there must always be conflict until one or the other prevails.

With the Communists this is dogma. With us it must be intelligent but passionate conviction.

At this point you may say "these are fine words, but what do you propose-that we shall go to war, send our young men into the jungles of southeast Asia?" The answer is, of course, that we are at war and have been since 1917. The first step is to realize that fact, and then to develop and adopt for ourselves a long range strategic plan to fight and win this new kind of war. Coexistence, containment, the status quo will never do it. For when it suits the enemy's purpose they will move again along their long planned road. Our grand objective must match theirs in scope and imagination. It can be nothing less than the destruction of the tyrannical governments of Russia and China. Any objective short of that will end in our defeat and the destruction of all governments which foster free capitalism and genuine democ-

Every move we make, every policy we adopt at home or abroad, should contribute something to this plan. We should start now by correcting that tragic mistake of 1933 by which our enemy established within our ramparts a privileged headquarters for their campaign of sabotage and subversion in the United States, Mexico, and Central America. What little advantage we may gain from having a restricted and shadowed embassy staff in Moscow is nothing compared to the value of their Washington Embassy to the Communists.

Will serving our diplomatic relations with Russia bring on world war III? Nonsense. We are at war and it is time we ejected the enemy spies from our camp. I urge every one of you to actively and vocally support Senator Knowland in his demand for the withdrawal of diplomatic recognition from this Government which refuses to even accept our protests when they diplomatically shoot down our aircraft over neutral seas.

We must press firmly for the expeditious rearming of a soverign West Germany so that they may reassume the mission of the ancient Teutonic Knights, guarding the eastern marches against the barbaric Slavs. We should put what troops we may find expedient to maintain in Europe on a realistic war footing, and bring home those thousands of dependents—potential hostages all.

We must not only stand resolutely firm in opposing the admission of Red China to the United Nations but we must move to reform that organization. Russia and her satellites have persistently and flagrantly violated every condition prescribed for membership in the U. N. They have used it as a sounding board for their lying propaganda. From its rostrum they have reviled every free and peaceful member nation. They have made open and shooting war against the forces of the very body of which they claim to be a rightful part.

If the United Nations are ever to be in fact united, if the organization is ever to be in reality a force for peace and an effective instrument of collective security, if the exasperated people of the United States are going to much longer consent to belonging to and supporting it, then the nations dedicated to violence and conquest must be expelled. The Communist plan for dominating the world turns upon the eventual isolation of this Republic. It is time we moved toward isolating Russia and China by excommunicating them from the congregation of civilized states.

We can make this moral isolation still more effective by using the force available to us to physically isolate these predatory aggressors. China is vulnerable to a blockage by sea. We have the naval forces, the air wings and the bases ready now to strangle China, make her dependent upon her tenuous rail connections with Russia for the machinery of war which is beyond her capacity to produce. South Korea and Nationalist China should be brought into the Asian anti-Communist pact. They are real allies who will stand firm when the chips are down.

On the island of Formosa there is the largest, best equipped and trained anti-Communist army in existence. It was created and exists for just one purpose-to regain their homeland and set it free. Time runs against them. The men grow older while the Chinese Reds fasten their terroristic grip ever more firmly on the restless and rebellious farmers. In a few more years the army of Nationalist China will be an army of old men. For them the tide will have run out, and Formosa will fall unless we then go all out to defend it. When Formosa falls, the Philippines will not be far behind and Japan will be helplessly exposed between the Kurilles and Formosa. I do not need to point out these elementary strategic facts to you who have studied and conducted war-but you are needed to explain them to those to whom the far Pacific seems another world.

After all, China is the Nationalists' own country. They have a right to put their cause to the test. We have no right to prohibit them—in fact, we have an historic obligation to assist them. If they win, Asia is safe and the world is saved for long time to come. If they lose, the free world is little worse off than it is bound to be after a few more years of inaction.

Will any of these courses bring on the dreaded World War III? There is no reason to believe so and every reason to believe the contrary. Of course, the Russians threaten, and so far they have bluffed us out. They proceed according to plan, and their plan does not include the risk of all-out war with the United States until they have accomplished our isolation, spent us weak, and reduced us to a lone island of beleagured freedom in a hostile, Communist dominated world. Their own base of power at home is still too shaky to risk giving the restless and conquered people who still remember freedom any opportunity for successful revolt.

But men cannot revolt against machineguns and tanks, it is said. Revolts have always been against seemingly insuperable odds. In the long struggle for human freedom the tyrants have always had the heaviest armament, the greatest hordes of marching men. But freedom has survived all the tyrants. There is something in the soul of man, planted there by his Creator, which makes him aspire to freedom as the sparks fly upward. And so far, there have always been some who have kept the faith and surrendered not to fear.

Behind the Iron and Bamboo Curtains there are millions who would give their lives if they thought that by so doing their children would inherit the freedom they remember. How better assist our enemy and extinguish what hope remains in the hearts of those sad prisoners than to continue compromise, to appease the unappeasable, to prop up their masters' regimes by providing so-called consumer goods so their industry need not be diverted from munitions production? How better, indeed, to mock the sacrifices of 40,000 young Americans, dead in Korea, than to recognize or admit to the community of civilized nations the obscenely inhuman government which encompassed their tortured deaths?

The road to the peace and security for which we hope and pray is long and hard and rocky, an uphill haul all the way. that long file of men in whose footsteps we have marched and whose best examples we have striven to emulate left unfading route markers for us to follow. The first is recogmarkers for us to follow.

nition of the danger in which we live. The third demands determination to build and maintain our strength, regardless of immediate costs to us, so that no foe will dare assault our ramparts nor attack those who take shelter under the banner Key sang of 150 years ago. Fourth and most vital of all is the personal rededication of every one of us to the principles upon which this Nation has stood; a fundamental belief in God; of firm adherence to the right as He gives us to see the right; and end to the false and cowardly hopes that there can be any lasting, successful compromise with evil.

You are all men who subscribed to a solemn oath to defend our Constitution and this Republic against all enemies, foreign and domestic. There was a period put to your term of service but no term to the binding nature of your obligation which you carry all your life. When you go home from this convention, don't just fadeaway. Use your influence, your prestige in your com-munities to build firm support for our Government's policies of strength and firmness. Help teach the youth of our country to be proud to be Americans. Instill in them the courage to stand with the patriots against those who would surrender our God-given sovereignty, our freedom, and our country's future for some surcease from strugglepeace and trade in our time."

Teach them that guarding the ramparts of freedom demands courage and sacrifice, some surrender of the ease and comfort of our lives. Teach them that freedom is a heavy load and liberty a heady wine, fit only for men strong in courage and faith. Make them see with Patrick Henry, who I will quote again, that "millions of people, armed in the holy cause of liberty—are invincible by

any force which our enemy can send against We shall not fight our battles alone. There is a just God who presides over the destinies of men and of nations. The battle, sirs, is not to the strong alone. It is to the active, the vigilant, the brave." Like those men of our Nation's infancy, we have, as Henry said, "no election—it is now too late to retire from the contest. There is no retreat, but in submission and slavery.'

We started this meeting tonight with a prayer, by pledging anew our allegiance to the flag and to the Republic. We stood at attention while the music sounded off with the ever-stirring strains of the Star-Spangled Banner. Let us go out from here, determined as ever, to keep that banner flying high and beautiful above the ramparts we guard.

One Hundred and Four United States Lending Agencies; Surely a Few Too Many

> EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. WOLVERTON. Mr. Speaker, the Hoover Commission has performed an important service in pointing up inefficiency, overlapping, and wasteful practices in the operation of our Government. Its latest report in dealing with the great number of lending agencies is one that can prove highly controversial, but the fact remains that the condition it complains of does exist and should be remedied.

I include as part of my remarks a very well written and logical editorial appearing in the Courier-Post newspapers, published at Camden, N. J., that makes plain there is a justification for some. if not all, of the recommendations that the Commission has made. It reads as follows:

ONE HUNDRED AND FOUR UNITED STATES LEND-ING AGENCIES; SURELY A FEW TOO MANY?

The latest report of the Hoover Commission covers a great amount of territory and will require a great deal of legislating if all its recommendations are to be put in effect. It is entirely safe to say this will not be

done.

"Certain parts of the report * * * appeared certain to stir up much controversy says the dispatch from Washington which summarizes it. And that is an understatement if there ever was one. It is interesting that 5 members of the 12-man Commission dissent from various parts of the report.

Broadly speaking, the report urges that the 104—that's right, 104—lending and insuring agencies of the Government be reorganized, with many of them being abolished and those that are retained being made to pay their

own way. Lending or insuring loans "is a function Which the Government should undertake only when private enterprise cannot or will perform the function, and then only in furtherance of a justifiable governmental Purpose," the Commission says.

The report specifically asks the liquidation of more than a dozen Government agencies which, it says, have served useful purposes but are no longer needed. It urges the reorganization of a number of others, including such big ones as the Federal Housing Administration and the Rural Electrification Administration, so that they will be self-sup-porting, better managed, and integrated with

the private-enterprise system.

On some other agencies, the report refuses to pass judgment. For instance, it offers the opinion that the Small Business Administration has outlived its usefulness and should be abolished, but recommends that its life be extended for 2 more years to demonstrate its worth or lack of same.

The report is conservative in its financial policies.

For example, it praises the FHA for a sig-nificant contribution to home financing and to the sustained high level of construction activity in this country.

But it questions the adequacy of its mortgage-insurance reserves and also questions its practice of permitting extremely low payments on the purchase of homes, a criticism which has been made frequently in recent months. The report says low downpayments on homes have not yet caused any trouble, but might do so in the event of a period of defiation or general decline, and goes on to recommend that the President be authorized to increase such payments on mortgages insured by the FHA.

The report criticizes the Export-Import Bank for making commercial short-term loans and says it should confine itself to longterm loans to foreign governments, financed through congressional appropriations.

The Commission skirts the issue of flexible versus rigid farm-price supports but proposes changes in the methods by which prices are supported, the basic change being designed to have farmers' loans made by private sources instead of by the Government. It also wants the Federal Crop Insurance Corporation to charge premiums sufficient to cover administrative expenses and losses and to provide reserves, advice not likely to be heeded by a politically minded Congress which at present is trying to reinstate high, rigid supports for the flexible system.

Federal loans, guaranties, and commitments through its lending and insuring agencies now total an astronomical \$244 billion, the report says. The Commission says its recommendations would effect substantial reductions in the national debt and governmental operating expenses.

Another result of following the recommended program, the report says, would be to restore control of the purse to Congresssomething which ought to appeal to that body.

But probably there will be objections raised to every one of the many recommendations in this report.

All the agencies whose abolition or merger is proposed will have their friends and defenders who will fight for them to the last ditch.

It is startling to think that 42 years ago we had not a single 1 of these 104 financial agencies, however, and it is reasonable to suppose we could get along without some of them, as the report urges.

Gibbering Yalta Ghosts Can Now Be Laid

EXTENSION OF REMARKS OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. PERKINS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Louisville Courier-Journal of March 18, 1955:

GIBBERING YALTA GHOSTS CAN NOW BE LAID-PAPERS BEARING ON THE CELEBRATED PACT, NOW SUDDENLY, GRACELESSLY RELEASED, SHOW ERRORS OF JUDGMENT, NOT BETRAYAL

Raymond Gram Swing noted back in 1949 that "Yalta has almost ceased to be the name of something historically measurable and has become a byword for failure, folly or trea-

That was the year when the late Senator Taft raised the charge that it was the Yalta pact that "divided the world into two sections," Neither he nor the chorus of critics who joined his outcry ever discussed Yalta in terms of honest human error. They presented it instead in terms of human perfidy. of dark and secret betrayal. It never dis-turbed such orators that a Roosevelt "plot" to sell out the West to communism at Yalta would have involved perforce a joint crime on the part of Winston Churchill.

Yalta has been used as a club to demolish the memory of Franklin D. Roosevelt as a

leader of America and of the free world.

Now at last the Yalta papers are released.

The action of the State Department is sudden, awkward and graceless, giving to the press the task of digesting a 500,000-word record to meet an immediate deadline.

Yet at least the record is now in the public domain, so that Yalta can become "something historically measurable." Even from the hasty stories huddled together by Washington reporters, some facts begin to emerge out of the poison vapors that have so long shrouded the conference on the Black Sea,

1. The secret sections of the agreement are shown to have related only to the terms by which Russia was to enter the war against Japan, and to the acceptance of Stalin's demand that Russia be granted 3 seats instead of 1 in the U. N. General Assembly.

The Far Eastern arrangements had to be kept secret because Chiang Kai-shek, whose interests were plainly involved, was unhappily not at Yalta as he had been, by Roosevelt's insistence, at the Cairo Conference. Russia was granted return of territories wrung from her by Japan in 1904, plus the Kuriles, some rocky islands with a population of 4,400, which had long been in dispute between the two nations. These arrangements and an agreement on Russian rights in Manchuria were later cleared with Chiang, who ratified them in a treaty of friendship with the Soviets.

These concessions were made to Stalin against a background of grave doubt about the war against Japan.

The first atom bomb was not successfully exploded at our desert testing grounds until 4 months after Yalta. The British-American Chiefs of Staff had advised their principals that they expected another 18 months of war with Japan after Germany surrendered. American plans for an invasion of the rugged Japanese home islands carried a military estimate of a million United States casualtles on the landing beaches. Japan had 1,950,000 men still on the mainland of Asia. Only Russia could tie them up there in the event of an allied invasion of Japan.

As to the concession to Russia on General Assembly seats, it was not announced because F. D. R. freely admitted that he found it "embarrassing." He wanted time to explain it to congressional leaders of both parties. It was this concession that Stalin insisted upon in return for Russian entry into the United Nations. No American has ever liked the agreement, but it would be idle to argue that the two extra votes have had the slightest effect on U. N. decisions from that day to this.

2. The agreements affecting the nations of central and eastern Europe were never secret from the beginning. The Yalta pact pledged the earliest possible establishment, through free elections, of governments responsive to the will of the people in these countries. It was Russia's later refusal to honor the pledge, not the pledge itself, that caused the Iron Curtain to fall around the western edges of the satellite nations.

This is the painful truth that faced the Eisenhower administration in 1953. The new government tried to carry out a campaign pledge to renounce secret understandings with foreign governments which permit enslavement. A look at the Yaita pact showed that the agreements on Europe were not secret. There was nothing in their terms to permit enslavement. It was Russia's repudiation of her Yaita pledge that led millions of Europeans into Red bondage.

3. The idea that Stalin got everything he asked for at Yalta is dead. The papers show that he caterwauled for Russian rights in the Dardanelles and in Iran, without getting the slightest result from F. D. R. and Winston.

4. The theory that Alger Hiss was the secret master at Yalta is exploded. The documents show that Roosevelt did not want Hiss or any other State Department advisers at his level on the trip, but was persuaded to take them by Edward R. Stettinius, former board chairman of United States Steel, who became Secretary of State. "Nowhere do the documents indicate that Hiss was a policymaker," writes W. H. Lawrence of the New York Times. "He was there as a technician."

The very name of Yalta has become heavily encrusted with myth and mystery since 1945. But when the pact was first announced, Herbert Hoover rose to tell a Lincoln Day audience in New York that Yalta was a strong foundation on which to rebuild the world. Governor Dewey hailed it as a real contribution to future peace. Churchill's report on Yalta drew a vote of confidence of 613 to 0 in the House of Commons.

It was later that the foundations of peace which Roosevelt and Churchill tried to establish at Yalta were undermined by Stalin's breaking his word.

It is easy to say now that the western leaders should have anticipated Russian perfidy and forestalled it by sending in their troops to occupy all of Central Europe. It is more difficult to see how they could have kept them there after the end of the war, in the joyous atmosphere of "bring the boys home" that prevailed. It is downright impossible, in the light of the papers now released, to argue with honesty that Roosevelt or Churchill willfully betrayed the West into Stalin's hands at Yalta.

What is left in the papers, then? There are fascinating tidbits for nibbling by future generation of historians. There are evidences of indiscretion, such as Roosevelt's tasteless remark about Wendell Wilkie's death and Churchill's easy comment that "I don't much like the Poles myself." But there is at least equal indiscretion from the stony lips of Stalin. His scorn of France and his insistence that the whole nation "opened the gates to the enemy" in 1940 will not make happy reading for French Communists even today.

Beyond that, there is a fascinationg if not editying picture of three historic figures sparring with each other, letting down their hair, voicing their personal prejudices, riding their pet hobbies. There is an air of joshing intimacy between Roosevelt and Churchill that must have left Stalin sometimes staring in disbelief at his translator. There is proof that the two leaders of the West had very different views about the future of colonialism after the war.

There are human foibles and failings in plain evidence in the actions of two men who bore the weight of the West on their shoulders. There are mints of Stalin's deep and soulless cynicism, of his ruthless, but also, at moments, of a rugged humor that makes him seem human after all.

These and many other matters of interest, but not of great significance, will be dredged up from the long-submerged depths of the Yalta record. There are evidences here of miscalculations, easy to condemn with the 20-20 vision of hindsight. But traces of treason on the part of the chosen leaders of the West? None whatsoever.

Protesting Comptroller's Approval of Bank Mergers—Letter From Comptroller of Currency Approving Proposed Merger of National City Bank-First National Bank of New York and Nine Other Bank Mergers in Nearby Long Island

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. CELLER. Mr. Speaker, under date of March 2, 1955, I protested to the Comptroller of the Currency regarding the contemplated merger of the Nation's second largest bank, the National City Bank of New York, with the First Na-tional Bank of New York. I also asked him to withhold his approval of the proposed mergers of the Franklin National Bank with the First National of Mineola, First National of Glencoe, Roslyn National, and Nassau County Trust; and the merger of the Meadowbrook National Bank with the New Hyde Park, National City Bank of Long Beach, Baldwin National Bank, and People State Bank of Baldwin.

I pointed out that the National City-First National merger together with the recently announced merger agreements of the Chase-Manhattan-Bronx, and the Bankers Trust-Public National—all of New York City—constituted the three largest in the history of our country in terms of total deposits. I argued that such mergers tended to create a monopoly and to substantially lessen competition in that section of the country and that such mergers were, therefore, at odds with the whole intent and policy of our antimonopoly and antitrust laws.

I also pointed out to the Comptroller that the Franklin National mergers and the Meadowbrook mergers would give those 2 banks control over 60 percent of all the banking deposits in Nassau County. This percentage figure is inordinately large, and accentuates the comparative weakness of the remaining smaller banking institutions and points up how increasingly difficult, if not impossible, it would be for them to compete.

The text of the letter of Comptroller of the Currency Ray M. Gidney and my answer to him follows:

COMPTROLLER OF THE CURRENCY, March 14, 1955.

Hon. EMANUEL CELLER.

House of Representatives,

Washington, D. C.

MY DEAR MR. CELLER: I wish to acknowledge and thank you for your letter of March 2, 1955, which has been read with interest. I appreciate having your views on a matter that has been receiving our serious attentations.

tion. Your letter raises the question of whether certain proposed bank mergers in the metropolitan area of New York City will violate the intent or policy expressed in section 7 of the Clayton Act or other antitrust laws.

In determining whether the approval of this office will be given to any merger or consolidation, the Comptroller considers, among other things, how the proposed merger will affect the particular banks involved, the soundness of the national banking system, and the convenience and needs of the community concerned. There may be a technical question as to the specific application of section 7 of the Clayton Act to these mergers. However, it has been the practice of the Comptroller before giving his approval to determine whether the effect of the merger, "in any section of the country * * may be substantially to lessen competition, or to tend to create a monopoly."

The Comptroller is aware of the recent mergers both within and beyond his jurisdiction and has studied the mergers presented for his approval to determine whether individually or collectively they tend to establish or give impetus to any existing trend which would have an adverse effect upon competition among banks.

The competitive area of the merging banks in Nassau County to which you have referred may for all practical purposes be defined as including all of Long Island and the Borough of Manhattan in New York City. However, in the case of the proposed merger of National City and First National, we have considered the problem as it may affect both the metropolitan area and nationwide competition among banks.

Our examination of the proposed National City-First National merger indicates that this merger would add vitality to competitive banking in New York by combining the diversified operations of National City with the specialized operations of First National.

Essentially, these two banks conduct different types of business. First National has specialized in a relatively small number of large corporate relationships and has not engaged in providing banking services to businesses and individuals of more moderate financial means. It has no domestic or foreign branches. National City, on the other hand, has 71 domestic and 57 overseas branches and is engaged in extensive foreign banking transactions. It finances trade and other commercial activities. A significant portion of its business is in the field of consumer credit and other banking services to individuals and small businesses. The competition between these two banks, in character of business and in services rendered, is

The attached schedules show the competitive position of the banks concerned, both prior and subsequent to the proposed merger. For example, in the metropolitan area, National City has 10.52 percent of the total deposits as against 11.7 percent after the merger, an increase of only 1.18 percent.

In comparison with other banks engaged in a nationwide business, National City's deposits amount to 7.5 percent of the total deposits of such banks, while after the merger the combined deposits will amount to 8.34 percent of the total, an increase of 0.84 percent. (For the purpose of this study only banks with total assets of over \$500 million were assumed to be engaged in nationwide banking; there are, of course, other banks which are in competition for nationwide business with National City, in varying degrees.)

In the New York area, National City has outstanding, 8.59 percent of the total loans. This figure refers to bank loans and does not include loans made by other types of competing financial institutions. The addition of First National loans to those of National

City will increase the latter's percentage to 9.58 percent of the total, an increase of 0.99 percent

In comparison with banks engaged in a nationwide banking business National City has 7 percent of the total loans and with the addition of those of First National the continuing bank will have 7.81 percent, or

an increase of 0.81 percent.

It should also be noted that as a result of the proposed merger the National City bank will add only 1 banking office, and will, as a result, increase its total number of banking offices to 73 out of a total of 732 Offices in the city of New York alone.

Accordingly, upon a study of the pertinent facts, the Comptroller has concluded that the proposed National City-First National merger will not violate the spirit or policy embodied in section 7 of the Clayton Act or other antitrust laws of the United States.

The mergers in Nassau County to which You refer do not either individually or collectively establish any substantial lessening of competition nor do they tend to create a monopoly. In fact an analysis of the banking business in that area discloses that the growth of certain banks in Nassau County was a necessary development if any local banks were to meet the competition of the larger New York City banks for the expanding industrial business of the Long Island

While it is true that the 2 largest banks in Nassau County have 60 percent of the deposits of all county banks, this figure does not indicate a true picture of the competitive situation as it affects these banks. Nassau County banks are in direct competition for deposits, and all banking business, with banks in New York City. The deposits in these banks as compared to the total savings and commercial deposits of all Nassau depositors in all banks would not approach 60 percent. It is our opinion that but for the mergers involving the two large Nassau County banks of which you speak, local banks would have a considerably smaller percentage of the banking business originating in Nassau County than they now enjoy. The increase in size has increased the ability of these two banks to compete with the larger New York City banks both in service and loaning ability.

An examination of the attached Schedule

E indicates that Franklin National has 0.66 percent of the deposits and 0.77 percent of the loans of banks in its competitive area, while the Meadowbrook National had (before its two most recent mergers, which were effective on March 4) 0.34 percent of the deposits and 0.33 percent of the loans. After the proposed mergers those percentages will be 0.78 percent and 0.88 percent for the Franklin bank. After the recently completed and proposed mergers these percentages for the Meadowbrook bank will be 0.44 percent and 0.42 percent. These figures, and par-ticularly the small amount of the increase, indicate to us that there will be no substantial lessening of competition as a result of the mergers.

Any consideration of the state of competition in the field of banking must take into account the vogorous competition offered by financial institutions other than banks, such as savings and loan associations and insurance companies. For example, savings and loan associations in Nassau County had loans of \$265,718,000 on December 31, 1954, as compared to commercial bank loans of slightly over \$404,000,000. When the impact of their activities is added to the competitive situation shown in the annexed schedules, it is even more apparent that the possible effect of these mergers upon competition is unsubstantial.

It is our conclusion that the proposed New York City and Nassau County mergers will contribute significantly to the ability of the banking institutions affected to serve the increasing needs of expanding economic activity and the millions of people who benefit by such expansion. This means the mergers should prove advantageous not only to the people of the respective areas, but also to the population of the entire metropolitan community.

There is nothing to indicate the mergers will substantially lessen the present healthy competition among banks in the New York area, or tend to create monopolies.

We share sincerely your interest in keeping abreast of the implications of current bank mergers as they pertain to the possible substantial lessening of competition in the field of banking. We shall continue to remain alert to our responsibilities to all the people of the Nation in this connection. We are constantly concerned to see that the law on this subject is strictly observed and shall give our best endeavors to keeping all mergers in which we have authority on a sound, healthy, and businesslike basis and consistent with the welfare of the greatest number of people who are served.

These particular marger proposals have been studied so exhaustively that we doubt enough new and pertinent information could be developed by hearings to justify the expense they would require. However, we would, of course, be pleased to meet at any time with you to discuss these matters further.

We value highly your views, realizing that we have the common purpose of maintaining a national banking system of unquestioned soundness and of the utmost effectiveness of its service to the public.

Yours very truly,

R. M. GIDNEY. Comptroller of the Currency.

HOUSE OF REPRESENTATIVES, U. S., COMMITTEE ON THE JUDICIARY, March 16, 1955.

Hon. RAY M. GIDNEY. Comptroller of the Currency. Department of the Treasury, Washington, D. C.

DEAR MR. GIDNEY: This is to acknowledge your letter of March 14, 1955 relating to my letter concerning the recent announcements of bank mergers in the New York City area. I wish to thank you for the illuminating material which accompanied your letter and for the courtesy and thoughtful attention

you gave to my request.

As I am sure you will agree, we are both interested in having a strong, competitive banking system. Sometimes, in order to obtain banks that can stand on their own feet and provide the public with the services needed, various small, weak banks need to merge, for the purpose of forming stronger, independent banks. The reasons underlying such mergers are well known. Early in our banking history we had thousands of banks which were too small, with too little capital, with inadequate diversification of loans, and lacking specialized personnel, and as a result they were unable to weather economic storms of even moderate magnitudes. In order to secure more capital, greater diversification of loans, and better managements, these small banks either united with other banks or established branches. All of these reasons have been acceptable and recognized ones for bank mergers and no doubt they will continue to be valid reasons.

None, however, seem to apply in the case of the recently announced National City-First National Bank merger. I have looked in vain in your memorandum for evidence on any of these points. You concede that National City is both strong and diversified; you include data which shows First National not only to be one of the larger banks in New York City but also one which is getting along so well that it is among the high profit earners in that area. No statement is made to the effect that First National suffered from

inadequate capital or lack of diversification of its loans or for lack of well-qualified, specialized personnel. You mention that it will now, as a result of the merger, possess foreign and domestic branches, and that it will be able to go into the field of consumer credit, but you fail to point out that we have hundreds of strong banks with no foreign branches, nor do you indicate assurance that going into the field of consumer credit will add appreciably to the strength of the bank. In these, as in some other respects, I find your letetr disappointingly inadequate.

I am sure your devotion to the American system of free competitive enterprise is as strong as mine and that you wish, in the public interest, to preserve competition. are as disturbed, I am sure, as I am about the fact that in the New York area there have been 14 mergers in the last 7 years, as a result of which there has been the elimination of many strong, vigorous, competing banks.

A notable example has been the elimination of the Corn Exchange Trust Co., in its merger with the Chemical Bank & Trust Co. Since the first of January we have had the merger announcements of the Chase National Bank with the Bank of the Manhattan Co., the Bankers Trust with the Public National Bank, the National City Bank, mentioned above, with the First National Bank—all located in New York City-which constitute, in terms of total deposits, the three largest banking mergers in the history of our country. If the present mergers are approved, an all-powerful oligopoly made up of the justenumerated banks and the Manufacturers Trust (itself the result of some 80 mergers and consolidations over the years) will have a stranglehold on New York banking facilities. The businessman and the merchant will be at the mercy of the financial colossi, which, because of the lack of competition, will be able to set the standards providing for their best interest, to the detriment of small banks, small-business men, and other customers. The Chase National Bank, which is presently the second largest bank in New York City, does not need the banking offices of one of its large competitors to render to the public the service for which it was organized. The principal value obtained by a large bank in acquiring a competing bank and merging with it is the elimination of the competitor, and in the instant case, the strengthening of an already all-powerful position of a large banking institution.

Your letter notes that, as a result of their eight recent mergers, the Franklin National and the Meadowbrook Banks of nearby Nassau County, Long Island, will have together over 60 percent of all the deposits of all the banks in that county. While these figures are inordinately large, you feel that such expansion is justified in order that those banks may meet the competition of the larger New York City banks. Such a position seems to me to be incongrous. It would mean that most banks in counties nigh unto New York City could or should merge, regardless of consequences. position offers the greatest encouragement for banks in Nassau, Westchester, and Putnam counties and the nearby counties in New Jersey and Connecticut, to merge with each other.

Any banks which control 60 percent of the deposits of a county are breeding, for practical purposes, a monopoly. violates the very purpose of our antitrust laws and the underlying policies of the Celler Antimerger Act. I believe you are being negligent in your duty by failing to stop mergers which tend to create monopolies. To my mind, these mergers, taken collectively with the recent gigantic mergers in New York City, can only have an adverse effect upon competition among banks in that area. The present merger trend serves to accentuate the comparative weakiness of the remaining, smaller banking institutions and points up how it is becoming increasingly difficult, if not impossible, for them to

compete.

the present trend is not stopped, obviously there will ultimately be but a few banks which, inevitably, as the history of banking in other countries has clearly demonstrated, will wind up in a nationalization of the banking system. We will soon be following in the footsteps of Great There, the so-called big five banks control about 75 percent of England's financial resources. Competition is not only lessened, but, corespondingly, the economy is depressed and cartelized.

If you, at the Federal level, will step into the breach and arrest this trend toward socialism, you will render statesmanlike service and set a sterling example for the banking officials of our various States, including the State of New York, in alerting them to the dangers inherent in these combinations.

Very sincerely yours, EMANUEL CELLER,

Chairman.

Brotherhood of Railroad Trainmen in California

EXTENSION OF REMARKS OF

HON, GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. MILLER of California. Mr. Speaker, on Thursday of this week the Brotherhood of Railroad Trainmen in my State is having a unique celebration. And one of my best friends, a person I have been associated with over a period of years, is a major part of that celebration. He is Harry See, national legislative representative of the brotherhood in Washington, with offices just down the street in the Labor Building.

I have known Harry See for the past 20 years, having first met him when I was a member of the lower house of the California legislature. At that time he was the California legislative representative of the brotherhood.

On March 24 lodge 71 of the brotherhood, located in my Congressional District at Oakland, will celebrate the 70th anniversary of its institution. Simultaneously lodge 1019 of the brotherhood, located in San Francisco, will celebrate its 10th anniversary. To complete the tripartite nature of the commemoration, Harry See will have been a member of the brotherhood 40 years on the same date.

This is a "Harry See affair" in just about every respect, as I learn that he was initiated into the brotherhood by lodge 71, and holds his present membership in lodge 1019, which also bears his name. During the celebration officers of the brotherhood will present him with his 40-year continuous membership em-

It has been my pleasure to work with the brotherhood both in California and in Washington on matters of special interest to railroad workers and their families, and I do not hesitate to say that my entire association with the Brotherhood and its officers has been pleasant and fruitful. I think it fitting to pause for a moment to pay tribute to a truly great labor organization, and to one of its outstanding officers.

Thirty-Seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. RADWAN. Mr. Speaker, I include the following address by Mr. Walter V. Chopyk, public relations director, Buffalo chapter, Ukrainian Congress Committee, on the occasion of the 37th observance of the independence of Lithuania, Sunday, February 27, 1955, International Institute of Buffalo, Buffalo, N. Y.:

Mr. Chairman, our distinguished guests, ladies, and gentlemen, this evening, I again bring you greetings, from the Buffalo chapter of the Ukrainian Congress Committee, on your 37th anniversary of Lithuanian independence.

Needless to say, we feel with you this day, we know the pains Lithuania has suffered, Americans of Ukrainian descent have suffered with you. We have not only sympathy and sincere understanding of this great day, we have a very real empathy in a problem of great, immediate, and mutual concern.

This evening, as an American of Ukrainian descent, exercising that cherished privilege of free speech in a free country, I speak both as an individual, and as a spokesman for the millions, and I mean 45 millions, all Ukrainians behind the Iron Curtain. These 45 million people are still hoping and praying for the day of deliverance from Red imperialism, with their millions of brothers and sisters in the Baltic prison of nations. They are all waiting and watching for that ray of hope, that spark of light, they are looking to us, the Western democracles, we who could and should lead the way toward freedom of mind, freedom of soul, and the complete freedom of the human being.

But that beam of light, that ray of hope, is not forthcoming. Let us examine and study our own democracy in the United States. Are we trying to light that spark of freedom for these imprisoned peoples, or are we unknowingly snuffing out the light for which they have been waiting?

1. Let us study for a moment, the Ezra Taft Benson plan, which consists of virtually dumping American agricultural surpluses behind the Iron Curtain; and now, according to the latest reports, the National Grange is concurring in this action. This means simply and logically, that we would indirectly be furnishing food to the Soviet Army and the Red Chinese Army, and not to the peasantry. Do not Mr. Benson, our Secretary of Agriculture, and the National Grange realize that for 12 years, the Soviet hierarchy has felt the powerful existence of nationalism in the Ukraine-exemplified by underground and political propaganda activitythe silent battle—the silent protest—the slow, the subtle, low production of grain in the "breadbasket of the world," a low production of grain for the Soviet war machine. Grain to feed the hungry mouths of the evergrowing Soviet and Red Chinese war machines, is planningfully and knowingly diminishing. What do we mean by this? We mean simply this. The Ukraine underground has planned, and is carrying out this

plan, to slow up the production of grain, the one commodity that can successfully finance a war-any war. A hungry man cannot shoot a bullet.

Now do Mr. Benson, and the National Grange know why the Soviets are deeply concerned, and have to focus more attention upon their internal conditions? They know if grain is not produced in sufficient quantities for their armies, they certainly cannot operate tactical warfare on an empty stomach. The Soviets may have the latest atomic weapons, but these are useless, in the hands of a hungry man.

Let us give credit to these underground or-

ganizations behind the Iron Curtain. They are producing headaches for the Soviet

Union-but not grain.

Fellow Americans, let's face it. That is one of the reasons for the very recent shakeup in the Kremlin. Those boys that were in charge could not shape up—so they were shipped out. They just had to change seats. This past week, dispatches tell of hurried visits into the Ukraine by Soviet agents, who preached to the people on collectivized farms, that more and greater production of grain was urgently and immediately needed. They further emphasized the greater care toward agricultural implements. Is this why there has been such a change of emphasis in manufacturing? Is this why the immediate emphasis in heavy manufacturing is so concentrated and seemingly so urgent? Now do Mr. Benson, and the National Grange wish to spoil the effectiveness of the hard work and careful planning of the underground activities of these freedom-seeking people, by furnishing indirectly, food to the Soviet war machine and the Red Chinese Army camps? Are they unaware that the shipping of these surplus foods and grains will destroy the moral spirit and hope, that spark of light, of these courageous peoplesmillions of them, whom some day we will need as our natural allies behind the Iron Curtain? Secondly, another method that our Government unknowingly, and we do hope it is unknowingly, is using in snuffing out that light of hope is by our weak diplomatic strategy in China. Our State Department is floundering, like a cork on the ocean, They don't know whether they are coming or going. Were they to develop a big-fist attitude, there, they would succeed. The Soviets know one thing—strength. An attitude of this type would set them where they belong.

In conclusion, I believe these to be our

only courses of action:
1. To protest the shipment of food and surplus grain to the Soviet war machine, which would destroy and upset the timetable of the undergrounds behind the Iron Curtain, and stifle the sources of patriotic resistance in the Red empire.

2. Make a definite statement of a consistpolicy of strength in regard to Red China. Show them we mean business

Now is the time for answers-not laterit might be too late.

I thank you.

The American Legion and the American Merchant Marine

EXTENSION OF REMARKS OF

HON. JOHN J. ALLEN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. ALLEN of California. Mr. Speaker, during the past 8 years in which I have served as a member of the Com-

mittee on Merchant Marine and Fisheries of the House of Representatives, I have come to know the organizations which in the national interest have given constructive, unselfish support to the building of a strong American merchant marine. Among the foremost of these organizations has been the American Legion and its merchant marine committee. It seemed to me very appropriate, therefore, when, on the anniversary of the birthday of the American Legion on March 17, the American Merchant Marine Institute sent congratulatory telegrams to both the Legion and its merchant marine committee. The gratitude of the industry to the American Legion was well earned.

A news release dated March 18 concerning the messages was made by the American Merchant Marine Institute. It reads as follows:

The American Merchant Marine Institute released for publication March 18 two telegrams sent March 17 (Thursday) congratulating the American Legion on its birthday.

R. J. Baker, secretary-treasurer of the shipping trade association, halled the Legion's efforts on behalf of a strong American merchant marine in the congratulatory messages. The telegrams were sent to Seaborn P. Collins, Indianapolis, national commander, and Henry C. Parke, Brooklyn, chalrman of the Legion's merchant marine committee. The telegrams are as follows:

"SEABORN P. COLLINS,

"National Commander, the American Legion, Indianapolis, Ind.:

"The American merchant marine wishes to extend its best wishes to the American Legion today on the anniversary of its founding. The American Legion's birthday is an important date for every American to remember. We take this occasion to repeat our gratitude to the American Legion for its long-time policy of support and encouragement for America's privately owned and operated American merchant marine, vital in peace and in war.

"R. J. Baker,
"Secretary-Treasurer American
Merchant Marine Institute."

"HENRY C. PARKE,

"Chairman, Merchant Marine Committee, the American Legion:

"The American merchant marine is happy to extend its congratulations today to the American Legion as a whole and to you, representing the merchant marine committee of the American Legion. Please accept our most sincere thanks for your tireless efforts and great service on behalf of a strong America and a strong American merchant marine, vital in peace as in war.

"R. J. BAKER,

"R. J. Baker,
"Secretary-Treasurer, American
Merchant Marine Institute."

To Save the Constitution

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the Record an article by Frank E. Holman reprinted from the Freeman of March 1955, as follows:

To Save the Constitution (By Frank E. Holman)

Until the organization of the United Nations, the average American citizen-and, in fact, most lawyers-took very little interest in treaties between the United States and foreign countries. This lack of interest was understandable because usually a treaty dealt with some international subject, such as alliances, war and peace, questions of boundaries, trade agreements and like matters. We viewed treatymaking as the sole business of the State Department, the President and the Senate, and assumed that treaties and other international engagements could not result in any substantial infringement of our individual rights as citizens and could not possibly result in changing or destroying the American form of government.

When the United Nations was organized in

When the United Nations was organized in San Francisco in 1945, there was included in the charter (art. 2, subpar. 7) a proviso as

ollows:

"Nothing contained in the present charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the members to submit such matters to settlement under the present charter."

This was a specific limitation upon the powers of the United Nations, and by reason thereof nothing contained in the charter should have been construed as authorizing intervention by the United Nations or its agencies in the domestic affairs of a member State—hence, in the domestic law of the United States or any other member State. Without some such protective proviso, the charter would certainly not have been approved by the American people nor ratified by the United States Senate; and it would not, in all probability, have been approved by many of the other important countries of the world.

When the charter was submitted to the United States Senate for ratification, it was accompanied by a letter from Mr. Stettinius, then Secretary of State, in which he called attention to the foregoing principle and advised the Senate and the American people that they need not be concerned about the United Nations or its agencies interfering in the domestic affairs of the American people.

One of the six "principal organs" specified in the U. N. Charter was the Economic and Social Council. In 1946, as a subagency of this Council, a Commission on Human Rights was appointed. It soon became evident that through the Economic and Social Council and its subagency, the Commission on Human Rights, the Socialists and Communists and the international planners and dogooders, both at home and abroad, proposed to reform and remake the world along the lines of so-called social and economic equality for all the peoples of the world-and to do this through declarations, pacts, covenants, treaties, etc., and thus to create a body of "treaty law" or world law which would be superior to and override the domestic laws of the member States, including the United States.

TREATIES AS WORLD LAW

The first definite step for creating and establishing this body of world law was taken early in 1947 with the announcement by the Commission on Human Rights that it proposed to draft two documents, a Declaration of Human Rights and a Covenant on Human Rights (the latter to be ratified as a treaty), for the purpose of establishing for all the peoples of the world a uniform system of individual rights regardless of the nature and character of such rights as already established by the national law and usage in each particular country.

This was, of course, a revolutionary program and was so recognized by the first Director of the Commission, Mr. John P. Humphrey, who publicly and boldly declared:

"What the United Nations is trying to do is revolutionary in character. Human rights are largely a matter of relationships between the State and individuals, and therefore a matter which has been traditionally regarded as being within the domestic jurisdiction of States. What is now being proposed is, in effect, the creation of some kind of supernational supervision of this relationship between the State and its citizens." (The Annals of the American Academy of Political and Social Science, January 1948.)

This program was, of course, in violation of article 2, subparagraph 7 of the charter and the assurances made by Mr. Stettinius and others for the purpose of securing ratification of the Charter. At the time neither the American press nor the public knew much about this revolutionary plan. Our so-called bipartisan foreign policy was chiefly respon-sible for preventing the American public from being advised; the leaders of both parties just assumed that because these international proposals had fine, high-sounding names—"Human Rights," "Equality of All Peoples," "Prevention of so-called Genocide," etc.—their purpose and content would not conflict with American concepts of political and economic freedom, as fixed by our own Constitution and Bill of Rights.

THE AMERICAN PEOPLE FOOLED

When the declaration was passed by the General Assembly of the United Nations, meeting in Paris in December 1948, there was no copy of the final draft available in this country for study or comment by the press or by responsible nongovernment organizations. In November, as president of the American Bar Association, I wrote the Secretary of State, Gen. George C. Marshall, in Paris, and thereafter wrote and cabled Mr. John Foster Dulles, and Senator Arthur Vandenberg, asking that, before final action in Paris, the United States delegation should request sufficient time for the American people to be advised of what was being ap-proved in their behalf. The naive answer proved in their behalf. The naive answer was to the effect that if the American people and American lawyers would think of the declaration as analogous to our own Declaration of Independence, then they would not be disturbed because, like our own Declaration of Independence, the Declaration on Human Rights was only a declaration of principles and not intended to be a legal document. This was not an accurate nor a reassuring answer.

First, there was no possible analogy between a declaration of independence which originated with the people themselves as a recital of grievances and a declaration of principles for which they were ready to fight and die to obtain independence, and a declaration in the form of pious compromises by a multination assembly in Paris assuming to act for the people of this country without the people's knowledge or consent.

Moreover, an examination of the document, when available, disclosed that the provisions of the declaration, particularly of the latter half, constituted an attempt to set up a socialistic if not a communistic concept of government for the peoples of the world, including the United States. In this respect, of course, the declaration failed in any way to conform to the traditions, the laws and sentiments of the American people.

In the dying hours of the same session of the General Assembly in Paris in December 1948, there was also adopted a document known as the Genocide Convention. This was also given little or no publicity by our State Department. On June 16, 1949, it was first submitted by President Truman to the United States Senate for ratification. Largely due to the studies and the opposition of the American Bar Association, it was not ratified. Nevertheless, during his administration, President Truman and the Acheson State Department continued to urge its ratification.

At a hearing in January 1950, before a subcommittee of the Senate Foreign Relations Committee, members of the American Bar Association committee on peace and law through the United Nations appeared and pointed out the serious dangers and loopholes in its content and also the failure of its language to include "genocide" committed by governments—as, for example, the liquidation of racial and other groups in Russia and Russian satellite countries by merely calling them political groups or enemies of the state. At Russia's insistence all reference to political groups was eliminated from the final text.

It was also established that the document was so badly drawn as to endanger American basic rights. As a result, the Senate Foreign Relations Committee pigeonholed the Genocide Convention. It has remained unratified, but it can be brought forth at any time by any President and submitted for ratification.

Meanwhile, the Commission on Human Rights has been busy drafting a covenant on human rights for controlling the social, economic, educational, and cultural affairs of the world, and for this purpose has held literally hundreds of meetings. In addition, innumerable other "treaty" proposals have been considered, which would change or adversely affect the American concept of basic rights, such as freedom of speech and of press and even freedom of religion. It is of the utmost importance to note that again and again the Commission on Human Rights has refused to approve the inclusion in the covenant of a provision covering the basic American right to own private property and be secure in its enjoyment against its arbitrary seizure by government.

This refusal of itself discloses and proves

This refusal of itself discloses and proves the extent to which the Commission is controlled by Communists and international Socialists. On March 3, 1954, over only United States and Turkish objections, the 18-nation Commission voted to shelve indefinitely all discussion of property rights. Under our concept of freedom, no man can be truly free who lacks the right to own property and be secure in its enjoyment against

arbitrary seizure by government.

The chairman of the Commission on Human Rights, Charles Malik, of Lebanon, had this to say of the Commission's Socialist and Communist approach to its work:

"I think a study of our proceedings will reveal that the amendments we adopted to the old texts under examination responded for the most part more to Soviet than to Western promptings. For the second year an unsuccessful attempt was made to include an article on the right to own property.

* * The concept of property and its ownership is at the heart of the great ideological conflict of the present day * * . It seems incredible that in these economic matters, which reflect indeed much more than mere economic divergencies, the Western World is so divided itself as to be incapable of presenting a common front against communism."

What are the matters embraced in these U. N. treaty proposals? They cover matters of education, the kind of teaching and textbooks to be adopted in our public school systems; social legislation; health and socialized medicine; and numerous other matters, including a proposal to establish an international criminal court to try American citizens in a court made up to a large extent, if not entirely, of foreigners—a plan under which American citizens could be transported overseas for trial and would be deprived of the safeguards accorded them in the Constitution of this country.

of this country.
Some will ask, "But do not our Constitution and Bill of Rights now safeguard American rights in all the foregoing particulars?" Unfortunately, no—unless the Constitution is properly amended. Until recent years Americans were entitled to rely on the propo-

sition that, in conformity to the Constitution and the Bill of Rights, their laws were made and to be made for them either by act of Congress or by State legislation or local city and county ordinances—to all of which agencies the people have the right to elect their own representatives.

But, since the term "treaty" is not limited nor defined in the Constitution, men in power with ingenious minds eventually discovered that this was a loophole whereby what was otherwise unconstitutional could be made constitutional by first making a treaty on the subject. This new theory or, doctrine was affirmed in 1920 by the Supreme Court of the United States—Missouri v. Holland (252 U.S. 416, 432). The doctrine of this case is simply that if the Federal Government does not have power under the Constitution to legislate with respect to a particular subject (one reserved to the States or to the people), it can acquire that power by the simple device of first making a treaty on the subject-in spite of the 10th amendment's reserving to the States and to the people all powers not delegated by the Constitution to the Federal Government. This decision then and there established "a third legislative branch of government [for the American pepole] composed of the President and some foreign nation, with a veto vested in the Senate, which is authorized to enact local police regulations governing the affairs of our citizens." (11 California Law Review, 242, 1922.)

TREATIES UNDER THE CONSTITUTION

When the Constitution was written, and by article VI thereof a treaty was declared to be the "supreme law of the land," it was clearly not contemplated that a treaty could be used to make domestic law or to override the Constitution either by an expansion of Federal power or otherwise.

Jefferson (as stated in his Parliamentary Practice, 1801) was quite clear as to the true meaning of article VI. He said:

"By the general power to make treaties, the Constitution must have intended to comprehend only those objects which are usually regulated by treaties, and cannot be otherwise regulated. It must have meant to except out all those rights reserved to the States; for surely the President and the Senate cannot do by treaty what the whole Government is interdicted from doing in any way."

Jefferson's Parliamentary Practice went through six editions before his death in 1826, and many more afterward. It had a great influence on political thinking and practice, being incorporated in full in Senate and House manuals as late as 1865. Jefferson's view on treaties was followed by the earlier Court cases, as illustrated by the case of New Orleans v. United States (10 Peters 662 (1836) at page 736, where the Supreme Court pointed out:

"The Government of the United States, as was well observed in the argument, is one of limited powers. It can exercise authority over no subjects except those which have been delegated to it. Congress cannot, by legislation, enlarge the Federal jurisdiction, nor can it be enlarged under the treatymaking power."

Even Hamilton, the great Federalist, said (Hamilton's Works, vol. 4, p. 342), "A treaty cannot be made which alters the Constitution of the country or which infringes any express exceptions to the power of the Constitution of the United States."

Hamilton also stated: "They [treaties] are not rules prescribed by the sovereign for the subject, but agreements between sovereign and sovereign."

CHANGED POINT OF VIEWS

There are enough expressions of opinion in United States Supreme Court decisions prior to Missouri v. Holland to indicate that up to that time treaties and treatymaking were subject to the limitations indicated by

Jefferson and Hamilton, But Missouri v. Holland repuidated one of these limitations, to wit: that Federal power cannot "be enlarged under the treatymaking power." Once this hole in the dike was opened, the concept of treaty supremacy without limitation began to grow. Thus in 1929, before the American Society of International Law, Chief Justice Charles Evans Hughes was persuaded to say that there was in the Constitution "no explicit limitation" on the treaty power, and that he would "not care to voice an opinion as to an implied limitation on the treatymaking power; the Supreme Court has expressed a doubt whether there could be any such." His references were to the expression of doubt in Missouri v. Holland.

Later a strong doubt as to any limitation was expressed by the United States Court of Appeals for the Ninth Circuit in United States v. Reid (1934) 73 F. (2d) 153). This doubt was further increased by United States v. Curtis-Wright Corp. (1936) 299 U. S. 304), declaring that the treaty power does not depend on a grant in the Constitution but is an inherent power of the Federal Government, and indicating that the treaty power is unlimited.

With the organization of the United Nations and the announcement by Mr. John P. Humphrey, Director of the Commission on Human Rights, of the proposal of creating supernational supervision of the relationship between the State and its citizens, a new school of internationalists announced the doctrine that " . . once a matter has become, in one way or another, the subject of regulation by the United Nations, be it by resolution of the General Assembly or by convention between members states at the instance of the United Nations, that subject ceases to be a matter being 'essentially within the domestic jurisdiction of the member states.' As a matter of fact, such a position represents the official view of the United Nations, as well as of the member states that have voted in favor of the Universal Declaration of Human Rights. Hence, neither the declaration, nor the projected convenant, nor any agreement that may be reached in the future on the machinery of implementation of human rights, can in any way be considered as violative of the letter of spirit of article 2 of the charter." (Moses Moskowitz, American Bar Association Journal, April 1949.)

In 1950, this new school of internationallists in the United Nations succeeded in getting an official declaration from the Acheson State Department that "there is now no longer any real difference between domestic and foreign affairs" (State Department Publication 3972, Foreign Affairs Policy series 26, released September 1950. Forword by President Truman).

by President Truman).

It was only logical, therefore, for Mr.

John Foster Dulles in 1952 to issue the following opinion and warning with respect to the omnipotence of treaties and "treaty law":

"The treatymaking power is an extraordinary power liable to abuse. Treaties make international law and also they make domestic law. Under our Constitution treaties become the supreme law of the land. They are indeed more supreme than ordinary laws, for congressional laws are invalid if they do not conform to the Constitution, whereas treaty laws can override the Constitution. Treaties, for example, can take powers away from the Congress and give them to the Federal Government or to some international body and they can cut across the rights given the people by the constitutional Bill of Rights."

The American people have therefore come full circle and find themselves now faced with an omnipotent instrumentality of non-representative Government: "treaty law." In the steel case we were within an eyelash of the treatymaking power's being successfully used to vest in the President the

uncontrolled power to seize private property when he thought it necessary for the good of the State. That is essentially the doctrine of absolute dictatorship.

As a result of all the foregoing, the basic issue with respect to "treaty law" is simple. The Constitution clearly intended to establish a Government of limited powers. intended, of course, that insofar as treaties dealt with international relations they should be the "supreme law of the land," but it was never intended that treaties should be omnipotent and be used to govern the American people in their domestic concerns, nor to extend Federal power, nor to override the Constitution. Since it is now boldly declared that treatles are omnipotent and can be used for all the foregoing purposes, it follows that unless this presently omnipotent power of treaties is properly limited by a constitutional amendment, the treaty process will be more and more used not only to make domestic law but to vest in the President dictatorial powers

In fact, at a press conference on March 16, 1954, Mr. Dulles said that under several presently outstanding treaties the President already had power on his own initiative and without any declaration by the Congress to put the country into war. The principles to be embodied in any adequate amendment are simple and understandable. It should, at a minimum, accomplish the following objectives.

tives:

1. Prevent a treaty or other international agreement that conflicts with any provision of the Constitution from being of any force or effect.

2. Place the United States on an equality with the other nations of the world so that a treaty or other international agreement will not become a part of our internal law until and unless implemented by appropriate

legislation.

Would such an amendment interfere with the power of the President and the Department of State to negotiate treaties and other international agreements and thus to properly conduct our foreign affairs? In no way. Under such an amendment the President would be as free to negotiate as now; and every treaty so negotiated, when ratified by the Senate, would be immediately effective as an international agreement. Such an amendment would have no restrictive force whatever on treaties as international obligations nor on the power of the President to negotiate them. It would only prevent them from violating the American Constitution and prevent them from becoming internal law within the United States until implemented by appropriate American legislation.

Would the amendment in any way affect the right of the President as Commander in Chief to conduct war, or to negotiate an armistice or perform any other acts rightly belonging to him as Commander in Chief? No. After hearing all the evidence, the Senate Judiciary Committee, by a large majority, found that such an amendment would not affect in the slightest the President's powers as Commander in Chief. Nor would it affect the right of the President to freely negotiate, and the Senate of the United States to freely ratify treaties of peace, of international cooperation, or reciprocal trade, or other beneficial treaties.

During recent years, by changes in judicial concept (both of courts and jurists) and by changed concepts in the international point of view, treaty law has become omnipotent, a kind of Frankenstein which can change and even destroy the liberties of the American people and their form of government. Thus, the need for a constitutional amendment is self-evident—except, of course, to those who believe (honestly or otherwise) that the American constitutional system and American independence are outmoded and, in the interest of mankind, in general, should yield to some form of world government. This is the choice and the issue.

Government by the Military or by Labor?

SPEECH

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 3005) to further amend the Universal Military Training and Service Act by extending the authority to induct certain individuals, and to extend the benefits under the Dependents Assistance Act to July 1, 1959.

Mr. HOFFMAN of Michigan. Mr. Chairman, conscientious, thinking, patriotic, but anxious and worried constituents ask and write inquiring whether we are to have a military or a labor government, rather than a government of, by, and for all the people.

A LABOR GOVERNMENT

Since 1935, when the Wagner Act, written in the main by a Communist, and enacted by Congress to give employees the opportunity to organize and better their working and living conditions, labor organizations have become politically powerful.

Some of their leaders, instead of confining their efforts to bettering the overall welfare of employees as did the father of organized labor, Samuel Gompers, have used the unions to advance their own political ambitions.

Through the collection of initiation fees, union dues, special assessments, and the sale of right-to-work permits, unions have accumulated millions, if not billions, of dollars. Millions of dollars of these funds have been used in political campaigns to elect to public office individuals who too often accept domination from union officials.¹

The net result has been that legislation granting special benefits and special privileges to labor organizations and their members has been pushed through State and national lawmaking bodies.

Though rightly and logically taxes can be levied or collected only by governmental organizations, unions have seized and hold the power to levy and collect contributions from employees, the burden in turn being passed along to employers, and through them paid ultimately by consumers—taxpayers.

The merger of the AFL and the CIO will undoubtedly bring on an organizing drive which, using not only argument, but beating and rioting, will result in forcing millions of additional unwilling workers into the union, where they will be governed and taxed by the unions.

Unless forthwith drastic action is taken, through amendment of the Sherman Act and the LaGuardia Act, to confine the activities of unions to their legitimate sphere—that is, an increase in wages, the betterment of the working conditions of employees—we will shortly have here in the United States a political government by labor with resultant legislation enacted primarily to advance the interests of employees, regardless of

the effect which it may have upon industry and those who do not belong to the union.

We will then more certainly and with greater rapidity follow along down the road recently pursued by England and which, it has been demonstrated, leads to a destination unacceptable to anyone.

A labor government is on its way.

Whether labor organizations first attain their goal, acquire political control, determine our national policy, before we have a government by and for the military, it is a question the answer to which is not clear.

One thing is certain, and that is, that, though here in America organized labor may at the moment go along with the military, basically their ends are diametrically opposed. Under the military, as has been demonstrated by history, the workingman is but another form of ammunition to be used and expended, as are atomic, hydrogen, and other weapons.

Organized labor's program, and the effect thereof, will be referred to later.

Our people do not want, and the Congress has more than once rejected, universal military training. As the gentleman from Texas [Mr. KILDAY] a member of the Armed Services Committee, just stated, we have conscription, and I quote:

Except for a very limited period of time, a selective service and training act, or a universal service and training act [has been] in force for a period of only months less than 19 years. With the exception of the 1-year period from 1947 to 1948, we have had legislation of this kind in effect for 15 years.

Then he added:

I do not believe we can learn anything from our experience in the past 15 years that could give us any confidence in hoping that the extension of this act for 2 additional years would relieve us of the necessity.

The gentleman was speaking in opposition to limiting the extension of the act from 4 to 2 years. Apparently, we are here to adopt—and retain control by the military as a permanent policy.

THE PENDING BILL

The bill before us today is a bill to extend the conscription act for a period of 4 years—until July 1, 1959. This bill is but a milestone on the road which leads us to complete universal military training—to a military government.

Among other things, the act as amended will provide for the conscription into the armed service for a period of 8 years, or 96 months, of every physically and mentally qualified young American who has reached the age of 18 years and 6 months, and who has not passed his 26th birthday. For 2 years he will be in the active service. Following that, he will be required for 6 additional years to serve when and where the military may direct. The plan is that he shall, during those 6 years, be required to take active training with the reserves, and be subject to call to combat service if the military determines his service to be necessary.

One of the reasons which impelled our forefathers to leave their homes and friends in the Old World, cross the sea,

Footnotes at end of speech.

Footnotes at end of speech.

and endure almost unbelievable hardships in a hostile land, finally declare their independence, create and adopt a constitutional form of government, was their desire to escape compulsory military service under their feudal lords or a king.

Another reason was their desire to be independent, to escape economic as well as military slavery. They created a nation free and independent. The people of that Nation have, as has the Nation

itself, prospered.

Our Republic as a nation grew great and powerful. It became a land to which the oppressed throughout the world looked as the one place where they might make their home and be free. It is a nation to which we are told all so-called free nations, when in trouble, look for aid, economic and military. It is the Nation to which the free nations look for military defense when danger threatens.

In the harbor of New York, the Statue of Liberty, with its ever-flaming torch, beckons the oppressed of the world to a land where the lowliest is welcome to an opportunity to be free, prosperous, and happy.

Present trends indicate that beacon

will soon be a false guide.

If we are, throughout the world, to create and maintain economic conditions which will secure to other people the material blessings which we here all enjoy, then indeed will we be required to bend our backs, flex our muscles, employ our creative ability, perhaps become economic slaves of the rest of the world.

If we are to assume the obligations of and continue through military might to guarantee the continued national existence as separate and distinct entities of every other nation in today's world, then assuredly our natural resources, our productive ability, are not sufficient, and we must conscript our manpower to fight, as did the mercenaries of old, but without pay except as we provide that compensation.

Since 1942, we have followed a course of action which has finally led us into a surrender of our national sovereignty to an organization whose policies and actions are dictated by nations other than our own. That surrender has destroyed the individual's liberty, made it possible to force us to expend our manpower and our resources in wars throughout the world; wars which, for either the protection of our people or our Nation, were

unnecessary.
For 15 years, the youth of America has been forced into universal military service, where they now serve under an international fiag—not the Stars and Stripes—under the orders of a one-world organization—the United Nations—an organization controlled, not by the representatives chosen by our people, but by politicians of the Old World.

Under recent policies, our men have fought three wars, none of which brought us either a greater degree of independence, prosperity, individual or

national security.

This bill—and hereafter it will be referred to as an act, for undoubtedly it will be adopted by both Houses and signed by the President—gives the youth of America into the control of the armed services for 8 years, which, in turn, in wartime, will be controlled and directed by United Nations to serve the interests of nations other than our own.

The armed services have, in recent years, when engaged in a fighting war, been subject to the control of the State Department. The State Department, in turn, to a remarkable degree, has been subservient to international politicians and foreign interests.⁵

For the first time in our history, we fought a war—the Korean war—in the field under the command of a State Department, rather than under the direction of our military experts.

Our Republic is founded upon the assumption that the Federal Government is the servant, not the master, of the

people.

More recently, it seems that the Government is supreme and the people are but puppets of the Government, and, far worse, of a government which accepts and attempts to execute the orders of United Nations.

Our people, who reserved all power not granted to the Federal Government, are now actually and in fact, through their Government's subservient attitude, being committed to the control of the United Nations.

If men or women are needed to maintain the welfare of our people, their independence and their freedom—if manpower or dollars are needed to make secure the future of our Nation—all that is required is that we adopt a national policy designed to attain those ends.

Our youth will fight for home, for fireside, and for the security of our Nation. There is no reason why they should fight for the political aggrandizement of any world politician or aggressor nation.

It is doubtful if there exists an intelligent informed individual who will contend that the power, the wealth, or the productive ability of America, unsurpassed as they are, can successfully put forth an effort great enough to fight and win a war wherever in the world some power-seeking individual, some quarrelsome nation, or United Nations may start a conflict.

It has been said that communism is an ideology—a way of thought. History teaches us that thought control cannot be imposed by persecution or by, from a military standpoint, a successful war.

Advocating the disuse of the sword by using the sword is strange logic.

It is my understanding that General MacArthur recently told us, in substance and effect, that peace could not be established and maintained by war. That being true, the only way that we can overcome communism — establish and maintain our political and economic philosophy—is not by war but for us to declare and establish a line of defense which our resources will enable us to successfully defend; and then, if our policies be sound and workable, our thinking, our way, through teaching and example, will prevail throughout the world, for all nations will find it good.

I will not vote to take 8 years out of the life of every physically and mentally sound young American and make him subject to a policy which calls upon him to risk his life thousands of miles from home in a war declared by and at the dictation of a United Nations organization controlled by representatives of other countries, who, on every single occasion, speak and act for the advantage of their respective countries.

IF OUR CAUSE BE JUST, WE DO NOT NEED CONSCRIPTION

American youth are patriotic. They are courageous.

They are self-sacrificing.

They love their country, and for home and country they will fight, and to the bitter end.

American youth are independent. They have as great a love for freedom, for independence, for self-government, as did those who, throughout 8 long years, against overwhelming odds, fought for and established their independence; conceived and gave birth to the United States of America.

That the youth of America, of yesterday and of today, are as patriotic, as courageous, as self-sacrificing, as determined, as any whose like qualities are praised in history, can, if anyone doubts, be learned from a knowledge of the record they established in World War I, in World War II, and in world war III in Korea.

If one would learn of individual or group heroism, he has but to read any of the histories put out by the armed services, which in detail and with illustrations record the deeds of the teenagers as well as of those who had passed the yoting age.

If one needs inspiration, let him look at the statue, the paintings, the pictures, which show the raising of the flag on Iwo Jima. Let him read the story of that heroic event.

The record of the trained and the untrained men who, since 1914, have fought, and of those who have died, in support of our present foreign policy, is one of which we can all be proud, even though those heartbreaking sacrifices have done little, if anything, to promote the welfare of our people or make secure the existence of our Republic.

But American youth are intelligent. They want to know the reason for a national policy in support of which they are asked to sacrifice all that is near and dear to them and go forth to battle on the far side of the world.

No Horatio at the bridge; no Leonidas as the pass of Thermopylae; no Spartan, was ever more willing to fight and to die in defense of country than in the American youth of today.

ican youth of today.

Our youth know or they have learned

Our youth know or they have learned that President Wilson was reelected primarily because he "kept us out of war." Forthwith, we became involved in war. They fought and they died because, so they were told, war was an evil thing. They were fighting a war to end all war, and since that war ended, their sons and grandsons have been fighting World War II and world war III in Korea, while they have been trying to carry the tax burdens imposed by those wars.

They know that American ships were engaged in World War II months before the Congress declared war. They were told that our frontier was on the Rhine, and that all that stood between us and being overwhelmed by the German armies was the British Fleet; that our armies must travel abroad in order to maintain our own independence. A falsely described situation.

Today, our frontier, we are advised, is in Formosa. The armed services advise that we have some 950 military installations outside of continental United

We are told that voluntary enlistments are not sufficient to meet the Army's demand for manpower.

In every other field, before the successful individual or business organization decides upon its need to carry on its program, it determines what it intends to do and the extent of the operation, its ability to carry out the program. There has been no such determination by those in control of our Government.

Yesterday, we had one line of defense and one purpose. Today, we have a different one. Tomorrow, we may have another. Since 1941, we have had no clear,

fixed foreign policy.

The purpose of all wars is to protect the individual citizens and the nation as a nation. Today, the first issues before the people and the Congress should be: First, what is our policy; are we an aggressor Nation or do we seek only peace? Second, just what do we intend to do; when and where does a war to protect us from communism or from any nation become necessary in order that the Republic may continue to exist?

The determination of those two questions come first and we must naturally take into consideration our ability to accomplish our objective. Until those two issues have been made clear, it is not my purpose to vote to conscript our young men or to require them to accept what, in effect, amounts to universal military training

Today we are told that Formosa is the front or the back door to our homeland. Formosa, 10,000 or 15,000 miles away from our base of supplies, depending upon whether we go east or travel west. Formosa, which just a few years ago we were told by our military and by our State Department was of no value to us as a military outpost. Formosa, which today it is said we must defend, no matter how great or even how impossible that task may be.

Sometimes the thought occurs, that if Formosa, under the domination of China as directed by Russia, is the key to our national defense, and if we must, for the future, maintain Formosa as a military outpost, just, militarily speaking, a stone's throw from China's communistic mainland with its hundreds of thousands of potential fighting men, we must be prepared to sacrifice our men for no apparent gain in the impossible task of conquering and holding China subject.

If our real enemy is communism, then Russia is the enemy to which we should look. If we have the military might, the airpower and guided missiles, the bombers, and bombs which our experts say we have; if their destructive force is what they tell us it is, then, if Russia is the undercover aggressor, it is time to use those weapons on the source of our trouble. We waste our energy in fighting a puppet enemy. If, for our national existence, we must fight, let it be against the real enemy.

And let the battle be directed by those who are trained to win wars, not by international politicians, who accept unworkable, security-destroying theories, who turn an eye when they see fool's gold on the horizon.

In World War II Russia was our ally. Before the war was over, and after, through our efforts she became a world power. Through our negligence, Russia gained control of China. With her help, China sent her Communists into North Korea.

And once again we were in a third war. A war in which our Armed Forces were denied the opportunity of winning, a war fought not under our military commanders but under the direction of the international politicians, a war the first in which we ever became involved which we did not win.

The foregoing is only a small part of what the youth of America today knows.

Knowing as they do that we became involved in the last three wars, and especially the last two, because those who formulated and directed our foreign policy have been thinking of trade or dollars or world government, rather than of the independence, the welfare of our people, and the security of our Nation, it is not strange that the young men have not rushed to enlist in an armed service where their destiny is controlled by politicians instead of by military men; where the objective is not a new declaration of our independence as a nation, the making secure their freedom as individuals, nor safe the future of our country, but rather a surrender of many of the principles which guided the men of 1776.

They have no desire to establish a one-world government under which they and their fellow countrymen have been, are, and will be, for time without end, found not only to work and contribute to the well being of many who are unwilling to earn the blessings which we enjoy, but where they and those who come after will be under the command of the representatives of other nations, which fail to carry their fair share of any burden which may be imposed by a one-world government.

The last three wars have gained nothing for our people except an ever-increasing tax burden and an ever greater dictation by United Nations telling us how we should live and die.

We have heard overmuch about free people, free nations. We have contributed in dollars, in munitions, and in human flesh and blood to other nations under the assertion that our sacrifices were being made to protect our national security, to contain communism. And the burden is still on our shoulders.

When we, with tax dollars, give Communists Federal jobs, it is ironic to tell our youth that they must be conscripted to fight Communists twelve or fifteen

thousand miles from the homeland in order to protect our country.

It is silly, it is absurd, to tell the farmer boy, the clerk behind the counter, or the young professional man that he is being called to fight a war to make men free when, in his home community, he cannot even go to work as a laborer without paying tribute to a union, or, if he be a farmer, drive his dad's truck with a load of produce to the home market without being required to pay tribute to a union whose boss lives in luxury and spends union dues in an attempt to purchase elections.

This act will call upon every young American who is physically and mentally fit to give 2 years of his life in the military service. In addition, he is required to be at the call of the military services for an additional 6 years.

It is charged that the act is necessary, that is, that our men must be forced to be under the command of the military for 8 years in order that our national existence may be protected.

That argument is an assertion that the youth of today is so lacking in patriotism, courage and determination that he must be forced to fight to defend his homeland. In my judgment, that is a false assertion.

Permit a repetition. The youth of today are as ready to fight in a just cause, to make sacrifices as great as were those of 1776 to 1782 or at any other time in the history of mankind.

NOR WILL THE MILITARY ACCEPT LEGISLATION

A previous conscription act provided for the deferment or exemption of individuals belonging to certain groups. Because exceptionally large amounts of food were needed to implement our foreign policy, those who were exclusively engaged in agricultural production and whose services could not be replaced were exempt from military service. The Tydings amendment was the one which carried that exemption.

The Tydings amendment was openly and flagrantly disregarded and set at naught by General Hershey, Selective Service Director, and those who accepted his advice and acted upon it.

I cite that action for no other reason than that it shows the complete and utter disregard by those in the military services of the will of the people and their representatives' opinion as enacted into law.

If you doubt that assertion, read the Congressional Records of February 2 and February 5, 1945.

Given a situation where the youth of the land are convinced that their welfare and freedom is threatened, the Nation's security involved, they will volunteer.

One of the reasons they do not enlist today in sufficient numbers to satisfy the demands of the armed services and the State Department is because they think the demands are unreasonable, unnecessary, and excessive.

Another is that they are firmly convinced that the threatened war is not a war for the preservation of their country.

Russia conscripts her men for from 24 to 60 months.

This bill today calls for the conscription of every mentally and physically fit man in America for a period of 96 months—24 months in the active service; 72 months in the Reserves but at all times subject to the call of the armed services.

Shortly, there will be—at least so I am advised—a proposal by the armed services for the enactment of further supplemental legislation which will call for universal military training—conscription—for 10 years or 120 months.

I cannot vote for this bill.

*Amendment X to the United States Constitution: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Roman persecution of Christians.

The Ostracism of Israel

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. CELLER. Mr. Speaker, with the conclusion of the Iraq-Turkey defense alliance, the weighting of the balance of the power in the Middle East area is now one longstep further in favor of the Arab nations. In the name of "impartiality," our State Department policy presently pursued has steadily pushed Israel into ostracism. If there is a defense alliance in that region which excludes Israel: if Egypt is to be permitted in defiance of international law to seal off the Suez Canal to Israeli ships; if the United States is to continue to ship arms to the Arab nations; if the Arab nations are to be permitted to refuse to move toward peace in that area; if the Arab nations, without criticism from this country or any other, are permitted to strangle Israel economically by its boycott; if, without reproach, the Arab nations are permitted to utter their war-whoops directed against Israel—then, I pray you, what manner of impartiality is this?

If the United States is to feed the strength of the hostile Arab nations who make no secret of their enmity toward Israel, then surely it is to the very best interests of the United States in avoiding the outbreak of war in the Middle East to preserve likewise, and to feed likewise the strength of the fledgling democratic state of Israel. Only preservation of balance can best serve the interests of the United States in that area.

Certainly it would be most desirable to keep shipments of arms out of that area. Certainly it would be most desirable that a Middle East defense pact be developed including Israel. Certainly it would be most desirable for the United States to throw all the weight of its prestige and power in the direction of influencing the Arab nations toward an acknowledgement and acceptance of Israel's existence. But since an affirmative policy has already been set by our State Department toward wooing Arab favor, throwing the scales of equity out of line, then counterpart action should follow to set those scales straight and right. The least, the very least, that the United States can do toward the restoration of balance would be: First guarantee the integrity of present Israeli borders; and second, remove the military disadvantage of Israel brought on by shipment of arms to Irag.

It is not enough for our Department of State to say, as it keeps saying, "Israel has nothing to fear; the Arab nations will not attack." Without United States support of arms and without the United States policy now in vogue of soothing and smoothing the ruffled ego of the Arab nations, they did attack in 1948. With what powers of clairvoyance do our spokesmen now say so assertively and dogmatically that the Arab nations will not attack Israel? The hostile statements of Arab spokesmen continue without abatement. Only recently, Nuri Es Said, Prime Minister of Iraq, stated that his government considered that the Zionist danger takes precedence over the Communist danger. He also stated that he had called upon Pakistan to support the Arabs against Israel in the same kind of treaty Iraq had concluded with Turkey against communism.

It is to be remembered that with the conclusion of the Turkish-Iraqi pact, Iraq can call upon Turkey if she is subjected to aggression by external forces. Similarly, members of the Arab League can band together, weak and torn by strife and jeolousies as they are today, to meet acts of aggression. Iraq now has specific affirmation of United States support in the matter of arms, yet the one country which has, within the United Nations and outside it, suported Western ideology, is left standing alone.

There are no treaties, either in the nature of the NATO treaty or the Manila Pact. There is only the tripartite declaration of 1951, which already has had so many of its paragraphs disregarded.

It would have been well if the United States had concentrated its energies upon, first, the fostering of the peace between Israel and the Arab nations; and, second, a program of meaningful impartiality in the encouragement of economic and social growth in both Israel and the Arab nations on the basis of equality.

In the censuring of Israel in the United Nations on former occasions we note the same irony. The steady flow of infiltrees across Arab borders into Israel, the senseless killings, 1 by 1, the slow drip of blood rasping the nerves of Israeli frontiersmen, the destruction of property, the thefts perpetrated by the Arab nations upon Israel, are not presented to the public conscience. The Israeli raids always are.

For months now, the tension between Israel and Egypt has been rising. On the Gaza frontier there have been many incidents involving theft and murder. There are few that know that between September 1 and January 31, the United Nations Mixed Armistice Commission censured Egypt 35 times and Israel 15

times for such incidents.

It is high time that our Department of State view this situation in the Middle East more realistically. The fears of Israel are further exacerbated by knowledge of its rejection, by the knowledge of the growing ostracism in which it is being placed. There is little reassurance to be found in the words of our Department of State that the Arabs will not attack. I repeat, a minimum of assurance lies in affirmative acts by the United States, in view of the major role of influence it is undertaking in the Middle East region, to guarantee the integrity of present Israeli borders and to remove the military disadvantage of Israel occasioned by shipment of arms to Iraq.

Postal Salaries

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mrs. KEE. Mr. Speaker, I realize that the committee of this still-new Congress have been demonstrating unusual speed and energy in meeting their legislative responsibilities, so that what I am about to say on the matter of postal salaries is not meant in criticism of the committees handling this legislation.

However, I would urge, Mr. Speaker, that the legislation be so drawn that the pay raises so long overdue are made retroactive—if not to the start of the fiscal year, at least to the start of this

calendar year.

We must remember that there was practically no controversy here last year over the question of granting a raise in pay to the postal workers. The main issue, as you will recall, was whether such an increase should be made contingent upon an increase simultaneously in the first-class mail rate from 3 cents to 4 cents. A majority of us felt, Mr. Speaker, that these were distinctly separate matters and should not be tied together in the same bill. The President thought otherwise at the time, and so vetoed the legislation.

This was unfortunate from many standpoints. The leadership of the Congress at that time did not feel confident enough in the merits of the administration bill on postal rates to submit this legislation to the House on its merits, and so that question was never taken up. Thus, in view of the President's position, there was a stalemate on the question of postal pay.

Unless much better evidence is presented this year than was given to us last year on the question of postal rates, Mr. Speaker, it is highly doubtful that this Congress would vote to raise the cost of mailing a letter from 3 to 4 cents. The evidence last year clearly showed that this type of mail more than paid its own way and, in fact, returned something of a profit to the Post Office Department.

During the political campaign last fall, the President indicated to the postal workers of the country that regardless of which party won they could look forward to a well-deserved increase in pay. I am sure he did not mean that in any way as a device to confuse the postal employees.

In view of all of these factors, then, Mr. Speaker, I do again urge upon the appropriate committees of the Congress handling postal legislation that the proposed increase in postal pay be made retroactive, so that the pay increases will be of some consequence.

The postal worker has a tremendous range of friendship in the Congress for the reason that he is and always has been one of the most reliable, conscientious, loyal, and hard-working of all public servants. Let us show our friendship, then, in a way that counts.

Health Reinsurance Bill Supported by New York Young Republican Club

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. WOLVERTON. Mr. Speaker, it seems that more and more there is a growing demand for a health reinsurance bill. The failure to pass the bill in the last Congress was the result of a lack of understanding as to the purpose of the bill, and, also because of a personality situation that developed and, as a result, the bill was recommitted to the Committee on Interstate and Foreign Commerce for further study.

It is gratifying to realize that there is a continuing interest in such legislation and a desire for its enactment at this session of Congress. As evidence of this, I include as part of my remarks a letter I have received from Arthur Rock, Secretary of the New York Young Republican Club. It reads as follows:

New York Young Republican Club, New York, N. Y., March 4, 1955. Congressman Charles A. Wolverton, House Office Building,

Washington, D. C.

DMAR CONGRESSMAN WOLVERTON: If you will
recall, I wrote to you last year on behalf of
the New York Young Republican Club, urg-

ing the adoption of the health-reinsurance bill. We were, of course, very disappointed that the reinsurance bill did not become law at the last session of Congress.

At a recent meeting of the board of governors of the New York Young Republican Club the following resolution was adopted:

"1. Whereas the board of governors of the New York Young Republican Club endorsed the administration's health-reinsurance bill at the last session of Congress;

"2. Whereas the board of governors deplores the defeat of said bill;

"3. Whereas the bill gives people social benefits without socialism and fosters free enterprise;

"4. Whereas this bill will allow insurance companies to experiment in fields of health insurance which they have been reluctant to do in the past, and in that way the majority of the 63 million people who today are not covered by any form of health insurance could conceivably take out a health-insurance policy;

"5. And whereas the bill will require only \$100 million of public money to start the program, and from then on will be self-sustaining from premiums received from carriers: Be it hereby

"Resolved, That the board of governors reendorses the health-reinsurance bill as proposed by the administration."

Needless to say, we hope that the Congress will see fit to adopt the bill this year.

Yours very truly,

ARTHUR ROCK.

California State Board of Agriculture Recommends Amendment to Federal Social Security Act

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. DOYLE. Mr. Speaker, here is a letter I have received which contains a copy of the resolution hereinafter set forth from the California State Board of Agriculture:

CALIFORNIA STATE BOARD
OF AGRICULTURE,
Sacramento, March 1, 1955.

Hon. CLYDE DOYLE,

Congressional Representative,

House Office Building,

House Office Building, Washington, D. C.

DEAR MR. DOYLE: Enclosed with this letter is a resolution relative to amending the proprovisions of the Federal Social Security Act. The resolution, passed by the California State Board of Agriculture at its regular meeting in Sacramento on February 28, 1955, is transmitted with the board's request for your consideration.

Very sincerely yours,
ROMAIN YOUNG,
Assistant Secretary.

RESOLUTION RE AMENDMENT TO FEDERAL SOCIAL SECURITY ACT

Whereas the present provisions of the Federal Social Security Act provide that deductions be taken from farm operators and employees when earnings of any employee gross \$100 or more in any calendar year; and

Whereas the turnover of agricultural labor, particularly at peak havest time, is very rapid, and such labor is used for the most part on a short-time basis; and Whereas operations under these conditions create a situation where accurate bookkeeping and accounting are either extremely burdensome or virtually impossible: Now, therefore, be it

Resolved, That the California State Board of Agriculture, meeting at Sacramento, Calif., on February 28, 1955, does respectfully urge the Congress of the United States to raise the minimum social-security provisions covering farm operators and farm workers from \$100 to \$500, and that deductions commence after the first \$500 has been earned from a single employer during a calendar year; and be it further

Resolved, That copies of this resolution be transmitted to all the members of the California delegation in the Congress.

A New Foreign Policy

EXTENSION OF REMARKS

HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. REUSS. Mr. Speaker, Gov. Averell Harriman of New York has called for a new foreign policy in a speech delivered in New York City before the nationalities division of the Democratic national committee.

Few living men in America are better qualified to assay the zigzags of our present foreign policy, and to suggest new and more constructive courses of action, than is Governor Harriman.

Under leave to extend my remarks in the RECORD, I ask that the full text of Governor Harriman's speech on March 8, 1955, be reprinted.

I am happy tonight to join with the nationalities division of the Democratic National Committee and to salute the splendid work you have done for our party—including your work in the New York State campaign last fall.

And I am glad to join in welcoming to the State of New York our national chairman, who has become so clear and forceful a spokesman for our party in so short a time—Paul Butler.

No 2 men ever deserved recognition more than the 2 you have honored with your awards tonight—2 men who have stood in the forefront of every fight for the rights and progress of minorities and the fundamental civil rights of Americans—Senator Green, of Rhode Island, and Senator Lehman, of our own State.

We greet the new and capable chairman of the nationalities division, our good friend, the dynamic young Governor of Michigan, Mennen Williams. Governor, you will have the support of all of us in New York for the activities of your division.

It is good to have with us our stalwart neighbors, Governor Meyner, of New Jersey, and Governor Roberts and Senator Pastore, of Rhode Island.

The groups represented here tonight have given us a number of able leaders in the new State administration of New York. I am proud to be associated with them.

We of the Democratic Party must organize and we must educate—and our goal is 1956. It isn't good enough just to have a Democratic Congress to help a Republican President out of his difficulties with his own party. We need a Democratic President, too, for many reasons. One of them is to restore America to her role of full particl-

pation in world affairs and leadership for You who are here tonight have an especially deep and personal understanding of the need for the United States to take its proper place of leadership in the world.

No nation can go it alone-not even powerful America.

From a military standpoint, we cannot. From an economic standpoint, we cannot. But over and beyond these materialistic reasons are others just as compelling-reasons of history and religion and culture, of sentiment and emotion. America will always be bound to the lands where all of us, whether recently or long ago, have our family roots.

The sons and daughters of every one of the nations bordering on the Atlantic and Mediterranean and the European seas and rivers have made their contributions to America-contributions of industry and enterprise and character. We have a common heritage. And so we who happen to be on this side of the Atlantic can never forget that we are part of a larger community. And none in that community can be secure unless all are secure.

SLAVERY KEEPS ALL INSECURE

Nor can any of us be truly secure as long as a large part of our community-reaching from the Baltic States through Poland and Czechoslovakia, to the borders of Greeceremains enslaved. We know that the flame of freedom will never be extinguished in those countries, and that they will again one day carry on their proud traditions in liberty and self-government.

So our common goal-and the goal of our Nation's foreign policy-must be to strengthen the ties that bind together the North Atlantic Community, and beyond that the larger community of all the free countries

of the world.

I need not tell this audience how injurious to this whole objective is our own immigration policy. Two and a half years ago the President said the McCarran Act had to be revised to eliminate its discriminatory, un-American features. But today the McCarran Act still stands as written-and still proclaims to the world that America does not really practice what she preaches about the equality and innate worthiness of all people of every land and creed.

We can thank Senator LEHMAN and Congressman CELLER and their Democratic col-leagues for taking the initiative to revise the act in the absence of the leadership the

President has pledged.

Equally injurious is our refugee policy. An act of Congress proposed to admit 209,-000 refugees over a 3-year period. Yet, as of January 28, when half the life of the act had passed, fewer than a thousand bona fide refugees had been admitted to this country. The administration of the act has made travesty of what was to have been a great humanitarian undertaking.

Unhappily, in the last 2 years, there has been a tragic decline in American prestige and influence among our friends and allies

throughout the world.

Why is this? Why has it come about? I believe it can be traced to a basic clause—and that is the unwillingness of the Republican administration to do those things necessary to fulfill the role of world leadership which the circumstances of history press upon us.

The last 2 years have been a period of retreat from leadership. You can see it in our military policy, in our economic policies,

and in our diplomacy.

We can better understand this retreat from leadership, I think, if we remember how and when it began. It began in 1952, when the Republican Presidential candidate set out to find a ground for compromise with those Old Guard Republicans who make up what might be called the go-it-alone wing of the Republican Party.

NEW WORD FOR COMPROMISE

The go-it-alone Republican is a complex breed, with varied moods and tempers. Sometimes he is for international cooperation, but only on our terms. If other countries don't unqualifiedly accept our terms, then we hear echoes of the old isolationism. Yet mention the word "Formosa" and he can become the most fearsome jingoist. As for allies, you can hear him reasoning: Why fuss with all these difficult people, they aren't worth much anyway and always wind up costing us money, let's go it alone.

At any rate, with these Republicans, the

Republican candidate in 1952 set out to com-The word "compromise" peared in favor of a new phrase, "middle-ofthe-road," but the meaning is the same.

Now, the middle of the road is not a very safe place to drive. It's not too safe even in domestic affairs. But certainly in foreign policy it can be disastrous.

Where is the middle of the road between go-it-alone-ism and international coopera-It is sometimes consultation sometimes the taking of unilateral positions without consultation, destructive of confidence among allies.

Sometimes it is reckless speeding on the wrong side of the road, and sometimes it is

too little and too late.

In military policy, the middle of the road seems to mean somewhere between strength and weakness. Only a few weeks ago the Joint Chiefs of Staff were again overruled as to our defense needs. And this in the face of evidence that the recent changes in Russian leadership mean an even greater emphasis on heavy industry and military output in the Soviet Union at the expense of consumer goods production.

Let no one think that military retrenchment in the United States is a local matter. Its impact is felt throughout the free world. because our own military program is a measure of our determination. And when we let down, in 1953, then our allies let down, too.

The men who dominate so much of our policy seem to be those who talk not of the opportunities in our search for peace, but of fancied limitations on America's ability. They regard America—the richest nation in the world—as somehow not able to afford to do those things necessary for our survival. They look for shortcuts to peace and bargain devices for the preservation of freedom. And these aren't good enough.

We have just seen another and dramatic illustration of the danger of short cuts.

Last November Secretary Dulles and Mr. Stassen were talking about what was called bold, new economic program for Although late, this made sense. Under President Truman's Point 4 program, we had learned much about these countries and what can be done by America to help people to help themselves in developing resources and raising living standards and productivity and morale.

BOLD PROGRAM UNDERSTOOD

In this proposal, the administration seemed to realize that what is needed to counter the external and internal threat of Communist expansion in Asia is a program bold enough to capture the imagination of the people, and vigorous enough to demonstrate that a decent life can be achieved under freedom. They seemed to understand that the cost to us of such an economic offensive would be a tiny fraction of our ex-penditures for military defense and military aid. And the effects of our help would b multiplied if cooperative undertaking could be developed among the participating countries as was the case in Europe.

So the talk went on. But the men who appear to have had the last word with the President are those who regard this sort of thing as beyond America's capacity-or not worth bothering about. So the idea was laid aside. Great had been the expectations-and equally great was the letdown throughout free Asia

In this connection, it is significant that a conference of most of the Asian and African nations has been called to convene in Banddung, Indonesia, next month. Red China has been invited to participate—whereas Chiang Kai-shek is excluded. We can be sure that the Communists will try to turn the whole meeting into a "hate America" crusade.

Compounding the effects in Asia of all the lack of understanding has been the incredible story of the "unleashing" of Chiang Kai-shek.

You recall that President Truman, in 1950, ordered the seventh fleet to neutralize the Formosa Strait—preventing attacks upon Formosa by the Communists and forbidding attacks upon the mainland by Chiang. And you remember how President Eisenhower, in his first message to Congress, reversed all that.

I doubt that anyone would now deny that behind this "unleashing" episode was domestic politics and appeasement of members of his own party.

Yet to the rest of the world it sounded ominous. To the rest of the world, it could only mean that we intended to support Chiang's ambition to return to the mainlands; and that, in turn, could only mean world war.

The "unleasing" episode, and the continuing failure to explain or retract it, injured our relations with our European allies, who were quite understandably not ready for such recklessness. And it soured our relations with many countries in Asia.

Last week, Chiang Kai-shek was still asserting that he intended to return to the mainland, with the help of this country. Asked about this, the President finally said "the United States is not going to be a party to an aggressive war." In effect, after 25 months, Chiang was to be leashed again.

The President appears to have realized at long last the wisdom of President Truman's policy of neutralizing the Formosa Strait.

Of course, we should and will defend Formosa. There has never been any doubt about that. But it should also be clear that there is no future in any Asian policy which pays more attention to the objectives of Chiang Kai-shek than to the aspirations of the 900 million people of the other free countries of the East, as well as the peoples

I am sure of this: the first thing we must do in the Formosa area is to end our desperately dangerous policy of going it alone. Whenever we take positions alone, it offers a temptation to the Communists to take risks in the hope of furthering their basic objective of splitting us from our North Atlantic Allies and our friends everywhere. We must get our diplomacy back on a basis of collective action. We must internationalize the defense of Formosa, and do this, if possible, through the United Nations.

What we need now is a new spirit in the conduct of foreign affairs-a spirit of humility, of moderation, of partnership and of peace—a spirit which would ring with a new sound in the ears of the world, but which would gain in its strength because it would be a reaffirmation of the finest strains of American realism and idealism-of values which made our Nation so long the refuge of the suffering people of mankind and the embodiment of the hopes of freedom and justice in the light of God, everywhere in the world.

Only as we return to this spirit can we hope to lead.

Only as we return to this spirit can we hope to survive.

Deeper Delaware River Channel Is Not a Partisan Program

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. WOLVERTON. Mr. Speaker, the deepening of the Delaware River channel is a matter of tremendous importance to the future progress of the Delaware River valley. It is entitled to the support of all without regard to political affiliation. This fact has been well and forcibly set forth in an editorial appearing in the Courier-Post newspaper, published at Camden, N. J. I include it as part of my remarks. It reads as follows:

DEEPER DELAWARE CHANNEL NOT A PARTISAN PROGRAM

Camden County's three assemblymen have introduced a resolution the legislature should lose no time in passing.

The resolution memorializes Congress to appropriate funds at once for deepening the Delaware River channel above Camden to a depth of 40 feet as far north as U. S. Steel's Fairless plant and 35 feet to the Trenton marine terminal.

The resolution calls on Congress to carry out the policy it adopted last year in authe appropriation which has yet thorizing to be made. At that time Congress rejected the proposal of the United States Army engineers that "local interests" which would benefit most immediately from the projectmeaning U. S. Steel-should contribute \$18 million to its estimated \$91 million cost.

Congress instead voted that the Federal Government should pay the entire cost of the dredging. Nevertheless, the Engineers have not withdrawn their "local contribution" demand and have succeeded in persuading President Eisenhower to endorse it, in spite of almost 100 percent insistence in the Delaware River Valley that the Govern-ment pay the whole cost of the project, in keeping with every past precedent.

The Hyland-Meloni-Werner resolution

says:
"Justifiable opposition to this proposal of contribution by local interests and the insurmountable obstacles involved in attempting to administer it have united the various political, civil, management, and labor in-terests in this and other affected States in a common effort to persuade the Federal Government to return to its traditional policy of financing such projects and to make the necessary appropriations so that this vital program may get underway without further delay."

The resolution also comments that "the development and maintenance of navigable waterways, such as the Delaware River, traditionally have been accepted as the ex-clusive financial responsibility of the Fed-eral Government."

The facts stated in the resolution are incontrovertible and it is unfortunate that partisan political considerations should have held its passage up at Monday's session of the legislature.

According to Hyland, some opposition developed to it in the assembly Republican caucus, on the theory that it "might be a reflection on President Eisenhower. While denying such an intention, Hyland agreed not to move the resolution until next week, meanwhile attempting to convince the Republicans of its merit. But he says he definitely will bring it up at next week's session, demanding a rollcall vote on it, and is confident of its passage even though it is a Democrat-sponsored measure.

By speedy passage of the resolution, our legislature might have a decisive influence in inducing Congress to pass the \$25 million appropriation for a start on the deeper channel this year which now is pending at Washington.

Republican members of the legislature who think that the resolution implies repudiation of the President or a reflection on him, or anything more than a difference of opinion to which no one can take exception. should remember that all New Jersey Members of Congress, including our 2 Republican Senators and our 8 Republican Representatives, support the action sought in the Camden County resolution.

They not only favor it, but have been fighting vigorously for such action. It is anything but a partisan measure, or an anti-Eisenhower measure.

The American Legion's 36th Birthday

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 15, 1955

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a letter sent to the Rochester, N. Y., Times-Union, by Mr. Frank G. Jurlen, Monroe County, N. Y., commander of the American Legion.

Mr. Jurlen's letter mentions some of the accomplishments of the American Legion during its 36 years of service to God and country. Among the valuable services rendered by this fine organization has been its assistance to our youth through Americanism and child welfare programs. The Legion has taken care of its own members and their dependents and has benefited our country through its relentless fight against communism and for world peace.

The letter follows:

THE LEGION'S 36TH BIRTHDAY: SERVICE TO GOD AND COUNTRY

The American Legion celebrates its birthday this week and its 3 million members can look back with justifiable pride upon 36 years of distinguished service "for God and country."

Through these many years, the Legion has made vital contributions to the community, State and Nation. It has won recognition as champion of adequate national security and a leading advocate of world peace through American military, economic, and spiritual strength.

Nationally over 1,500,000 boys and girls this year will participate in American Legion sponsored Americanism programs such Junior Baseball, Boys' States, Boys' Nation, Boy Scout troops and Cub packs, annual high school oratorical contests and school awards. Monroe County engages in every one of these programs and locally about 2,000 girls and boys participate each year.

A living memorial to the Americanism program is the Back to God movement through which the American Legion encourages regular church or synagogue attendance, daily family prayer and the religious education of our children. Locally, during this lenten period, we have installed cards in 200 buses calling attention to children and their need for religious training.

One of our most outstanding programs is child welfare. During 1954 the American Legion and its affiliated groups expended over \$6,500,000 in financial aid to needy children, bringing to more than \$117,750,000 the amount spent since 1925 for food, clothing, and medical treatment for children.

The American Legion's primary obligation has always been championship of the rights of disabled veterans and their dependents. We are proud of the vast structure of beneficial legislation through which millions of World War II and Korean service men and women have been reestablished in civilian

The American Legion served its God and country in time of war and it is still serving. FRANK G. JURLEN.

Commander, Monroe County American Legion.

St. Patrick's Day Address

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD my annual St. Patrick's Day address which was broadcast over radio-TV station WXEL, and radio stations WJW and WERE, Cleveland, on Thursday, March 17:

Once again we commemorate the feast of St. Patrick and rejoice in his many wonderful gifts to our civilization.

The greatest of these gifts are of the spirit. They are reflected in those great principles which recognize the special dignity of every man and serve as the steady guide for humanity in time of strife or tranquillity.

The entire history of the United States is replete with St. Patrick's contributions, beginning with our fight for national independence.

The sons and daughters of Ireland, loyal always to the great inspiration of St. Patrick. have come to our shores and have helped us to become the great Nation that we are today.

As a great Nation among the powers of the world we have been called upon to assume grave responsibilities in an up-set world in which the very civilization heralded by St. Patrick is threatened with extinction.

It is therefore fitting on this, his feast day, that we recall to mind some of the signs of our time which carry bad tidings of the future.

It is now 10 years since the end of a war involving most of the nations and people of the world.

That war was costly, in terms of our manhood and our natural resources.

We fought that war against tyranny and for a golden era of peace, freedom, and prosperity for all mankind.

In the throes of that great struggle, suffering mankind was promised that those great goals would surely be attained and that finally there would be comity among all the nations of the earth.

Even before the end of active hostilities, we began to construct an organization for peace in whose councils all the nations would be represented.

At war's end, all mankind held high hopes for, and placed great faith in, a peaceful

In the 10 years that have passed, but a moment in the long history of mankind, many events have taken place which have shaken confidence in our ability to reach those worthy goals.

Our first shock came when it became clear that all the nations of the world would not be included in the United Nations organization.

Some nations were to be severely punished and purged before they would be considered for membership.

Other nations, taking no part whatsoever in the war, and long recognized as peaceful nations, were denied membership because of the objections of the Russians. Unhappily, Ireland, the home of St. Patrick, and the mother of many great leaders in the fight for human liberty, was one of those nations excluded from the councils of the United Nations.

The second great shock came from the Russians who, in violation of all their solemn pledges during the war, brought under ruthless slavery the many nations and peoples our sons and daughters fought and died to liberate during World War II.

It would seem that then we in the free world failed to recognize the terrible significance of these events, because we did little or nothing about them.

We surely did not recognize these events as a threat to peace, because we falled to use the United Nations in order to prevent these acts of aggression.

Our third great shock came when the Russians threatened to overrun Greece and Türkey in their geopolitical drive to split the world. We became aroused at this turn of events, because a great American, President Truman, took a stand against Communist aggression and pronounced the Truman doctrine.

His significant act awakened the West from a deep slumber.

The next great shock came when the Russians attempted to force the western allies out of Berlin by means of a blockade.

This was another test of the determination of the United States to fight for the cause of freedom.

This challenge was met, and the Russian bullies backed down.

Then came Korea.

The Russians, using a small corps of North Koreans and hardened veterans of the Chinese Communist army, invaded South Korea for the purpose of driving the Americans into the sea and enslaving all Korea.

Without hesitation, President Truman met this challenge, and after terrible sacrifices the Communist aggressors were driven back north of the 38th prallel.

Then followed a protracted period of negetiations climaxed by a dubious armistice for which the Communists have shown their complete disdain by breaking it time and time again.

In the process, Red China was branded an aggressor in the Korean war by the United Nations.

Still another blow at the hopes of mankind was the Communist aggression in Indochina. When another Russian stooge, Ho Chi Min, fully supported by the Chinese Communists, brought about more bloodshed and terrible human suffering.

While all these shocks were taking place the United Nations, in one degree or another, became involved, but in none of these instances was the United Nations able to measure up to the reasonable hopes imposed in it by mankind.

Twenty years ago, in 1935, a great Irish statesman, Eamon De Valera, speaking before the League of Nations when that body was considering Mussolini's aggression against Abyssinia, warned that this was its crucial test.

That if it allowed aggression against a small and defenseless country to go unpunished, its days were numbered.

Ireland, unfortunately, is still not admitted to the councils of the United Nations.

She is still blocked by the atheistic Communists of Russia.

The prophetic words of Eamon De Valera could well be spoken in the councils of the United Nations today.

United Nations today.

What he said in 1935 fits perfectly the crisis that now faces the United Nations, an organization for peace in which we put such high hopes.

I feel certain that if Ireland were represented, the issue that De Valera raised in 1935 would be raised again in the councils of the United Nations in an effort to reestablish law and morality in the conduct of affairs between nations, and to avoid what, at the moment, seems to be an uninterrupted trend toward world war III.

It seems very strange that today there should be any talk whatsoever about admitting Red China to the United Nations.

Red China, an aggressor and initiator of the Korean war, a violator of every tenet of international law, defiant and disdainful of all pleas made by the United Nations, has no right whatever to membership in the United Nations.

If Red China be admitted to the United Nations there would be no doubt but that the criteria for membership is the ability of a nation to wage aggressive war rather than its hopes and aspirations for peace.

There are some who still believe that it is possible to satisfy the appetite of a dictator.

A good example of this notion is found in the crisis created by the Chinese Communists in their efforts to destroy what is left of free China.

At the beginning of this crisis, certain of the islands of still free China were voluntarily evacuated and turned over to the Communists.

By devious twisting of the facts, this evacuation was built up as a great victory for peace.

It was depicted as a victory because the evacuating force was not attacked by the Communists while they were in the process of handing over to them, territory that belonged to free China.

That is peace at any price.

All liberty-loving people were shocked upon receiving the news that the Chinese Communists held, without foundation, many Americans in their prisons and refused to release them.

Most of these Americans are members of the armed services.

We were horrified to learn how these Americans were being brainwashed and that many of those whose personality had been destroyed were returned to us so that they could cause further confusion and damage to the cause of liberty.

It was not so many years ago that the holding of one single American by a foreign power, without cause, would have been considered a most serious offense and likely to lead to war if not quickly and satisfactorily remedied.

But today it seems that the unchanging values and immutable principles which brought America to its present position in the world, have lost their meaning and their purpose.

It may be that we, as a nation, have been subjected to a brainwashing which has dimmed our fundamental beliefs and confused us as to what is right and what is wrong.

Are we to believe that nothing is black or nothing is white, but everything is grey?

Is this what is happening to us as a nation and a people as we seek to avoid war, and continue our fight for peace, freedom, and prosperity?

That is the fundamental question of our

It is not a question of patience, as some would have us believe. Rather it is a question of right or wrong.

We must at all times be impatient to see that right is done in the conduct of all the affairs of mankind.

And we must be equally impatient to prevent and stamp out that which is wrong.

Failing to do this, we will have signed our own death warrant and prepared the way for the fall of our entire civilization.

On this, the feast of St. Patrick, we must begin to reassess our values and to reexamine our mission in a sadly upset world,

We must make it clear that we, as a nation, know the difference between right and wrong.

We must also make it clear that we propose to stand up for that which is right and to oppose with all our vigor that which is wrong.

We must also make it clear that we place the greatest value upon things of the spirit and not upon material gain.

Above all, we must make it clear beyond any doubt to all the people of the world that no sacrifice is too great for us to make in support of those great spiritual values without which our Nation would soon cease to exist.

I believe that adherence to sound moral principles is St. Patrick's greatest gift to America and to all other peoples of the world who have felt the warmth of his teachings.

America has been blessed with an abundance of his favors, and I pray to God we will begin to take full advantage of these great assets.

Compton, Calif., Herald-American Editorial Supports Congressional Pay Raises and Also Post Office Employees Pay Increase

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Friday, February 25, 1955

Mr. DOYLE. Mr. Speaker, I am pleased to herewith present an editorial column by Cliff Smith, the publisher of the Herald-American newspaper in Compton, Los Angeles County, Calif. This newspaper not only circulates in Compton, Calif., but in several other of the metropolitan communities of the great 23d District, which I have the honor to represent this, my 9th year, in this great legislative body.

I am especially pleased that this busy editor emphasized the importance and place of the grassroots expression of opinion for in his splendid editorial, amongst other things, he said:

You, the reader, can help by sending a letter or post card to your Congressman and United States Senator demanding that post office employees' pay be raised.

Mr. Speaker, it would certainly do vast good if more and more of the newspaper editors in our great Nation would stress the fact that this Congress is the Congress of the American people and that it is from the American people at the grassroots of American citizenship that we Members of this great legislative body seek the thinking and considered opinion on all important major problems which come before us.

CONGRESSMEN AND POSTMEN

This writer is all for the raise in salary of our Congressmen. The expenses of running two households properly, representing the district, entertaining, etc., in the past, have made it almost an impossibility for a Congressman of limited or medium means to keep his head above water financially.

The new pay scale which has been set is not high for business executives and, remember, it is subject to ordinary income taxes, which will syphon off about 40 percent

INJUSTICE RESULTS

Unless a man is extremely wealthy, he would do his family and himself an injustice to accept a congressional office. The result has been that a majority of the incumbents in Congress have been chosen from the wealthy class, whether they were Republicans or Democrats. In fact, quite a large number of the wealthy Members of Congress have been Democrats.

This will all be changed by the increase in salary which has been voted by both Houses of Congress. Now, any man with ability, regardless of his financial status, can feel free to run for congressional office. For the above reasons, this writer is strongly in favor of the increase in salary for Congressmen.

UNDERPAID POST-OFFICE EMPLOYEES

Now let's talk about the employees of the Post Office Department, this large and faithful group which expedites and carries the mail. Civilization could not survive in any country without an adequate post office as means of communication. It is a terrible blot upon American conscience, justice, and fair play to expect our post office employees to continue to work for the small pittance they are receiving from the Government. The scale of pay in the Post Office Department has consistently lagged behind the scale of pay in any corresponding private enterprise or other Government employees.

Let's see what concerted action can doeven from a small section of the country. You, the reader, can help by sending a letter or post-card to your Congressman and United States Senator demanding that post-office employees' pay be raised. Following is a list of Congressmen elected from the district covered by the Herald-American newspapers. Write to one or all of them today:

The Honorable CLYDE DOYLE, Member of Congress, Washington, D. C.

The Honorable CHET HOLIFIELD, Member of

Congress, Washington, D. C.
The Honorable CRAIG HOSMER, Member of

Congress, Washington, D. C.
The Honorable CECH. KING, Member of

Congress, Washington, D. C.
CALIFORNIA UNITED STATES SENATORS

CALIFORNIA UNITED STATES SENATORS

Also write to our two Senators: They are great men and are doing a great job representing their State:

The Honorable William F. Knowland, United States Senator from California, Washington, D. C.

The Honorable THOMAS H. KUCHEL, Member of the United States Senate from California, Washington, D. C.

Let's do what we can today to remedy this grave injustice to a large group of our best citizens.

A New Wiretap Law Is Needed

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1955

Mr. KEATING. Mr. Speaker, today I am introducing a new measure aimed at

the control of wiretapping by unauthorized persons. It also follows the language of the bill which passed the House last year permitting the use of wiretap evidence in court, limited to cases involving the national security.

The bill that passed the House last year actually amounted to little more than a new rule of evidence, overturning the Federal court decisions which have prevented the use of wiretap evidence in Federal prosecutions, and providing that such evidence, with certain safeguards, shall hereafter be admissible in a limited class of Federal cases relating to the national security.

The evidence was not really the heart of the matter, as recent shocking disclosures about wiretapping in New York City have dramatically illustrated. I am convinced that there must be a prohibition against reckless and unauthorized tapping by persons who have no connection with law enforcement.

The new bill which I am introducing, therefore, combines the provisions of the House bill of last year with a new section intended to make wiretapping a Federal crime when it is done by blackmailers, snoopers, and all others except properly authorized law-enforcement officials. My bill would rid us of the clandestine listener who has sometimes turned out to be such a terrible threat to the privacy of individuals and the sanctity of their homes.

The new section, tied to the criminal penalties in the old act—1 year and a day and/or \$5,000—prohibits all tapping except by the Federal intelligence agencies seeking evidence of subversion and espionage, the Federal Bureau of Investigation, investigating serious Federal crimes, or State and local officers acting in accordance with authority conferred by their own laws.

The text of the new section follows:

Sec. 4. No person shall intercept or attempt to intercept any communication by wire or radio, not being authorized in advance by the sender or the recipient thereof, except (1) authorized agents of the United States seeking evidence in accordance with the provisions of this act, (2) authorized agents of the Federal Bureau of Investigation seeking to detect or prevent any felony as defined in chapter 1 of title 18 of the United States Code, or (3) authorized agents of any State, Territory, or possession of the United States acting by authority of a law of such State, Territory, or possession."

As indicated in the following editorial from the Washington Star, the Attorney General has endorsed the principle of this bill:

REMOVE THE STRAITJACKET

Attorney General Brownell chose a good time and place to make his latest comments on wiretapping. New York City has been aroused by disclosures of widespread eavesdropping on telephone lines by nonofficial investigators. A grand jury inquiry is in progress. Mr. Brownell's proposal that wiretapping be outlawed except when authorized in certain major crimes attracted more than ordinary interest. That is encouraging, for the efforts of the Department of Justice in the past to gain public support for controlled Federal wiretapping, with permission to use the evidence in court, have been of little avail.

New York City has had a taste of the dirty business of indiscriminate wiretapping. But, as the Attorney General told the New York Patent Law Association, properly

regulated wiretapping has a place in law enforcement. Certainly it is absurd to give spies, saboteurs, and kidnapers free use of wire communications, secure in the knowledge that no information obtained by listening in can be used against them in Federal courts. Under present law the Government is foreclosed from using wiretap evidence to convict known enemies of the country. Thus, as Mr. Brownell said, congressional reluctance to change the law along commonsense lines leaves Government prosecutors in a straitjacket as far as intercepted communications are concerned.

Camden County Mayors Association Calls for Immediate Dredging of Delaware River Channel

EXTENSION OF REMARKS

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. WOLVERTON. Mr. Speaker, the dredging of the Delaware River channel to a depth of 40 feet is recognized as a public works project of tremendous importance in the development of the Delaware River Valley.

The Camden County Mayors Association is one of the long list of industries, shipping groups, municipal and State authorities, and other numerous and varied interests, pressing for action at this session of Congress that will result in the immediate deepening of the Delaware River channel.

The resolution adopted by the Camden County Mayors Association at a meeting held March 16, 1955, reads as follows:

Whereas the Camden County Mayors Association is an organization consisting of the mayors of the various municipalities in Camden County who have banded themselves together so that by the exchange of ideas their respective municipalities may prosper and the area of Camden County may develop and progress; and

Whereas the deepening of the channel of the Delaware River from Trenton to the sea to its authorized depth of 40 feet is vital and essential if the area of Camden County is to develop to its fullest potential; and

Whereas the Camden County Chamber of Commerce is presently waging a vigorous and intensive campaign to have the channel deepened to its authorized depth without any local participation or without exacting tolls from any maritime user of the said river; and

Whereas the Camden County Mayors Association is full aware of and conscious of the fact that it has always been the responsibility of the Federal Government as one of its delegated powers to dredge navigable streams of this country at Federal expense without expecting any local participation from municipalities that may be located along the banks of navigable streams and also without any contribution from industries whose plants abut and are adjacent to the said navigable rivers; and

Whereas the development of the Delaware River to its fullest use by deepening the channel to its authorized depth will open new vistas of prosperity together with industrial and busines growth throughout south Jersey which is unprecedented: Now, therefore, be it

Resolved by the Camden County Mayors Association in a formal meeting on this 16th day of March, A. D. 1955, That the channel of the Delaware River from the sea to Trenton be immediately dredged to its congres-sionally authorized depth of 40 feet, and that the Congress of the United States immediately appropriate such sum or sums of money as may be necessary to effectuate and com-plete this project without any local participation and without financing the project by the exaction of marine tolls from the users of the said river, and, further, that copies of this resolution be immediately sent all congressional and New Jersey State legislative representatives from this area, and to the press.

Nixon Sees No Attempt To Sell Out at Yalta

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Friday, February 25, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I set forth the following article which appeared in the Los Angeles (Calif.) Times on Friday, March 18, 1955:

NIXON SEES NO ATTEMPT TO SELL OUT AT YALTA-FALL OF CHINA TO REDS CAN BE LAID AT DOOR OF PACT, VICE PRESIDENT SAYS IN

CHICAGO, March 17 .- Vice President NIXON said today in answer to a question that he does not believe there was "any deliberate attempt to sell us out to the Communists" at Yalta.

Nixon made the statement during a question and answer period following a speech before the Executive Club of Chicago.

An unidentified man asked from the floor, What about Yalta?"

Nixon said: "Of course, it will take weeks and months of intelligent study to determine a correct analysis of the effects of the pact and comment intelligibly on it.

"But I don't believe there actually was any deliberate attempt to sell us out to the

Communists.

REASON FOR CONCESSIONS

Nixon said the "reason concessions were made was that the leaders of the free world simply didn't know what the Communist animal was like."

"Another reason," he added, "was that we badly needed Soviet support at the time

for the conquest of Japan.

The Vice President said there was no doubt, however, that the concessions to the Russians were detrimental to the United States and the free world.

And, he added, the fall of China to the Reds could be laid directly at the door of the

"All we can say now," he added, "is that it was a fault not of the heart but of the head."

NEED STRONG CANDIDATE

Turning to his views on the 1956 Presidential outlook, Nixon reiterated a previous stand that the Republican Party is not strong enough to elect a candidate but needs a candidate strong enough to elect the party.

Reminded by newsmen of President Eisenhower's statement yesterday that the party could elect a candidate "worthy of being nominated if it develops programs for the benefit of all the people," Nixon stood by his

In his luncheon speech, however, Nixon said "the corollary to my statement is that the Democratic Party is faced with exactly the opposite dilemma.

MORE DEMOCRATS

"As a party," he added, "the Democratic Party is numerically stronger than the Republican Party and, therefore, should be strong enough to elect its candidate for the But currently the Democratic Presidency. Party has no candidate on the scene who is as strong as his party."

Nixon said that any further aggression in the Pacific will be met by force, and with atomic weapons rather than the "obsolete" weapons of Korea and World War II.

He reiterated President Eisenhower's statement earlier this week that in any future war United States forces will use atomic tactical explosives on "military targets with precision and effectiveness.'

Farm Price Supports

EXTENSION OF REMARKS OF

HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a letter from Mr. R. V. Petersen, of Watsonville, Calif. In my opinion, Mr. Petersen's letter clearly indicates the thinking of the majority of the farmers in my congressional district:

CALIFORNIA FARM BUREAU FEDERATION, Watsonville, Calif., March 16, 1955. Hon. CHARLES S. GUBSER,

House Office Building,

Washington, D. C.

DEAR CONGRESSMAN GUBSER: Since 1948, Congress has been promising the American people a more economical and sounder farmprice support program; however, the chronology of events since that date indicates that there has been a recurring clash between the economics and politics of this program with politics winning out to date.

Last year again we thought we had that program when, after an exhaustive study of the Nation's agriculture problems, the facts and views developed became the basis of a new farm program which the President submitted to Congress. The heart of this program, just as in 1948 and 1949, involved the principle of flexible price supports for the basic commodities.

Now, however, we find ourselves once again faced with the political facet of this program with the House Agriculture Committee reporting out H. R. 12, which would take away this principle of flexible price supports and place us back on a high fixed price support program for basic as well as other commodities. We are told by labor that this is what the farmer needs.

Apparently this committee and labor have forgotten that the net realized loss of this program to the taxpayer from its inception in 1933 to June 30, 1953, was \$1,110,000,000 and that the net realized loss for the first 9 months of fiscal year 1954 was \$187 million as compared to \$61 million for the whole of fiscal year 1953.

They seem also to have forgotten that last year it was necessary to raise the ceiling of money which the Commodity Credit Corporation was authorized to borrow from the Treasury from \$6,750,000,000 to \$8,500,000,000 in order that it could continue its operations.

Certainly, it would appear that they have forgotten that the great majority of farm-

ers, as represented by the policy of the American Farm Bureau Federation, are opposed to high fixed-price supports, and that they favor the principle of flexible price supports and extension of modernized parity.

H. R. 12 must be defeated.

With kindest regards and best wishes, I am,

Sincerely yours,

R. V. PETERSEN.

To Make Our Security System Secure

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 8, 1955

Mr. UDALL. Mr. Speaker, since there is obviously a growing interest these days in the vital question of our Nation's internal security, and a workable method of preserving both security and the rights of our citizens, it seems appropriate that every thoughtful pronouncement on the subject be given widespread circulation. Therefore, I submit the following statement by the well-known and respected scientiststatesman, Dr. Vannevar Bush, president of the Carnegie Institution, which appeared in yesterday's New York Times magazine under the title "To Make Our Security System Secure":

TO MAKE OUR SECURITY SYSTEM SECURE (By Vannevar Bush)

After a spell of fever the country has now returned to an almost normal temperature as it regards the problem of loyalty on the part of its citizens in high or sensitive places. Key cases have disappeared from the front page, the last of these being so patently absurd that it was ludicrous. Oppenheimer is living a happy and constructive life, contributing to our philosophy if not to our defense. Condon is teaching physics rather than making new kinds of glass, and no doubt teaching well. Ladejinsky is back at work on his specialty.

But no one looks back on the recent imbroglio over loyalty procedures with any pride or satisfaction. For widely different reasons the feeling prevails that the system of loyalty clearance under which we have operated has been defective. We need a new system, not a bit of tampering with the old; we need a 1955 model, not an antirattling device to be attached to a model T.

The new system should be built from the ground up by a competent body of men with an unrestricted assignment. That body should include members who are vigorously alive to the dangers of subversion and others who are equally alive to the rights of citizens. It should not be just a collection of scientists. It must, by all means, be divorced from politics. It need not be hurried at its job, for our present situation is apt to continue a long time. But it should be so thorough that it will bring the whole problem of enemy penetration and disloyalty under control, without again making it a political fooball and without wrecking the careers of humble public servants.

First, the body should visualize the world conditions under which the revised system is likely to operate; second, it should analyze the objectives and and methods of our enemy in the field of propaganda and subversion; third, it should write down the objectives which the new system is to accomplish; fourth, it should establish a group of principles to which the system should conform; and, fifth, it should create a system that is to attain our objectives in accordance with the established principles. Here we can touch only the high spots of this program.

As nearly as we can now see, we are entering a period of technical stalemate, in which great wars are unlikely to occur, though secondary wars fought with limited means may be a common occurrence. This seems, at least, to be the best that we can hope for at present. For no great war can ever again be won; it can only end with the partial or complete annihilation of both contestants.

Our enemy relies chiefly on the weapons of penetration and subversion to weaken us so that later he can destroy us. He tries to steal our secrets, to penetrate our organizations and influence our actions, and above all, to spread confusion and mutual distrust among us. In this last purpose he has been extremely successful—so successful, in fact, that he need hardly try further; for we are carrying on the process without his aid.

The enemy's success in this respect has had an especially severe impact on the scientific community. For scientists occupy a key position with respect to those secrets that should be most strictly kept. They are an individualistic lot; otherwise they would be of little value as scientists.

While they concentrate in their special fields, they are often extremely naive in others. When we dreamed of world understanding as a means of ending all war, there was a greater portion of gullible men among them than among most other intellectual groups. And there were a few-an exceedingly few-traitors among them.

Much of the recent witch-hunt, therefore, seemed to concentrate on their profession. Yet in no other place could its effects be more disastrous to our national interest. Young men hesitate to enter the scientific professions, and in particular to participate in the scientific programs of the military arms because of the danger to their reputa tions and success. We must change this situation if we are to compete on even terms with the enemy.

But let it be perfectly clear that scientists ask no special privilege. To restore the principles of the Bill of Rights in all the processes of Government is not to grant special privilege. To urge a revision of our present faulty security system is not to seek special privilege.

The great question now is whether our recent public behavior is a passing phase, or whether we propose to change our part of the free world until it becomes a replica of the captive world which opposes us. If we choose the latter, the struggle will be over, for it will then no longer matter which tyranny prevails.

What, then, should be our objectives as we construct and operate a system for examining into the loyalty of Government servants and those who serve voluntarily on boards or committees?

In the first place, we want to throw the Communists out. If there is a man, of any rank in the Government, who is taking his orders from the Kremlin, we want to get rid of him promptly. If there is a teacher who is imparting to the young principles which are not his own but are dictated to him by the machinery of the Communist Party, we want to see to it that he stops teaching.

There is a point here which needs more discussion. We believe in free speech and a free press and that any man has a right to express his honest opinions and to criticize his government.

We believe with Brandels that "freedom to think as you will and to speak as you think are means indispensable to the discovery and spread of political truth; that without free speech and assembly, discussion would be futile; that with them, discussion affords ordinarily adequate protection

against the dissemination of noxious doctrine; that the greatest menace to freedom is an inert people; that public discussion is a political duty; and that this should be a fundamental principle of the American Government."

We have generally accepted the statement by Holmes that "We should be eternally vigilant against attempts to check the expression of opinions that we loathe and believe to be fraught with death, unless they so imminently threaten immediate interference with the lawful and pressing purposes of the law that an immediate check is required to save the country."

We hesitate, however, to go as far as Lin-coln did when he said, "This country with its institutions belongs to the people who inhabit it. Whenever they shall grow weary of the existing Government, they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it."

But there is a vast difference between the honest citizen who would change our system of government because he thinks he has a better system-even when his acts border on the violent-and the person who is part of a foreign conspiracy to wreck the Nation. Regarding the latter we have no doubts and no hesitancy. If he is a citizen, he is a traitor. If he is a guest in the land, he is a spy. either case he must be found out and dealt

with according to his deserts.

This alone, however, is not a sufficient objective. We want to make it possible for a humble citizen to serve his Government without fear of powerful men, we want decency in our national life. More than that, we want to establish an atmosphere of trust and mutual confidence among our citizens. Our security system needs to have two objectives, one to get rid of our enemies and their adherents, and the other to encourage, support and protect honest, loyal citizens as they work on matters that are important for our safety and our prosperity.

If a man was once a fool, do we condemn him for life, or do we let him prove that he has outgrown his folly? If we excluded from Government and from other employment all who have sometimes been foolish, we would not have enough left to man our guns or run our factories. But we are concerned here more particularly with the man who once subscribed to or flirted with the Communist philosophy and later, realizing his error, became a loyal citizen.

There are all degrees of involvement, of course. We certainly don't want to welcome with open arms, and introduce into sensitive spots, the man who professes sudden reformation. But neither do we want to exclude permanently from the practice of his trade or profession the man who did no more than attend a meeting of Communists out of curiosity when he was an adolescent.

The best proof of a change of heart is loyal service, and there are plenty of places in the Government where one can serve loyally without having access to military secrets. In the struggle with Russia we shall need all the capable men we can muster.

Quite apart from the question of decent humanity, we cannot afford to waste our most precious resource: the talents of our trained citizens. So, one object of our system should be to give the individual about whom there is doubt a chance—a safe one. certainly, but a path up instead of down, and an opportunity to remove whatever doubt

If a new system is to be built, there are several principles to be kept in mind. A considerable catalog of them is contained in the Bill of Rights.

There seems to be a feeling about that the Government does not impose a penalty on a person unless it fines him or puts him in jail, and two fallacies have emerged from confusion in this regard. It is said that to

work for the Government is a privilege and. therefore, that the Government has a right to terminate one's employment with it ar-

bitrarily. :
There is no question of privilege involved. When a citizen serves the Government he is paid a salary and presumably gives capable, honest service in return. He has a duty to serve well and loyally. But the Government also has a responsibility to avoid imposing hardships on any man who has served it faithfully, except on proof of disloyalty or for reasons apart from those we are considering here, such as incompetence.

disloyalty is not proved, but loyalty is doubted, we need not cut off a man's support and place a stigma on him that will make employment elsewhere almost impossible. He can be shifted to an insensitive job with little difficulty and no danger. We have al-ready damned for life too many humble employees of the Government merely because there was doubt or because our security system was too clumsy to resolve it.

In our courts we have a complex system of rules of evidence to protect a citizen against unwarranted prosecution, to expose liars, and to arrive at facts as far as is possible in the light of human frailties. Undoubtedly we have at times carried this system to extremes and hobbled our procedure unnecessarily. But the system has evolved as a result of 1.000 years of experience, and we should not

abandon it lightly.

We cannot carry it all over into loyalty procedures without rendering them cumbersome. Still, such procedures place a man in jeopardy; not, to be sure, of life or limb, but of his good name, which may be more preclous; and, therefore, the best advice of men learned in the law should be obtained if we are to have a sound and fair system embodying the safeguards that have been found essential for wise judgments.

We have had, recently, some very striking and disheartening examples of how far an unscrupulous liar can go and the harm he can do when proceedings are loose and informal, and he does not have to run the gauntlet of vigorous cross-examination.

The Bill of Rights says that a man shall not be twice placed in jeopardy for the same offense. In our loyalty system there is no finality. Important men who could contribute much to the Nation's real security have found it necessary time after time to go through the same rigmarole, filling out forms, appearing before loyalty boards, reassuring their neighbors that constant inquiry does not necesarily mean they are subversive.

Some have also had to spend their own money, time after time, merely defending themselves against ill-founded attacks. This has not generally been the result of new evidence presented. It has just been because we have a clumsy, inadequate system, steeped in confusion. When a man is cleared he ought to stay cleared unless there is new and pertinent evidence that he should

Do we still subscribe to that item of the Bill of Rights? Or do we think it is not jeopardy when a man may lose position, rep-utation and friends because of the acts of his Government?

The most serious aspect of our system to date has been that it has been used for spite and for thought control. Wholly unsupported charges lodged mainly for spite have been entertained seriously and made the basis for action when a proper court would have completely disregarded them.

The matter of thought control has been more subtle and more disastrous. Apparently the argument goes something like this: A man expressed opinions contrary to those which have been accepted as a Government policy. Perhaps he did so in the interests of Russia. We shall, therefore, examine whether his opinions were sound. What a travesty on the ideals of free speech.

And I am not writing merely of cases that have been in the headlines. I have in mind cases of a number of persons that received no publicity. My information about them is fragmentary, and I could prove nothing; for they have been surrounded with all the paraphernalia of secrecy; they have been the subject of star chamber proceedings.

But I believe there has been altogether too much thought control of this kind; for if it has been practiced in the full light of day, as it has, we may be sure it has been practiced far more in secret-sometimes on no better ground than that a man's arguments regarding policy have been found inconvenient.

Now I do not intend to prescribe an ideal system. I hope very much that a fully competent board will be given the task of doing so before more harm is done. But I have three suggestions in that direction.

In the practice of criminal law we have grand juries. They are part of our heritage from the long struggle of the past against arbitrary power. Their power is to protect the individual against capricious acts on the part of government officials. Before a district attorney can jail a man and force him to defend himself in court against serious charges, he must have him indicted. And no indictment will be returned unless the district attorney can convince a grand jury, made up of the man's fellow citizens chosen by lot, that he has a strong enough case to warrant setting all the machinery of the courts in motion.

Under our loyalty system, on the contrary, a man can be suspended and forced to defend himself at the whim of an official who may have only the flimslest of evidence against him. We need the equivalent of a grand jury in our security system. Such an equivalent would be made up of men who owe no allegiance to any official who may make charges, and it should be rigorously supported and protected in its deliberations and findings.

It could be selected by lot from men in the civil service, as grand juries are selected from the general body of citizens, which would be a reasonable and democratic way of sharing the burden. No machinery of trial should move unless there are serious charges supported by adequate evidence in the opinion of such a group of men. If this had been a part of our system in recent years, a large number of cases that have caused real distress would never have got started.

The relation of a government to its employees is a different matter than its relations to citizens at large. It is, in some ways, comparable to its relation to men in uniform. There are a dependence and an agreement under which both the men and the Government have obligations and re-

sponsibilities.

When a soldier is subjected to court-martlal, the Government furnishes him with counsel. Under the present loyalty system, a man who is accused must defend himself at his own expense. When our system is revised this burden should be lifted. The accused should be furnished with vigorous and capable counsel and should have wide latitude in its selection. He can then add his own counsel if he sees fit.

Such a provision would accomplish a number of things. It would protect the man who is without resources and to whom his job may be highly important. It would put an end to the absurdity of preventing an accused man or his counsel from seeing some of the evidence because it is classified. This would be no more than merely decent and

In addition to positive machinery for detecting and excluding disloyal persons in our equally positive midst. there should be means for insuring that the system is not used for improper purposes—for spite, for thought control, or for political advantage,

A grand jury can report to a court, and often does, if it believes prosecuting officers are violating the law. An equivalent of the grand jury should have a corresponding opportunity in connection with loyalty procedures. And it should report to the top in such instances-to the superiors of the offending official as many steps removed as the circumstances and the gravity of the offense warrant, in its opinion. The public would then have some assurance that the practice under the system is clean.

All that I have said has to do with the security system employed in the executive branch of Government. What committees of Congress do is up to Congress and, in the last analysis, up to the public opinion which obtains. Courts, quite properly, refrain from entering into questions of how Congress conducts its business.

But if the executive branch has a really effective system in operation and has cleaned its house, there will be few specific cases to which Congress can usefully direct its attention. We may then arrive at a situation in which Congress examines only into the manner in which the executive branch is operating, instead of attempting, in an exceedingly cumbersome and defective manner, the examination of individual cases, which should be promptly and effectively handled by a system designed specifically for that

The tide has apparently turned. We are much more sane and less hysterical than a year ago. We are gradually becoming more reasonable in our approach to the problem of subversives. But there is a danger here. Public opinion in this country sometimes swings to extremes: witness the great prohibition experiment.

As the tide turns, we should be on the alert to see that it does not swing too far and leave us complacent. We still, no doubt, have some Communists in our midst; and we still need to be vigilant in finding and removing them from places of trust in Government and industry.

It is time for a new system, one that strikes a proper balance, seeking out and removing enemy sympathizers who are doing us harm, but offering reasonable protection to the innocent as it does so; one that will be decent and just and that will not itself subvert those ancient rights of man which are the essence of his liberty.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanled by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which I shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

One Hundred and Twelfth Anniversary of The Citadel

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the text of an address delivered on March 19, 1955, by Hon. George Bell Timmerman, Jr., Governor of South Carolina, to the corps of cadets of The Citadel on the occasion of the 112th anniversary of the corps.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. GEORGE BELL TIMMERMAN, JR., GOVERNER OF SOUTH CAROLINA

INTRODUCTION

General Clark, gentlemen of the corps of cadets, ladies and gentlemen, I congratulate the corps of cadets on its 112th birthday.

As one who once wore the uniform of The Citadel I am honored to come before the corps as principal speaker on this important day in your academic year.

I congratulate the people of South Carolina for maintaining an institution that has attracted outstanding young men for more than a century.

From its beginning. The Citadel has been in the forefront in the development of young men into respected leaders in the many phases of life in our State and Nation.

As a Citadel man, I regret that one who is a prominent symbol of the strength and the tradition of The Citadel is unable to be with us today. I am sure that he joins with us in anticipating with confidence the continued development of our college. To him, Gen. Charles P. Summerall, I convey our greetings as the college to which he gave so much passes another milestone.

As well as the 112th birthday of the corps, today marks the first anniversary of the association of The Citadel and the man who has succeeded General Summerall.

Gentlemen of the corps, Citadel men around the world, and the people of South Carolina rejoiced at our good fortune when a man known to the world, Gen. Mark Wayne Clark, was inaugurated as the 11th president of The Citadel.

General Clark brought with him established qualities as an administrator and leader. He has shown a great understanding and appreciation of the traditions and aims of the military college of South Carolina. He has assessed accurately the present position of The Citadel and has given his attention to long range planning to maintain and strengthen that position in future years.

The opportunity to address the corps of cadets presents an important challenge,

Although it has been said repeatedly, there is no statement with more truth than to say that the future of our State and Nation rests with young men like you.

RECORD OF CITADEL MEN

South Carolinians are proud of the record made by Citadel men.

The original corps of cadets guarded the arms of the State at Charleston in a fortress known as The Citadel. From that fortress came the name of our college. From the first cadets came the great military tradition of the corps—to train for military leadership while acquiring an academic education; to learn to receive orders and to give orders as a way of developing self-discipline; and to have instilled the conviction that any sacrifice must be made when principle is involved and that truth, honor, and integrity are the basis of character.

Those before you have attained much success. Part of them have made the military a career. Only the academies at Annapolis and West Point, all of whose graduates enter upon active duty, have contributed a higher percentage of men to the military.

Citadel men have attained the leadership and great responsibility in military life. Citadel men have attained the leadership and great responsibility in civilian life. The record of Citadel men is your goal.

THE CADET OF TODAY

When you elected The Citadel for your scademic training, you voluntarily turned from the easier road.

You came for a sound education, but you came also for a full-time program of military training.

There is a modern day philosophy holding that we are all equal, that there is no man but the average man. It is a philosophy that I reject. At no time would I reject it more strongly than when I stand before the cadet corps.

You have not taken the easy way. To succeed as a member of the corps of cadets you must apply yourself.

You learn that the hard work you do as

You learn that the hard work you do as a cadet is not an end in itself. You learn that the highest accomplishment comes from the greatest effort. You learn how to use your faculties so that throughout your lifetime you will be, not that a verage man, but a leader of men.

THE WORLD CHALLENGE OF OUR TIME

At no time in history has the demand for able men been greater than it is today.

For the larger part of your life, we have

For the larger part of your life, we have been geared for war or the threat of war. We are striving constantly to have available for instant call millions of trained men. Such a military buildup requires leaders. On your shoulders will fall some of the future responsibility for that leadership.

More than two thousand years ago, a Greek named Plato, suggested that the laws of Greece ought to apply equally to everyone.

For this trouble, he was laughed at and scorned by many of the people of his time. It was unthinkable to them that the laws were meant to apply equally to all.

were meant to apply equally to all.

But that dream remained in the minds and
hearts of men.

Today we live in a land in which the right of the individual is fundamental.

Our concept of law is ultimately based on the protection of the individual.

Unfortunately only a small percentage of the peoples of the earth are governed by laws based on that concept.

Another theory, as old as the human race, abounds, and is being retested.

It regards the individual as unimportant. It considers the law as existing not for his benefit and protection but for his exploitation and regimentation.

Those who adhere to this theory are dedicated to the avowed destruction of those who adhere to our concept. They seek their goal by any means, fair or foul, external or internal, by force from without or collapse from within.

There always have been evil forces at work in the world.

These things are not new, but never before has the issue been so clearly put, nor the stakes to the loser so costly as now.

Today we see that men's minds are being fought for and the control of their thinking is being fought for.

We are necessarily aware that we can no longer define war, or total war as it is often called, in terms of explosive destruction alone.

We know that there exists the scientific knowledge and the explosive power to annihilate life on earth.

The chailenge which confronts the world is clear.

How we meet that challenge will determine the future course of history.

mine the future course of history.

Should man fall, it could mean the end.

History will eventually give the answer.

History will eventually give the answer, perhaps in blunt, even brutal, terms as it pursues the course that man will set for it.

THE STATE CHALLENGE OF OUR TIME

In South Carolina today there, too, is a great need for young men with qualities of leadership.

From your ranks much of this leadership can be supplied.

South Carolina today offers more opportunity to the young man than ever before in our history.

Our State has made greater strides in

Our State has made greater strides in many fields of endeavor in recent years than any State in our Nation.

In only 10 years industry has made almost a billion dollars in capital investments within South Carolina. These investments in our future mean additional jobs for our people. New jobs mean new payrolls. New payrolls mean new markets. New markets mean greater prosperity. We are developing daily on these fronts. As we develop we do not exhaust our opportunities. We create additional opportunity.

Since South Carolina was a young colony,

Since South Carolina was a young colony, it has been the local leadership which has enabled us to develop and move forward.

Local leadership in the ante bellum period made South Carolina the third richest State in the Nation.

Local leadership carried South Carolina through reconstruction and into the greatest period of development in our history. Local leadership in the years ahead will carry our State to heights many of our people would not dare dream of today.

It was the local leadership of William Gregg that established South Carolina's first cotton mill at Graniteville in 1846.

It was the local leadership of James C. Self, of Greenwood, that resulted in better working conditions, better housing, better medical care, higher wages, and a better standard of living. His pioneering gave the industrial worker a new set of basic minimums not only in South Carolina but throughout the South.

It was local leadership that has made our State the textile manufacturing center of the world.

It was local leadership that brought to our State the basic wool plants which will be the foundation on which we will develop as the wool center of the world.

It was local leadership that took the port of Charleston, a dormant installation, and in 10 years developed it into one of the leading ports of the Nation. It is local leadership which is guiding the port of Charleston today as the fastest-growing port in the Southeast.

It was local leadership which recognized the needs in the field of public schools and brought about an educational revolution which has put our State 4 years ahead of the Nation.

It was local leadership which founded and developed our fine system of higher education.

It was local leadership that provided a college for military training at the Citadel. It was local leadership that provided for our State university at Columbia. It was local leadership that provided for mechanical and agricultural education at Clemson College.

It was local leadership working through Clemson College that brought about an agricultural revolution in South Carolina.

It was local leadership that enabled South Carolina to pioneer a statewide highway system.

Local leadership is developing the greatest industrial water supply in our Nation a few miles from Charleston at Bushy Park.

Local leadership through the years has answered the challenge of the times—to build schools or railroads or highways when the progress of our people demanded it.

I ask you to look beyond the opportunity of immediate economic security to the opportunity to accept the great challenge of

Our population is increasing and employment for that population is increasing. Because of that, our markets are increasing for agricultural products, manufactured products, and services of many kinds.

In spite of these increases, South Carolina is still 45th in the Nation in per capita

In spite of our growing employment, South Carolina offers 114 young men to replace each farmer who dies or retires.

Until the per capita income of our people, white and Negro, exceeds the national average, until every man able and willing to accept employment has a decent job, until every acre of abandoned land has been put into cultivation, until the great natural harbors at Georgetown and Port Royal join the port of Charleston as busy gateways to world trade, a challenge will face the leaders of South Carolina.

Until our peoples are properly housed and properly clothed and properly fed, that challenge will exist. Until our peoples have adequate medical care and a fair share of the comforts of this modern age, that challenge will exist. Until we can provide the best educational opportunities for our youth, that challenge will exist. Until all other services which our citizens expect from the State are brought to the highest standards, that challenge will exist.

CONCLUSION

The challenge which faces you is no less important than the challenge which faced William Gregg as he built his cotton mill,

The way perhaps will be easier.

No longer must you seek the shoals of the river to find power to turn the wheel. Today even the electric-power companies no longer have to seek the perfect hydroelectric site. Steam turbines lend themselves to convenience and efficiency in location.

Transportation is provided by highway, railroad, and air in such a blanket of facilities that no section of South Carolina is isolated.

Improved methods and mechanical tools provide greater yields in manufacturing and in agriculture.

Mankind is seeking utopia. It is not likely that it will be found. But we have achieved much and will achieve more in driving toward a higher goal.

As long as man seeks utopia, there will be an audience for those persons with fancy schemes and shortcut proposals.

But there is no shortcut. There is no plan whereby one man or a small group of men can wish for utopia and simply by wishing bring such a state into being.

The alternative to a government-controlled economy is one built on the energy and initiative of the individual.

It is that alternative which needs you in the ranks of leadership.

How you meet the challenge of your course of study at the Citadel may well determine how well you meet the challenge of the future of South Carolina.

It is my sincere hope that you accept the challenge of South Carolina. If you do accept it, it will not be an easy road.

You will encounter selfish interests who think not of a better tomorrow for our State but only of themselves in the present. Do not let them shake your faith in our future. No man works for the development of our State without working for his own betterment. Man draws more from the expanding economy than from the shrinking economy.

The goal is a better life.
The challenge is there. It is yours to

answer.

The International Atomic Energy Program—Address by Hon. Morehead Patterson

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, March 18, 1955

Mr. WILEY. Mr. President, I have prepared a statement relative to the International Atomic Energy Agency and negotiations for worldwide peaceful application of this great nuclear force.

I ask unanimous consent that the statement and the attached speech by the Honorable Morehead Patterson be printed in the Appendix of the Record.

There being no objection, the statement and appended speech were ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR WILEY

The world has noted with interest the latest example of Soviet duplicity: Izvestia, characteristically, has just denounced President Eisenhower's effort for worldwide peaceful application of atomic energy. Izvestia slandered the historic address made by our Chief Executive on December 8, 1953, before the United Nations General Assembly.

Thus, once more, the Soviet Union brands itself in the eyes of the world as an opponent of all reasonable steps actually to harness this great force for man's benefit, and to prevent it from being used for man's destruction.

The Soviet Union's course with respect to President Eisenhower's efforts represent a typical instance of the Soviet Union's talking out of both sides of its mouth at the same time. This situation proves once more the Soviet tendency to lie unendingly, to propagandize unconscionably.

Nevertheless, we are not disenheartened. We are not discouraged. We are not going to permit Soviet sabotage to impair our efforts in relation to working out with the free nations the great plans which have been spelled out by our Chief Executive.

MANY PROBLEMS LIE BEFORE US

I have noted with deep interest the progress of many of the free nations in their nuclear reactor programs or the beginnings of such programs.

I feel that we are entering upon a new age in which many underdeveloped nations can span the gap toward industrialization with a speed which might heretofore have been inconceivable.

There are, of course, a great many technical and economic problems which must still be resolved before atomic energy can be produced economically for peaceful power purposes. This is not going to happen overnight by waving a magic wand, but that it is going to happen within a reasonable time is certain. We are sure that under the great leadership of President Elsenhower and Secretary of State, John Foster Dulles, we will, in concert with freemen everywhere move toward the goals which we have set for ourselves.

ADDRESS BY MOREHEAD PATTERSON

America is fortunate that we have as our United States representative for international atomic energy negotiations an outstanding citizen, a leading businessman (president of the American Machine & Foundry Co.), a man who has already proved his mettle in U. N. conferences on disarmament. Mr. Morehead Patterson.

I was pleased the other day to read the text of an address which Mr. Patterson delivered at the opening of the School of Nuclear Sciences and Engineering in Chicago. In it, he voices many extremely significant observations with regard to the future peaceful application of atomic energy on an international scale. This is Mr. Patterson's first public address in his new capacity.

AN HISTORIC CHAPTER

This overall subject is, of course, no more passing matter.

I believe that when the history of these times is written, the role played by President Eisenhower in the atoms-for-peace plan will constitute one of the most significant chapters of our times.

I believe, too, that the vital role played by Adm. Lewis Strauss, Chairman of the Atomic Energy Commission, in pioneering in the peaceful application of atomic energy, will likewise stand as one of the outstanding roles of a public servant in our time.

In the flux of day-to-day events, let us keep these immensely significant contributions in mind.

Let us bear in mind, too, that it is the genius of United States free enterprise which is in the vanguard of actually carrying out the technical details of this work.

VITAL WORK OF ATOMIC INDUSTRIAL FORUM

Fortunately, a great many of America's finest companies, including many in my own State, are now laying sound plans to cooperate with our Government in peaceful use of the atom.

The Atomic Industrial Forum is serving invaluably in this overall effort.

American business is thus demonstrating to the world its vision and resourcefulness in opening a new chapter in our free-enterprise system. And Government is giving the "green light" as fast as security considerations and other problems will permit.

Meanwhile, on the international scale, America is acting upon her unparalleled opportunity to serve man's welfare and to strengthen relations with all free nations, as well as trying to come to some meeting ground with the east.

SPEECH AND EDITORIAL

There follow now excerpts from the text of Mr. Patterson's vital address.

It is followed by an editorial from the March 17 Milwaukee Journal, describing the significance of the historic occasion at the

opening of the school.

I may note that Mr. Patterson is going to address an important conference in San Francisco on April 4, conducted by the Atomic Industrial Forum and Stanford Research Institute. The theme of the conference is Atomic Energy-The New Industrial Frontier. Other speakers will include Dr. Glenn T. Scaborg, Nobel prize winner, and Dr. Edward Teller, famed nuclear scientist. This meeting at the Mark Hopkins Hotel is typical of the very significant work being spearheaded by the Atomic Industrial Forum, in acquainting United States business with its opportunities and responsibilities in the atomic age,

MAN'S BENEFITS FROM THE ATOM

(Address by Ambassador Morehead Patterson, United States representative for international atomic-energy negotiations, at the opening of the School of Nuclear Sciences and Engineering, Chicago, Ill., March 13, 1955)

This day will long be remembered by peoples everywhere. It marks the beginning of an extensive, permanent program of international educational exchange applying the knowledge of the atom to the betterment and the improvement of mankind.

You who come from every continent of this earth are true trailblazers in this historic program of peaceful cooperation. Representatives from 19 countries are ready to begin here at the School of Nuclear Sciences and Engineering a most unique and fruitful

program.

Each of you is a living testimonial to the desire that burns in all the world's peopleto help one another toward greater health, security, and well-being. Through your studies here you will have the opportunity to make a substantial contribution toward that end for your own countries and peoples and for all the countries and all the peoples of the world.

The opening of this school is a true realization of the hope that modern man can learn to overcome his fears and his misunderstandings in much the same way that we have learned and are still learning to fathom the infinite mysteries of nature and to apply

them to the benefit of all.

This School of Nuclear Sciences and Engineering equally represents a most remarkable advance along the path of international cooperation. One of the greatest obstacles to the speedier development of the peaceful uses of the atom is the lack of a large enough body of scientists and technicians trained to deal with nuclear materials. We cannot have powerplants operating by atomic fission, for instance, until we have technicians who know how to operate them. As a result, we must train a large body of individuals all over the world who can grasp the problems and know what is required to work safely and effectively with atomic materials. There are substantial numbers of reactor engineers in the United States, in the United Kingdom. and in Canada, and there are quite a few in other lands. Their number must be rapidly increased, especially today. That is exactly what we are trying to do with this school and with this course.

The existence of this school for the exchange of know-how to the benefit of mankind is a typical way in which the American people desire to express their deep and genuine hatred of war and their devotion to peace. History has shown that the American civilization flourishes in peace. War, and especially war in the 20th century, must of necessity bring with it the type of economic regimentation which is destructive of the finest and most productive values in American life.

It is for these simple reasons that the harnessing of the atom for peaceful purposes is a natural and inevitable step for the American people. And this, by the same definition, is an advance which the Ameri-can people like and prefer to share with their friends abroad. Similarly, it was natural and easy, though admittedly naive, for the American people to disarm rapidly soon after the end of both World Wars. What other country could have demobilized 8 million men in 10 months? It was also natural and easy for the American people to offer to give up their most powerful weapon of war-the atom bomb-and internationalize atomic energy. Despite the fact that the United States had a monopoly of that weapon at that time, the sole condition made was that a foolproof system of safeguards be established. Those were easy, unhesitant decisions for the United States. The difficult and trying decision is to maintain prepared-While the atom takes on a primary peaceful aspect, we shall not weaken our defenses to the detriment of real security.

The unique course you are about to begin is the natural consequence of another memorable event. On December 8, 1953, the President of the United States delivered a message of hope to the world-a broad plan for turning the atom to peaceful uses.

He thus proposed that the benefits of atomic energy be used for the good of all mankind, and not confined to the few States that by an act of God, so to speak, have

atomic know-how.

The impact of the President's thoughts was great. It stirred the imaginations of people all over the world and created a tremendous wave of enthusiasm which even a dash of Russian cold water failed to chill. It was also greeted by some with cynicism and

Such was the enthusiam that many were inclined to overestimate and forget the practical difficulties involved in putting the atom to work. Some have concluded that in a very short time-perhaps next month or next year-we would find ourselves in a rosetinted era of atomic plenty. All of us-in industry, in science, and in positions of public responsibility for the peaceful development of nuclear energy-have contributed in some measure to this excessive public optimism on how much we can expect from the atom, and how soon. Sometimes we compete with one another to see who can take the longest leap into outer space in projecting the overnight transformation of every aspect of human life through the application of atomic power. One could argue that there is nothing drastically wrong with this dreaming.

The free world was not alone in this contemplation of atomic possibilities. What, for instance, have the Russians to say on this Let me quote from a recent article subject? in the Soviet magazine New Generation (Smena):

"The use of atomic energy for peaceful purposes will permit the correcting of many of nature's mistakes * * * the Turgai Gates might be blown up to open the way for Siberian rivers to flow south to Central Asia and Kazakhstan."

Other projects which this article promised are "irrigating such deserts as the Sahara, construction of a colossal powerplant in the Straits of Gibraltar, building a dam in the Bering Straits which would be connected with a series of other structures that would direct the warm streams of the Pacific Ocean to the Arctic Ocean to warm the areas be-

While the article then indicated that all this could happen immediately, it points out that these "earth-shaking schemes will have to wait for the end of capitalism."

From what we really know, none of these earth-shaking schemes nor, in passing, the end of capitalism is imminent.

So much for the optimists. Now for the pessimists.

A respected political leader in one country suggests that we give up hope of ever being able to solve all atomic problems; that we turn back the clock and that the United States "throw all its atom bombs into the deep Antarctic and begin a new world free from fear." Of course, this would mean a complete halt to the development of peaceful uses of the atom, since the basic fissionable materials that we would throw into the Antarctic would be the same as the materials used in powerplants.

The road which the United States is presently following is not that of unrealizable earth-shaking schemes; or is it the road of despair which would abandon all hope of progress because of its dangers. We are seeking to move forward constructively and practically with steady steps toward our goal of making the atom a real servant of mankind. We hope and know that each year will show advances over the previous year.

I am deeply convinced that the atom holds limitless potentialities for human good. Science and industry, hand in hand with the Government, will level the barriers that stand between us and its useful application. By focusing increased attention on these problems and the freer exchange of information between countries-which is reflected in the school here-the time for achieving appreciable results will get shorter. Every promise has 3 dimensions, 1 of which is time.

We will bring about only disappointment, and perhaps even disillusionment and despair, if people become persuaded that all this represents a quick or easy assignment.

The Sahara just cannot be made to bloom next year.

The face of the globe cannot be altered to turn the North Pole into a tropic paradise the year after that.

We must realize that great human and material effort must still be exerted before we can tap the atom's full potential; and that, even when we do, it will not be the answer to every problem in every corner of the earth.

This state of mind can easily be described by the old maxim: Before we can run, we must learn to walk.

In the public discussions on the potentials of the atom the aspect that has attracted principal attention until now is the prospect of cheap and plentiful electric power, using nuclear materials as fuel.

So many countries are in need of new fuel sources and the world's energy requirements are rising so rapidly that much of our immediate hope for the atom is concentrated in this field. A good part of your own time at this school will be devoted to certain aspects of this subject.

The countries which you represent hope to realize many benefits from the development of reliable and economical powerplants utilizing nuclear fuels as soon as possible. For each country the timetable of this development will vary. The power requirements of your countries are increasing rapidly each year. For example, I understand that the rise in Portugal amounts to 20 percent per

At the same time the conventional sources of fuel-solid fuels, liquid fuels, and water power-are generally inadequate today and can be expanded only with difficulty.

Let us be specific for a moment: In France and Belgium the solid fuels which up until now have been the chief source of energy are becoming more expensive to produce and there is little possibility of rapid expansion

of production. The recent discoveries of oil in France are indeed encouraging but will probably be used for purposes other than energy.

In Switzerland, Sweden, Portugal, and Greece expansion of hydroelectric resources is definitely limited and there is no substantial production of liquid or solid fuels.

Portugal fortunately has rich deposits of uranium. In Spain with its limited hydroelectric and solid fuel resources we look forward to especially rapid increase in the demands for power.

To turn to Asia: The hydroelectric and solid fuel resources of Japan are already entirely inadequate to take care of its highly industrialized economy. There is no oil production.

In the Philippines even today we find a desperate power shortage which impedes the industrial development of the country.

Thailand is completely dependent on imported fuel to meet its power requirements. In Pakistan domestic production of fuels is equal to only about one-fourth of present

consumption requirements. Indonesia is more fortunate than some cf its neighbors because of its nearly unlimited

resources in petroleum. However, its vast populations should benefit especially from applications of the atoms in the field of health and agriculture.

Israel has as yet found neither liquids nor solid fuels in its borders.

Australia has large solid fuel resources. Yet its program for expanding its economy should benefit materially from harnessing the atom for peace, especially since Australia is a potentially large producer of uranium.

There are a number of peaceful uses of the atom now being developed which could be extremely helpful to Egypt in solving its unique economic problems. I refer in particular to the tracer techniques as applied to agriculture and to the considerable experimentation now going on to develop economical methods of transforming sea water

to fresh water. To turn to the Western Hemisphere: Of the countries represented in this course only Mexico has at the present time adequate developed fuel resources within its borders; all four states-Argentina, Brazil, Guatemala, and Mexico-have embarked on programs of industrial development which can benefit materially from the atom.

I think it is safe to say that every one of you when you return to your homes will find problems in your countries at least in the planning stage to which you can apply im-mediately and profitably the knowledge and skills which you will acquire in these courses.

To my mind, the best way to illustrate where we stand today in the realm of atomic power is to draw an analogy between the development of aviation in the early years of this century and the present stage of development of atomic energy.

In the late twenties-many here will recall-a wave of enthusiasm engulfed the world in connection with the benefits to be derived by mankind from the peaceful uses of the aeroplane. Up to that time, the chief developments in aircraft had all been military. Little serious thought was given to the commercial use of planes. Suddenly, the world seemed to visualize a tremendous future for civil aviation.

The headway in civil aviation has, of course, been impressive. It has brought ma-terial benefits to all of us. And yet very few of us can commute to work by air; even fewer drop out of the skies to visit their friends for an evening. Railroads, steamers. and buses continue to run, and the use of automobiles has increased many times more rapidly than the use of the planes.

The reason why the dreams of the twenties are still only partly realized is a simple one:

With aviation, something new was added to the complexities of travel—the law of gravity. Flying is not dangerous. The danger begins when the motor fails and you stop flying. Ever since the Wright brothers made their first flight our ingenuity has been focused in two directions: First, on ways to make planes safer and more reliable; and second, on the training of technicians-the pilots and ground crews. We have made enormous strides in this direction.

Today after 50 years of constant experimentation and improvement, air travel has become so safe that our major airlines fly millions of miles each year without a casualty. They solved the safety problem, just as you, and others like you, will solve the problems inherent in the safe application of atomic power. But it took time.

We are going to get a great deal from the atom, but it is foolhardy to tell ourselves we are going to accomplish this revolution overnight.

I am confident that the will and the ability to solve these many problems will be found. Indeed, an occasion like this one here today represents the best assurance that the think ing of experts from all nations can and will be focused on the prompt and effective solution of problems which man has the ingenuity to conquer. Out of such fine coopera-

tion can come only good.

These past months progress has been made toward international cooperation in peaceful uses of the atom. We have moved forward on the path leading to the creation of an International Atomic Energy Agency as suggested by President Eisenhower. statute for such an agency has been prepared and is presently under active negotiation. Included in this statute are numerous constructive steps suggested during the lengthy and helpful debate on this subject in the last United Nations General Assembly. It would be premature to discuss today the details of the proposed agency. Soon there will be in existence an active international agency to develop the peaceful uses of atomic energy. I hope that many of you will share in the work of this agency.

The opening of the School for Nuclear

Science and Engineering is yet another step toward this important path of international cooperation to bring out greater peaceful uses of the atom. So is the forthcoming Technical Conference on the atom in Geneva in August.

Highly significant in the operation of this school is its worldwide representation, spread

all over the globe.

We might call the roll to bring out this vital fact:

From Africa, Egypt is represented here; Australia is represented. From Asia we have here students from Japan, Pakistan, Israel, Thailand, Philippines, and Indonesia. Europe is represented by Beigium, France, Greece, Portugal, Spain, Sweden and Switzer-America is represented by Guatemala and Mexico and by Argentina and Brazil.

We certainly should have a good start in developing trained technicians all over the world.

By this school and by joint participation we have made a real move toward inter-national cooperation in harnessing the atom for peace. The message of hope which the President of the United States gave to the United Nations a little over a year ago has become today a reality. More will be done in the future.

In the future when we have an International Atomic Energy Agency, as visual-ized by the President, I hope that all countries with atomic know-how, including the Soviet Union, will invite citizens of all nations to participate in their training programs on an exchange basis. The International Agency may have training programs of its own; and in any event, it can assist materially in arranging for spreading atomic know-how everywhere.

I congratulate the Atomic Energy Com-mission for its broad vision in establishing this school. I congratulate the staff of the school for the careful and skillful arrangements which, I am convinced, will make the courses a success.

And I congratulate you, the students from foreign lands, who will go back to your countries as pioneers in this great work. You signify the urgency expressed throughout the world for affirmative action to assure the survival of humanity on this planet survival in the face of possible widespread destruction from the use of this same atomic energy for war only. I think it is the justifiable hope of the world that as peaceful uses of atomic energy become universal and the power systems of the world become more and more dependent upon it, its destructive use in allout war may become less likely. In this sense the development of nuclear power would have significance far beyond the economic sphere which is the perspective in which it is generally considered today. In this sense your efforts as pioneers in your countries in this field may well qualify you for the blessed reward promised to peace-makers. You will be in that enviable position of making the world we live in better. more secure, and healthier. This represents real hope. By exchanging know-how and ideas all men benefit. The American people by their action in the field of the peaceful uses of atomic energy have dedicated themselves to that goal.

[From the Milwaukee Journal of March 17, 1955]

REPAYING OUR ATOMIC DEBT

America this week started sharing with other nations of the world some of the knowledge and skills that have given us preeminence in the realm of atomic science.

At the Argonne National Laboratory, southwest of Chicago, representatives of 19 for eign lands gathered for the opening of the new School of Nuclear Science and Engineering. There they will learn the tech-niques of operating atomic reactors so they may return home and pass on their knowledge to ather edge to others. Thus will be created a body of technicians for the constructive use of

one may properly take pride in this exame ple of American generosity. But, in truth, it represents only a partial repayment of the immense contributions. immense contributions made to our earlier atomic effort by scientists of foreign lands.

The roll of these scientists was called, in part, at ceremonies opening the school: Einstein, of Germany; Fermi, of Italy; Bohr, of Denmark; Breit, of Russia; Szilard and Wigner, of Hungary; Zinn, of Canada; they and many others; and had and many others; and had and many others; and had and many others. many others; and before them Hahn and Strassman, of Germany; Cockroft, of Eng-land; the Curies, of France and Poland.

Not until the present modest beginning has been vastly broadened can we mark the debt paid. President Eisenhower sketched the outlines in his electrifying atoms-for-peace proposal to the United Nations.

The Uses of Fear

EXTENSION OF REMARKS

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject. The Uses of Fear, delivered by Representative John M. Vorys, of Ohio, at the Ohio State University convocation on March 18, 1955.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

THE USES OF FEAR

(By Representative John M. Vorys, of Ohio, at Ohio State University convocation on March 18, 1955)

Midwinter seniors of 1955, I congratulate you upon your graduation. You have not finished your education. You will forget much you have learned and much of it is subject to change by new discoveries, by time and experience; but if you have truly learned to learn, you are ready for your life's work, and are needed.

You are graduating in a period of unparalleled prosperity in the richest country on earth in all history; but this is a time of fear. In 1943 I spoke here a a convocation in the middle of World War II. I said, "How can we win the war? * * * Who keeps score on who wins? We will know we have won, not on the day we march into Berlin and Tokyo, but on the day our troops march out of Berlin and Tokyo, for home, for good, knowing they will not have to return."

Today, 12 years later, our troops are still in Germany and Japan, and we are promising they will stay there, indefinitely. We have extended the draft again. Two-thirds of our Federal budget goes for military spending. The struggle against totalitarian aggression has not been won, and we live in an age of fear because of the threat of totalitarian

communism.

The A-bomb and H-bomb have created a new kind of fear, that spreads and deepens as we learn more of the effects of nuclear warfare. I have seen an A-bomb explosion out at Yucca fiats in Nevada. It was only a little one, of the size that took only 100,000 lives at Hiroshima. The yield of an H-bomb is far greater. The effects of high-yield nuclear weapons have been described and detailed so thoroughly in the press, the movies, over radio and television, that yield, blast and heat, radiation and fallout are words of common knowledge. Prime Minister Churchill says that by this knowledge "the entire foundation of human affairs was revolutionized and mankind placed in a position both measureless and laden with 'doom',' He said, "the hydrogen bomb has made an astounding incursion into the structure of our lives and thoughts. Its impact is prodigious and profound." The Soviets are making the most of this fear in planning their propaganda.

Another and entirely different kind of fear has been introduced into our lives by the Communist threat. Their conspiracy for overthrowing us from within, by propaganda, subversion, espionage and sabotage, and the necessary counter-measures we must take, cause us to fear each other as we have never done before. A newspaper tells of the nightmarish terror and emotional breakdowns suffered by persons feeling unjustly accused as security risks, as reported to the American Orthopsychlatric Association predicting that the extension of the security program will bring about a mental hygene problem of national proportions. This report has been criticized as exaggerated and unsound, but it calls attention to a new kind of fear in America. It says nothing of the deep, disturbing, well-founded fear Communist infiltration which underlies our attempts to discover security risks and bar them from sensitive posts. These new fears, creating confusion and suspicion among us, are useful to the Communist conspiracy which is responsible for them.

The Communists have developed other techniques for using fear, improving on Nazi methods they took over after World War II. Ten years ago I saw an underground factory at Nordhausen, Germany, where 30,000 slave laborers were turning out V-2 rocket bombs. We used to believe that mass slave labor was only good for unskilled work. At Nordhausen, however, the Nazis, by a scientifically planned system of punishment and terror, were obtaining skillful, intricate, precision work from slaves motivated solely by fear. The Russians took over this factory and this system.

The Communists use fear, not only to direct men's acts, but to mould their words, their wills, their thoughts. The protracted, ingenious, efficient cruelty of brain-washing has been brought home to us in all its sickening horror by the treatment of Americans in

the hands of the Chinese Reds.

These are some of the fears involved in the cold war and some of the uses of fear by the Communists. We have many problems not connected with communism that must be solved, involving hopes and fears, opportunities for success and failure. But fear is contagious, and in an age of fear there is a tendency, a temptation, to state all our problems in terms of fear so as to attract attention.

Widespread fear of mass unemployment of skilled workers due to "automation," the new word for the rapidly increasing use of so-called mechanical-brain machines, is being generated as a result of studies by certain

labor groups and others.

On the other hand, there is fear that we do not have enough skilled workers. Secretary of Labor Mitchell said recently that the level of working skills has dropped so dangerously it poses a threat to the Nation's survival. The American Council on Education, advocating a tax credit for college tuition, says: "With national security resting in the balance, the United States is less strong than it might be because * * the supply of college graduates to meet immediate needs is insufficient in the natural sciences, engineering, home economics, dentistry, medicine, nursing, school teaching and college teaching, and demands are increasing in social science and the humanities."

Sometimes graduating classes fear they cannot get jobs. According to this statement, you need have no such fears, but can help alleviate fears for our national security by accepting these positions that are imme-

diately available.

In this age of fear it is sometimes hard to keep up with all the fears we are told we should have: Fears of no jobs for workers, no workers for jobs, depression and inflation, too much overwork, too much leisure, overweight, and malnutrition. How about lung cancer, tooth decay, halitosis? One antidote for fear is a sense of humor. In this age of fear we need young people who don't take things too seriously. But we cannot laugh off all our fears.

If the Communists can use fear for their ends, if American advertisers can use it, perhaps we need to analyze fear a little ourselves; its power for evil, its power for good.

We are not going to get rid of fear, or escape it, but we can overcome fear as a master, and use it, as Nature and God intended, as a warning, as a stimulus.

Men cannot escape fear for long. Alcohol, drugs, and pseudoreligious hypnosis will do it for a while, but the jitters that follow such jags involve a peculiarly degrading kind of fear that finally falls to respond to heavier doses of escape remedies.

Fear has its uses. Nature built fear into us as a warning system. The burnt child dreads the fire. Fear keeps us from being run over in traffic. The presence of danger brings the quick stop, the rapid mental reconnoiter, the increased heartbeat, the stim-

ulus that is so useful in avoiding trouble or meeting it with skill and strength.

Fear can be trained. We can cultivate our useful fears. As Dr. Johnson said, "Fear is implanted in us as a preservative from evil." We can learn how to ignore useless fears. We can also learn how to resist and overcome real and deadly fears, when this is necessary, with courage.

I think courage is not a rare virtue; it is a God-given quality that is as instinctive and contagious as fear; it can be cultivated and developed, and is very useful. Fearless people, who have no fear at all, are about as scarce as complete cowards, who have no courage, and about as annoying and useless. Most of us have a healthy sense of fear, and also a healthy capacity for courage, which needs development right now, individually and collectively, for the H-bomb era.

Arnold Toynbee, in his study of history, points out that the development of a civilization depends upon challenge and response. When there is no challenge—where things are too easy, the civilization decays. Where the challenge is not met, the civilization is destroyed. It is when the mortal challenge evokes a worthy response that civilization flourishes. These are the virtues of ad-

versity.

Your Government is planning measures to meet the Communist challenge on all fronts, military, diplomatic, economic, propaganda, civilian defense, internal security. As a Congressman working on legislation to implement these measures, I realize constantly that the success of all of them finally depends, not on Congress, not on the President, but on you who are not in government, your state of mind, your spirit. We hope that Soviet fear of our instant, devastating retaliation will deter them from nuclear warfare, but we cannot guarantee it. Should our policy depend on it?

Prime Minister Churchill, in his recent speech on this subject said, "I am anxious to repeat and emphasize the one word which is the theme of my remarks, namely 'deterrent'." After telling how the H-bomb increased the area of vulnerability to mortal danger, how this should certainly increase the deterrent upon Soviet Russia by increasing their fears, how he hopes this would lead to a top-level conference, he said, "Then it may well be that we shall, by a process of sublime irony, have reached a stage in this story where safety will be a sturdy child of terror, and survival the twin brother of annihilation."

I have studied this poetic, cryptic phrase. If it means that our only goal is to seek safety from terror by a Big Three conference on the pattern of Yalta and Potsdam, based on a sort of nuclear neutrality, born of mu-

tual fears, then I cannot agree.

Our goal ought to be something more than a perpetual arms race, with the prize going to the side with the greatest scientific development of death-dealing, fearbreeding weapons. Our goal ought to be something more than a stalemate, a double deterrent, based on fear. Our goal ought to be based on doing what is right and just and honorable, undeterred by fear of anything except wrong and injustice and dishonor.

From now on we face an ultimate challenge, not of scientific ingenuity, but of human spirit; not of nuclear behavior, but of human behavior. So do our enemies. The issue will be decided, not in laboratories, in Congress, or on battlefields, but in men's minds, and hearts, and souls. As President Eisenhower said in his state of the Union message, "It is of the utmost importance, then, that each of us understand the true nature of the world struggle now taking place.

"It is not a struggle merely of economic theories, or forms of government, or of military power. The issue is the true nature of man. Either man is the creature whom the Psalmist described as a 'little lower than the angels.' crowned with glory and honor, holding 'dominion over the works' of his Creator; or man is a soulless animated machine to be enslaved, used, and consumed by the state for its own glorification.

"It is, therefore, a struggle which goes to the roots of the human spirit, and its shadow falls across the long sweep of man's destiny."

In these moving words, the President was speaking to the people, and for the people. A great spiritual awakening is going on in this country, a great religious revival. Church attendance and membership have increased. Religious books are best sellers. It is more than escapism from H-bomb terrors. In this age of fear we are learning how to live and how to die.

I have talked about new fears. Actually, fears of wholesale pain, torture, murder, annihilation, are as old as evil in the human race; and long ago we were told that if we dwelt, not in H-bomb shelters, but in the secret place of the Most High under the shadow of the Almighty, we need not be afraid for the terror by night; nor for the missile that flies by day; nor for the pestilence that spreads in darkness; nor for the destruction that blasts at noonday.

America has led the world in scientific development, material progress. Now the world needs spiritual development, moral progress, in a hurry. We led in the discovery of atomic secrets, and our enemies stole them, Can we discover the secret place of the Most High and tell the world the secret? If we did, what chance would there be for Godless, materialistic communism, in war or in peace?

We will need courage, and wisdom, but we are told that, not fear of the H-bomb, but "the fear of the Lord is the beginning of Congress cannot repeal fear or wisdom." enact faith by passing a law. Force will rule the world, but above military force, economic force, there is a moral force Perhaps among you who are graduating today are those who will lead in discovering, developing, and exporting that kind of force for us, for the world.

Fifth Anniversary of the National Muscular Dystrophy Foundation

EXTENSION OF REMARKS OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. DANIEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement I have prepared concerning the fifth anniversary of the National Muscular Dystrophy Foundation.

There being no objection the statement was ordered to be printed in the

RECORD, as follows:

FIFTH ANNIVERSARY OF THE NATIONAL MUSCU-LAR DYSTROPHY FOUNDATION

(Statement by Senator DANIEL)

March 20 was the fifth anniversary of the organization of the National Muscular Dystrophy Research Foundation in my own home town of Liberty, Tex.

Since the Senate was not in session on the anniversary date, I take this, the first opportunity thereafter, to pay tribute to the organization and especially to its founders.

Two young women in Liberty, Tex., Sallie and Nadine Woods, who were afflicted with muscular dystrophy, resolved that they were going to do something about this mysterious crippler. Their sister, Dell, an invalid since childhood, caused them to know what could happen to them and to others stricken with this disease. On March 20, 1950, they found-National Muscular Dystrophy Research Foundation. It was the first organized effort against the disease and the first national health organization chartered in the State of Texas.

During these 5 years the organization has grown and prospered, but always it has been under the influence and inspiration of its original founders, Sallie and Nadine Woods, Theirs is the story of 2 individuals-not healthy like most of us-but afflicted with a disease whose cause is unknown and for which no cure has been discovered. They are victims of muscular dystrophy, a disease which causes a progressive wasting away of muscle tissue resulting in complete invalidism and often death.

Five years ago doctors knew little about this disease which afflicts some 250,000 Americans. It was passed over in a few paragraphs in the medical books. were sympathetic but not encouraging. Sallie and Nadine were faced with a future which seemed to give them little hope. I am proud to say that these 2 girls from my home town wouldn't be stopped. Despite the fact that they grew weaker every day, they entered the battle against muscular dystrophy.

Five years later many research projects have been started to study the nature of this disease and to search for a cure. Thousands of victims have sent their case histories to Liberty. Mrs. Dwight D. Eisenhower is the foundation's national honorary president, and the committee of national sponsors

includes Roy Rogers, Dale Evans, E1 Sullivan, and Gov. Allan Shivers.
Sallie and Nadine Woods have accomplished this by faith and sheer willpower. When the foundation began they did parttime secretarial work at home to pay for the postage. They talked to anyone who could be interested in helping and soon raised the funds to give the program a wider

They have now helped Raymond Waller, foundation poster boy, to launch a drive for \$1 million in research funds. I visited Ray-mond shortly after his 18th birthday. He weighs only 35 pounds. But if you could see him, you would agree with Mrs. Elsenhower that his courage is an example to each of us.

Raymond knows that any discovery will come too late to help him but he has asked that everyone send 18 cents or \$18 to Ray-mond in care of the postmaster, Liberty, Tex. He knows these research funds will not come soon enough to save him, but he wants to erase the shadow of muscular dystrophy from the lives of future boys and girls.

The spirit displayed by Sallie and Nadine Woods and by Raymond Waller is an example to each of us. They have demonstrated how we, too, may help make things better for our fellow men. There is more hope in the world for the sick and afflicted because 5 years ago Sallie and Nadine Woods began their crusade against muscular dystrophy.

Regulation of Natural Gas Prices by the Federal Power Commission

EXTENSION OF REMARKS OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. VANIK. Mr. Speaker, during the past 10 years the use of natural gas for space heat in the Greater Cleveland area has skyrocketed and at the present time approximately 80 percent of the homes in the Greater Cleveland area use natural gas for home heating purposes.

This tremendous natural gas consuming market must depend exclusively upon such gas supplies as are made available through the local distributing company which, in turn, looks to the great gas producing areas of the Southwest. Our people have no other alternative but to use the gas that is brought through the distributing pipelines of the Southwest and there is no other area for competitive

The people of northeastern Ohio are very apprehensive and concerned that the exemption from the operations of the Natural Gas Act of the independent producers and gatherers of natural gas who sell gas at wholesale to pipeline companies engaged in the transportation and sale in interstate commerce of natural gas for resale will only result in increasingly rising costs of natural gas. In addition, the vital industries of northeastern Ohio have a tremendous stake in the availability of low-cost gas so that they can reasonably compete with other industries which are located near other sources of energy.

The City Council of the City of Cleveland in recognition of the tremendous stake and interest of the citizens of Cleveland, on February 21, 1955, passed the following resolution memorializing the Congress of the United States to defeat legislation which proposes to amend the Natural Gas Act so as to exempt the production of natural gas sold in interstate commerce from regulation by the Federal Power Commission:

Resolution memorializing the Congress of the United States to defeat legislation which proposes to amend the Natural Gas Act so as to exempt the production of natural gas sold in interstate commerce from regulation by the Federal Power Commis-

Whereas the Natural Gas Act was passed by the Congress in 1938 for the primary purpose of protecting natural gas consumers against exploitation at the hands of natural gas companies; and

Whereas the city of Cleveland took the lead among municipalities in obtaining passage of the National Gas Act; and

Whereas the city of Cleveland has a substantial interest in the price of natural gas as its inhabitants are paying approximately \$35 million annually for this commodity and an increase of just 1 cent per thousand cubic feet in its price would mean an increase of about \$600,000 annually; and

Whereas there is currently underway a heavily financial movement to prevail upon the Congress to amend the Natural Gas Act so as to exempt the production of natural gas sold in interstate commerce from Federal Power Commission regulation; and

Whereas the effect of such proposal would be exploitation of natural gas consumers throughout the Nation by a handful of large oil companies operating in southern oil and gas producing States; and

Whereas the city of Cleveland has in the past opposed similar legislation which proposed to exempt natural gas production from Federal Power Commission regulation, the last such legislation being the Kerr bill; and

Whereas on February 3 Mayor Celebrezze accepted membership on a steering committee to consider ways and means to present the municipal viewpoint on such legislation before the Congress and publicize this viewpoint, afcresald committee being composed

of mayors of such cities as Milwaukee, Detroit, Kansas City, Boston, Nashville, and New York; and

Whereas it is in the interest of the nat-ural gas consumers in the city of Cleveland that the Natural Gas Act be not weakened by an amendment similar to that embodied in the Kerr bill; and

Whereas this resolution constitutes an emergency measure in that the same pro-vides for the usual daily operation of a municipal department: Now, therefore, be it

Resolved by the Council of the City of Cleveland:

SECTION 1. That the Congress of the United States be and it is hereby respectfully memorialized not to enact into law any bill similar to the Kerr bill of the 81st Congress, which proposes to amend the Natural Gas Act so as to exempt the production of natural gas sold in interstate commerce from regulation by the Federal Power Commis-

SEC. 2. That the clerk of council be and he hereby is directed to transmit a certified copy of this resolution immediately upon its adoption thereof and the signing by the mayor to Senators John W. BRICKER and GEORGE H. BENDER, Representatives Frances P. BoL-TON, OLIVER P. BOLTON, MICHAEL A. FEIGHAN, WILLIAM E. MINSHALL, JR., CHARLES A. VANIK.

SEC. 3. That this resolution is hereby declared to be an emergency measure and, provided it receives the affirmative vote of twothirds of all the members elected to council, it shall take effect and be in force immediately upon its adoption and approval by the mayor; otherwise it shall take effect and be in force from and after the earliest period allowed by law.

Adopted February 21, 1955.

JAMES DONNELLY, President of Council. THAD FUSCO. Clerk of Council.

Approved February 24, 1955: ANTHONY J. CELEBREZZE,

Mayor.

Imports of Pork Products

EXTENSION OF REMARKS OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. HOEVEN. Mr. Speaker, following complaints from farmers in my congressional district regarding the importations of pork products from foreign countries, with particular emphasis on shipments from Poland, I recently addressed a letter to the Secretary of Agriculture asking for full information. Under leave to extend my remarks in the RECORD, I include the following letter received from Earl L. Butz, Assistant Secretary of Agriculture, dated March 16, 1955, in reply to my inquiry:

DEPARTMENT OF AGRICULTURE, Washington, D. C., March 16, 1955. Hon CHARLES B. HOEVEN,

House of Representatives.

DEAR CONGRESSMAN HOEVEN: The following information may be useful in analyzing the present situation as it presently applies to imports of pork products from foreign countries with particular emphasis on shipments from Poland.

In the first place, the United States Government has no authority, under present laws to bar or restrict imports of cured or cooked pork products so long as the duty

(314 cents per pound in 1953 and 1954) is paid and certain sanitary requirements are satisfied.

Total imports of pork products from all countries in 1954 amounted to 112,574,000 pounds as compared to production of approximately 10,063 million pounds in the United States. The attached tables show United States imports by countries from 1947 through 1954, as well as the 1935-39 average and exports of lard and tallow to the countries involved.

United States exports of pork products (lard excluded) to countries from which pork products were imported in 1954 were 6,000 pounds to Denmark, 9,243,000 pounds to the Netherlands and 11,905,000 pounds to Germany. United States exports of lard in 1954 were 49,584,000 pounds to Germany and 14,-294,000 pounds to the Netherlands. Exports of tallow in 1954 were 108,522,000 pounds to Germany and 211,376,000 pounds to the Netherlands. There have been no United States exports of lard, tallow, and/or other animal products to Poland, in recent years.

United States imports of all products from Poland in the first 11 months of 1954 were valued at \$17,581,411 while United States exports of all products (mostly tobacco and textiles) to Poland during that same period were valued at \$1,636,042.

Value of all United States export and import trade with countries from which pork products were imported during the first 11 months of 1954 is given below.

	United States imports	United States exports \$2,483,114,000 40,301,000 430,817,000 396,331,000 1,636,000		
Canada Denmark Germany Netherlands Poland	\$2, 167, 029, 000 46, 079, 000 254, 349, 000 150, 388, 000 17, 581, 000			

According to information furnished by the American Meat Institute on March 9, 1955, wholesale prices quoted on the New York market were 64 cents per pound for American hams, 82 cents per pound for German hams, and 91 cents per pound for Polish homs

All Polish hams imported into the United States are channeled through one New York export import company.

Sincerely yours,

EARL L. BUTZ. Assistant Secretary.

Let's Keep the Government Out of Private Business

EXTENSION OF REMARKS

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, on behalf of the State of North Dakota, I am pleased to submit a resolution adopted by the North Dakota Industrial Commission protesting Federal encroachment in the sale of natural gas at the production point.

It would appear to me that we have plenty of Government controls and interference with private business now without invading this presently competi-

The resolution follows:

RESOLUTION ADOPTED BY THE INDUSTRIAL COM-MISSION OF NORTH DAKOTA, MARCH 18, 1955

Whereas the Supreme Court of the United States has, after 16 years, held that the Natural Gas Act of 1938 applies to sales at the point of production by independent gas producers where the sale is in interstate commerce for resale for ultimate consumption, and that such sales will, therefore, be subject to the Federal Power Commission's jurisdiction; and

Whereas such Federal Power Commission jurisdiction of sales of natural gas produced in North Dakota adversely affects the conservation of oil and gas within this State and threatens the jurisdiction of this commission over the conservation of the natural gas and oil resources of this State: Now,

therefore, be it

Resolved, That this commission is opposed to any control by the Federal Power Com-mission of sales at the point of production of natural gas produced in this State, and urges that appropriate congressional action be taken to correct this situation; and be it further

Resolved, That a copy of this resolution be furnished to the chairman of the Committee on Interstate and Foreign Commerce of the United States House of Representatives and to the United States Senators and Congressmen of North Dakota.

Over 50 Million Cars Need Highways

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, February 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over WMEX, Boston, Mass., on Saturday. March 19, 1955:

There is one good thing about airplanes as a method of transportation-we don't have to build and maintain roads for them. air on which they travel doesn't wear out.

We hope the day will never come when there will be as many planes in the air as there are cars on the ground, for then our present traffic problems would seem almost enjoyable by comparison. At least, cars do not break into your TV living room or make you worry about the strength of your ceiling.

But automobiles, while convenient for the individual and indispensable to the national economy, do create new problems as well as satisfactions.

Downtown areas of large cities are being ripped out to make room for cars that are moving and for cars that are standing still.

Among signs of the times, we observe that parking lots cover one-half of the midtown Detroit area. The city of Washington is putting in 3,000 new off-street parking places a year. Cars bed down on the residential streets at night and wall-in business streets during the day. The problem of the empty, waiting cars is a subject in itself.

Our present concern is with the cars that are in motion and how to make way for them before the production of automobiles which exceeds the birth rate leads to a congestion that would slow everything down to a walk.

Many of our streets and highways follow the original cowpaths.

They were built when the automobile was considered to be but a byproduct of our civilization and not one of the dominant factors which it is today.

Dad drives his car to work.

Mother would like to have one to do her shopping.

Junior makes no bones about it. He must have a car of his own to get to high school on time. Besides, who would ever think of asking a girl to walk to a dance.

There are so many cars battling for position on the highways that there are more people killed and injured annually than we suffered in combat casualties during any 1 year of World War II or in any war.

Now, this is not to blame the automobile, which simply does what it is directed to do. Mechanical failures are few. Human failures

But our overstrained and antique high-way systems, weefully behind in providing broad, safe, and well-surfaced highways for the mounting volume of traffic, must share some of the responsibility.

Automobiles were never designed to make

their own trails like tanks or jeeps.

We must provide the arteries that will enable them to circulate freely, and this service cannot be provided without the expenditures of sizable sums of money.

The question is: Shall we consider this as a major problem, and tackle is accordingly, or permit economizing to freeze our power of decision and let this problem get completely out of hand?

Some people say that other problems deserve priority. Defense, veterans' programs, schools, subsidies to agriculture, etc.

They claim that we cannot do all things at

True, but the fact remains that highways

demand an increasing share of our attention. Because not one of these other problems is free from the impact of the automobile and the adjustments that must be made because of it.

What would industry do without parking lots for its workers, or schools without school buses, or agriculture without farm-to-market roads for trucks instead of horse-dawn wagons?

The problem has become so acute that the President deemed it necessary to deliver a special message to Congress calling for a rapid development of our interstate high-

Without the uniting force of communication and transportation," the President declared, our country "would be a mere al-

liance of many separate parts."

He proposed that by expenditures of 25 billion dollars over 10 years, to be financed by special bond issues and with the Federal Government assuming the principal responsibility, this vital connecting system would be brought up to date with the demands of present-day and future traffic.

This was no hasty conclusion.

The President's Advisory Committee on a National Highway Program, after earnest study, made its report to him in January.

Under the heading "Why the System Is

Inadequate," it has this to say:

"Reduced to its simplest terms, the highway problem is this: Traffic has expanded sharply, without a corresponding expansion in capacity of roads and streets. As a re-sult, a major portion of our facilities are seriously overcrowded. Moreover, this movement is faster and heavier than in previous years, and continues to increase.

"Simple arithmetic illustrates the dimensions of the task. We now have more than 58 million motor vehicles registered; one for every 700 feet of every lane in both directions on all streets and highways in the Na-This gigantic fleet traveled an estimated 557 billion vehicle miles in 1954, much of it concentrated on main arteries in urban areas which have become the expensive, hazardous bottlenecks referred to by the

"The existing traffic jam is bad enough, but prospects for the future are even worse.

Vehicle registrations are expected to continue their upward surge, reaching 81 million by 1965, an increase of 40 Total highway travel of these vehicles will likewise continue to increase as we attempt to meet the transportation requirements of an expanding economy, probably to reach an estimated 814 billion vehicle-miles in 1965.

"This Committee believes that these forecasts, carefully projected on the basis of all available data, are soundly conservative and represent the foundation upon which the Nation's highway improvement should be planned. Our population is ex-pected to exceed 180 million by 1965. Our gross national product, which was about 357 billion dollars in 1954, is estimated to reach 535 billion by 1965, an increase of almost 50 percent in the next decade, as recently reported by the Joint Congressional Committee on the Economic Report."

In its conclusion, the Committee states: "We are indeed a nation on wheels and we cannot permit these wheels to slow down. Our mass industries must have moving supply lines to feed raw materials into our factories and moving distribution lines to carry the finished product to store or home. Moreover, the hands which produce these goods and the services which make them useful, must also move from home to fac-

tory to store to home.

"Our highway system has helped to make this possible. We have been able to disperse our factories, our stores, our people; in short, to create a revolution in living habits. Our cities have spread into suburbs, dependent on the automobile for their existence. The automobile has restored a way of life in which the individual may live in a friendly neighborhood, it has brought city and country closer together, it has made us one country and a united people.

"The proposed financing need not be inflationary since the financing is spread over a 10-year period and the program can be planned to fit in with general governmental fiscal policy. Bonds will be retired on schedules from general revenue to be specifically appropriated by the Congress in which the anticipated increase in the gasoline tax alone suffices to service the bond issue while continuing a substantial Federal-State coop-

erative program on other roads.

"Thus, we will accomplish the objective sought by the President for a grand plan for a properly articulated highway system that solves the problems of speedy, safe, transcontinental travel, intercity transportation, access highways, and farm-to-market movement, paying off in economic growth, and making a good start on the highways the country will need for a population of 200 million people."

This, in concentrated form, is the heart of

the President's highway program.

We are grateful that he has met the issue and that he has asked for a bold attack to conquer the problem.

While agreeing with him in principle, the Democrats in Congress will differ as to the details, insisting upon direct and large-scale participation by the Federal Government.

Obviously, the States, the cities, and the towns, limited as the revenue they can raise and struggling with problems of their own, are in no position to carry their share of a big highway program.

And again, the financing method proposed

by the President attempts to do the impossible, on the theory that it won't cost anything now.

Some Senate Democrats are thinking in terms of a compromise plan, providing for a sharp increase in the Federal Government's outlay for such a program, to be financed by an increase in Federal gasoline taxes.

Highway officials of 11 Eastern States have already asked for speedy completion of a program to provide a 40,000 network of interstate highways. There is an urgent need, they stated, to meet a growing traffic crush, to provide for military and civil defense, and for the economic advancement of the United States.

The people would rather see highway money go into the actual building of roads rather than interest charges.

If we are to meet the need squarely we must be prepared to pay the cost.

The motorists who use our highways and who want good ones for their own safety and convenience, as well as for the protection of their cars, might agree to a cent or two increase in the gas tax to finance this need on a pay-as-you-go basis.

In any event the issue is a live one and public opinion should act on it without

Meet Mrs. Womanpower: Frances Bolton

EXTENSION OF REMARKS

OF HON, JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. BETTS. Mr. Speaker, as a colleague of Mrs. Frances Bolton, I share with her other colleagues a tremendous amount of pride in her accomplishments. not only in Congress, but in many walks of life. The following article, which appeared in the Cleveland Plain Dealer of March 20, 1955, is a fine tribute to Mrs. Bolton, and I am sure it will be of interest to all of her other colleagues in the House:

MEET MRS. WOMANPOWER: PRANCES BOLTON (By Ann Cottrell Free)

WASHINGTON .- FRANCES PAYNE BOLTON represents the 22d Congressional District of Ohio, but she represents a great deal more. Mrs. Bolton, now 15 years in Congress, is

recognized increasingly as representative of woman as an effective citizen. During a recent "womanpower" confer-

ence here in the capital, a picture of modern woman in the ideal sense emerged from the discussions. Though born in the last century—she is 70 this month—Mrs. Bolton fits the description. She is, in a manner of speaking, Mrs. Womanpower herself.

She believes in a woman being a woman

first. "Usefulness to her family, as a mother, is woman's first duty," Mrs. Bolton says. She has borne four children. One son, OLIVER, is now in Congress.

STUDENT OF HISTORY

She believes that a woman should fit herself to be self-supporting if need be. Though wealthy through inheritance, Mrs. Bolrow by her frequent reelections to Congress shows she can earn a paycheck.

And she believes that a woman should go as far as she possibly can in being politically effective. In this Frances Bolton excels.

Her range of congressional and extracurricular activity is enormous. Her pace is grueling. "Physical, mental, and spiritual" are the three cornerstones of her life. She exercises, breathes correctly, stands erectly, and eats wisely. She is a serious student of history and political science. And her spiritual life is deep and full.

Well equipped for the living of life, Frances Bolton has distinguished herself as a member of the House Foreign Affairs Committee. She is the third-ranking Republican member. During the war and early postwar years she traveled extensively abroad, including Russia and Poland. She

has had dinner in the Arabian desert with the late King Ibn Saud. She supervised one of the best studies of the nature of worldwide communism. She evolved through the years from an isolationist to an internationalist. In 1953 she represented this country as a delegate to the United

Nations general assembly.

To many, the name Frances Bolton means "friend of nursing." Her life-long interest in nurses stems from childhood membership in the Cleveland Brownie Club. The Brownies helped visiting nurses in the Cleveland slums, where Frances saw suffering and poverty for the first time. She realized, too, the need for more nurses. Today the Western Reserve School of Nursing, which she endowed, is named for her. It was her bill during the war that set up the United States Cadet Nurse Corps.

Looking back over the years, fair-haired, blue-eyed Mrs. Bolton says she can't pick out any one thing as her most important accomplishment. "It's the day-by-day work," she says, "the work behind the smoke. The work that doesn't show is probably what

counts most."

Looking out for her constituents is a job in itself and it never shows up in the national headlines. But the record shows that she wins a great number of normally Democratic votes.

Being a well-disciplined woman, Frances Bolton sometimes seems a bit stern. But when she turns on an extraordinarily bright and winning smile, it seems to be a very good day indeed.

Federal Regulation of the Sale of Natural Gas

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Record a resolution received from the League of Wisconsin Municipalities which urges Congress to reject any legislation that would leave the price of natural gas unregulated by Federal authorities.

The resolution follows:

RESOLUTION OF THE LEAGUE OF WISCONSIN MUNICIPALITIES, MARCH 14, 1955

Whereas certain bills are now pending in the Congress of the United States to exempt sales of natural gas by the producers and suppliers thereof to pipeline companies for resale in interstate commerce from Federal regulation; and

Whereas the great percentage of natural gas sold in interstate commerce for transportation and resale by pipeline companies is by a relatively few major companies; and

Whereas an adequate supply of natural gas reasonably priced to the consumer is essential to the economic stability of the citizens and industries of Wisconsin and many other States and can only be guaranteed by reasonable regulation of sales by producers and suppliers; and

Whereas consumers dependent upon natural gas will be left without adequate protection if there is no Federal control over the price of natural gas as sold by the pro-

ducer and supplier; and

Whereas the majority of Wisconsin consumers are located in cities and villages: Now, therefore, be it Resolved, That the League of Wisconsin Municipalities, representing 451 cities and villages in the State of Wisconsin, urges the Congress and President of the United States to reject any legislation which will leave the price of natural gas unregulated by Federal authority.

Attested to:

ED JOHNSON, Executive Secretary,

Mixon Gets Ike's Vote of Confidence

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. HOSMER. Mr. Speaker, a fair appraisal of the political future of, and President Eisenhower's regard for, Vice President RICHARD M. NIXON appeared editorially in the Long Beach Press-Telegram newspaper on March 16, last. The editorial indicates Mr. Eisenhower's esteem of his second in command is based on the real and salutory results arising from placing a man with real ability in the Nation's No. 2 spot:

NIXON'S POLITICAL FUTURE

Vice President RICHARD M. NIXON's southern California visit last weekend stirred anew speculation as to the political future of this amazing person.

What happens to him in 1956? Will he be second man on the slate again if President Eisenhower runs for reelection? If Ike bows out, will he give the nod to Nixon for the top job?

Perhaps President Eisenhower himself isn't certain as to the answers to those questions at this point. They hinge on the question of his own availability in 1956 and will be subject to influence by events between now and then.

But this is certain. No Vice President in American history has worked as hard at the job. None has been given such opportunities to acquaint himself with the problems which would be his, should fate elevate him to the Presidency.

It is well known that Nixon is a strong and respected figure in White House conferences, which is a sharp departure from the tradition of isolating Vice Presidents from the affairs of state At the same time the Vice President has been given a couple of highly important diplomatic assignments which he carried off brilliantly. One was the 1953 round-the-world tour, the other his recent Caribbean tour, both handled in a way that impressed some of his harshest critics. Nixon has steadily continued to gain stature in the Vice Presidency.

And President Elsenhower doesn't sound displeased about the impression being made by the man second in command. Ten days ago, in fact, at a gathering in Washington, the President went out of the way to say some very pleasant things about Nixon.

The occasion was the White House Correspondents Association annual dinner. Speaking to hundreds of newsman, to many of the high-ranking officials of the administration, and to some top-flight Democrats, the President expressed great admiration for Nixon. It was good, he said, to realize that Nixon was available to take his place if anything happened to the President.

Was Ike trying to make it clear he has no intention of abandoning Nixon? If so, why was there need to make the point clear?

Nixon is a young man who has had a meteoric political career. In 9 years he worked his way from Congressman to Senator to Vice President. He is a big power in the party at age 42. A man does not ascend that quickly without being eyed fealously by older men or, for that matter, by men in his own age bracket.

Again, Nixon is a hard-hitting campaigner who disturbs Democratic leaders so much that one of them recently quipped that it is always nice to see Nixon leave the country on a good-will tour. They have picked him out as a principal target and attempted to portray him as a "smear artist," in hopes that he might become a liability rather than an asset to the administration.

Against this background, the President's remarks about Nixon are interpreted as a significant vote of confidence. Some observers suggest that the President's comment was more than an indication that Nixon will be a satisfactory running mate in 1956. He might have been giving Nixon a boost toward a future presidential nomination.

Whatever it meant, it was clear evidence that Nixon is on extremely good terms with the White House. Nixon's good-will tours have helped put him on better terms than ever with the people. That's a hard combination to beat.

Hellenic Independence Week

EXTENSION OF REMARKS

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks, I am including herewith the proclamation issued by Gov. G. Mennen Williams, of the State of Michigan, on the occasion of the anniversary of the independence of Greece:

PROCLAMATION: HELLENIC INDEPENDENCE WEEK

LANSING, MICH.

Each year Americans of Greek descent observe the week that includes March 25 as Hellenic Independence Week. On March 25, 1821, the Greek War of Independence against Ottoman rule began when the Archbishop of Patras unfurled the national flag of Greece. Greece began her fight against seemingly unsurpassable odds but her valiant efforts soon enlisted the sympathy of Europe and the United States. As a result, in 1829, Turkey acknowledged Greece as an autonomous nation, and in 1832, Greece received recognition of its complete independence.

It is more than fitting that we should recognize this great expression of liberty and independence.

Therefore, I. G. Mennen Williams, Governor of the State of Michigan, do hereby proclaim March 20 through the 26, 1955, as Helenic Independence Week in Michigan, and urge all our citizens to join with their neighbors of Greek descent in honoring this great date and paying tribute to the traditions of liberty which Greece has given to the world.

Given under my hand and the great seal of the State of Michigan, this 17th day of March 1955, and of the Commonwealth the one hundred nineteenth.

By the Governor:

G. MENNEN WILLIAMS,
Governor.

JAMES M. HARE, Secretary of State.

Association for Supervision and Curriculum Development in Chicago

EXTENSION OF REMARKS OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. NORRELL, Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following letter and statement:

> ARKANSAS AGRICULTURAL AND MECHANICAL COLLEGE, College Heights, Ark., March 14, 1955.

Hon. W. F. Norrell,
United States Representative from
Arkansas, House Office Building,
Washington, D. C.

DEAR CONGRESSMAN NORRELL: It is nice to know you have recovered and are back at work representing Arkansas and the United

Would you be so kind as to extend your remarks in the Congressional Record and have printed in the Appendix ASCD in Chi-Thank you very very.

A constant supporter.

Dr. GEORGE S. REUTER, Jr.

ASCD IN CHICAGO

(By Dr. George S. Reuter, Jr., Arkansas A. and M. College)

The 10th annual conference of the Association for Supervision and Curriculum Develcoment, a department of the National Education Association, was held at Hotel Conrad Hilton, Chicago, Ill., from March 6-10. The theme was: Crucial Problems of Today's Schools.

The writer represented Arkansas A. and M. College and visited with several old friends. Dr. Glen Barnett, of the University of California, an old Navy friend, recalled some vivid experiences in 1943. Dr. and Mrs. Harry Lion Boren, of Chicago and Highland Park, recalled other naval and political events. Dr. and Mrs. James Riley Patterson, A. B. Churchill, the Robert Livingstons, H. D. Ludlow, the H. D. Jones, James M. Clifton, and the Reverend James Kurtz, of Jackson Park Baptist Church, made the visit outstanding. Yes; and Dr. Alan Redpath, of Moody Memorial Church preaching on Rebuilding for God (X Preparation for Revival) and Thou Shalt Not Kill offered great words of wisdom.

The featured speakers of ASCD were Bishop G. Bromley Oxnam, of the Methodist church, who spoke on The Struggle for the Minds of Men; Dr. Vivian T. Thayer, of the University of Virginia, who spoke on Today's Challenge to Our Children and Youth; and Dr. Hollis L. Caswell, president, Teachers College, Columbia University, who spoke on Values in Progressive Education That Must

Be Preserved.

The writer accompanied 29 other educators for an entire day at the Evanston Township high school. This community is on the northern edge of Chicago and as one of the distinguished old suburban communities on the North Shore.

The high school is in a highly favored position. The community is well-located, wealthy, and well-educated. Evanston ranks first in the median number of years of its citizens' education (12.9 years) and second in the median income (\$5,491) of its families. The high school is situated on 67 acres and serves 2,500 children in the 4-year program. It could easily serve 3,200. There is a staff of 160

This school with a per pupil cost of \$625 has only about 31/2 percent dropouts and 20 percent leaving the community. It is well known for its core curriculum. A 1953 revised edition of the Harper and Brothers' book The Schools for a New Culture by MacConnell, Melby, Arndt & Bishop tells the story of this wonderful book.

It cost \$35,000 to conduct ASCD's recent meeting and 50 weeks of planning. About 3,000 members attended. There were many divisional meetings. Among them were:

1. International understanding: The purpose was to promote among curriculum workers greater awareness of the world context of some of our educational problems and to seek to encourage the development of resource materials in this area. Dr. Leonard Kenworthy, of Brooklyn College, served as chairman.
2. Teaching the core curriculum: What

and how? This included the day's trip to Evanston and two other meetings. Dr. Galen Saylor, of the University of Nebraska, was

3. Organizing schools and school systems for effective instruction: Dr. Benjamin Willis, superintendent of schools of Chicago; Dr. Henry Harup, of George Peabody College for Teachers, Nashville: Dr. G. Robert Koopman. of the State department of public instruction of Michigan; and Dr. Jennie Wahlert, of Washington University, St. Louis, was an inspiring panel.

While Accurated Composition Service, Inc., is out of business, Kiddle Korner and A. C. Becken & Co. have moved since 1948, the problems of this phase of education are still staggering and serious, but there was a feel-ing of steadfastness. The recent death of Mrs. Karl J. Leidinger (March 9) and the influence of Dwight Lynam Moody (1837-99) in Chicago lives on. Thus, a great meeting was held at a critical time in a great city. The writer greatly profited by being present.

Odd Facts on St. Patrick

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Thursday. March 10, 1955:

ODD FACTS ON ST. PATRICK

EDITOR, TIMES-LEADER NEWS:

In Tuesday's issue of your newspaper under Odd Facts, it was stated that St. Patrick was English or Scotch and sent as a missionary to Ireland. Now these statements are "odd" enough but hardly facts. They represent obsolete viewpoints still persisting in many so-called "encyclopedias" as originally written by biased (English) historians of the "down with the Irish" school of medieval thought.

This annual reprinting of disproven material places upon me the equally regular necessity of setting forth the most scholarly viewpoint on the subject, to wit: St. Patrick was a Roman citizen of the coast of France, a nephew of St. Mastin, the bishop of Tours, who was captured in his youth by raiding pagan Irishmen and brought to the Emerald Isle where he labored as a slave, tending sheep, for 6 years and became so imbued with admiration for the Irish character that upon his escape he went to Rome and eventually won permission from the Pope to come

(not "sent") to win the people he loved to the Faith.

That his labors were not in vain has been the proudest boast of 15 centuries of Irishmen since that great life's work.

ASHLEY.

Oil for the Lamps of China

EXTENSION OF REMARKS

HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. GUBSER. Mr. Speaker, in connection with the current approach of a Finnish tanker into the southeast Asia area with a consignment of kerosene for Communist China, I have received inquiries why the United States is, in effect, attempting to "keep oil from the lamps of China," and whether this Government is prepared to go to war "in an attempt to stop the natural industrial development of a nation of 600 million people." Under leave to extend my remarks in the RECORD, I herewith enter my reply.

The rulers of Communist China have publicly announced their intention of extending their regime to the island of Formosa. They have stated that they would invade that island, and they have massed armed forces along the coasts facing this island. Formosa, however, is an important anchor point of our own Pacific defense perimeter, and military leaders as well as political leaders of both parties are in agreement that an attempt upon Formosa constitutes an attack upon the security of the United States.

Now, kerosene may once have been innocuous oil for the lamps of China. Today, kerosene is fuel for jet propelled aircraft. This Government certainly is not prepared to go to war "in an attempt to stop the natural industrial development of a nation of 600 million people," but I believe we are prepared to defend ourselves against further Communist aggression. And furthermore, I believe that this very preparedness may be the biggest deterrent factor for any such aggression to actually happen.

We have contained Russian expansion in Europe by drawing definite lines, and by backing these lines with arms and men. The lines have remained inviolate. In many Asiatic areas, we have been only too vague in defining the points beyond which we would consider ourselves attacked. Then, on January 24, 1955, President Eisenhower sent his message on Formosa and the Pescadores to the Congress, and in subsequent action-and in a fine show of bipartisan unity-the Congress drew a line in that area.

I thoroughly agree that it is better to use every means possible to settle differences through peaceful negotiations, and to avoid interference in the internal affairs of other countries. I believe we are doing both. We are peaceful people who

do not fight unless attacked. We are carrying the principal burden for maintenance and upkeep of the United Nations because we believe that this organization furnishes the platform on which peace can be served in multilateral negotiation and international supervision. We have offered to share our knowledge of the atom with others for peaceful endeavor. We have submitted plans for the outlawing of atomic weapons and a system of international inspection. We are always willing to negotiate if the cause of honorable peace can be served.

In the case of Formosa, we are confronted not with a difference of opinion, but with the announced intention to make war upon a bastion in our own defenses. We have clearly and calmly announced our intention to counter any such attack if it is made. We are all for the oil that can soothe the troubled international waters. The oil that sends jet planes screaming against our own lines must, of necessity, receive different consideration.

Researching for Air Safety

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following enlightening editorial from the Daily Evening Item, Lynn, Mass., March 16, 1955, giving long overdue praise to the air researchers in the Navy and Air Force for their studies, decisions, and recommendations in the field of plane accidents.

Much will be gained in preventing these accidents from these well-expended funds in the field of research.

The services of this personnel merits our sincere congratulations for advancement in this field. The editorial follows:

When a plane caught in a snowstorm or a vicious thunderstorm cracks into a mountain, the only puzzle is why the storm was not avoided. But over the years many mysterious mountain crashes have occurred in weather merely cloudy or sometimes even clear.

Now it is disclosed that the Air Force Research Center at Cambridge, Mass., and the Office of Naval Research have been studying the problem for 4 years and have made a discovery of the highest importance to air

They learned that any mountain range with crests above 300 feet can produce vertical air currents like huge waterfalls. Some flow down, but some flow upward at frightening speed. Others whirl about like giant ferris wheels.

Planes trapped in these varied currents are likely to find their altitude gauges thrown off the track, with resulting perli to the aircraft.

To probe these treacherous air drafts, Air Force and Navy researchers sent piloted motorless gliders right into their midst. Risk to pilots was great. Some who have gone through powerful surges of air around mountains.

tain summits report that at times they lost all control of their ships for a short period. Controlled instrument flying was impossible.

A pilot might think he was climbing steadily when actually he was dropping 2,500 feet a minute in apparently smooth air. One of the oddities is that smooth air and turbulent currents seem to exist side by side around mountain peaks.

Heavy gusts might buffet a plane, causing instruments to flutter, and then suddenly the mountain range the pilot thought far beneath him would loom up straight ahead. Unquestionably many a regularly scheduled airplane has found itself in this very predicament just before it crashed on a craggy mountainside.

The fact that cloud caps often hide high peaks further complicates the problem and probably accounts for mountain accidents in

otherwise clear weather.

This painstaking 4-year inquiry has produced data and charts of tremendous value to civil and military aviation. These charts might be compared to those used by ships in marking dangerous shoals and reefs. Already made available to the commercial airlines and others, they are considered by air experts to be a prime factor in the greatly improved air safety record of 1954.

Since they have understood the perlious

Since they have understood the perllous mountain air currents, researchers have steadily advised all fliers to steer clear of them wherever they are known to exist. Evidently the warning has been heeded. If it continues to be, this very puzziling type of plane crash may be largely a thing of the past.

Highest commendation must go to the Air Force and Navy researchers who broke the mystery and thereby contributed so mightily to the country's air safety.

Godless Communism-Resolution Passed by State Legislature of Texas

EXTENSION OF REMARKS

HON, LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1955

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting at this point a copy of resolution passed by the State Legislature of the State of Texas:

Whereas the conquest of godless communism which has now enslaved a third of the world is always and everywhere propelled and directed by the so-called Soviet Government in Moscow, Russia; and

Whereas the march of communism began years ago with the bloody ensiavement of the God-fearing, peace-loving Russian people, who have been held against their wish and will in slavery and, in the case of uncounted millions, in slave camps; and

Whereas the curse of godless world communism will end only when and if it is destroyed at its heart and center, namely, the Kremlin, by the righteous and successful uprising of the oppressed Russian people against the Communist gangsters who have unlawfully selzed and perpetrated their ruthless dictatorial power over the Russian people, and have used and are now using this unlawful conquest as a military and spy base for the domination of 800 million human beings; and

Whereas the patient, painful, persistent efforts of liberty-loving, resolute leaders of the anti-Communist Russian revolutionary movement, both inside and outside of Rus-

sia, have now at last produced a climate of popular opinion and popular determination in and among the Itussian people which takes the day of their revolutionary liberation not merely inevitable but definitely foreseeable; and

Whereas the Soviet Government is now desperately working to counteract this revolutionary sentiment by propagandizing the Russian people to believe that the United States of America hates the Russian people and plans to exterminate them with atom bombs, a fate from which the Soviets insist that only a strong universally supported Soviet Government can possibly defend them: Now, therefore, be it

Resolved by the house of representatives (the senate concurring). That we of the State of Texas, do now publicly proclaim that while we abhor and will continue to resist by every means the present unlawful ganster Soviet Government of Russia, we nevertheless likewise publicly proclaim our sympathy and friendship for the oppressed people of Russia who are now held in inhuman bondage by their unlawful Communist Government; and be it further

Resolved, That because of the ruthless desperate nature of the criminal Soviet Government, we caution the Russian people against any premature uprising against it and advise them to strike out for their Godgiven liberty only when they are properly implemented with the means for definite success. We nevertheless, in the spirit of our own great American Declaration of Independence against tyranny, look forward hopefully and prayerfully to the day when the Russian people are ready and able to liberate themselves, and at the same time to liberate the world by the dethronement and destruction of their Communist masters who now threaten the freedom of all mankind.

Is Hoover Commission Out To Liquidate REA?

EXTENSION OF REMARKS

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert in the RECORD the recent letter which Mr. Clyde Ellis, general manager of National Rural Electric Cooperative Association, sent to Members of Congress.

Mr. Ellis' letter is self-explanatory, and I hope that all of my colleagues have studied the letter. If they have not, I urge them to reread the letter again. Mr. Ellis properly raises the question as to whether it is the intent of the Hoover Commission to liquidate the REA and help turn this movement over to the private power companies lock, stock, and barrel.

I believe that the 9th Congressional District of Wisconsin, which I have the privilege of representing, is probably the most highly organized REA district percentagewise in the United States. I am very familiar with the fine work accomplished by the REA cooperatives. For a time, when I was farming, I was a member of one of the REA co-ops in my district. That is why I am concerned

about what the Hoover Commission and its task force is proposing to do to REA. Mr. Ellis' letter of March 18, 1955, follows:

NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, Washington, D. C., March 18, 1955. Hon. Lester R. Johnson, House of Representatives,

Washington, D. C.
DEAR CONGRESSMAN: The full report of the Task Force on Federal Lending Agencies to the so-called Hoover Commission dated February 5, 1955, has just come to our attention. This report which is a public document, paid for by the taxpayers, is still not available to the people because Mr. Hoover has not given the Superintendent of Documents permis-

sion to sell copies. This Task Force Report is based upon a report by Price, Waterbouse & Co., the big accounting firm which is heavily engaged in accounting for the private power companies and was at last notice official auditor for Purcell Smith's National Association of Electric Companies, the big utility lobbying outfit. The basis for this report, insofar as the report deals with the rural electrification program, is the official word of the power companies and their invesment banker-insurance company owners trans-mitted through Price, Waterhouse, and adopted by the task force with a dissent from only 1 of its 10 members, Mr. William W. Campbell, of Arkansas, the only member who has any working, personal knowledge of the rural electrification program.

This report shows clearly what we have suspected from the beginning, that Mr. Hoover, repudiated by the American people in an overwhelming election defeat, has returned to a high place in the land as Chairman of this Commission to carry out his earlier aims of serving the vested interests against the common people. Mr. Hoover is out to liquidate all segments of the electric power industry which are not owned and exploited by the Wall Street bankers and insurance companies with which he has had such close connections all his life.

This report, in the section dealing with the rural electrification program which has brought the blessings of electricity to almost 4 million farm families, is another example of the "creeping Hooverism" and "bundles for bankers" philosophy which is so obvious in Washington today. If the recommenda-tions in this report and the subsequent Commission report are adopted by the Congress this is "operation bankruptcy" and "liquidation by commission" of the rural electric program. The investment houses and their chosen instruments, the privatepower companies who scorned the task of bringing power to rural people for decades, now hope to move in for the kill. What they would not create, they now seek to selze or destroy.

This task-force report reeks with falsehoods and misstatements and power company propaganda. It recommends a program which would more than double credit costs for the farmers' small electric cooperatives, turn control of their program over to President, and destroy the right of the farmers to tell Congress their own story each year.

This report contains a two-page attack upon the rural electric cooperatives and their national organization, the National Rural Electric Cooperative Association. It assumes the position that there is something immoral and undemocratic about this farmers' organization and urges that REA be reorganized as a corporation subject to control by the President in order to remove that lending agency from any influence by the people it was established by the Congress to serve.

This report contains a frontal assault upon the right of farmers to generate and transmit their own electric power, insisting that this is "inconsistent with the basic purposes of the REA program, and * * * inconsistent with sound public policy." The right of the farmers to generate their own power is spelled out clearly in the REA Act and has been upheld by the Federal courts. Apparently, the Hoover Task Force has set itself above both the Congress and the courts in determining what is substantive law and which is sound public policy. Such arrogance is conceivable only in light of the career of the man who selected the task force and the vested interests of the members of the task force, a membership recduited largely from the very banking, insurance, and accounting firms which would profit from the looting of rural electric consumers were their policies to be adopted.

The rural people of this Nation organized in our association, 31/2 million rural families, repudiate the report of this task force as the work of predatory interests designed to turn the farmers' electric systems over to the big banking houses and the power companies; we urge the Congress to reject this report and discharge the Hoover Commission and withhold any further funds from that Commission. The power lobby has millions to spend for propaganda. Why should the taxpayers be called upon to subsidize their lies and half-truths through the Hoover Commission?

If the final recommendations of this task force to the Congress are accepted, we have amended the Constitution. We now have four branches of Government-the executive, the legislative, the judicial, and the Hoover Commission. I think we have done very well over the years without the fourth branch and that we should retire Mr. Hoover and his comrades for a well-earned rest,

Sincerely.

CLYDE T. ELLIS. General Manager.

Wilkes-Barre Sesquicentennial

EXTENSION OF REMARKS

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 2, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record. of Wednesday, March 9, 1955:

St. Patrick's Day, March 17, will mark the entry of Wilkes-Barre into the 150th year of its existence as a corporate body.

It was on March 17, 1806, the village of Wilkes-Barre was incorporated as a borough by act of the legislature. Its incorporation as a city came May 4, 1871. A new charter was granted in 1898 giving it third-class city

Nearly 1,000 persons were living in the village and the township when the incorporation took place, in contrast to the nearly 77,000 now in Wilkes-Barre City.

City, served by networks of railroads, highways, and about to be connected with the Pennsylvania Turnpike, also served by one of the most modern airports in the country, was in the early days an isolated village, walled in by mountains and remote from the great thoroughfares of travel.

It was 2 years after the village became a borough that Jesse Fell first burned anthracite in a grate.

A glimpse into the early Wilkes-Barre is given by this account, given in the March 18, 1905, issue of the Record:

"The region surrounding (Wilkes-Barre) was devoted largely to agriculture, and the surplus products of the farms was marketed principally at Wilkes-Barre. From here it was hauled in sleds or big canvas-topped wagons over the mountains to Easton, 65 miles distant, or else shipped in arks down the Susquehanna to Middletown, in Dauphin County, or to Columbia, in Lancaster County, whence it was conveyed across the country to Lancaster and Philadelphia. Easton being the most accessible town, however, especially after the construction of the Easton and Wilkes-Barre turnpike, in 1802-08, was for many years the chief market town for the merchants of Wilkes-Barre and the principal farmers of the Wyoming Valley.

The first bridge across the Susquehanna in the Wyoming Valley was erected at the foot of West Market Street, occupying the same site the present bridge does. upon the structure was begun in the spring of 1817 and the bridge was completed and opened to the public in the autumn of the following year, 1818."

Address of Robert B. Anderson, Deputy Secretary of Defense

EXTENSION OF REMARKS OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Robert B. Anderson, Deputy Secretry of Defense, before the National Conference of Christians and Jews, Houston, Tex., March 10, 1955:

One of the most interesting people alive. Dr. Charles R. Kettering, once told of his experience in developing an automobile spring which would not break. His laboratory started to work on a simple flat spring which was found to break regularly when flexed about 2,000 times. In the process of their experimentation, he and his associates finally developed a process whereby the spring was given a surface treatment of heavy blasts of small steel shot.

In Dr. Kettering's words: "Somehow that punishment makes the molecules in the steel clutch each other with a new fervor. resulting in a tremendously greater overall toughness." The spring so treated was found to withstand over 2 million flexings without breaking.

How very much, indeed, do we stand in need of some such unifying action in human affairs—something which would lead the human molecules of our world society to "clutch each other with a new fervor." great paradox of our time is that whereas the whole impetus of our science and technology lies in the direction of consolidating and unifying the world, the influence of many of our social and political undertakings seem largely directed toward breaking it apart, and the tragedy of it all is that so often the very things which might have united men have been wrongly understood and wrongly practiced and have thus served only to magnify and excerbate their differences.

I am not talking here about the particular conflict between the free and the Communist worlds, although that, of course, is a part and symptom of the general problem. I am

referring to something far more basic and more enduring than any ephemeral manifestation of the international power struggle. I refer to the fact of the struggle itself and to the coming inability of differing peoples to live together in a stable and enduring order of international relationships.

An uncompromising geography has perhaps been the most conspicuous factor in developing the separateness of peoples. Little groups of people, cut off from one another as they were by time and space for thousands of years, tended to adopt patterns of living peculiar to themselves and to the locale in which they abided. Habits and actions hardened into customs and traditions, dialects into languages, theological concepts into formal religions, and the world became a patchwork of different culture patterns, each more or less compartmented from the others by the walls of its own language, customs, and traditions.

Within the past hundred years science and technology have battered down the barriers of time and space without perceptibly disturbing those of culture and tradition. These latter may also yield at some distant date, but it is beyond realism to expect that they may be softened or dissolved at any time in the foreseeable future. Yet we cannot afford to wait for the prospect of some remote and uncertain eventuality to redeem us from our present danger. We must proceed now to discover the common bases upon which a world of widely differentiated peoples can build a community of interest.

ples can build a community of interest.

The political result need not be, and should not be a world government or a world state. One of the things which is needed, however, is the development of a capacity within people to see one another as they really are, and which will disclose to them the immense areas of common ideals, beliefs, and aspirations which they all share and support. It shall be my purpose this evening to review with you some of these great universals, these roots of understanding which are capable of breaking through the barriers of suspicion and fear and illwill, and which may provide the working hypothesis upon which any real international accord will have to depend.

I would say something by way of introduction to the general topic of universals. By their very nature they are the most powerful agents in the entire field of human motiva-Precisely because they are universals they at once tend both to unite and to divide the members of the human community. Our difficulty arises, I think, out of the fact that too often men seek their universal application without admitting the possibility of their universal interpretation. Thus different peoples may perceive the same reality in different terms because of their differing points of view. And if they happen to apprehend the reality in universal terms and attempt to impose such a reality upon their neighbors in colloquial terms the result may be discord and division stemming out of the very process which was supposed to unify.

So I think that one of the very first things which we must do if we would mitigate the harmful effects of these cultural differences is to recognize that differences do in fact exist, and that they will continue to exist despite the most persistent efforts to deny them. Notwithstanding the problems they create, these differences remain one of the most interesting and hopeful aspects of the whole human situation. They lie at the base of whatever progress we have managed to make over the past 10,000 years.

We must not be distressed at the fact that our world neighbors may prefer their own theology to ours, that they may remain relatively unimpressed by our cultural achievements, or that they may be reluctant to accept the forms of our political and economic institutions. Mr. Erwin D. Canham, editor of the Christian Science Monitor, has put it this way: "Our big job is to convince the people

of the world that the system of which we are a part-the millenial system with roots back in Judea and in Christ's teaching and in Greece and Rome and Western Europe-this system has within it values which can be adapted to their needs and experiences and can bring them, too, into the light. One of the mistakes we have made is to assume that our system, both political and economic, can be exported as is. There is much that is universal in our experience. But what we have demonstrated is based upon our experience and our aptitude and our history and our conditions. What we can do today is the result of many centuries of struggle. Hard lessons were learned all along the way. Our precise formula would not work for any other people. The best we can do is to make available to them our example, so that they can choose and experiment for themselves. But we can cooperate in setting up the channels by which experience can flow from nation to nation."

We are thus concerned less with the form than with the substance of these values which we would share with other peoples, and which hold special meanings to the people of each society according to the manner in which they affect, benefit, or have consequences for its members. Our main concern is to find in them the largest possible area of agreement with the other peoples of the world, to the end that we may be united rather than set apart. We seek with a new fervor the roots of understanding which may give meaning and purpose to our common efforts.

First and foremost of these, so important that it might properly be called the taproot, is the subscription of the overwhelming majority of the world's people to some kind of transcendental religion. In whatever form and through whatever means they apprehend Him, most people acknowledge the existence of a spiritual God, all powerful and eternal, who manifests a benevolent concern for the human objects of His creation. And from this fundamental profession of faith there flow two assumptions upon which virtually all human activities in the non-Communist world are in some way based. First, there is the assertion of a Supreme Authority and an independent moral order above and beyond the pale of human affairs. Second, there is the belief in the spiritual identification with an eternal godhead of every human being as a unique and separate individual, which confers upon him a special worth and sacredness in his own right.

These common basic beliefs underlie virtually all the constructs which operate outside the Iron Curtain. They likewise reside in the hearts and minds of those behind the curtain whose social institutions are subordinated to the stuitifying effects of Communist regimentation. They make possible the formulations of temporal and spiritual law, of theology and government, of justice and equity, or right and wrong, and the rights and responsibilities which inhere in the individual as a living soul.

From them the peoples of the world have developed their interminably varied social, religious, political, and economic institutions. They have done so imperfectly. They have invested them with the faults and contradictions which inhere in all human institutions and which have often set peoples against one another in the bitterest of idealogical conflicts. But the point to remember is that the fundamental propositions contained nothing in themselves which compelled such action by their separately organized votaries. In these basic considerations people are very much alike the world over. Their differences arise from other sources.

The laws of most peoples, for example, are based upon systems of moral absolutes, derived from the moral order of a willingly conceded Higher Authority. Generally, these absolutes will be found to be the same among

people the world over. It is wrong to steal, to lie, to cheat, and to murder. It is right to speak the truth, to honor one's obligations, to be loyal to one's fellow beings. Moreover, these values, being rooted in the higher law, are held to be immutable. There is no place given to relativism here. Deeds are not sanctioned or censured according to whether they help or hurt the prospects of a party, program, or regime. In the profession of the group, as opposed to the practice of certain individuals, right is still right and wrong is still wrong, regardless of the immediate consequences of an act for the individual or the group concerned.

One of the most encouraging signs I know of is the great respect in which moral authority continues to be held in the world. even by its enemies. John Foster Dulles, out of his rich experience in international affairs, says he has noticed two impressive facts-first, the relatively small amount of moral authority available at any given point of time and in connection with any particular problem, and, secondly, the enor-mous influence which even a little moral authority can exercise, an influence out of all proportion to the number of persons who reflect it. In the United Nations, he has observed, "every nation there is afraid of being caught on the wrong side of a moral issue' and does everything it can to make whatever position it adopts seem morally correct.

Among the values which stem from and depend upon the thesis of the dignity and worth of the individual and his personal relationship of his Creator we find wide areas where differing peoples may find a basis of agreement. Among the most intense and persistent preoccupations of men of all colors and all ages has been the search for freedom and justice. Like other values, freedom and justice vary greatly in their meaning for different peoples. They appear in various places about the earth in all stages of evolution, from the relatively primitive to the relatively well developed. Their political aspects are much better understood and more generally practiced than those applying to economic or social phases. throughout them all there runs the common thread of their exclusive identity with the divinely constituted human creature possessing an immortal soul.

If men were no more than an accident of the universe, a tiny speck of matter inhabiting one of the smaller planets, he would have little right to or need of freedom, and what we call justice would lack a standard of measurement either for conception or application. If he were only a creature of instinct, an inordinately well-evolved organism, as it were, he would have as little moral claim to such things as the freedom of conscience or the pursuit of happiness as the deer in the jungles of Africa that is attacked by a prowling lion. There would be no justice but that of fang and claw.

Again, if man were no more than a producing agent, a number in a regimented soclety, inhabiting the earth for a scant 70 or 80 years and then disappearing forever into dust, he could claim no rights which the community or the State might not at any moment take from him. If this were true, then the life of the individual, lasting less than a century, would be of less consequence than the existence of the state, which usually outlives the span of a single human generation. In this situation the individual could hardly claim to have rights which antedate and are superior to the state. His claim to freedom would lose much of its validity, and there would be no right to which he could appeal in the name of justice.

If, however, man is what the world's religions say he is, a moral being, with the responsibility for right conduct and a claim to immortality, then he has certain rights which he must be free to exercise in order to discharge his responsibility for right action. The dispensation of these rights constitutes the essence of justice, and their exercise the essence of freedom. As I have mentioned before, in both the concept and the application differ widely, but both re-main deeply and ineradicably rooted in man's personal religion. For it is religion which keeps on insisting that man is more than a highly developed form of animal life, that he is more than the creature of the state; that he is, in fact, a moral and spiritual being with a destiny and with rights and responsibilities which lie beyond the reach of society and of the state. For precisely this reason every type of totalitarianism must by its very nature either eradicate religion or attempt to subvert moral truth to its own designs. As a consequence in such a climate all sense of justice vanishes. It is no longer derived from absolute principles of morality that operate independent of life in society.

The gentler values of tolerance, charity, mercy, and brotherhood, urged upon humanity by almost all the really great teachers and philosophers, and imperfectly practiced by most of the world's people, depend ut-terly upon this interpretation of the nature of man. As abstractions they are nothing. It is only when they are practiced in the human community that they acquire mean-

ing and purpose.

These are some of the reasons which suggest to me that as a recipe for human soclety, communism will eventually fail. Its atheism constitutes a denial of most fundamental belief men hold about their place in the universe, and it must perforce deny all the constructs which flow from this belief. It thus places itself irreconcilably at odds with the deepest and most relevant insights men have been able to draw from their thousands of years of experience and reflection. For men do not live by bread alone. The deep and persistently held conviction that they are entitled to something better than the treatment given the beasts of the field will continue to manifest itself in thousands of ways in every land.

Men will insist upon worshiping God in accordance with the dictates of their conscience. They will insist upon thinking in accordance with the dictates of their reason. They will insist upon their rights to equal treatment under the law, to work productively and creatively, and to enjoy the fruits of their earnest efforts. They will insist

upon being men.

These are the things that really matter: Freedom, justice, brotherhood, and a sense of the dignity, separateness, and sanctity of the individual. They are the values which all humanity generally accepts. They are the values whose practical extensions have accounted for the making of America, and which our Nation is peculiarly well suited to help make available to other peoples of the world. They are the roots of understanding which may some day support an enlightened, peaceful world.

The great need of our own time is for an atmosphere of honorable peace which would favor the translation of these values into practical, meaningful realities for the world's people. We seek to achieve this condition through such means as an enforceable disarmament, and an understanding acceptance of the diverse forms of society and government of all nations which contribute to our common goal of freedom.

I cannot bring myself to believe that an effective disarmament will stem alone from mere documentation, or that peace will result from the efficacy of words spelled out on parchment or paper.

Disarmament will most likely evolve from the desire-deeply embedded in the hearts of those responsible for the governments of the world who are willing to subordinate their national pride and world power objectives to the practical necessities of inspection and enforcement procedures which will touch many facets of their industrial, military, and political endeavors. A climate of trust, an atmosphere of hope, and acceptance of the universality of justice predicated on the rights of man must precede any documentation of commitments or under-

World peace must be a practice, not a platitude or stated principle. A state of living is the resultant action of all the factors which influence it. Governments reflect the predominant desires of the governed or those who govern. International amity and understanding demand the same respect for the basic facts of truth, reason, justice, and man's immortality as does a comparable climate of a national society composed of differing races, colors, creeds, and cultural backgrounds.

Centuries of time and sufficient effort may leaven us all, but we do not have the time to wait. The possibilities of force for great evil press too closely upon us. Energy must be turned from channels of destruction and waste to the productive service of mankind. To this end the American people and their Government remain dedicated.

At the root of it all is man's acceptance of man-as he is-with all his faults, his own peculiar beliefs and theology-his own inheritance of culture and tradition, but with this basic concept: He is a man, and shorn of all the ornamentation that humanity has heaped upon him he differs little from all others whose hands stretch pleadingly toward the eternity which eludes only the living.

These basic beliefs are nowhere more clearly evident than here, in your great organization, your philosophy, and your work in demonstrating at a practical working level the soundness and enduring vitality of the concept that all men are brothers, loved alike of God, and equal in His sight. May He help us all to an increased understanding that we are all His children, created in His image, and first obligated to His plan of peace on earth, good will toward men.

Permanent Peace in the Middle East

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

Mr. ROOSEVELT. Mr. Speaker, yesterday I included in the RECORD my letter to the Secretary of State on the subject of permanent peace in the Middle East. Today, I submit the reply received from the Honorable Thruston B. Morton, Assistant Secretary of State, and my comments on his interesting information. As I stated yesterday, in view of the imminent consideration by the Congress of appropriations covering the foreign operations field, I hope that my colleagues will find time to give this matter their consideration,

DEPARTMENT OF STATE. Washington, February 10, 1955. The Honorable James Roosevelt, House of Representatives.

DEAR MR. ROOSEVELT: Thank you for your letter of February 4, 1955, expressing your views concerning military assistance to Iraq and the other Arab countries. We appreciate your conveying to us your thoughts on this

There is enclosed a statement recently prepared by the Department of State giving United States policy on the question of military assistance to countries of the Middle

East and measures taken to ensure that this military assistance will not be used for aggressive purposes.

Sincerely yours, THRUSTON B. MORTON, Assistant Secretary (For the Secretary of State).

UNITED STATES POLICY WITH REGARD TO MILI-TARY AID TO THE NEAR EAST

The policy of the United States in supplying arms to the Near East is guided by the principles set forth in the tripartite declaration of May 25, 1950, issued by the United States, the United Kingdom, and France. This declaration recognized that both the Arab states and Israel needed to maintain a certain level of armed forces for the purpose of assuring internal security and self-defense. and at the same time emphasized that an arms race between the Arab states and Israel should not be permitted to develop. It further made clear the intention of these powers to prevent aggression among those states.

These considerations have been reflected in the decisions of this Government with regard to (1) issuing licenses for the export of arms purchased by the Near East governments on the commercial market and (2) making it possible for Near East governments to purchase and export certain arms not available on commercial market, under the terms of section 408 (e) of the Mutual Defense Assistance Act of 1949, as amended. The United States Government has maintained a position of impartiality with regard to both these types of arms exports, discriminating against neither the Arab states nor

Sales of arms to the Near East and Middle East under these policies have been limited, and the area remains relatively defenseless against possible outside aggression. This has been a matter of growing concern to the United States Government. The 1st session of the 83d Congress in 1953 authorized, in section 202 (b) of the mutual security legis-lation for 1954, and appropriated funds for United States military assistance to certain of the countries of this area where the President considers such assistance will serve the purposes of the act.

On February 25, 1954, the President announced the first action taken under this authority-the decision to extend military aid to Pakistan. In the President's statement announcing this decision, there were

included the following passages:

This Government has been gravely concerned over the weakness of defensive capabilities in the Middle East. It was for the purposes of helping to increase the defense potential in this area that Congress in its last session appropriated funds to be used to assist those nations in the area which desired such assistance, which would pledge their willingness to promote international peace and security within the framework of the United Nations, and which would take effective collective measures to prevent and remove threats to peace.
"Let me make it clear that we shall be

guided by the stated purposes and require-ments of the mutual security legislation. These include specifically the provision that equipment, materials, or services provided will be used solely to maintain the recipient country's internal security and for its legitimate self-defense, or to permit it to par-ticipate in the defense of the area of which it is a part. Any recipient country also must undertake that it will not engage in any act of aggression against any other nation. These undertakings afford adequate assurance to all nations, regardless of their political orientation and whatever their international policies may be, that the arms the United States provides for the defense of the free world will in no way threaten their own

security. I can say that if our aid to any country, including Pakistan, is misused, and directed against another in aggression I will undertake immediately, in accordace with my costitutional authority, appropriate action both within and without the U. N. to thwart such aggression. I would also consult with the Congress on further steps.

"The United States earnestly desires that there be increased stability and strength in the Middle East, as it has desired this same thing in other parts of the free world. It believes that the aspirations of the peoples in this area for maintaining and developing their way of life and for realizing the social advances close to their hearts will be best served by strength to deter aggression and to reduce the fear of aggression. The United States is prepared to help in this endeavor, if its help is wanted.

"PRESIDENT EISENHOWER."

President Eisenhower further states in his address on October 20, 1954, at the American Jewish tercentenary dinner, that—

"In the Near East, we are all regretfully aware that the major differences between Israel and the Arab States remain unresolved. Our goal there, as elsewhere, is a just peace. By friendship toward both, we shall continue to contribute to peaceful relations among these peoples. And in helping to strengthen the security of the entire Near East, we shall make sure that any arms we provide are devoted to that purpose, not to creating local imbalances which could be used for intimidation of or aggression against any neighboring nations. In every such arrangement we make with any nation, there is ample assurance that this distortion of purpose cannot occur."

On April 21, 1954, an agreement was made for Iraq to receive United States military assistance, such assistance having been requested in March 1953 for the purpose of strengthening Iraqui forces for the defense of the country against possible aggression. In requesting this help, the Iraqi Government linked its national defense with the defense of the vital resources of the free world against the danger of Communist expansion. Included in the agreement is a provision that "assistance will be provided subject to the provisions of applicable legislative authority and will be related in character, timing and amount to international developments in the area."

Evidence of Iraq's determination to deal effectively with domestic Communist activities may be found in recent severe measures taken by the Government against membership in the Communist Party and Communist activities. In addition to these measures, the Government is attempting to lessen the appeal of communism by raising the general living standards through land reform and other measures and through an economic development program for which 70 percent of the country's considerable oil revenues are earmarked.

The announcement on January 13, 1955, of the intention of Iraq and Turkey to conclude a mutual defense treaty further demonstrates Iraq's clear realization of the danger which threatens the area and her desire to cooperate with others in meeting that danger. (Public Services Division, Department of State, Washington, D. C., January 18, 1955.)

March 18, 1955.

Hon. Thruston B. Morton,

Assistant Secretary of State,

Department of State,

Washington, D. C.

Dear Mr. Secretary: I have carefully gone over the statement of United States Policy with Regard to Military Aid to the Near East, dated January 18, 1955, which you were kind enough to send me in response to the letter which I sent to Secretary of State Dulles.

In my letter I expressed concern over our current programs to furnish military assistance to Iraq and other Arab countries in advance of an Arab-Israel peace. I do not believe that your answer adequately responds to my inquiry or allays my concern in this serious matter.

Your statement declares that United States policy in supplying arms to the Near East is guided by the principles set forth in the tripartite declaration of May 25, 1950. This Declaration, you point out, recognized that both the Arab States and Israel needed to maintain a certain level of armed forces for the purposes of Internal security and self-defense and at the same time emphasized that an arms race between the Arab states and Israel should not be permitted to develop. You go on to say that with regard to the issuing of licenses for the export of arms and the purchase and export of arms not available on the commercial market, the United States has "maintained a position of impartiality, discriminating against neither the Arab states nor Israel."

Having thus declared our Government's desire to be impartial and to prevent an arms race, you then proceed to state that arms are being furnished to Iraq but you offer no explanation of the fact that no arms are going to Israel although it is my understanding that Israel requested our arms back in 1952. This is not impartiality—this is clear discrimination.

Furthermore, it is clear that if we are to press our arms upon Iraq and other Arab states and deny them to Israel, we are inevitably provoking a disastrous arms race, which will put a tremendous burden on all the people of the area and which may lead to a renewal of the fighting. Accordingly, it seems plain that our current program does not follow the 1950 tripartite declaration. It flouts it.

You quote a statement of the President to the effect that "in helping to strengthen the security of the entire Near East, we shall make sure that any arms we provide are devoted to that purpose, not to creating local imbalances which could be used for intimidation of or aggression against any neighboring nations."

The President may have the finest of intentions in approving the shipment of arms to these countries, but how can be guarantee the intentions of the recipients?

the intentions of the recipients?

He goes on to state, "In every such arrangement we make with any nation, there is ample assurance that this distortion of purpose cannot occur." But as I read that portion of the Iraq-United States agreement which you have provided me with and which is relevant to this subject matter, I see no express undertaking by the Government of Iraq not to use our arms for a renewal of aggression against Israel. The language that is used in this agreement is extremely vague—pointedly so. So vague, in fact, that the Baghdad radio hailed the agreement as unconditional. It would therefore seem that the Arab States do not interpret this agreement as you do.

It seems evident that we do not have sufficient influence with the Arab countries to persuade them to agree, as a condition for the receipt of our arms, that they will renounce their aggressive intentions against Israel. If our influence is of such little consequence, would we really be able to halt an outbreak of fighting should it occur?

Nothing you have submitted to me diminishes my fear that we are taking the most reckless gamble with Middle East peace if we continue to pursue these unstable Arab governments, press our favors upon them whether they wish them or not, shower them with lethal weapons whether they can use them or not; secure their signatures on pacts whether they mean them or not; and all without taking the first and necessary step

for an effective program for Middle East development and defense, the promotion of peace negotiations between the Arab States and Israel.

It may be that the time is still unpropitious to bring Israel and the Arab States together into direct negotiations looking toward a peace settlement. But if this is still true 7 years after Israel was established; if the Arab States still refuse even to recognize her existence, how can we possibly ignore the efficient threats which emanate from Arab leaders? How can we risk giving them the weapons to translate their declarations into deeds?

All of us agree that we must strengthen the Middle East so that it can resist Communist aggression. But I cannot see how we strengthen this area if we arm one side and ignore the other; if we create a military imbalance; if we refuse to recognize threats at their face value; if we continue to condone boycotts and blockades and a flagrant rejection of obligations under the United Nations Charter.

We will not strengthen an area if, as a result of our policy, we keep it in tension and turmoil. As to so many other areas of the world, the need is for bold and positive leadership with an emphasis on peace. First we need a firm declaration of fundamental principles. Next we need action to implement When will our Government make clear to the whole Middle East that never will we let Israel suffer from armed aggression. when will it make clear that every treatv. pact, or agreement made in the area to which we are party or to which we have given our approval must include all the nations on an equal footing? When will we openly seek similar action from our allies, such as France, who have influence and interests in the area?

In summary I most earnestly urge that our Government undertake a dynamic program to meet and conquer the root causes of conflict in the Middle East. Certainly the United States, in building its opposition to subversion and aggression, will not ignore or help injure the only really democratic government in the whole area. Surely we will not abandon the ally most dedicated to friendship toward our own ideals and one most ready and willing, if necessary, to fight for them.

Inasmuch as this entire question will come before the Congress shortly during our consideration of the mutual-security program, I trust that a definitive statement will soon be forthcoming from the administration.

Very truly yours,

JAMES ROOSEVELT.

William F. Sullivan's Statement Opposing H. R. 1

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement of William F. Sullivan, president of the National Association of Cotton Manufacturers and of the Northern Textile Association, before the Senate Finance Committee on March 17, 1955, in opposition to H. R. 1.

This is an excellent statement prepared after very diligent and careful study, much thought, tireless research,

March 22

and years of experience in the textile industry:

My name is William F. Sullivan. I am president of the National Association of Cotton Manufacturers and of the Northern Textile Association. These associations represent northern cotton and synthetic fiber textile mills, most of which are located in New England.

New England has a very important stake in H. R. 1 and the current negotiations taking place at Geneva because despite her losses the textile industry is still the largest manufacturing industry in the area, employing 170,000 people. In cottons New England concentrates in fine combed goods which have a relatively high labor content—about 43 percent—hence wage difference between ourselves and Japanese or other foreign producers are a serious competitive handlesp.

The present economic condition in the industry is set forth in our testimony before the House Ways and Means Committee. Textiles are not a growth industry. Every dollar provided to Japan or other countries by the sale of cloth in this country will be a dollar withdrawn from the present reduced sales of our own mills and will depress an already perilously low market.

Since January 1951 over 260,000 Jobs have been lost in the textile industry, of which over 109,000 have been lost in New England. The per capita consumption of all textiles has dropped by 20.6 percent in the same period, and cotton textile prices have declined by almost 33 percent. Production in the cotton and synthetic industry is down 19.7 percent, and woolen and worested production by 27.5 percent. In New England since January 1954, employment has dropped 16.3 percent, and over 15 cotton and synthetic textile mills have permanently closed their doors. Textile mill liquidations resumed as soon as World War II was over.

Textile mill liquidations in Eastern States, 1946-541

	Total		New England		Middle Atlantic		South	
	Plants	Employees	Plants	Employees	Plants	Employees	Plants	Employees
1940-49 1950-52 1953-54	233 200 207	49, 095 50, 715 68, 135	87 72 77	24, 775 30, 745 36, 315	89 115 83	11, 600 16, 845 22, 800	57 13 47	12, 720 3, 125 9, 020
Total	640	167, 945	236	91,835	287	51, 245	117	24, 865

Includes spinning, weaving, knitting, dyeing, finishing, and carpet plants.

American costs of producing typical fabrics exceed Japanese costs by substantial amounts. This takes into account not only comparative wages, but machine efficiencies, work assignments, and other relevant data—Japan versus United States of America. For example, the cost of producing typical combed goods in the United States exceeds the cost of producing the same fabric in Japan by from 43.2 percent in the case of broadcloth to 60.5 percent in the case of volles, and over 70 percent in the case of lawns.

We know from actual experience in New England that workers displaced by the closing of textile mills are seldom reemployed by growth industries and that as much as a year and a half after displacement less than half the workers are reemployed at all. In the case of those over 45 years of age only one-third are reemployed. Of those who are eventually reemployed, two-thirds receive less pay, are generally downgraded, and unless reemployed in a textile mill lose the skills to which many years have been devoted.

Assuming that there will be an extension of authority to continue the trade-agreements program, our principal objections to H. R. I in its present form are briefly as follows:

 It fails to provide adequate safeguards against unemployment and injury to textile producers;

It fails to establish principles or yardsticks to guide the executive branch in carrying out the trade-agreements program; and

Certain provisions of H. R. 1 discriminate against the textile industry.

We wish to emphasize three changes which should be made in H. R. 1:

First, subparagraph (E) of section 3 (p. 5, line 24, et seq.): The general rule in H. R. 1 authorizes the President to reduce the rates of duty in effect on July 1, 1955, by 15 percent "(except as provided in subpar. (E) of this paragraph)" (p. 4, lines 9 and 10).

Subparagraph (E), however, authorizes the President on and after June 12 to reduce rates by 50 percent of those existing on January 1, 1945, on those articles which are currently being negotiated with Japan at Geneva pursuant to the notice of November 14, 1954.

One of the principal industries now being negotiated at Geneva is the textile industry. Over 90 percent of the cotton textile output of this country is currently on the bargaining table. In addition, many items of wool, silk, rayon, synthetic, and other textiles are subject to negotiation. For those of us unfortunate enough to be on this list, H. R. 1 authorizes a greater cut in duties than is allowed for the rest of American industry. It would be more equitable to wipe the slate clean as of now and put us in the same position as other American industries.

The great bulk of staple cotton goods have had no tariff reductions since January 1, 1945, and consequently, the whole 50 percent hangs as a threat over the industry. The principal reductions for the bulk of the cotton-goods industry were made in the United Kingdom agreement of 1939. Only in the higher count goods were duties reduced after 1945 and then by about 17 percent.

The exception of subparagraph (E) goes even further, however, than merely discriminating in the amount of reductions. Subparagraph (E) provides a special test to guide the President. It grants authority to reduce rates by 50 percent "if the President determines that such decrease is necessary in order to provide expanding export markets for products of Japan (including such markets in third countries)" (p. 6, lines 5 through 8, excerpt attached).

The test proposed in this bill to apply to our industry in negotiations with Japan is whether a reduction in our duties will aid Japan in expanding her export markets. The original Trade Agreements Act of 1934 had among its purposes "restoring the American standard of living" and "overcoming domestic unemployment." The Trade Agreements Extension Act of 1951, as well as H. R. I, have identical purposes—"for the purpose of expanding foreign markets for the products of the United States * * by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of

American production so that foreign markets will be made available to those branches of American production which require and are capable of developing such outlets by affording corresponding market opportunities for foreign products in the United States" (p. 2, line 3 et seq.).

The test of subparagraph (E), which the Congress is asked to approve, is at variance with the major purpose of the legislation. It is designed exclusively to aid Japan without reference to the welfare of our domestic industry. It is a principle of statutory construction that specific language such as this will control the general provisions of the legislation. It is patently obvious that decreases in our duties would provide expanding export markets for the products of Japan (including such markets in third countries).

If the Congress were to enact subparagraph (E) with its special test to apply to the particular negotiations with Japan, it is conceivable that the argument would be made that the escape and peril point provisions of the act do not apply in these cases. Even if applicable, the executive branch might well argue if it chose to disregard the recommendations of the Tariff Commission that Congress had directed it in these particular negotiations to provide expanding export markets for the products of Japan (including such markets in third countries).

We respectfully submit that subparagraph (E), being a discrimination against a particular industry, being designed wholly for the benefit of a foreign nation, and being contrary to the purposes of the trade agreements program, should be struck from H. R. 1.

Second, subparagraph (D) (ii) of section 3 (p. 4, line 14 et seq.): This part of H. R. 1 provides that "in the case of any article which the President determines, at the time the foreign trade agreement is entered into, is normally not imported into the United States or is normally imported into the United States in negligible quantities," rates may be reduced 50 percent below those of January 1, 1945. Although the words "normally" and "negligible" have not been explained by the proponents of the bill, it is our opinion that this authority to cut rates by 50 percent would be applied to the textile industry as a whole. It is, therefore, unfair to have a 50 percent rule for us and a 5 percent rule per year for other industries not on the Geneva list. Although in certain categories textile imports have been large and caused severe damage, imports as a whole might well be considered negligible. For example, since 1940 imports of cotton broadwoven goods have varied from onetenth of 1 percent to nine-tenths of 1 percent of our domestic production. If this special rule regarding goods normally imported in negligible quantities is intended to bring in greater quantities of these goods at the expense of domestic producers by reductions up to 50 percent, unemployment and injury will be caused to American workers and producers in the textile industry

Third, escape clause and peril point provisions: The escape clause and peril-point provisions of the Trade Agreements Act should be improved to protect domestic producers from unemployment and injury.

(a) Test: The current test or guide in these matters is serious injury to the domestic industry producing like or competitive products. This test is too broad and does not prevent plants in our domestic industries from being driven out of business even though an entire industry may not be seriously injured. The proper test or guide which Congress should establish is whether the operation of the trade agreements program will cause unemployment or injury to American workers producing like or competitive products. This can be accomplished by either changing the words in the escape and peril-point provisions or by defining

industry so as to mean the plants or seg-

ments of an industry.

(b) Administration: This test of unemployment or injury should be mandatory in the sense that it should apply to whoever administers the act whether it be the Tariff Commission or an agency of the executive branch of our Government. Although Congress may feel that the carrying out of the trade agreements program must rest with the executive branch, it should, nevertheless, provide principles, guides, or yardsticks under which the executive branch would operate. There should neither be the authority for, nor an invitation to the executive branch or any agency thereof to disregard the principles laid down by the Congress. Cnly Congress should have the right to change or overrule the application of the principles established in this legislation.

We respectfully submit that H. R. 1 should be amended so as to provide that the administration of the trade agreements program will not result in unemployment or injury to American workers or producers producing like or competitive products and that no one shall disregard these principles without the express consent of Congress.

H. R. 1, subparagraph (E), page 5, line 24, et seq .: "(E) In order to carry out a foreign trade agreement entered into by the President on or after June 12, 1955, to which the Government of Japan is a party and with respect to which notice of intention to negotiate was published on November 16, 1954 (19 F. R. 7379), if the President determines that such decrease is necessary in order to provide expanding export markets for products of Japan (including such markets in third countries), decreasing by more than 50 percent any rate of duty existing on January 1, 1945."

Yalta's Whole Story

EXTENSION OF REMARKS OF

HON, FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, now that we have full docu-mentation for the Yalta story, it is clear that Republican propaganda concerning President Roosevelt's alleged "sellout" to Stalin is 100 percent imagination. Though some mistakes were made at the Yalta Conference, these mistakes are much clearer in the light of subsequent history than they possible could have been at that time. The one thing that is most evident from a reading of these documents is the belief of the Joint Chiefs of Staff in the necessity of Russia's entry into the war against Japan as soon as possible. It was felt that this entry might save millions of American lives in an invasion of Japan which was then seen as the only way of winning the war. The President took the strong advice of his military advisers and made certain concessions to Stalin to insure Russia's participation in the Pacific war once Germany had surrendered. Had he not done so, and had the war with Japan not ended so abruptly, I feel sure that today Republicans would be criticizing him for his failure to assure Russia's participation against the enemy.

That this interpretation of events is not a partisan Democratic view, but one which represents the objective view of thinking people throughout the Nation, may be shown by the editorial which appeared in the Trenton (N. J.) Evening Times on Friday, March 18, 1955, which

YALTA'S WHOLE STORY

The whole story of the Yalta Conference now is told. In view of the bitter controversy its provisions have aroused over the years, the general reaction to the facts revealed is one of surprising moderation. Actually, the record does not alter substantially the impressions that have long been held. The agreements reached at Yalta do not reflect the ultimate in wisdom: but they were made, it must be remembered, on the basis of conditions as they existed at the time and without benefit of prophetic vision.

Criticisms of the Yalta agreements have centered principally upon the concessions made to Soviet Russia. There has been a widely held conviction that Stalin obtained all that he demanded and that Britain and the United States were outwitted by the saturnine master of the Kremlin. The facts

do not sustain this theory.

Marshal Stalin sought concessions in Turkey and Iran, also substantial reparations from Germany, which he was denied. He received the Kuriles, southern Sakhalin, and concessions in China. In return, he granted what the United States and Great Britain most urgently desired—participation of Russia in the war against Japan, once Ger-

many was conquered.

It was assumed at the time that Japan would have to be invaded. The atomic bomb was in the making; but that there was no certainty of its success. All preconceptions of the invasion of the Japanese Islands envisioned the most sanguinary military operation in history, one continuing about 18 months, with the possibility of a million

casualties.

On the basis of these ominous expectations, the bargain made with Russia was good. And it was made in accordance with the judgment of responsible military leaders at a time when Germany, while facing in-evitable defeat, still had millions of men under arms and when Japan possessed an enormous capacity for resistance.

If the war had not been ended by the atom bomb, the price paid for Russia intervention would not have been high. And if Russia had been faithful to the terms of the agreement, rather than treacherous, the fate of Poland would have been a different

story.

The record refutes the theory that President Roosevelt and Prime Minister Churchill were less than realistic in their dealings with Stalin and were unaware of the danger of betrayal. There was a wholesome skepticism as to the good faith of the Soviet; but it was necessary to hold the wartime coalition together at all costs,

Errors were made at Yalta, and it is possible that some of them could have been avoided; but they were made under conditions of extreme stress and in accordance with what were, at the time, honest and sincere judgments.

Tariff Legislation

EXTENSION OF REMARKS OF

HON. WALLACE F. BENNETT

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by my colleague, the distinguished senior Senator from Utah [Mr. WATKINS], with respect to his proposed amendment to H. R. 1.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. ARTHUR V. WATKINS, OF UTAH, BEFORE THE SENATE FINANCE COM-

Mr. Chairman and members of the Committee on Finance of the United States Senate, I do appreciate the opportunity you have extended to me of making this statement here today in connection with H. R. 1. I shall try to make my comments brief and to the point.

Several decades ago when changes were needed in our tariff laws the Congress, under its constitutional authority "to lay and collect taxes, duties, imports, and excises," almost did the job unassisted by the executive branch of the Government.

As the economy grew and developed, it likewise produced a vast number of complex problems involving thousands of economic interest groups. Thus our complex society, as we are only too well aware, has been productive of an ever-increasing volume of legislative concern for the Congress. Limitations of time and the complexity of certain aspects of this legislative concern have in part necessarily forced the Congress to delegate some of its responsibilities to the executive branch of the Government. Tariffmaking, the subject matter of which involves schedules covering thousands upon thousands of products, was one such activity which, over a period of time, has progressively passed by delegation to the executive.

Exclusive tariffmaking by the Congress was plainly no longer tolerable by the time of the First World War, and, in 1916, the Congress created the United States Tariff Commission to assist the Congress. At that time the Commission's activities were limited to the continuous investigation of all economic matters which had a bearing upon tariff policy, and the reporting of its findings to the President and the Congress; it had no independent authority to make changes in the tariff laws or in their administration.

The Tariff Acts of 1922 and 1930, however, gave the United States Tariff Commission the authorization to investigate cost of production differences between domestic and foreign products and required it to recommend to the President, on the basis of its findings, specific increases or decreases in the appropriate tariff rates. The President, in turn, was given authority to readjust tariff rates either up or down within a range of 50 percent. The effect of these two acts was to provide the United States for the first time with a flexible tariff policy which enabled cost differentials between domestic and foreign production to be adjusted without awaiting the necessarily slow and very uncertain results of congressional attention and detailed legislation.

With the passage of the Reciprocal Trade Agreement Act in 1934, the Congress began the gradual disintegration of its control, except in theory, over the tariff-making pro-The United States Tariff Commission in effect has been reduced to a presidential staff agency in the purest sense of the word "staff," for its administrative history indicates that it serves mainly as an informative and advisory agency, an agency whose recommendations are seldom followed. By 1945, trade agreements were in operation between the United States and 28 countries. result of these agreements by 1945 was that the general tariff level had been reduced almost to that prevailing under the so-called Underwood Low Tariff Act of 1913. More recent extensions as you are aware have given

the President added authority to reduce tariff rates still further.

With respect to present tariff rates, it is important to realize that the United States is not now a high-tariff country. Our average tariff rate, as measured by the percentage of customs receipts to total imports, is the lowest that it has been in this century, and there are indeed few Western European nations whose record is as good on this basis of calculations. As Dr. Jacob Viner, professor of economics, Princeton University, told the Joint Committee on the Economic Report: "In the past 20 years there have been substantial reductions in our tariff rates, and, because of inflation, there has been also a substantial reduction of the ad valorem equivalents of the specific duties of our riff." (Hearings, p. 991.)
For example, the custom duty on zinc was tariff."

one-third of the domestic price in 1930 when the Tariff Act of that year was enacted; today, it is only one-twentieth of the 1954

However, in their endeavor to sell the American public a so-called liberal trade policy, low tariff advocates have made the tariff policy of the United States virtually a scapegoat for the economic troubles of the world. It is about time the nations of the world put a halt to the unjustified practice of making this Nation the world's economic whipping boy. Why? Because it is apparent, in light of the expert opinion which has been given this committee and its counterpart in the House of Representatives. as well as the Joint Committee on the Economic Report, that the world's economic ills will not be solved or even appreciably relieved by any conceivable tariff action which may be taken by the United States. Willard L. Thorp, former Assistant Secretary of State for Economic Affairs, and now director. Merrill Center for Economics. Amherst College, put it this way to the Joint Committee on the Economic Report a few weeks

"I cannot feel that there would be major changes that would create a great volume of trade. The American economy will be one in which 90 percent, shall we say, of our goods and services will be produced within the United States." (Hearings, p. 883.) (Hearings, p. 883.)

Dr. Jacob Viner was even more adamant in stating to the Joint Committee on the Economic Report that:

"The amount of change that complete free trade would make in the American economy is not very large. I fear that the amount of gain the American economy can make out of free trade has fairly narrow limits. I 'fear' it only in this sense: The amount of good we can do to the rest of the world through free trade is limited, and the amount of good we can get for ourselves from that avenue, as against the benefits we can get from other avenues of good government, is also limited." (Hearings, p. 969.)

It should be evident that a reduction of American tariffs cannot bring about any spectacular increase of United States imports or be of decisive importance in the world economics picture. Greater United States imports, and successful entry into the American market requires in a great many cases that foreign countries redesign their products, if United States consumer preference is to be created; that they adjust and expand production facilities and establish warehousing and distribution and sales facilities in the United States. This is a cost of doing business. It is exactly the same problem that American exporters face. But even more important: if there is to be an appreciable increase in United States exports, it will depend upon the continued expansion of economic activity in this country. Specifically, what in the main will primarily determine the level of our imports will be technological change in production techniques and the general level of business

activity-not the abolishment of tariff schedules.

Simultaneously with the reduction of United States tariff rates to about half of what they were in 1930 by the Executive under the trade-agreements program there arose a growing volume of protest from cer tain segments of American industry. complaints have charged that such tlated agreements contained tariff and other concessions which resulted not only in American producers losing domestic markets but also in the demise of American industries. And as the years have gone by this conflict has grown and magnified, producing in its wake voluminous but conflicting opinions and literature on the subject of trade agreements.

As I indicated in my remarks to the Senate on January 25, 1954, I am in general agree-ment with President Eisenhower's statement in his special message on foreign economic policy to the effect that all nations should mutually undertake the lowering of unjustified barriers to trade on a mutual basis so that the benefits can be shared by all. But, as I said on that occasion, the "all" must include those efficient domestic industries which are operating in the face of ruinous and disadvantageous competitive conditions

with foreign imports.

A great number of these domestic industries are engaged in the production of raw materials, such as our metals, petroleum, and agricultural products, which must be processed. Yet it is exactly these types of commodities which make up the vast bulk of our imports. Is this connection, Mr. Nathaniel Knowles, Jr., Acting Deputy Di-rector, Bureau of Foreign Gommerce, Department of Commerce, told the Joint Committee on the Economic Report that-

"Some 70 percent of our exports consist of manufactured goods shipped in substantially the forms in which they are finally utilized abroad. * * Our imports, in contrast, to our exports, consist preponderantly of raw materials and crude foodstuff requiring extensive further processing before entering into consumption channels. Less than one-fifth of our imports enter the country as substantially finished products." (Hearings, p. 930.)

Now, with these facts in mind, it is not difficult to see why the export-minded segments of our economy not only do not fear lower tariff rates on imports but actually favor them. First, foreign imports provide a cheap source of raw materials. Second. with our great advantage in the techniques of industrial production, they have little to fear from competitive imports.

As Dr. Arthur Upgren, dean, Amos Tuck School of Business Administration, Prince-ton University, told the Joint Committee on the Economic Report a few weeks ago:

"The barrier to a great inflow in imports is largely the \$160 billion investment of American plant in new industry.

"With that huge investment American industry would generally meet the price conditions which would be imposed by tariff reduction. What I am saying here is that the proposal of trade, not aid, about a year or two ago, could not have accomplished but a very small amount of the achievement that was dramatized by the visit of two members of the British Cabinet. This was important, but we should not try to persuade the American people that we can do so much more than is possible." (Hearings, p. 891.)

Actually, one is led to suspect that this drive for a so-called trade-not-aid program is an argument that has been advanced not because it will cure the economic ills of the world, but because it serves better the interests of the export-minded segments of our domestic economy. Commodities which enjoy an appreciable export market, it would appear, are in a far better position to be considered for tariff reductions under the

This would trade-agreements program. probably include, for example, automobiles and special high-grade production machine Yet, the protection afforded to the steel and automobile industries by way of comparison with lead and zinc, a raw material, is relatively much greater.

I firmly believe that an American trade policy must embody those features that will work toward the enlargement of international trade but in a manner consistent with maintaining a sound domestic economy. Our experience to date, however, seems to indicate that certain revisions in the tradeagreements program are necessary if these wo objectives are to be realized. dent, I believe, that the Congress must return to itself a larger share of the direct responsibility for tariff-making policy in those areas of intense conflict which has been generated by the trade-agreements program.

This is essential since, although the continued reduction of tariffs will not appreciably result in increased total imports, they can well result in the demise of many Ameri can industries. This is because, as Dr. Jacob Viner told the joint committee, "to a large extent the reductions in our tariff which would really lower the effective margin of tariff protection remain to be made." (Hear-

ings, p. 991.)

the controversies over further Because tariff reductions under the trade-agreements program are undoubtedly going greater repercussions, it is imperative that the Congress return to itself a larger degree of control than it has had the past few years. Actually the pendulum of tariff-making authority has simply swung too far toward the expediency of administrative negotiation and execution by the executive branch. It has swung so far in fact that it would cause a reasonably prudent person to conclude, I am sure, that the Congress de facto has completely abdicated its constitutional authority in this field.

An analysis of escape-clause applications and their administrative disposal will make this quite clear. The escape clause, as you undoubtedly know, was not an original part of the Reciprocal Trade Agreements Act. Rather, it was the product of extensive liberality in granting tariff and other concessions by the executive branch under the tradeagreements program and the result of increasing protest by American industries adversely affected by excessive imports. The function of the escape clause is, of course, to compromise the conflict which arises between the need and desirability of freer international trade and the need for protecting defense and certain other industries fundamental to the economies of certain sections of the United States, the customs and traditions of our people, and for maintaining safeguards which protect wages, industry, and agriculture.

early trade agreements negotiated under the Reciprocal Trade Agreements Act of 1934 contained no general means of providing realistic relief if a particular concession proved unexpectedly injurious to a domestic industry. Although escape clauses had been contained in bilateral trade agreements since 1941 and in the General Agreement on Tariffs and Trade since 1947, it remained for the Congress, because of the difficulty of foreseeing the contingencies that might arise, to make the inclusion of an escape clause in new trade agreements a statutory requirement. This was accomplished in 1951 by the passage of the Trade Agreements Extension Act.

The facts, however, indicate that the executive branch of the Federal Government and the United States Tariff Commission have not in general interpreted and administered the escape-clause provisions as the Congress so intended. It is interesting to note that of 56 applications, which were filed during the period 1948-54, the Commission recommended relief in only 12 instances, all but 2 of which involved only products of minor importance.

These 12 favorable recommendations were

made with respect to-

1. Women's fur-felt hats and hat bodies (unanimous, September 25, 1950).

2. Hatters' fur (unanimous, November 9,

1951).

3. Garlie (4 to 2, June 6, 1952).

4. Watches, movements, and parts (first investigation, 4 to 2, June 14, 1952).

5. Dried figs (unanimous, July 24, 1952). 6. Tobacco pipes and bowls (unanimous,

December 22, 1952).

7. Screen-printed silk scarves (unanimous, April 13, 1953).

8. Scissors and shears (4 to 2, March 12, 1254).

9. Ground fish fillets (second investigation, 3 to 2, May 7, 1954).

10. Watches, movements, and parts (second investigation, 4 to 2, May 21, 1954)

11. Lead and zinc (unanimous, May 21,

1954).

12. Alaike cloverseed (unanimous, May 21, 1954).

Rather an unimpressive list, is it not? But why only 12 favorable applications? In part, because the Congress has failed to establish definite criteria for the Commission to follow in arriving at decisions. But primarily it is because the Commission in considering the effect of increased imports on production, profits, and employment has consistently held that an industry is deemed to include, for purposes of escape-clause relief, all the operations of the constituent firm making the application, rather than only those operations that are directly related to the production of the product identified in the escape-clause application.

This interpretation has directly served to nullify the intent of the Congress to give

needed tariff relief.

How close has the President followed what We must presume to be the expert recommendations of the Tariff Commission? Of the 12 favorable Commission recommendations I named a few moments ago, you will observe that:

1. Seven were unanimous decisions and included-

(a) Women's fur-felt hats and hat bodies.

(b) Hatters' fur.

(c) Dried figs.

(d) Tobacco pipes and bowls.

(e) Screen-printed silk scarves.

(f) Lead and zinc.

(g) Alsike clover seed. Four were 4-to-2 decisions and included-

(a) Garlic.

(b) Watches, movements, and parts (first investigation).

(c) Watches, movements, and parts (second investigation).

(d) Scissors and shears.

3. One was a 3-to-2 decision and was made With respect to groundfish fillets.

In only five instances did the President follow the recommendations of the United States Tariff Commission. These five favorable actions by the President involved the following:

1. Four products which the Commission unanimously believed needed relief. They Included-

(a) Women's fur-felt hats and hat bodies.

(b) Hatters' fur.

(c) Dried figs.

(d) Alsike cloverseed.

2. The other product—watches, move-ments, and parts (second investigation)—involved a favorable recommendation decided by a 4-to-2 vote of the Commission.

In these other cases the President refused to grant relief even though by unanimous vote the Tariff Commission had recommended such action. These included-

(1) Tobacco pipes and bowls.

(2) Screen-printed silk scarves.

(3) Lead and zinc.

Likewise, he refused relief with respect to three 4-to-2 decisions and one 3-to-2 recommendation, which respectively involved-

(1) Garlie.

(2) Watches, movements, and parts (first investigation).
(3) Scissors and shears.

(4) Groundfish fillets (second investigation).

In these cases, despite the recommendation of the Tariff Commission, an expert body, the President held to the contrary, for rea sons which seemed satisfactory to him, that serious injury to the domestic industry had not been established.

It is absolutely useless for the Congress of the United States to create an expert body that is largely investigational in nature and designed to lead to expert recommendation for administrative action in areas where it has delegated to the executive branch extensive authority, as it has done with respect to trade and tariff matters.

A typical case in which the effect is readily apparent of delegating to the Executive final decision with respect to escape-clause recommendations is well illustrated by the lead

and zinc case.

During the Korean war foreign production was greatly increased through the support of American aid and by comparatively high domestic prices during a period when domestic production was restricted by price controls. After the war, as a result, excess foreign lead and zinc supplies have continued to flow into our domestic markets at prices well below the average cost of domestic production.

As Mr. Otto Herres, chairman of the National Lead and Zinc Committee, told this committee last week, "Such action has made marginal mines out of once prosperous properties." In the spring of 1953, the minindustry was advised to seek relief through the escape clause provisions of the Trade Agreements Act rather than by legislative means.

This committee, as well as the House Ways and Means Committee, were sufficiently impressed with the problems of the lead and zinc mining industry to direct the United States Tariff Commission, pursuant to the repective resolutions of July 27, 1953, and July 29, 1953, to initiate a general investigation of the industry, including the effect of imports of lead and zinc on the domestic prices and employment.

On May 21, 1054, the Tariff Commission unanimously reported to the President that the importation of lead and zinc was in such quantities as to cause serious injury to the domestic industry. In order to correct the problems, the Tariff Commission recom-mended that "the rates of duty 50 percent above the rates existing on January 1, 1945, * * * be imposed for an indefinite period."

The President, however, for what were sufficient reasons to him, did not follow the expert recommendations of the Tariff Commission. Instead, on August 20, 1954, the Government initiated a long-term stockpiling program for lead and zinc. And although, by this action, the President recognized in effect that the excessive importation of lead and zine had injured the mining industry, the results to date indicate that it has not appreciably improved the situation.

Since August 1954, the price of zinc has advanced only one-half cent, from 11 cents per pound to the current quotation of 111/2 cents. Why? Primarily, because unlimited imports of zinc and slab zinc have continued flow into this country. As Mr. Otto Herres, chairman of the National Lead aud Zinc Committee, told this committee:

"For the year 1954 on an average of 41,460 tons of zinc a month from foreign ores in addition to an average of 13,444 tons of imported slab zinc, a total of 54,904 tons, entered United States consumption while the output of the mines at home was dropping to an average of 38,750 tons.

"Excessive imports of foreign ores have been taking over a larger proportion of United States smelter production at the expense of the Nation's mines. Domestic mine output of zinc consequently has been reduced to less than 39,000 tons a month from an average of 60,000 tons a month in early 1952. Smelter production of zinc is at an all-time high while mine output of lead and zinc is the smallest since the depression years, 1931-34."

It is evident, I believe, that stockpilling is not accomplishing the purpose it was intended to achieve. To the extent that stockpiling does increase domestic prices of lead and zinc it only serves as a magnet to foreign imports in much the same way as does the price-support program on agricul-tural commodities. But whereas the American farmer can rely on section 22 to limit imports, the lead and zinc industries have had only the escape-clause provision, which the executive branch has declined to invoke for reasons which appear sufficient to them.

It is quite evident that the pendulum of responsibility for escape-clause actions must swing toward greater control by the Con-This is a portion of its constitugress. tional authority which should be recalled from the executive branch. At the same time, it should be made clear that we cannot, with respect to the general responsibility for negotiating trade and tariff matters. return to the cumbersome and slow procedure under which the Congress in the early 1900's sought to write detailed tariff legislation.

The amendments which I have proposed to the bill H. R. 1, to extend the authority of the President to enter into trade agree ments under section 350 of the Tariff Act of 1930, as amended, are designed to bring the tariff-making procedure of the United States back into equilibrium again. In brief, the proposed amendments are as follows:

1. Section 3 (a) and (c) of the proposed amendment, by extending the trade-agree-ments program, as requested by the President, would give authority to the President, for a 2-year period, to-

1. Reduce tariff rates on selected commod-Itles by not more than 5 percent per year for 2 years.

2. Reduce any tariff rates in excess of 50 percent to that level over a 2-year period.

3. Reduce, by act more than one-half over a 2-year period, the tariff rates in effect on January 1, 1945, on articles which are not now being imported or which are being imported only in negligible quantities.

The administrative facilities and services of the executive branch of the Federal Government, under the direction of the President, would be continued for the negotiation of trade agreements. The fact remains that the actual negotiation with regard to the thousands of items covered by trade agreements and tariff legislation is better handled by the executive branch of the Federal Government than by the Congress.

2. Section 3 (d) of the proposed amendment would require the President to submit an annual report on the operation of the trade agreements program to the Congress which must include-

1. Information regarding new negotiations.

2. Modifications made in duties and import restrictions of the United States.

3. Reciprocal concessions obtained.

4. Modifications of existing trade agreements in order to effectuate more fully the purposes of the trade agreements legislation, including the incorporation therein of escape clauses.

5. Other pertinent information and data.

3. Section 5 (a) of the proposed amendment to H. R. I would require the United States Tariff Commission to submit a report to the Congress on all peril-point investigations.

The Trade Agreements Extension Act of 1951, as amended, requires the President, before entering into negotiations concerning any proposed foreign-trade agreement under section 350 of the Tariff Act of 1930, as amended, to furnish the United States Tariff Commission with a list of all articles imported into the United States. Upon receipt of this list, the Tariff Commission shall make a study and report to the President with respect to each article-

1. The limit to which such modification, imposition, or continuance may be extended without causing or threatening severe injury to the domestic industry producing like

or directly competitive articles.

2. Whether or not increased duties or additional import restrictions are required to avoid serious injury to the domestic industry producing like or directly competitive articles and, if so, the minimum increases in duties or import restrictions required.

Section 5 would require the Tariff Commission to transmit such a report to the Congress as well as to the President.

- 4. The proposed amendment would amend section 6 (a) of the Trade Agreements Extension Act of 1951 so as to provide that no reduction of tariff rates or any other concession shall be permitted to continue in effect when-
- 1. Importation of increased quantities of any product upon which such a concession has been granted under a trade agreement causes or threatens serious import injury to the domestic industry producing either like or directly competing products.

 Heretofore it has not been spelled out

clearly that relief is to be granted from the effects of concessions given under trade

agreements.

- 5. Section 7 (c), (f), and (i) of the proposed amendment directs that should the Tariff Commission find that the importation or prospective importation of any produpon which a concession has been granted under a trade agreement, results in or threatens serious import injury to the domestic industry producing either like or directly competitive products, it shall find and declare the extent to which and the time for which the following actions are necessary in order to prevent or remedy such injury:
- 1. Permanent withdrawal of the concession shall be made:
 - 2. Modification of the concession;
- 3. Suspension of the concession in whole or in part;
- 4. Limitation of the quantity of the product which may enter or withdraw from warehouse for consumption; or
- 5. Any combination of these four items.

The Tariff Commission's findings would be contained in a plan for their implementation which must be transmitted to both Houses of the Congress on the same day and while both are in session. The provisions of any plan transmitted shall take effect on the expiration of the first period of 60 days of continuous session of the Congress, following the date of transmittal and the expiration of the 60-day period, either House of the Congress, by affirmative vote of a majority of its authorized membership, passes a resolution stating that it does not favor the plan. An essential step in bring-ing the tariffmaking process back into equilibrium again is to reserve to the Congress, which is more representative of the will of the people, final decision in controversial areas of our national trade and tariff program.

After concluding its investigations and hearings, should the Tariff Commission find that relief is not necessary, it shall likewise make and transmit to the Congress a report of its findings and conclusions.

6. Specific criteria are established upon which the Tariff Commission is to base its findings under escape-clause proceedings by

section 7 (d) of the proposed amendment to

The Tariff Commission is directed to consider any of the following factors as con-stituting import injury with respect to a domestic article when caused, or threatened to be caused, in whole or in part by the importation of competitive imported articles:

(1) Unemployment, layoffs, or curtailment of workweek;

- (2) Reduction in actual or relative wages, including reduction of fringe benefits enjoyed in lieu of wages;
 - (3) Decline in prices or sales;

- (4) Rising Inventory;(5) Decline in profits of, or operation at loss by, the manufacturer, producer, grower, or wholesnler;
- (6) In the case of an agricultural product, a return to the grower or producer below the established parity price for such product;
- (7) Decline in flow of investment into plant expansion, new equipment, or other improvements:
- (8) Decline in proportionate share of the domestic market enjoyed by the domestic article;
- (9) Increase in the importation of like or directly competitive imported articles accompanied by unused, but available and suitable, capacity to produce, manufacture, or grow domestic articles;

(10) Inability to meet promotion, advertising, and customer services provided for a like or directly competitive imported article, to the extent that such inability is due to the lower landed costs of the imported article or to payments from foreign sources not included in the landed cost of the imported article; and

(11) In the case of any natural-resource industry or to any industry determined to be essential to the national security by the National Security Council, a productive capacity of the domestic industry which is less than the peacetime requirements of the domestic market for the article produced or manufactured by the domestic industry, plus a reasonable reserve over and above peacetime requirements for emergency use,

By providing such criteria, the Congress can insure that its policies with respect to escape-clause actions are carried out as in-

7. For purposes of escape-clause proceedings a definition of an industry is provided by section 7 (e) of the proposed amendment to H. R. 1.

Where a particular business enterprise is engaged in operations involving more than one such industry, or more than one such segment of a single industry, the Commission shall distinguish or separate the respective operations of such business enterprise for the purpose of determining import

A domestic industry is held to include only those operations that relate directly to the production of the products under investiga-

The Yalta Papers' Net Effect: A Warning Against Secret Diplomacy

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. HOSMER. Mr. Speaker, a refreshing viewpoint on the Yalta papers has appeared in the Long Beach Independent newspaper. Written by editorial columnist Larry Collins, whose location some 3,000 miles from the Na-

tion's Capital serves as insulation against the political crosscurrents and riptides so prevalent here in Washington, the article catches the real significance of the Yalta papers, namely, a warning against the perils inherent in secret diplomacy:

THE YALTA PAPERS

There is little revealed in the Yalta papers that had not been widely rumored for many years. But they confirm the fact that President Roosevelt, Prime Minister Churchill, and Premier Stalin paved the way for the downfall of the Chinese Nationalist Government. It is an example of secret diplomacy which shocks the world. It also is evidence of the ruthless demands by Russia and how the Communists broke faith on about every agreement made. It is unfortunate their perfidy was not revealed when the Korean war opened. It might have brought us greater cooperation from other nations.

The timetable of events is important. The Yalta meeting was held in February 1945. At that meeting Russia was promised the Japanese islands of Sakhalin and the Kuriles, lying north of the Japanese mainland. Russia was also promised rail control across Manchuria and ports then held by Japan. For this, Russia agreed to join in defeating Japan as soon as Hitler was defeated,

Germany surrendered on May 7, 1945. August 6 the atom bomb was dropped on Hiroshima. It was apparent Japan would surrender within a few days. We had, for 3 years, carried on the fight in the Pacific. Okinawa was in our hands. But Russia had not kept her word. Then 3 days after the bomb was dropped and the Japanese in Manchuria and China were demoralized, Russia stepped in.

Five days later Japan surrendered. Russians swept over Manchuria and took all the Chinese possessions which had been held by the Japanese. Russia kept moving into North Korea until we stopped her at the 38 parallel. It was a sordid breaking of faith which should be remembered when-ever anyone talks of agreements with the Communists.

At the meeting, President Roosevelt was already a very sick man. He knew then we were about ready to use the atom bomb. But seeking to end the war quickly, with the help of Russia, he made concessions which destroyed China's hopes of ever holding Manchuria again. It appears he agreed to give Russia more votes in the U. N. than we were to have.

As Secretary Dulles has said-this debate will go on forever. But of importance to the peoples of the world is this demonstration of secret diplomacy. It is understandable that there must be much secrecy in dealing with other nations. But when three men can sit down and divide greats part of the world, without telling the people what is being done, it cannot be called the democratic processes of government.

It seems terrible that the details of this meeting have been held secret for 10 years. During that period Russia has taken Poland and most of Eastern Europe in direct violation of Mr. Roosevelt's plan for free elections. It caused us to have 150,000 casualties in Korea.

What has happened is history. But its effect has been that the world is continually facing war instead of the peace that was promised. It should be a warning to the people that secret diplomacy endangers them. The people of the world have a right to know what their leaders agree to. Any agreement that cannot be entrusted to the people is dangerous to free people everywhere. The Yalta agreement is an example of what can happen when leaders set themselves so high above the people. When it is known that the people are to be informed of what has been agreed to, much more care will be taken in dividing up the lands of this or other nations. L. A. C.

the Textile and Apparel Fields

EXTENSION OF REMARKS

HON, THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following news release furnished me by Mr. Solomon Barkin, director of research, Textile Workers Union of America, CIO:

New York, N. Y., March 20.—The Textile Workers Union of America, CIO, has lodged a bitter protest with Secretary of Agriculture Benson against the Government's plan to abandon its research work in the textile and apparel fields. News of the plan leaked out of a closed congressional hearing two weeks ago and has since been verified.

In a letter to Benson, William Pollock, the union's executive vice president, said abandonment of the 25-year-old research activity "comes at a time when the textile industry is in its greatest need of assistance in broadening its markets to stimulate business and restore employment."

"The continued dismantling of the Federal agencies necessary to keep our industries virile and alert and to stimulate invention can only spell further blight upon the textile industry, already beset by many other difficulties," Pollock continued.

"As you must know we have for the last 2 years been pressing the Federal Government to take action toward alleviating the persistent textile depression. As a result of your order the industry will get less help than ever. We cannot too strongly express our dismay."

The text of Pollock's letter follows:

"DEAR SIR: We read with great astonishment that you have ordered the Bureau of Human Nutrition and Home Economics to abandon its research in the field of fabrics and apparel. This order comes at a time when the textile industry is in its greatest need of assistance in broadening its markets to stimulate business activities and restore employment.

'Many of the Bureau's investigations provided invaluable information for the textile and apparel industry and they have offered insights and information necessary for reconstruction of the industry on a sound basis.

"We urge immediate reconsideration of your action and the restoration of the activities performed by the Bureau in the field of

"The continued dismantling of the Federal agencies necessary to keep our industries virile and alert and to stimulate invention can only spell further blight upon the textile industry, already beset by many other difficulties. We cannot have a full employment economy if these aids are not provided.

"As textile workers, we believe this action is improper and unwise. There is as much justification for research in the apparel and textile field as in the field of human nutrition. Human clothing and nutrition have been the primary concern of this Bureau and its work must be fostered in the interests of the well-being of the American people. All groups-consumers, workers, manufacturers, and the Government-need an agency providing the objective data which has been furnished by this Bureau at a modest cost.

"As you must know we have for the last 2 years been pressing the Federal Government to take action toward alleviating the persistent textile depression. As a result of your order the industry will get less help than

Folly of Abandoning Research Work in ever. We cannot too strongly express our dismay.

"The restoration of the project in textile and apparel research is imperative.

'Very truly yours,
"WILLIAM POLLOCK, "Executive Vice President."

Why Sell the Delaware?

EXTENSION OF REMARKS OF

HON, FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, last year the Congress passed legislation authorizing the deepening of the channel of the Delaware River. his budget message this year President Eisenhower included approval of such deepening only with the proviso that private industry benefiting from such deepening help pay the costs. This is, of course, a radical and remarkable departure from established and workable procedures in such matters. In this connection, I should like to include as part of my remarks an editorial appearing in the Trentonian on March 16, 1955. The editorial follows:

WHY SELL THE DELAWARE?

"This new concept of local financing for a national interest project is one that should cause concern to the people throughout the country. This is no mere local issue. It will have a real meaning to every port in the country. It is a complete reversal of a traditional Federal role, one that can have a lasting and harmful effect on our shipping lanes. . The idea is so novel and ridiculous that it shouldn't be given a moment's thought."

Those are the words of Congressman CHARLES A. WOLVERTON, Representative from the First New Jersey District, covering Camden, Gloucester, and Salem Counties. He is a Republican. We wonder how he feels today about the action taken by his fellow Republicans who control the New Jersey State Assembly from the basement of the state

Those members of the lower chamber on Monday were offered an opportunity to give backing to the tri-State drive for a deeper Delaware, to be paid for entirely by Federal funds. They have before them a resolution petitioning the Federal Government to provide all the necessary funds for the project,

Appropriately enough, the Republican assemblymen assembled in the basement, and, in one of their time-honored caucuses, voted to kill the resolution. They thus supported resident Eisenhower who, contrary to congressional recommendations, holds that private interests should pay part of the bill.

A spokesman for New Jersey's basement clique said the GO was afraid that deepening the river would allow salt water and sand seep into the drinking water of cities along the river, despite engineering reports to the contrary.

Lined up solidly behind the proposition

that the Federal Government should pay all the costs of deepening the Delaware are Governors Meyner, of New Jersey, Leader, of Pennsylvania; and Boggs, of Delaware.

Supporting it actively in Congress are Congressmen Frank Thompson, Jr., and Wolver-TON, of New Jersey; Scott, King, Green, Byrne, and Barrett, of Pennsylvania; and Senators DUFF and MARTIN, of Pennsylvania.

They are not the only ones who think the project should be paid for exclusively out of Federal funds.

On January 20 we observed that "Congress obviously did not want to sell any part of the Delaware—one of those navigable streams over which the Federal Government exercises control-to any private interest. .

The Camden Courier-Post remarked on February 7 "that in no projects similar to this one have local interests ever been called on to share in the cost, and they should never be. * * *" What it all boils down to is this: While our

Congressmen, public officials, and news-papers are fighting tooth and nall for the Federal Government to undertake its just obligations and provide a channel to the sea for the great and growing Delaware Valley. New Jersey Republican members of the assembly are dragging their heels. Their de-plorable action Monday has hurt the drive for a deeper Delaware, but they have not stopped those farsighted people who are convinced that a ship channel will make the Delaware Valley an important adjunct of our Nation's defense and economy.

Need for Restoration of Appropriations for State Maritime Academies

EXTENSION OF REMARKS OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. BALDWIN. Mr. Speaker, in California, Maine, New York, and Massachusetts the State governments have been operating Maritime Academies for the training of Merchant Marine officers. The students have graduated with their papers as deck or engineer officers and have also in the past been commissioned in the U.S. Naval Reserve. On this basis the Congress has appropriated Federal contributions to the budgets of the academies since 1911. In fiscal year 1955 the amount for the four schools was \$660,000. The budget as presented for fiscal 1956 contains nothing for this

Consequences of a serious nature could result from abandoning the program at this time. The international situation, which apparently will be tense for many years to come, emphasizes the importance of this resource for training officers. The enrollments in the academies at the end of the last school year were 495 at the New York academy; 224, Maine: 180, Massachusetts; and 130, California.

It would appear particularly inappropriate to terminate this program at a time when we are simultaneously considering an expansion of other Federal assistance to State educational programs. First consideration should logically be given to the continuance of existing programs. I most sincerely hope that the Appropriations Committee and this House will amend the budget to provide an appropriation of \$660,000 for the support of these academies for fiscal year

In this connection, I have received the following letter from the chairman of the board of governors of the California Maritime Academy stressing the urgent need for restoration of this appropriation:

CRISIS-CALIFORNIA MARITIME ACADEMY ACTION NEEDED-IMMEDIATE CALIFORNIA MARITIME ACADEMY.

March 2, 1955.

Hon. John F. Baldwin, Jr., House Office Building,

Washington, D. C.

DHAR MR. BALDWIN: A serious crisis now exists at the California Maritime Academy which endangers its very existence, and your help is urgently needed.

The academy was founded in 1929 and is an educational institution of the State of California for educating young men to become merchant marine officers. There are three other State maritime academies: New York (founded in 1874), Massachusetts (founded in 1888); and Maine (founded in

Congress, in its wisdom and foresight, enacted a law in 1874 which, as amended, has been in effect ever since and which empowers and authorizes the Federal Government to aid States maintaining maritime academies.

In full reliance and solely upon this Fedlaw, the maritime academies were founded by the four States and, in continued reliance upon said law, have expended millions of dollars in maintaining these academies year after year and in the con-struction of facilities and buildings. At the California Maritime Academy right at this moment we are completing 2 new buildings at the sole cost to the State of approximately

Total Federal aid last year to the four State academies was \$660,000, of which California received the benefit of about \$100,000. We have always received this Federal aid, year after year, and were informed on Decem-ber 19, 1954, by the Maritime Administration, that the budget now being considered by Congress contained this sum of \$660,000 for State aid. However, when the budget was submitted, all money for State aid of the academies had been eliminated. A representative of the Department of Commerce informed me personally that the Department had no objection to the restoration of these funds in the budget.

We have already prepared and submitted to the State legislature our budget for the year commencing July 1, 1955, which was prepared with the expectation of the usual Federal aid that had always been forthcoming.

Under our budget as submitted to the State legislature, and without the usual Federal aid, the California Maritime Academy cannot operate for the fiscal year starting July 1, 1955.

Attached hereto for your ready reference is a complete statement of the facts.

Will you please use every effort to get the appropriations for all State maritime academies restored to the budget?

Set forth below are the names and addresses of the other board members.

Anxiously awaiting your reply, I am, Respectfully yours.

R. D. SWEINEY, Chairman, Board of Governors, California Maritime Academy.

Senator Luther E. Gibson, 516 Marin Street, Vallejo, Calif.; Dr. J. Burton Vasche, de-partment of education, Sacramento, Calif.; Mr. Hugh Gallagher, Matson Navigation Co., 215 Market Street, San Francisco, Calif.; Mr. Gene M. Harris, 12201/2 State Street, Santa Barbara, Calif.

STATEMENT OF FACTS

The California Maritime Academy is an educational institution of the State of California and is located near Vallejo, Calif., on San Francisco Bay. It was founded by an act of the State legislature enacted in 1929.

The purpose of the academy is to train and educate young men for the ever-increasing technical and difficult profession of a merchant marine officer. It is the only educational institution west of the Atlantic coast devoted exclusively to the teaching of nautical sciences and marine engineering so as to afford within its confines all instruction necessary for a well qualified mcrchant marine officer.

Each graduate receives a B. S. degree and upon passing the required Coast Guard examination (which they all do) also re-ceives either a license as a third mate or a third engineer officer, depending upon which branch the graduate has chosen. Those graduates who can pass the required physical examination also receive a commission as an ensign in the United States Naval Reserve. The Navy Department maintains naval personnel at the Academy for the purpose of instructing the students in allied naval sciences.

The academy and it graduates have an excellent standing and reputation with the maritime and shipping industry, the Propeller Club, American Legion, and other civic organizations.

Excellent and similar maritime academies are maintained by the States of New York (founded 1874), Massachusetts 1828), and Maine (founded 1941). Massachusetts (founded

These academies fulfill a great need to private industry and in the educational, economic, national and international life of this country, and students are accepted from any State in the Union.

Congress in its great wisdom and foresight enacted a law in 1874 which as amended has ever since been an honored law of this Nation (34 USCA 1121-1130) and which basically empowers and authorizes the Federal Government, in order to promote nautical education.

(a) To furnish a State a suitable vessel to be used for the benefit of any nautical school established in certain named ports upon condition that there shall be maintained a school for the instruction of youths in navigation, marine engineering, and all matters pertaining to the proper construction, equipment, and sailing of vessels or any particular branch thereof;

(b) To repair or recondition and equip said vessel;

(c) To detail naval officers as instructors to said schools.

The Federal law authorizes the appropriation of \$50,000 annually by the Federal Government to each such State school for the purpose af aiding in the maintenance and support of such nautical school. Of this \$50,000 up to \$25,000 thereof is to be paid to each State if it admits students who are residents of other States, said payment to be on a per capita cost basis.

In full reliance and solely upon this Federal law and with the right to believe that the Government would abide by its own word as solemnly expressed in this law, the maritime academies were founded by the above four States and which States in continued reliance thereon have each expended millions of dollars in maintaining these academies year after year and in the construction of facilities and buildings. At the California Maritime Academy, right at this moment, we are just completing 2 new buildings at the sole cost to the State of approximately \$750,000.

These four States have fulfilled all of the conditions of the Federal law entitling them to this aid which, because of the permanent character of the academies, is of a continuing nature.

Each year the Federal Government, except as hereinafter set forth, pursuant to said law, has furnished and still furnishes each of said States a ship and pays the annual overhaul thereof, which is paid direct by the Government to the private shipyard which performs the work. Each State provides the cost of and performs the usual routine maintenance and repair of these vessels which are kept in excellent operating condition and which otherwise would be rotting at anchor. Title to these ships remains vested in the United States.

Each year the Federal Government has appropriated and paid to each State the sum of \$25,000 as authorized in said law and also the proportionate part of the additional \$25,000, depending upon the number of outof-State students and the per capita costs and also money toward subsistence, and an annual allowance of \$200 each for uniforms and textbooks for a certain limited number of students.

This long course of conduct between the Federal Government and the States having maritime academies has construed the Fed eral law and the intent of the parties and has permitted each State to rely upon this

For the fiscal year which ends June 30, 1955, the Federal Government, with respect to the California Maritime Academy, appropriated and will pay:

Annual overhaul of ship_____ \$37,450 Annual grant 25,000
Toward subsistence 22,675

85 125

The annual uniform and textbook allowance of \$200 each to a limited number of students, which is paid direct to the student, will amount to about \$20,000.

The total annual appropriation of all money by the Federal Government, with respect to all 4 State academies for the fiscal ear ending June 30, 1955, is \$660,000, which, I believe, is the same amount appropriated in the several previous years. There are a total of about 1,100 students in the 4 State academies, which is an annual cost to the Federal Government of about \$600 per student, and this includes the costs of repairs by the Government to its own ship.

The inclusion of the above funds in the Federal budget for many years last past has been under and is the duty of the Maritime Administration of the Department of Com-

merge. Each year it has been included. Suddenly, and without any notice or warning to the State academies, and for the first time that memory of man runneth not to the contrary, including depression years, and in complete disregard of the intent of Congress as expressed in its laws, the annual grants were entirely eliminated from the present Federal budget now under consideration by Congress.

Each year the State academies, as a matter of course and to be sure we are not for-gotten, inquire of the Maritime Administration if the money for the State academies has been included in its budget. This we did this year on December 10, 1954, and were informed that the same amount, \$660,000, for the State academies was in the budget

as was in last year.

You can imagine our astonishment, indignation, and despair when we were informed for the first time by reading in the newspapers that the appropriations for the State academies had been eliminated from the President's budget and there were inferences that the President himself had done the eliminating. Of course, no President knows the detail of every item in the budget and it is not fair to place the stigma upon him of doing something contrary to the intent of Congress and its laws and of participating in misleading the States.

On January 26, 1955, I telephoned Mr. Louis S. Rothschild, the then Maritime Administrator, and he affirmed that the appropriation was in the budget when we inquired on December 10, 1954, but had been later taken out. He stated he was not at liberty to say why or by whom. He did say that he would have no objection whatsoever to have the appropriation restored to the budget and would not oppose any action by the State academies in so doing. He suggested that we request our Representatives in Congress

to restore it to the budget.

If the appropriation of the \$660,000 were in the budget, it would undoubtedly have passed without question. The Department of Commerce cut it out of the budget. The Department of Commerce now says it has no objection to its restoration. Hence, restoration should be simple with no Government opposition.

Our plight at the California Maritime Academy is very serious. We operate on a very tight budget. We have already prepared and submitted to the State legislature now in session our budget for the year commencing July 1, 1955. This was prepared with the expectation of the usual Federal aid which had been forthcoming for years.

Under our budget as submitted and without the usual Federal aid, the California Maritime Academy cannot operate for the fiscal year starting July 1, 1955.

We have kept faith with the Federal Government-we have fulfilled the conditions on our part to be performed under the Federal law entitling us to this aid.

If the appropriations are not restored to the budget for State academies, we feel that the Federal Government has not kept faith with us and our youth. It is needless to state the results which follow from such procedure.

As our chosen Representatives, who are our only salvation from wrongful governmental acts, we urgently request your assistance in getting the appropriation for State maritime academies restored to the budget.

Not only is our academy endangered, but so also is the soundest principle of good government—integrity and fairness in its dealings with its citizens.

This is a long letter, but the case is a hard one, and even more could be said.

Your help is anxiously awaited.

Sincerely yours,

R. D. SWEENEY, Chairman, Board of Governors, California Maritime Academy.

Birthday Anniversary of Robert E. Lee

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by a young friend of mine. It appeared in the Sewanee Purple, his high school paper, on the anniversary of the birth of Gen. Robert E. Lee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

QUEM TE MEMOREM, LEE?

A Town, THE South, January 19, 1895 .-There is a festive air prevading the town. The school children will be dismissed at noon so that they will be able to walk in the afternoon parade. All the stores will be closed. Confederate flags are flying from the buildings and the houses. It is one of the most significant celebrations of the year for the people of our town.

The Confederate veterans will march in the parade in their gray uniforms. A speech platform decorated with the stars and bars has been erected in the courthouse square. After the speeches honoring Lee there will

be a box supper served in the square by the

Daughters of the Confederacy.

The last speaker of the day is always Major Anderson, who served under Lee for 4 years in the Army of northern Virginia. He always gives the same speech, one part of which I have almost memorized.

"Robert E. Lee epitomized nobility and honor. He was a gentleman without peer. He fought valiantly for 4 years, but when the war ended he returned home without bitterness. He asked his soldiers to bear no malice toward the North, but to devote their energies to the rebuilding of the South by all of its people. To Lee, the war for southern independence ended at Appomattox.

"On the anniversary of the date of his birth we should rededicate ourselves to his principles of honor and duty-we should forget all bitterness-keeping the memory of Old South as a glorious heritage and remembering neither the cruelty of the war nor the horrors of reconstruction, but only that we acted nobly and without dishonor."

A Town, The South, January 19, 1955.— Today is Lee's birthday. The only recogni-tion of the event is the closing of the banks and the resulting inconvenience. Only one group is keeping the memory of Lee really That is the League for the Preservation of Southern Anglo-Saxon Americanism. I will never forget the speech I heard in their meeting hall today. It was made by Jake Buckey, the manager of Smith's Department

"What a terrible condition the South is in today. All our troubles are coming from the damyankees and their Communist ideas. They are trying to destroy the South and the ideals of Robert E. Lee. The Supreme Court decision is going to make dirty mongrels of us all. We got to fight it. Fight it with our last drop of blood. We owe it to our chil-dren to preserve the Anglo-Saxon race and the Protestant religion. It is up to we southerners to keep our land free of foreigners and Communists. We all got to fight socialist and internationalist schemes to destroy the South. This is what Lee would have done."

Look away, look away, Dixieland.

Mr. Stassen and the Arms Race

EXTENSION OF REMARKS

HON, EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mr. Stassen and the Arms Race," published in the Washington Evening Star of March 21, 1955, dealing with the appointment of Harold Stassen as a Special Assistant to the President dealing with the question of disarmament. I believe that this appointment holds hope and courage for the future disarmament of the world.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

MR. STASSEN AND THE ARMS RACE

In the unprecedented new assignment he has handed to Harold Stassen, President Eisenhower has strikingly reemphasized his profoundly earnest desire-which is shared by the Nation as a whole—to make this a far safer and much happier world through general disarmament and great international

cooperative projects like his atoms-for-peace plan.

Mr. Stassen, who now will begin winding up his duties as Director of the Foreign Operations Administration, will henceforth have full cabinet rank as the President's special assistant charged with the "responsi-bility of developing * * * the broad studies, investigations, and conclusions which . . will become basic policy toward the question of disarmament." In that capacity, retaining his present membership in the National Security Council, he will occupy the first post of its kind in the history of our own or any other country—a post dedicated exclusively to the task of trying to figure out ways and means, if such ways and means are really possible, of ending what has shaped up into incomparably the costlest and dead-liest arms race of all time.

As made clear in his statement on the matter, the President has been moved to create the new post because of his longstanding "deep concern" over the terrible actualities and potentialities of this race. He has been moved to do so, too, because of the fact that Soviet intransigence-which apparently is being displayed once again at the current "secret" five-power disarma-ment talks in London—has rendered impossible a genuinely effective agreement on the reduction and control of arms and armed forces of every kind, including principally atomic-hydrogen weapons and other instruments of mass destruction. In Mr. Eisenhower's words, there has been "no progress and no clear crystallization of thinking on this subject", and so it will be Mr. Stassen's job-in cooperation with other agencies of our Government-to see what can be done, assuming that anything can be done, to promote peace by breaking the present deadlock. Speaking for himself, Mr. Stassen has ac-

cepted his potentially history-making re-sponsibility with a pledge to conduct "a more thorough and penetrating study of disarmament than has ever been made." effect, he has thus suggested—as has the President himself-that the time has come for a complete reappraisal of all our past and present positions on the problem. And such a reappraisal would seem to be very much in order not merely because the Kremlin appears to be adamant in its totally unacceptable views on the subject, but also because our own American views may need to be modified and recast in terms of the following fact: That there is now at least a little reason to doubt, from the standpoint of the mechanics of control, that there is actually any possibility of establishing a foolproof check against clandestine manufacture or surprise use of mass-destruction weapons.

Here, probably, is the most important problem that Mr. Stassen will have to deal with on his new assignment, and obviously there are no easy solutions. But the President, simply by the act of drafting him for the job, has demonstrated before the whole world that the United States is determined to do everything possible to prevent the universal cataclysm inherent in the current uncontrolled situation.

That \$20 Bill

EXTENSION OF REMARKS OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "That \$20 Bill," published in the Washington Daily News of Wednesday, March 16, 1955.

There being no objection, the editorial was ordered to be printed in the

RECORD, as follows:

THAT \$20 BILL

Almost any of us could use a spare \$20 bill, if it came our way.

But if you found one of those double sawbucks on the street, and you knew one of the children had lost it on the way to the corner store to pay the grocery bill, you hardly would figure it a real find.

You would go right ahead and pay the

grocer.

That's the way it was with the so-called tax cut the Senate voted down yesterday.

The political masterminds among the Democrats in the Senate proposed to knock \$20 off each taxpayer's income levy next year, plus \$10 more for each dependent—except the wife.

It was a vote-chasing sop. And it would not have amounted to much in the first place, and nothing at all to some taxpayers. In the second place the taxpayers would have been tapped for this much, and more, later on to make up the extra deficit it would have created in the Government's books.

The whole idea was to give you back \$20 of your own money next year, an election year, and then take it away from you later—

with interest.

Only 5 of the 49 Democrats in the Senate voted against this give-little-and-take-backmore proposal. They were Senators Byan and ROBERTSON, of Virginia; GEORGE, of Georgia; ELLENDER, of Louisiana; and HOLLAND, of Florida.

All other votes against the proposal came from Republicans, in support of President

Eisenhower.

We would have thought there were more statesmen among the 49 Democrats.

Goodwill Tour to Beirut, Lebanon, by Mayors of Seven United States Cities Named Lebanon

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. NEUBERGER. Mr. President, to cement relations with the strategic Middle East and the people of Lebanon, the mayors of seven United States cities named Lebanon, including Lebanon, oreg., have been participating in a good-will tour of their cities' namesake.

Lebanon, Oreg., in the foothills of the Cascade Mountains in the fertile Willamette Valley, with its strawberry festival, and home of the world's biggest shortcake, is a progressive community and a rapidly growing lumber and distribution center.

It is a pleasure to salute Mayor Ralph Scroggin and the people of Lebanon,

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Lebanon Mayors Cited in Beirut," published in the Oregonian of March 16, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEBANON MAYORS CITED IN BEIRUT

BETRUT, LEBANON.—President Camille Chamoun awarded Lebanon's gold medal of merit to seven mayors of United States towns named Lebanon.

The ceremony climaxed a 15-day visit of the mayors as guests of the Lebanese Government. The president's wife presented them with samples of embroidery from the Lebanon mountains.

The visit will end Wednesday. The mayors are from Tennessee, New Hampshire, Indiana, Missouri, Oregon, Ohio, and Nebraska.

Atomic Energy: A New Renaissance

EXTENSION OF REMARKS

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. GREEN. Mr. President, on St. Patrick's Day, before the British Empire Club—strange as that combination may seem—our esteemed colleague, the distinguished junior Senator from Rhode Island [Mr. Pastore] delivered an address entitled "Atomic Energy: A New Renaissance." This address is of exceptional and timely interest, especially in view of the remarks on this subject which we have heard on the floor this afternoon.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ATOMIC ENERGY: A New RENAISSANCE (Remarks of Senator Pastore before the British Empire Ciub, in Providence, R. I.)

My fellow Americans. I deeply appreciate the invitation to spend this special night with the members of the British Empire Club. As one who can boast of being familiar with Providence and its amenities, I realize that it is rather difficult to distinguish whether you are being invited to the British Empire Club by Spencer Over, or being invited by Spencer Over through the British Empire Club. Whichever the case may be, and you may choose sides as you like, I am truly happy to be with you tonight.

I said this was a special night, and it may be likely that I am not being modest enough, but as you well know, one of the hardest things for a man in public life to do is to hide his day of nativity, and this happens to be mine.

Originally I had a notion that March 17 was a very exclusive and personal possession of my own; then I began to discover that I had to share it in large measure with my Irish playmates for ancient and honorable reasons connected with their race. Later, as I grew older, I learned that there was an annual friendly struggle between my Irish and Anglo friends, to prevent the Friendly Sons of Saint Patrick from having a monopoly on the 17th. And in time, too, I became familiar with the superfriendly spirit in which two great assemblies have exchanged felicitations on this memorable night.

Therefore, whether I spend this night with my Irish or British friends, we are all brought

together by the same inspiration and example of St. Patrick—the one-time slave boy, claimed by many lands, whose fame rests on his conquest of Ireland—in peace and without bloodshed—to the greater glory of God and man.

That type of conquest seems to be a lost art in our day and age, for if we are indeed enjoying peace, it is a peace that leaves an uneasy feeling in the hearts of all men.

Here we are expected to gain a sense of security in rockets that can send out threats to their targets, even across thousands of miles of open sea, and in the same breath, that security and assurance is shaken by the undeniable fact that these same weapons in the hands of a barbarous and brutal enemy could, with one stroke, devastate 7,000 square miles of our own populace and prosperous America.

You, who know the dimensions of the British Isles, have been treated recently to a discussion of some of these dangers. But you, who also understand the human dimensions of the British people—the determination, the devotion, and dedication to destiny—are able to see all of this in the true perspective of history, and for this

reason are not easy to despair.

I know that I know something of the dimensions of the danger, too. For it has been my senatorial privilege—arising from my membership on the Joint Committee on Atomic Energy—to witness and to study, and, I hope, to understand, some of the destructive might of this instrumentality which is only 10 years young—yet seems to be born almost daily with terrifying additions to its tremendous power.

But it has also been my privilege to know something of the benign and beneficent possibilities and achievements of atomic development. And for this reason it makes me a

man of heart and hope.

It seems to me that the miracle of conquest, without bloodshed, is a little bit closer than we are able to see today. For today our vision is a little fogged with fear; and despair could interfere with our true sense of direction.

When we think the world is grasping for the depths of despair—who knows but that we may be really reaching for the heights of

happiness.

The very power which could carry the seed of destruction for our civilization can, if man so wills it, be the source of the material improvement and the spiritual strength of all men—indeed, the means by which man would prefer to live at peace with his neighbor and with the world—in an era of a new renaissance.

For in this I can see an economy of abundance for the whole world. I can see the extinction of labor slavery in all of its forms, Poverty and hunger, which now make men jealous of their neighbors, would become outmoded in a spirit of true charity and brotherhood.

This is not the pollyanna philosophy of a pacifist. It is the practical opinion of a man who doesn't believe that a nation is going to risk its life for a prize that it can gain more readily through peaceful progress—than it can hope for through the sweat and scars of war. Indeed, there are prizes that modern war, with its vigorous and vicious retailations, would destroy for the aggressor whatever the event. The calculated risk would have to be, at best, victory without salvage. That could be no better than defeat, and utter destruction.

I take the premise that our rivals have in their mind, too, thought for their personal survival. I think they feel as we do, that we are at once the possessors and the prisoners of a destructive force so final that neither they nor we can afford to let it loose.

If my reasoning is wrong, then all logic must take wings. If we are going to use the products of our intelligence to destroy the civilization it has taken centuries for that intelligence to create, then I say, What price intelligence?

This is not an attitude that would neglect the cautions of a confident and competent

country.

I do not mean that the Western Powers should take their policemen off the international streets. I certainly do not mean that we should let our guard down.

Tonight—on the British Isles—together with English forces—50,000 American airmen are at their posts. They are not daring any common enemy. Their only purpose for being there is to deter such an enemy from a hostile surprisa blow. Our men have no chip upon their shoulder but, by the same token, they will not be a sitting target for treachery against their friends.

We mean no breach of international peace, but we do mean business. Our intentions are peaceful. We will keep them that way. But we can keep them that way at the moment only so long as our defenses are powerful.

And, at the same time, America does invite the world—the whole world—to peaceful development and exploitation of the possibilities of this atomic age. America points the way to a prosperous common possession of all the means to a peaceful living together.

America does not pretend to have a monopoly of nuclear wisdom and nuclear production. America does not want to have such a monopoly. We have already expressed our desire to share, to help, toward peace and plenty. Indeed we have written it into our law, and now we are only too eager to translate it into concrete, friendly acts.

Only last week it was my privilege and honor, as chairman of the Subcommittee on International Agreements of the Joint Committee on Atomic Energy, to meet and to break bread with 31 young scientists and physicists from foreign lands. These young men were invited here by the United States Government for a special advanced course in this important field of peaceful development of atomic energy.

The people of the world know—as well as

The people of the world know—as well as we do—the miraculous benefits that can accrue from our nuclear progress. We want them to know. We want them to have these benefits for peaceful pursuits. We want these benefits for ourselves, too. But more than wanting them, we want them in peace, for ourselves and for the rest of the world.

This is not a field of power alone. By this time, all of us are fairly familiar with the promises of atomic power in peaceful industry. Uranium 235 is a familiar name of fissionable material. We know that the heat released from a pound of such uranium provides 2.600,000 times the heat produced by the burning of a pound of coal. That makes sense to us. That is something we can use.

Atomic power as energy in the field of every-day electricity is only a part of the possibilities. In agriculture, in medicine, in manufacture, in every facet of living, the processes that are the byproducts of our nuclear studies put us on the threshold of an existence that materially and spiritually can be the rebirth of the human race.

"Radioisotopes" is a difficult word—yet one

"Radioisotopes" is a difficult word—yet one that is becoming more and more familiar to all of us. These are the elementary materials made radioactive by exposure in an atomic reactor.

Only a few years ago these materials were limited to those of radium and its decay products. They were costly. Today, out of new processes and new materials we can produce for \$10,000 what used to cost \$100 million. We can understand those odds of 10,000 to 1. We certainly can use this kind of progress.

If I say we lead the world in atomic progress, it is not by way of boasting—but to state an acknowledged fact. Authorities readily admit that whatever superiority we have we owe to our enormous and industrial resources and to the immense effort exerted in devising ways of handling fissionable material on a colossal scale.

Yet—I say we owe it equally to the American state of mind, our principles, our poli-

cies, our democratic purposes.

We are not concerned with external plunder but with internal peace and progress. We wish the same for men of good will everywhere. The sheepherder of New Zealand has already benefited no less than the peanut grower of the Carolinas. When New Zealand flocks began to fail radioactive tracers were able to determine the element missing from the diet of the herds. Airplanes were called upon to dust the pastures with the needed cobalt, and because of this the flocks were restored to good health.

Here in America a million dollars a year were saved by peanut planters of the Carolinas when a blight was irradiated.

Last week the National Food Conference was told by Dr. Urbain, researcher for Swift & Co., that meat, bombarded with gamma rays from an atomic pile, will stay fresh indefinitely without refrigeration or any other form of expensive storage.

Potatoes will not sprout and will retain their freshness through 2 years of storage.

These may seem humble examples to us, but to industry it constitutes its lifeblood. Soon the fishing fleets will no longer need

Soon the fishing fleets will no longer need countless tons of ice on their journey to the banks and back.

Fresh water will come from salt water—abundant foods from the plant life of the sea. What a boon to mankind.

This is not a dreamer's dream. All of these accomplishments are on the horizon, if some are not already in the full grasp of our scientists as I speak to you now.

A thousand new processes are born in industry from the uses of irradiation. New plastics are produced—new methods of vulcanizing rubber—new means of measurement and identification of materials—a whole new world of electronics.

Just as this new science has solved the mysteries of plant life—and just as it has solved the puzzles of animal aliments, so, too, the human medical field has made great strides through the use of radioactive materials. The attainments in gotter and cancer studies thrill and enthrall the student—and becken him on to unmeasured accomplishment in putting atomic energy to use in the processes and problems of medicine.

Hours and hours would be required, just as books and books have already been written in the infancy of atomic progress, as a precursor of the promise of tomorrow's miracles.

We have been witnesses or students of great changes in the economic life of our country. We have seen periods when we seemed to have reached our topmost limit, and the only change could be downward. Then came man's invention: The automobile, the airplane, radio, and television. Each seemed to come at the right psychological moment to rescue man from economic doldrums, and to spur him on to the new heights of luxury and happiness.

If I say that the electronics age is yet another chapter, another step up the ladder for our American economy, I will not be expressing an original thought. It is already the promise of our scientists. It is already the expectation of our men of business.

But if we stop there, if this is to be purely a material gain, just an economic profit, just a lift up for luxurious America, the idea would be unworthy of us. It would be unworthy of our post and power in this hour of the world's existence. It would be unworthy of the hopes that the world has placed in us, whether we have sought the responsibility or not.

Today, in the Congress, we have reports from the world over—of the hunger of all peoples for this energy and progress in the medical and biological fields—so that plagues and famines will become unused words in any language. It is a hunger that will not be appeased with paper performances, but if we do not rise to our responsibilities, those people will get their help elsewhere. It may be from Europe. If Europe, too, falls, then it could be from Russia.

Let us not for a moment think that atomic discoveries have been exclusively American. On the contrary, we know that many of the great fundamental scientific revelations of the atomic age have come to us from minds that were born in the British Isles, France, Germany, Poland, Switzerland, Denmark, and Italy. What we have contributed, as I said before, in addition to our own great scientific minds, is our immense experimental effort through our superb and superior industrial resources.

There is an Achilles' heel, however, in our atomic progress.

Our development of scientists is not in keeping with our great American tradition and with our needs of tomorrow. I regret to say that, in my opinion, our human mental factor is not getting the attention it requires.

Last year, Russia graduated 54,000 engineers.

American schools graduated 20,000. The experts tell us we must resurvey our educational ideas.

On the high-school level, there must be teachers competent in the standards of this electronic age. There must be, above all, guidance and direction for those who have the talent to meet the challenge in this new field. We must find out why so many high-school graduates of college caliber never go to college. If it is our manpower policies, they must be restudied, also. If we are delinquent in giving direction to the studies and inspiration of youth, if we are not giving the dollars and the drive—to the promotion of this basic knowledge in our high schools, our colleges, and our universities—then this, too, needs to be corrected.

In our minds, our hearts, and our souls, we must be attuned to this great help and this great hope to the world.

As the deserts of the almost forsaken lands may be made to bloom again—so, too, the dreams of people in despair can be brought to life once more.

No small group of plotters can keep millions and millions of human beings chained forever to the pangs of hunger. No purge can drive them to the slaughter of distant battlefields, when peace and plenty can be theirs, instead.

"God is not dead in Russia"—is the simple phrase of a humble priest. The echo of this admonition brings the knowledge that men cannot drive an understanding of the Creator out of the souls of His creatures.

We know that man craves the dignity of his human nature—he craves all the freedoms that we have cataloged for hand and heart and mind. Man will have them.

Man can have them.

These great powers that we extract from the atom today have always been there since the dawn of creation. Man adds nothing new to their substance. His great achievement has been that through his God-given genius and intelligence he has, in good time, succeeded in analyzing and devising and dividing the simplest elements of nature.

Our civilization is only entering upon its grandest era—a new Renaissance. This last half of the 20th century will be written in history as the age of the atom—that out of the smallest element we have drawn the formula for the world's biggest dream—man's happiness in a world of plenty, under an umbrella of God's peace.

International Trade Fair in Bangkok

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. THYE. Mr. President, Mr. Jim Bormann, director of News and Public Affairs of radio station WCCO, of Minne-apolis, Minn., broadcast on March 8, 1955, a news item regarding the International Trade Fair in Bangkok. I ask unanimous consent that the statement be printed in the Appendix of the

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Some time ago, I reviewed on this program a problem that had been outlined to the President by Senator EDWARD THYE-a problem involving our prestige in the Far The Senator attended the International Trade Fair in Bangkok, during a visit to Siam in 1953, and he said what he saw in the Soviet exhibit put America to shame. The Russians had turned out a dazzling display of industrial production for peace, and had actually outshone the scattered exhibit of American products. Soviet tractors and automobiles were more impressive than ours. They had on display fine cutlery, chinaware, radios, phonographs, surgical supplies, and household appliances. Our exhibit contained none. The Soviets cleverly pointed out that America was unable to show this kind of peaceful production because its industry was stoking up to produce the implements of war. It was a telling blow-though a false one-in the Communist campaign to stir up hate for America among the peaceloving countries.

That's the story Senator THYE told President Eisenhower, and the President called in business advisers and advertising men to help him do something about it. He reasoned that a nation which produces the implements of peace in abundance should find a way to export at least enough of these to prove the Communists were lying.

With this background, it is interesting to read in the Information Agency report an account of the spectacular showing America made this year at the fair in Bangkok. A picture in the report shows a multicolored balloon tower atop which floats the Stars and Stripes. Behind it, and above the entrance to the United States exhibit, was a huge sign which proclaimed in Siamese: "The Pruits of Freedom." And inside the exhibit area were vast throngs intently watching Cinerama on a giant curved screen beneath

Perhaps a few paragraphs from the report will demonstrate that Senator THYE'S urging for broader American participation in these international exhibitions produced solid results.

"In few areas has the United States suffered more consistently unfavorable comparison with the Soviet union than in the international fairs held throughout Europe and Asia." The report goes on to say: "During the past 8 months, however, this situation began to improve.

"At the Damascus International Trade Fair in September. This Is Cinerama drew huge crowds which surged past the Soviet exhibit and jammed the entrance to Cinerama. This display was presented through the cooperation of private United States industry, and was equipped with an Arabic sound track by an employee of the United States Information Service in Damascus,

Cinerama has been described, because of this, as America's secret weapon.

"In 1953, at the famous Constitution Fair in Bangkok, the Communists display of consumer goods won first prize. The United States was not officially represented. But in 1954, the United States won first prize with its exhibit "The Fruits of Freedom." This exhibit was developed by the United States Department of Commerce in cooperation with the United States Information Agency and more than 100 private business firms

The Soviets provided a measure of America's impact at these fairs by complaining that Cinerama was unfair competition, and by claiming that it was an inferior imitation of a 15-year-old Soviet invention.

"But even more significant was the fact that the Soviets didn't want to compete in a contest they knew they would lose. with Cinerama and the concerted efforts of American industries in the Bangkok exposition, the Russians withdrew their exhibit."

Tariff Legislation

EXTENSION OF REMARKS

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article which was published in the Washington Evening Star of March 21, 1955. It deals with the sad experience which many Congresses and Presidents have had in the past in trying to write tariff bills on the floor of the House and of the Senate. The article has particular pertinence at this time in view of the fact that a number of Members of Congress feel that we should resort again to the practice of trying to write tariff bills on the floor of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The longer the hearings on the proposed Trade Agreements Act are drawn out, the greater is the impression that the Nation may be in for an old fashloned row over protection of the American market.

Probably Congress and the country will be spared the ordeal of the writing of a tariff bill with specific duties on the floor. But the hearings before the Senate Finance Committee, and the earlier hearings on the House side, are developing demands for quota restrictions on certain imports.

It is likely that some of these will come up on the Senate floor. It is also possible that the proposed act to extend trade agreements authority for 3 years and to permit the President to negotiate moderate tariff reductions may end up quite different from what it was originally.

Records of tariff legislation offer instances where tariff revision started out in one direction and ended up in another. The course of the present bill so far offers an interesting parallel to the early history of the Tariff Act of 1894. That was in Grover Cleveland's second administration.

The present bill got through the House without amendment, chiefly due to the efforts of Speaker RAYBURN. Similarly, the bill of 1894 got through the House handily. It was a bill of moderate reductions. It was introduced December 19, 1893. It was passed by the House February 1, 1894. Then the Senate took over.

It took 5 months for the Senate to produce its version of the bill. First, in response to a Democratic caucus, moderate tariff protection was given sugar, coal and iron ore.

Then there started a parade of representatives of industries. The shirt and collar manufacturers of New York wheeled into the fray. There came the iron and steel men of Pennsylvania and the glass and pottery interests of New Jersey.

The Democratic majority in the Senate was slim. The leadership figured it had to give some ground to win votes for the bill.

The yielding reached the proportions of a general retreat. In May 1894 a caucus decided to support 408 amendments. One Member of Congress is said to have remarked, "This is a free-lunch counter; walk up and help yourself." In the end the bill, after being amended 600 times, finally passed the Senate in July. Many of the House-scheduled tariff reductions were revised upward. The then sugar trust got such sweet treatment it was a scandal.

President Cleveland hoped that in conference the House would prevail to restore the bill to something like its original appearance. He was disappointed. The House gave way and the measure was finally adopted in August. The disgusted President wouldn't sign it; he let it become law without his signature.

That tariff writing can have political repercussions was well known in 1894. The high-tariff McKinley Act had been passed in 1890 during President Harrison's administration. Prices advanced even before the provisions of the McKinley Tariff Act took effect. Those who put up their prices said the tariff was to blame. Even such a traditionally American industry as the manufacture of wooden nutmegs for the Connecticut trade advanced the price of the product—and blamed it on the tariff.

The act became law in October 1890. Next month came the off-year elections. In place of the Republican majority, the voters elected 235 Democrats to the House and only 86 Republicans.

Similarly in 1894 the Democrats lost the control they had gained in 1892 when Cleveland was elected over Harrison. The 1894 elections returned 244 Republicans to the House and 104 Democrats. The Republicans won a slim lead in the Senate.

President Hoover, too, had an unhappy experience with tariff legislation. The Smoot-Hawley Act of 1930 was the result.

At that time there was no real demand for tariff revision, up or down. There was a demand to do something to relieve the plight of the farmers. A special session was called in June 1929. That was a boom period, but not for the farmers who had been put through the wringer. The President suggested to Congress only that duties on agricultural products be raised to help the farmers and that where manufacturing industries were depressed, they, too, might be helped.

The special session dragged into the regular session, which began in December in those days. The House Ways and Means Committee started out considering a "limited revision." But the bill it reported went far beyond that and on the floor there were more revisions upward.

In the Senate, Reed Smoot, chairman of the Finance Committee, was a real protectionist. He also wanted good treatment for the beet sugar of his State, Utah. To get it he had to allow other Senators what they wanted for their States.

"Limited revision" had now disappeared. Prof. F. W. Taussig remarks in his tariff his-tory that Mr. Hoover might have headed off what occurred had he announced early that if the measure went beyond the bounds of a limited revision he would veto it.

The agricultural forces, when they saw what was happening, became angry. The measure which was to have helped them was turning into a measure to raise the prices of the things they had to buy. The protectionists appeased them with even higher duties on agricultural products in exchange for higher duties on manufactures.

The bill was finally enacted in June 1930. Many urged Mr. Hoover to veto it. He didn't.

Meanwhile, the stock market panic had occurred in the fall of 1929 and the depression had set in. Senator Smoot predicted the tariff act would cause smoke again to billow from the chimneys of manufacturing plants. It didn't.

The Democrats captured the House in the

November elections.

Federal Aid to Education

EXTENSION OF REMARKS OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Dunklin County Teachers' Association, at Kennett, Mo., on Monday, March 14, 1955, on the subject of Federal aid for elementary and secondary school construction.

There being no objection, the address was ordered to be printed in the RECORD,

as follows:

ADDRESS BEFORE THE DUNKLIN COUNTY TEACHERS ASSOCIATION, KENNETT, Mo., MON-DAY, MARCH 14, 1955

It is a great pleasure to be with you in Kennett today, and because this audience is one most interested in schools, I plan to discuss that problem from the standpoint of the Congress.

Federal aid to education is not new. began with early land and monetary grants for the support of education in States formed

from the public domain.

Antedating the Constitution, these grants were authorized in an ordinance adopted by the Congress of the Confederation, in grants were used both for school construction and for maintenance and operation.

In his first annual message to the Congress, January 8, 1790, President Washington

said:

"Knowledge is, in every country, the surest basis of public happiness. In one, in which the measures of government receive their impression so immediately from the sense of the community, as in ours, it is proportionately essential."

In recent years, the Federal Government has assisted in school construction, through WPA and PWA assistance during the depression, and in areas of intense defense activity during war and national emergency years.

The Federal Government has spent many billions of dollars since World War II for the education of its veterans. It now has thousands of research contracts with colleges and universities throughout the country.

The entire concept of public education, that is, free schools to be maintained at public expense, is founded on the belief that the cost should be allocated according to ability to pay. (The man without any children may, and often does, pay more than the man with 10 children-because all benefit from public education.)

When public schools were first established in this country, ability to pay was measured by ownership of real property-land and buildings.

At the time our Government was established, 94.9 percent of the people lived on the farms. In April 1954, only 13.5 percent lived on the farm.

With a great percentage of our Nation's wealth now in intangible property, real estate can no longer be expected to meet the mounting costs of education.

There is a large variation in the wealth in school districts. For example, Sugar Creek, a small school district in Jackson County, Mo., with a multi-million dollar oil refinery. has an assessed valution of \$26,000 behind each school child.

But an adjoining school district, Independence, a growing residential community, has an assessed valuation of only \$4,000 per child

By comparison, Kansas City has an assessed valuation of \$12,000 per child.

It is small wonder that the Independence school district has a local tax rate over double that of Sugar Creek.

The State governments now pay 40 percent of the cost of maintenance and operation of school districts; but the cost of construction is still borne almost entirely by the local districts, through real-estate taxes.

In many school districts where the need is greatest for school buildings, nevertheless the districts in question have reached the constitutional limits on the amount of bonds that can be sold.

These districts go into debt-sell bondsto build schools.

Is it unreasonable that the Federal Government should help out in such districts?

Factors such as the location of railroads, oil wells, industrial plants, slums, office buildings, housing developments, waste-lands, etc., cause great variations in the ability of local districts to construct school buildings from taxes on real estate.

There is almost as much difference in the ability of States to pay for the costs of school construction as there is between individuals

and school districts.

In 1953 income payments per capita of topopulation ranged from \$834 in the poorest State to \$2,304 in the richest State.

In 1952 income payments per child of school age (5 to 17 years) varied from \$3,008 in the State having the least ability to support public education to \$11,294 in the State having the greatest ability.

Elementary and secondary school enroll-ments this year total 30,200,000, an increase

of 1,300,000 over last year.

There is a shortage today of 370,000 classrooms in the United States, and another 50,000 classrooms will be needed each year to take care of the growing school population resulting from unprecedented birth rates since the war.

But only 60,000 classrooms are scheduled for completion this year.

No one denies the need for additional school facilities.

In 1952 a nationwide survey by the Office of Education showed a shortage of 312,000 classrooms.

By 1954 this Department reported the need had grown to 370,000 classrooms, even though during those years the States and localities had spent nearly \$4 billion on school con-

The 1952 report estimated the cost building the necessary classroom facilities at \$10.6 billion, with local and State resources able to put up only \$5.9 billion.
This left a deficit of \$4.7 billion.

The 1954 cost of classrooms was placed at \$12 billion, with \$30 billion needed for the next 10 years.

During World War II many of our leaders in industry, the armed services, and in com-munity life began to see the importance of schools more than ever before. shortage of classrooms has been increasing constantly.

Thomas Jefferson said:

"If a people expect to be both ignorant and free, they expect what never was and never will be."

During World War II, some 17 million men were examined under the Selective Service System. Of this number, 5 million were rejected as unfit for military service.

In 6 States, close to 50 percent of the draftees were rejected; and the highest rates of rejection occurred in States with the lowest per pupil expenditures for schools.

Where the public schools were strong and adequate, there was order in the community. Delinquency and crime were at a minimum. The children were under good supervision, even though their parents were busy at war work. Absenteeism at the plants was much

Where the public-school systems were weak, children were running the streets; and youthful misdemeanors and crimes rose

to new heights.

Recently the United States Commissioner of Education reported to the Juvenile Delinquency Subcommittee of the Senate that there were 385,000 legally delinquent children in the United States in 1952-about 2 percent of all the children between the ages of 10 and 17. Of this group, 61 percent were not enrolled in any school, including 32,000 under the age of 14.

Experts in the field report it costs \$3,000 a year to take care of each of these legally delinquent children, not including the thousands of emotionally disturbed children

in institutions.

For less than \$300 a year a child can be furnished an excellent education. Missouri county school superintendent recently reported, it costs much less to keep a child in school than to hire a babysitter.

The charge has been made that "much of the tax money for the support of Federal aid for school construction would be wasted on the way to and from Washington."

Actual cost of levying and collecting Federal taxes is only one-fifth as much as cost of levying and collecting real-estate

Another charge frequently made by op-ponents of this program is that "Federal aid to education would result in Federal control of education."

But the bill that would really result in Federal control is the now proposed bill of this administration. In fact, in it is so much control, and so little aid, that 42 of the 48 principal State school officers have publicly declared their opposition to the plan.

This administration advertises the program as a \$7 billion one. Actually, it is \$67 million a year for 3 years. The remainder is "State put up"-or lent at higher rates.

The other five bills now being considered by the Senate Labor and Public Welfare Committee specifically forbid Federal domination.

I believe especially in the Hill bill and the McClellan bill, 2 great school bills introduced by 2 great southern Senators.

Dr. Edgar Fuler, executive secretary of the Council of Chief State School Officers, has said: "There is no possibility whatever for Federal control of educational programs in these bills."

Under them, aid to school construction would be distributed by the Pederal Department of Education to the State departments of education.

Dr. Fuller, a former administrative official in the United States Department of Education, is author of the statement that any one of these five proposed laws could be administered by only a half dozen persons in the Department of Education.

The President's program, on the other hand, would:

- 1. Increase the cost of interest on school bonds from one-half to 1 percent in Mis-
 - 2. Freeze the burden on real estate;

3. Provide a maximum of \$67 million a year for 3 years in Federal grants.

It would take at least 2 or 3 years before any school could even be built under its complex regulations.

Not a single one of the 48 chief State school officers has endorsed the President's program, because not a single one of them believes it would help build schools.

The Rhode Island chief State school officer even went so far as to say that the President's program is "abhorrent to American tradition."

Based on the number of children from 5 to 17 years of age, under the Hill plan, for a billion-dollar program, Missouri would pay in \$24,630,000, and get back \$24,80,000.

Pretty close to even.

Under such a plan, New York, at the top of the scale, would pay in \$1.92 for each \$1 received back. Mississippi would pay in 23 cents for each dollar it received back.

In recent years, generous Federal aid has been provided for unemployment compensation, social security, roadbuilding, agriculture-to mention only a few. But no comparable Federal aid is being provided for education—perhaps the most important of all requirements for the future security and well-being of our country.

As a result of the lack of any real program,

only 8 cents of the total tax dollar-Federal, State, and county-is now being spent for public schools, as compared to 16 cents before World War II.

This country now has a population of about 160 million people. There are some 300 million modern slaves under control of the Communist leaders of Soviet Russia; and 600 million under control of the Communist leaders of China.

The future of the free world depends on the leadership and ability of these 160 million Americans-1 out of every 5 of whom are in our schools today, training for the future.

In all too many cases those schools are in-adequate, poorly built, poorly financed, with underpaid teachers.

As the able commentator, Walter Lipp-

mann, said recently:

"Our educational effort * * has not yet been raised to the plateau of the age we live in. • We must measure educational live in. . effort as we do military effort, * * * not by what it would be easy and convenient to do but by what it is necessary to do in order that the Nation may survive and flourish. We have learned that we are quite rich enough to defend ourselves, whatever the We must now learn that we are quite rich enough to educate ourselves as we need to be educated."

Winston Churchill has often referred to the period in which we live as "the terrible 20th century."

The first half of this century justified that designation.

What will the second half bring? depends on whether we follow the guidance of those who believe money is more important than people, or those who believe our greatest obligation and potential asset, for the future, is the proper education of our

One real step forward to the goal of an adequate educational system which would measure up to the age in which we live would be the adoption of a sound Federal aid to school construction law in this

To that objective most of my Democratic colleagues are dedicated. We will see what we can pick up on the other side of the aiste:

The battle against Communist invasion will be fought by military preparedness, by production, and by ideas. In all of these fields the education of our youth is of vital importance.

We cannot ever hope to hold our own against the Communists on a quantitative basis. Our future security depends on the quality of our brainpower, the sincerity of our purpose, the devotion of our youth.

In each of these fields, our schools must play a leading role, supported by the American home, and our belief in God.

Yes; the quality, rather than the quantity, of our manpower will determine whether the second half of this century will be terrible or glorious.

Federal Control of Natural Gas Prices

EXTENSION OF REMARKS

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. FJARE. Mr. speaker, under leave to extend my remarks in the Appendix of the RECORD. I include the following resolution of the Oil and Gas Conservation Commission of the State of Montana, which was endorsed unanimously by the commission, and represents the position of the State of Montana officially and Hon. J. Hugo Aronson, Governor of Montana, personally. My own personal position is in accord with the views expressed in the resolution of the Montana Oil and Gas Conservation Commission.

The natural gas producers of Montana and the Nation are in a highly competitive field, and they have no guaranteed return and no assured market. The life of the entire industry depends upon vigorous exploration, and if government control is allowed to stifle or retard such exploration, then the industry and the consumer will both suffer. In my opinion, price control is apt to discourage the producers so that they will make little effort to expand their business, and provide the necessary gas reserves for an expanding economy in these United States

The resolution follows:

RESOLUTION

Whereas the Supreme Court of the United States has held (Phillips Petroleum Company Wisconsin (98 L. Ed.) (Advance, p. 695), decided June 7, 1954) that the Natural Gas Act of 1938 requires the Federal Power Commission to exercise regulatory control over the price at which gas is sold by independent producers to purchasers who transport the gas in interstate commerce; and

Whereas the Federal Power Commission has assumed this jurisdiction by its Order 174-A; and

Whereas the assertion of this authority by the Federal Power Commission as a result of a decision of the Supreme Court of the United States, as aforesaid, will be detrimental to, impede and burden regulatory enforcement for the conservation of oil and gas in this State by this Commission: Now, therefore, be it

Resolved, That the Oll and Gas Conservation Commission of the State of Montana does hereby express its opposition to regulatory control by the Federal Power Commission of sales at the point of production of natural gas produced in this State and respectfully petitions Congress to amend the Natural Gas Act of 1938 so as to correct this situation; be it further

Resolved, That a copy of this resolution be furnished to the Governor, and all Members of Congress from this State.

OIL AND GAS CONSERVATION COM-MISSION OF THE STATE OF MON-TANA

D. E. HAGEMAN. Chairman. JOE H. FRERICH, Vice Chairman. GLAYDE W. YODER, Commissioner. TED HAWLEY, Commissioner.

Attest:

JAMES F. NEELY. Executive Secretary.

Trip to Soviet Russia by William Randolph Hearst, Jr.

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. BUTLER. Mr. President, last Wednesday, Mr. William Randolph Hearst, Jr., delivered a stirring address, concerning his recent trip to Soviet Russia, before the Advertising Club of Baltimore, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

TEXT OF MR. HEARST'S SPEECH

(Following is the text of Mr. William Randolph Hearst Jr.'s speech before the Advertising Club at the Emerson Hotel today:)

Gentlemen, it is a genuine pleasure for me to have the opportunity and the privilege of speaking to you today.

First of all, let me tell you a little about

how this trip to the Soviet Union happened to take place.

I can assure you that we had no invitation to Russia, no advance tip of any kind that important things would be taking place while we were there, and no assurances that we would be able to talk with any of the Soviet leaders.

My reason for wanting to go was simply to get a firsthand glimpse of the country, its rulers, and its people.

It was my father's conception of journalism that it could and should be-and he made it-an audacious and exciting enterprise.

When we applied to the Soviet Embassy Washington for visas, I stated that I wished to be accompanied by Joe Kingsbury Smith, European general manager of Inter national News Service, and Frank Conniff, my editorial assistant.

Joe, with nearly 20 years' experience as a foreign correspondent, was familiar with the Soviet problems and knew his way around

diplomatic circles.

Frank Conniff had served as a war correspondent in Europe and Asia. In addition to this citywide experience as a reporter and rewrite man for the New York Journal-American, he is a student extremely well informed on history and military affairs. He is also my right hand here at home. With these two close friends and associates, I felt we could handle any curves they might throw

To my surprise, the visas for the 3 of us were approved within 7 days. We flew to Paris, talked with General Gruenther, picked up Joe, and proceeded to Berlin, where we boarded a Soviet plane for the flight to Moscow. It was a twin-engine Convair type of plane which flew most of the time at about 8,000 feet, made 1 stop at Vilna, capital of Lithuania, and landed us gently just after dusk in a snowstorm at the Moscow Airport. The flight took 7 hours.

LIST OF CELEERITIES

The next morning we sent to the Soviet Foreign Office a letter, written in the Russian language, listing the prominent personalities we wanted to see in the religious, cultural, and scientific life of Moscow.

The subjects of our interviews ranged from Communist Party boss Khrushchev to Shostakovich, the composer; from Premier Bulganin to Ulanova, the ballerina; from Marshal Zhukov to Patriarch Alexei, the head of the Russian Orthodox Church; and from Molotov to Svetlana Stalin, the late dictator's daughter.

In addition, we literally spent hours in discussion with the leading Western Ambassadors, checking our impressions and gaging our reactions against the experience of these diplomatic experts.

And on our way home, when our party reached London, after a day of flying from Moscow, I experienced the sentimental climax of the whole trip as far as I was personally concerned.

I spent an hour with Sir Winston Churchill in the historic Cabinet room at No. 10

Downing Street.

That hour with Sir Winston was something really special. He listened closely while I gave my impressions of the Russian leaders and swapped a few thoughts on the significance of Russian moves.

He spoke with great clarity and seemed to be in good health and spirits. I left with the strengthened conviction that this grand old man is one of the really great figures of history.

WAR QUESTION

I assume that one of the questions uppermost in your mind must be whether the new leadership in Russia is more or less likely to precipitate war with us one of these days.

I must say, as I have written, the strongest hope for peace that I found in the Soviet Union during my 3 weeks' visit was the shrewdness of these new rulers of Russia.

These men can be ruthless. Certainly no humanitarian considerations would cause them to hesitate to wipe us out if they thought they could get away with it.

They believe the end justifies the means. And for them the end remains Communist domination of the world. Krushchev said so to me quite frankly. He said communism is invincible and predicted that the future would belong to the Communist order.

Nevertheless, these men are cold, calculating realists. I don't believe they are possessed by the madness that drove Hitler to bring Germany down in ruins. Nor by the recklessness that led Mussolini to tie Italy's kite to the shooting star of Nazidom's short-lived conquest.

lived conquest.

They know the destructive power of nuclear weapons. Even if they possess the H-bomb—which some British officials doubt—and even if they use it first, they know America has superiority in these weapons and the means to deliver them.

Furthermore, as Eden put it to us, and we agree with him, the Soviets have now become the bourgeois of the Communist world. They have established an empire extending from the heart of Germany to the borders of China. They are becoming property owners—cars, television sets, ice boxes, even country homes. They have vested interests to protect.

As long as they feel they are not going to be directly attacked, as long as they know they cannot themselves attack without the certainty of the swift and terrible retalia-

tion, I seriously doubt that they will deliberately precipitate an atomic war with us.

TEMPTATION STRONG

If America was to let down its guard, if the day were to come when the Soviets thought they could deliver a knockout blow that would neutralize the United States, then the temptation would be strong and I would give no odds on them not doing so.

For the present, however, I think they realize they could not pull an atomic Pearl Harbor on us without getting back a nuclear punch that might well knock the Red daylights out of them.

That is why I say here—have written in our papers and told President Eisenhower when I reported to him on my return, that we felt the present American policy on firmness without provocation, of keeping up our guard and maintaining a strong retallatory force in readiness—was the right one.

We must never make the mistakes that were made before and think that we can base our relations with the Soviet Government on trust in their good intentions.

The present leaders were all part of the top echelon of the regime during the period when Stalin broke faith with us.

These men were in the Kremlin, or close to it, during the bloody purges. We must not be misled by their smiling, benign appearances, when they wish to be friendly in order to serve their own interests.

FORTUNETELLERS

The history of Soviet Russia during the past 30 years has shown that one can never be sure what is going to happen, especially within the inner circle of the Red hierarchy. As Marshal Zhukov said to us: "Fortune-tellers, you know, can go wrong."

Nevertheless, I feel rather certain that if another Stalin is to emerge on the Russian political scene, it will not be the new Pre-

Bulganin, with whom I talked for over an hour, did not impress me as the type who could be capable of selzing power and making himself the absolute ruler as Stalin did.

He lacked the dynamic personality and forcefulness of Khrushchev. He did not seem to possess the cunning that would be required for victory in a struggle for power with the tough ones in the Kremlin.

Bulganin struck me more as a front man for the principle of collective leadership that I think, for the time being, at least, continues to be the basis on which the Soviet system is now being run.

Of the four top leaders we met, Khrushchev was in many ways the most impressive. If any of the 4 were to grab power to build himself up into a Stalin-like dictator, my guess is it would be this boss of Russia's 7 million Communist Party members.

DOMINATED SCENE

A bullnecked, blunt, and rugged individual, this heavy-set little man with the beady blue eyes and aggressive vitality gave the impression of being the boss of the Kremlin show at the moment and knowing it.

On the day Georgi Malenkov publicly lost his job as Premier, it was Khrushchev who dominated the scene in the Supreme Soviet. He nominated Bulganin as successor, and as he did so he remarked that he was sure the deputies would accept the suggestion. There was more than an expression of hope in that remark. It was clear that the boss was speaking. No one else was nominated, and no one else spoke for or against Khrushchey's candidate. The vote was called and the hands of some 1,300 deputies shot automatically into the air. They remained up only a few seconds, then came down. The chairman glanced quickly over the room, said there were no dissenters and no abstentions and no other candidates. Unanimous. It was interesting to watch Soviet democracy During our private interview with Khrushchev, he made no bones about the hope of the Communists to gain the upper hand in the world one day. But he sought to convince us that the Soviet leadership wants to confine the global struggle between the Communist and capitalistic systems to measures short of war.

Unlike American Communists, he and most of the other Soviet leaders we met displayed a sense of humor. He laughed, joked, and showed flashes of wit. He would doubtless order you liquidated without battling an eye if he thought it would serve Soviet interests. But he can be amiable.

LONG TABLE

We sat at the end of a long conference table with him in his office in the headquarters of the central committee of the Communist Party.

At one point, when we were pressing him as to just what the Soviet Government meant by coexistence, he leaned over, put his hand on my arm and, with a cold twinkle in his eyes, said, "You are a capitalist. I am a Communist. We are coexisting around this table, why can we not coexist in the world?"

At another point he said he would like to see Russia and the United States compete in growing the best corn, rather than producing the most destructive atomic weapons.

He spoke with admiration of American agricultural methods and said he would like to see Russia copy many of our ways of doing things.

At the conclusion of our visit, he said with a smile, "If, when you return to the United States, you are summoned before Senator McCarthy, let me know and I will be glad to come over and testify that you represented the interests of your country very ably."

As for Molotov, he seems to have become the elder statesman of the Soviet Government. Always the professional diplomat, he was cautious in his statements and quick to give us the propaganda line. He talked at length about American military bases surrounding the Soviet Union and referring to our protection of Formosa, labeled it, "United States interference in the internal affairs of China."

AIR OF CONFIDENCE

He spoke with an air of self-confidence as though he was supreme in the handling of Soviet diplomacy.

However, I had much the same feeling about him that I did about Bulganin. I could not quite picture him as developing into another Stalin. He, too, seemed to lack the flair for lone wolf leadership.

Of all the four top men with whom we talked, Marshal Zhukov was the most pleasant. He received us alone except for our interpreter guide, and greeted us warmly when we arrived in his office in the National Defense Ministry. Here was the old soldier who had been on such friendly terms with General Eisenhower in the closing period of the European war and for a short time thereafter.

This husky, forthright military man who commanded the defense of Moscow, prepared the Soviet stand at Stalingrad and led the Red army to victory against Germany, gave me the impression of being sincere in his expressed hope for improved relations with the United States and the warm sentiments he voiced about General Eisenhower.

Not that I think there is any likelihood of Zhukov exerting a dominant influence on Soviet policy. He struck me as a soldier, likely to carry out the orders given to him. He also gave me the impressions of being a dedicated Communist. Speaking rather proudly of being a member of the Central Committee, he said: "We soldiers follow the party line."

With these four coldly realistic men at the top in the Soviet Union, I could not help feeling that any immediate threat to world peace is more likely to come from Red China than Russia.

COMMONSENSE

Khrushchev told us he was confident that the Chinese Communist leaders would show commonsense in this respect. Now if that is so, and we are not going to have war in the foreseeable future, then I believe we are going to face a struggle that may prove more difficult for us to wage successfully than a military conflict. In the long run, however, this struggle will involve the survival of our way of life just as much as war would.

I am referring to the conflict of competitive coexistence. This is intended to be an ideological and economic struggle aimed at achieving Communist domination of the world by measures short of an allout East-West war. That is what we face now. It will be much less terrifying and much less destructive in a material way than a military conflict. It will be far more suitable than the cold war was under Stalin. But its ultimate objectives, as far as we are concerned, will be the same.

The second half of this 20th century will determine whether Khrushchev was right when he told me that communism would ultimately gain the upper hand throughout the world.

He said it confidently and matter-of-factly, although acknowledging my right to believe that our way of life would become the stronger force.

This states the challenge of the future as clearly as any other occurrence that happened during our 3 weeks' visit to Russia.

The faith of the sharp, shrewd, and aggressive little boss of Russia's Communist Party must be matched by a belief just as strong and just as deep on our part.

TIME WILL TELL

Time alone will tell whether the free world is equal to the sacrifice, the self-denial, and the courage required to first control and then turn the tide against rampant communism.

That means keeping our guard up. It means being prepared for the next 5, or even 20 years to risk war at any moment to check Communist imperialism from resorting to military conquest, just as we are doing today in respect to Formosa.

We must not let coexistence lull us into a false sense of security.

Unless and until Russia, Red China, and the rest of the Communist world accepts a really effective system of international control and inspection of armaents of all types, including the nuclear weapons, we must maintain in a state of constant combat readiness a powerful retaliatory force.

The western program of building armed strength, while fundamentally the correct one, should be widened into a more flexible and imaginative strategy for competitive co-existence with the Communists in every field and on every front.

While in Moscow I gained the impression that communism was moving ahead in many fields which the present western strategy overlooks.

The arms race is not the only event in which they are competing with us. They have taken sports and culture and the impressionable years of youth and transformed them into arenas of the cold war.

By inviting to Moscow picked delegations from the satellite countries and wavering neutrals, like India, they strive to convey the impression that Soviet customs are superior to those of the West.

LIMITED VIEW

The delegations are carefully chaperoned, of course. They only see what the Communists want them to see. On that basis the good things of Moscow can be impressive—the spiendid Moscow ballet, the mosaic-adorned subway, the up-to-date classroms of

towering Moscow University, the new apartment buildings, and the progress that has unquestionably been achieved in the industrialization of a backward, almost primitive agricultural nation.

Sports is another front on which the commissars are moving full steam shead.

On one frigid night while we were there 75,000 Moscovites jammed Dynamo Stadium—the local Kezar Stadium—to watch the home team humble West Germany in a hockey game, 10-3.

The United States is likely to have a tough time at the 1956 Olympic games in Melbourne, when Soviet Russia fields a team which even now is being painstakingly prepared for the big test.

America has dominated the modern Olympic games since their inception and has taken great pride therefrom. It has also been a source of prestige throughout the world, especially with sports-conscious young people.

PROFESSIONALS

How would the sports-minded youth of the world feel, especially in doubtful areas, if the Russian team should end American's long sway at Melbourne in 1956? Of course, these Russian athletes are not really amateurs. They are professionals. They are trained under government guidance, with government help. They receive bonuses and money prizes.

We should find some way of making sure that our Olympic contenders get everything they need in the way of training opportunities.

The lively arts are another field wherein the commissars are operating with the professed intention of proving to the young people of the world that Russian achievements far surpass the West.

We have so much more to offer than the Communists that any comparison must show

up in our favor.

We should seek to convey to the world to our allies, to the uncommitted countries especially, and to the Russians if possible the idea that America has more to be proud of than its motor cars, its bathtubs, and other material benefits.

I believe that any cultural exchange between Russia and the United States is certain to tip the balance in our favor. Within limits, I think such exchanges should be encouraged.

PLANNING BOARD

What I would like to see is the establishment of a permanent planning board commissioned to formulate an all-fields, all-fronts strategy for winning the conflict of "competitive coexistence."

This board should be scrupulously nonpartisan. It should be culled from the finest minds and talents available, both in public and private life.

It should coolly survey the whole global scene and develop plans for getting the people of the world on our side. Sports, the theater, educational exchanges—no field should be neglected in this competition of two diametrically different systems.

Who can doubt that America would emerge on top in any such competition?

My suggestion is not blueprinted. It may even be a little vague, but formulating and implementing it would be the job of the planning group of men and women, each one devoting time and energy to developing an overall nonmilitary American strategy for 1955—and for the next generation, and the rest of this century.

We have a National Security Council. I would like to see a national competitive coexistence council to combat communism.

One side or the other is going to win the battle of competitive coexistence.

It had better be our side.

Everyone and everything we love and cherish is at stake.

I thank you.

Matthew Alexander Henson

1

EXTENSION OF REMARKS

HON, FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. PAYNE. Mr. President, on April 6, 1909, 2 Americans and 4 Eskimos reached the North Pole—the first and only time an expedition has ever reached the North Pole over the ice by dog sled. Those Americans who thrilled the world were Adm. Robert E. Peary and his personal attendant, Matthew Alexander Henson.

Admiral Peary died in 1920. Mr. Henson survived him by 35 years, dying March 9 last, at the age of 88. The death of this last survivor of that famed expedition to the North Pole should not go unnoticed here in the Congress of the United States. Matthew Henson was an American hero. He was a credit not only to the Negro race of which he was a proud member, but to our entire Nation.

Mr. President, I ask unanimous consent that Matthew Henson's obituary from the New York Times of March 10, together with an editorial from the Portland Sunday Telegram of March 13, be printed in the Appendix of the Record.

There being no objection, the article and editorial were ordered to be printed in the Record, as follows:

[From the New York Times of March 10, 1955] HENSON, WHO REACHED POLE WITH PEARY, DIES; SERVED 22 YEARS AS ADMIRAL'S VALET ON TRIPS—HE WAS THE ONLY AMERICAN WITH EXPLORER ON THE LAST DASH TO 1909

GOAL

Matthew Alexander Henson, the man Adm. Robert E. Peary termed indispensable in his final 5-day dash to the North Pole, died here yesterday at St. Clare's Hospital. The 88-year-old explorer, the only American to accompany Admiral Peary to the Pole, succumbed of a cerebral hemorrhage.

First reports indicated that Admiral Peary had been accompanied only by Eskimo helpers. When the party reached Labrador Mr. Henson's achievement also was recorded.

Mr. Henson, who had been hired by Admiral Peary as a valet, accompanied the explorer on all of his expeditions over a 22-year period. In interviews after the completion of the mission on April 7, 1909, Admiral Peary praised him highly as a sledge-maker, dog-sled driver and expedition companion. He said:

"This position I have given him primarily because of his adaptability and fitness for the work; secondly, on account of his loyalty. He has shared all the physical hardships of my Arctic work."

The commander also said he could not have made the dash without Mr. Henson.

Mr. Henson kept a diary of the trip. He described the arrival of the party at the Pole just before noon on April 6. He explained that because of weather conditions, readings were not taken until the next day when the American flag was planted at the Pole shortly after noon. Thus it was that Mr. Henson found himself "siceping one night at the North Pole."

Of the flag raising, he reported:

"The commander merely said in English: "We will plant the Stars and Stripes at the

North Pole'—and the Stars and Stripes were planted. Speaking in the Eskimo language, I then proposed three cheers, which were Leartily given."

He said that he had coached the natives before-hand in this particular art. Of his own feelings, he wrote in his book, "The

Negro at the North Pole:"

As I stood there at the top of the world and thought of the hundreds of men who had lost their lives in the effort to reach it, I felt profoundly grateful that I, as the personal attendant of the commander, had the honor of representing my race in the historic achievement."

When the expedition ended, Mr. Henson was in good health, but had lost 20 pounds during the 68-day march and return.

After his adventures, he seemed almost relieved to settle down in an office job. an executive order from President Taft in 1913, he was appointed a clerk of the New York Custom House, a position he held until his retirement on pension in 1936.

Later, he lectured on, or just chatted

about, the expedition.

Just as reports of his presence on the final dash came late, the more tangible honors, exclusive of his civil service appointment, eluded the man for many years. Many bills were presented in Congress on his behalf. They specified a pension and a medal, pointing out that Admiral Peary had received a

\$5.500 pension and a medal.

On January 28, 1944, Mr. Henson received a medal-one authorized by Congress for all members of the Peary Expedition of 1908-09. In 1948, at the age of 81, he received the gold medal of the Geographical Society of Chicago and he was made an honorary member of the Explorers Club in New York. The club of the Explorers Club in New York. had honored him in 1934 at a smoker, where he spoke on the expedition.

His biography, "Dark Companion," was published in 1947 by Bradley Robinson. Last April, on the anniversary of the expedition, Mr. Henson and his wife met President

Eisenhower in Washington.

Even before he met Admiral Peary in a haberdashery store in Washington, when he was 18 years old, he had charted a life of adventure and travel for himself. He had gone to sea as a cabin boy and had made a voyage to China before he was hired by the admiral as a valet.

Mr. Henson had made his first expedition on the admiral's second trip to Nicaragua in 1887

He was born in Charles County, Md., August 8, 1866. His mother died when he was 6 and he lived with an uncle in Washington for several years. He received his formal education-6 years at the N Street schoolduring this time.

Surviving are his widow, Lucy, of 246 West 150th Street, and a sister, Mrs. Eliza Carter

of Washington.

A funeral service will be held Monday at the Abyssinian Baptist Church. The Reverend Adam Clayton Powell, the pastor, will

[From the Portland (Maine) Sunday Telegram of March 13, 1955]

MATT HENSON

So Matt Henson has gone, at the ripe age of 89. He had been the only American with Adm. Robert E. Peary on the dash to the North Pole, April 6, 1909; and Admiral Mac-Millan called him "altogether the most efficient man with Peary."

In fact, according to MacMillan, Henson was actually the first man to reach the pole. Admiral Peary, whose feet had given out, was forced to ride on a dog sled, while Henson went on ahead and, when he judged that he had gone far enough to have arrived at the goal, sat down to wait. Presently, Peary arrived, made his calculations, and found that he was at 80°, 57', and was able to write in

his log, "The pole at last." The little company of Peary, Henson, and four Eskimos built the usual cairn, raised the flag, and Henson led three cheers.

That cairn presumably still stands, though the flag, of course, long since blew into shreds and nothingness. No other expedition has been able to reach it, though Roald Amund-

sen in May of 1926 got as far as 87° and 44'. But it is a commonplace now for airplanes to fly over it. Could Admiral Peary's cairn have been built of something other than ice, no doubt it would have been sighted by aviators.

It is possible that Henson was familiar with Portland. If he ever accompanied Admiral Peary to the Eagle Island home down Casco Bay, he certaintly was familiar with But New York was his home, and our city. there he lived and worked during the years following the great North Pole expedition as a customshouse messenger, a position secured for him through his admiral's influence with President Taft.

He was the recipient of the Navy medal and of the Chicago Geographical Society's gold medal. On the 45th anniversary of the Peary success, Matt Henson was received by President Eisenhower in the White House, a fitting last public appearance of one who had contributed so materially to the conquest of the North Pole. In him Portland and all Maine have had especial interest as they have had in everyone and everything associated with the heroic figure of the great Adm. Robert E. Peary.

Automobile Pricing Deception

EXTENSION OF REMARKS

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include an article from the Wall Street Journal published March 21, 1955. entitled "Auto Prices":

AUTO PRICES-CONSUMER GETS CUTS ON MOST Makes, BUT SIZE OFTEN IS ILLUSORY-HOW A \$713 DISCOUNT ON A CHEVVY IN DALLAS SHRANK TO ONE OF \$213-NINETEEN OF TWENTY DEALERS PACK PRICE

Shopping for a new car these days is more akin than ever to Alice's trip to Wonderland-wonderful, of course; but mighty confusing also.

Car prices have perhaps never been more subject to dickering. To get some idea of just how susceptible they are as the big spring auto buying season approaches, the Wall Street Journal sent reporters on shopping expeditions in six major cities and three representative small towns across the United States.

One finding: All but 1 of the 20 dealers checked offered some concession from his original asking price—including a \$696 "discount" proffered by a Buick dealer in St. Louis.

Another discovery: Only 1 of the 20 dealers quoted at the outset the list price which his factory suggests as enough to guarantee the normal 24-percent dealer profit. The other 19 asked more-including \$435 more that same St. Louis Buick dealer.

FORDS, MERCURYS

For example, a New York Ford dealer quoted a price of \$2,611 for a 4-door Customline V-8 model; the factory suggests a price of about \$2,370, or \$241 less.

On a Mercury Montclair convertible, a Boston dealer originally asked \$3,728, or \$331

more than the factory suggests as the list price.

In each case, the dealer had a printed list of prices for auto and accessories, which totaled up to a figure the factory says exceeds the suggested "list" price. (Description of the factory prices below.)

This practice, of "packing" prices, is not illegal, of course. An auto dealer, like any worker or businessman, can charge anything he can get for his goods and services. A midwestern dealer explains frankly why he packs his prices: "The buyer has come to expect a dealer to quote a discount of several hundred dollars. That's okay by me so long as it doesn't come out of my pocket. So I just lift the price I quote for the car by a few hundred-the buyer gets his so-called discount, I get my reasonable profit, and everybody's

Many dealers, of course, deplore packing as being a calculated deception of the public. An eastern Ford dealer believes price-packing-once people catch on to it-will eventually make it difficult "to convince people that they should ever again pay a regular list price."

DISILLUSIONMENT IN DALLAS?

A glance at the price-pack history of a six-cylinder Chevrolet Bel Air sport coupe, as offered by a Dallas dealer, shows how a buyer could well become disillusioned. On this car, on which the factory suggests a price in Dallas of \$2,573, as equipped by this dealer there was a pack of an even \$500. Every item on the invoice offered the shopper was packed, including a \$378 addition to the factory recommended price of the basic car with automatic transmission and a \$4.15 pack atop the price of \$5.85 backup lights.

Shopper, studying invoice: "So that all

adds up to \$3,073?"

Salesman, doing a rapid calculation on a note pad: "Yes. But I can let you have it, ready to drive off the lot, for \$2,360."

Shopper: "Gee. That's a discount of \$713." Then, referring to the invoice's "delivered in Dallas" base price less accessories of \$2,532: "How can you let me have the car for \$2,360?"

Salesman: "We're just in the business for the fun of it. We don't make any profit on the car. Just another mark on the wall. What profit we do make comes from the accessories."

Of course, the dealer was making quite a bit of profit, though absorbing some actual discount. The discount of \$713 from the packed price shrank to one of \$213 from the factory's suggested list price.

THE DISCOUNTS VARY

Discounts from the factory calculations of delivered list price vary rather widely-from no discount at all to one of as much as \$512, offered by a New York City dealer on a heavily equipped Oldsmobile series 98 Deluxe Holiday (hardtop) coupe.

This dealer had packed his prices enough that the actual \$512 discount could be presented as one of \$666 from a quoted price of

Shopper: "I noticed in your ad in the morning paper that you're supposed to be offering 'sensational deals' on Holidays. Is that \$4,016, then, a sensational deal?

Salesman: "Oh, no. That's the list price. We have a discount price of \$3,350. saves you \$666."

Shopper: "Hmm. That sounds better, Do you think \$3,350 is the best price I can find?"

Salesman: "Oh, if you look long enough and far enough, you might find a dealer that's \$25 or \$50 under that. But, remember, the almighty dollar isn't everything. Service still means something, you know."

Then, after a lengthy sales talk on service: "But, to get back to our price here. If, to exaggerate, some dealer offers you a price of \$100 or \$150 below ours, we can look it over, and, depending on supply and demand, perhaps match his deal."

HOW DISCOUNTS SHRINK

In some cases the Wall Street Journal reporter-shoppers found that what appeared to be a whopping discount was almost no discount at all after the pack had been taken into consideration.

For example, a San Francisco Buick salesman quoted a price of \$3,404 for a four-door Special, then quickly offered a \$450 discount. The factory's suggested price for the same auto revealed the dealer actually was cutting the price only \$26.

On a Dodge four-door Royal V-8 in Dallas a "discount" of \$555 turned out to be one of \$96. On a Plymouth V-8 Plaza Club sedan in New York a \$325 "discount" shrank to \$34.

On the Mercury Montclair convertible inspected by a shopper in Boston, a possible \$300 cut from the asking price turned out to be no discount at all. In fact, it left the dealer's price some \$30 above the factory's idea of what he should get for this car and its wide variety of equipment.

This Mercury dealer indicated that folks who shop for Mercury convertibles don't quibble about prices. But a dealer, who offered a somewhat more expensive Mercury Montreey station wagon, to a suburbanite in New York, indicated the opposite.

Salesman: "Yes, that's the green one out back, \$4,065, including the power steering." Suburbanite: "What's my 1953 Chevvy worth?"

Salesman: "On that car with that equipment * * * hmmm. How does \$1,800 sound? That would leave \$2,200 more or less. Payments to suit your budget."

Suburbanite: "My wife would kill me."
Salesman: "Just a minute; I'll talk to the
boss." Returning a couple minutes later.
"On your 1953 Chevyy 22 200"."

"On your 1953 Chevvy, \$2,200."
The Chevvy cost \$2,400 new, has a current wholesale market value of about \$1,300. So the dealer was overallowing by \$900.

THE UNSHAKABLE CADILLAC

To keep their calculations simple, the shoppers generally asked for a straight discount on a deal which involved no trade-in. The only make on which no discount was offered was Cadillac. Shoppers found a Cadillac, series 62. 4-door sedan, and a spate of equipment offered in Boston at the suggested factory price, with a wait of at least 90 days for delivery. A supplementary check in another city turned up the same set of facts.

The survey found that dealers in small towns were offering smaller discounts from the packed prices than were comparable dealers in metropolitan areas where the competition is more severe.

Take the case of the Oldsmobile 98 Holiday which could be had in New York for \$512 less than the factory's idea of list. At a small New Jersey town 60 miles from Manhattan the discount was only \$70.

A Chevrolet dealer in a Missouri town of 1,200 population offers a discount from the factory prices, but \$116 less than the discount offered on a comparable Chevvy in St. Louis.

The survey indicated that the biggest packing comes in the base price. But such accessories as automatic transmissions and power brakes were widely quoted by dealers at above factory-suggested prices, too. Items which are relatively cheap by factory standards often get a high-percentage pack.

For example, a \$19.35 2-tone paint job for a Ford is quoted at \$50 by 1 dealer.

The turn indicator lights on a Studebaker which the factory suggests at \$19.90 in Boston are quoted by the dealer at \$26.

The buyer generally won't take a big dollar wallop on accessories.

But glance at the table in the adjacent column. It gives a rundown of how base prices of representative models are being packed by dealers in some United States cities.

Here are some sample price packs:

Make, model, city shopped	Factory suggested basic local price i	Dealer's basic price	Pack
Buick, 4-door Special, San Francisco Buick Special Estate Wagon, St. Louis Carlillac Series 62, 4-door, Boston. MANUFACTURERS AND PRICES

DETROIT.—Fathoming what an auto manufacturer means by the prices he publishes in advertising and publicity is no easy chore.

The manufacturers have varied nomenclature to designate such prices. Chrysler Corp., Ford Division, Nash and Packard usually dub their prices "factory delivered retail." But Studebaker calls them simply "delivered prices." For Willys and Rambler autos it's "suggested retail"; for Mercury, "suggested list." Then there's Lincoln with "suggested factory delivered retail charges." Chevrolet, Buick, Oldsmobile, Pontiac, and Cadillas refer to "list prices."

You have to plod slowly through the footnotes for further clues to just what is meant by these labels. For example, some include the 10-percent Federal excise taxes, others exclude it. An auto manufacturer may change his position on this from year to year. Chrysier Corp. brought out its prices via the press last November excluding excise taxes. But on January 10 this year it worked up lists which include such taxes.

As it now stands the following manufacturers include the Federal excise tax, which must be paid on every car sold: Plymouth, Dodge, DeSota, Chrysler, Imperial Hudson, Nash, Packard, Ford, Studebaker, Lincoln.

These exclude the excise tax in announced prices: Mercury, Buick, Cadillac, Chevrolet, Oldsmobile, Ramblers. Pontiac's first press story on its 1955 models said prices excluded excises; but a spokesman last week said they are included.

None of the prices posted by the factories include freight to the various points of sale.

(Federal tax and freight charges have been included for all makes in the table on this page.)

There are other descriptive areas of auto pricing which are hard to fathom. Chrysler now includes a "DEH" item. This is described as the costs of "delivery, excise, handling." But "delivery" doesn't mean delivery of the car from factory to the dealer; it's the cost to a dealer of preparing a car for delivery to the buyer.

There's another item some use, called EOH. One company says it is "excise tax and other handling" charges. Another scribes it as "excise on handling."

There are other items not included in the factory prices: State and local taxes, license, and title fees. These are excluded from calculations in the table.

The Farm Problem and Price Supports

EXTENSION OF REMARKS

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Up to Old Tricks," published in the White River Valley (Vt.) Herald of March 17, 1955; an editorial entitled "Rigor Mortis," published in Business Week for March 19, 1955; an editorial entitled "Ninety Percent Politics," published in the Washington Post of March 21, 1955; and an article by John O'Donnell published in the New York Daily News of March 21, 1955, all dealing with the farm problem and the question of price supports.

There being no objection, the editorials and article were ordered to be printed in the Record, as follows:

[From White River Valley Herald of March 17, 1955]

UP TO OLD TRICKS

The current session of Congress is disclosing that the leopard hasn't changed his spots, at least so far as the majority of the Democratic membership of the House is concerned. In two major fields, taxation and farm price supports, the Democratis House majority is making it quite plain it is not above playing politics with vital issues.

The House move to cut income taxes \$20 per person, across the board, has no justification except political justification, at a time when the Federal budget is still unbalanced, and when the Nation is facing very heavy defense expenditures, both military and economic.

The same can be said of the move now picking up steam in the House to restore fixed price supports for farm products—a device which has not solved the farm problem, but which has only piled up huge surpluses at the expense of the general taxpayer as agricultural producers, many of them huge corporate enterprises, produce not for the market but for Government storehouses.

Secretary of Agriculture Benson has urged that the new system of flexible price supports be given a fair chance to operate; resistance to a return to the fixed price supports will probably be led in the Senate Vermont's Senator AIKEN. If necessary. President Eisenhower is expected to veto such a bill, which would result in bringing into effect the flexible provisions adopted by the 1948 Congress and still held in abeyance.

On both these issues, the Democratic mafority of the House is obviously playing for votes along the lines followed so successfully during the New Deal-Fair Deal period, when the slogan was "spend and spend, elect and That is the policy which has given the country a 50-cent dollar. House Democrats now would start the country on its way to a two-bit dollar. Certainly the present session of Congress has given disturbing indications that the Democratic Party, with a few stalwart exceptions, still favors a con-tinuous mild inflation as a national and political policy.

The fact is disturbing because the experts appear to be agreed, Democratic and Republican alike, that Republican prospects for regaining majority control of the next Congress are not bright, to put it mildly. The prospects, in fact, are for heavier Democratic majorities in both branches following the 1956 election.

It appears to be recognized that President Eisenhower is his party's only hope in 1956. Indeed, the President's continuing popularity at midterm is something of a political marvel. If Ike lives and runs for a second term. the prospect is he will be reelected-but with a Democratic Congress.

The outlook is not an encouraging one to those who believe devoutly that the Eisenhower course is best for the country. Unless the Republican Party in the various States can identify itself with the Eisenhower policies and principles in the minds of the voters, the present administration may well turn out to be merely a temporary break between two long Democratic reigns. The second Democratic dynasty is liable to begin not much later than 1960 in that case.

If that happens, the GOP, and the country, will have lost a golden opportunity to capture the support of the majority of voters which has rallied so remarkably to the Eisen-

hower program.

[From Business Week of March 19, 1955] RIGOR MORTIS

The House Agriculture Committee's approval of a bill restoring rigid price supports at 90 percent of parity throws an additional burden on an already overworked Congress. In that sense, the action is unfortunate. But it may have a useful purpose, too-in a way its sponsors do not now suspect.

Democrats seeking to revive 90 percent rigid supports in place of the present system of flexible supports ranging down to 821/2 percent are, of course, angling for political advantage in 1956. But by forcing the House to vote this year, instead of next, they are going to encounter an uncomfortable fact: The old political appeal of 90 percent sup-ports is dead as far as national farm policy is concerned.

Eisenhower and his Secretary of Agriculture, by getting Congress to adopt flexible supports last year, took the first step in killing it. Farmers, by their votes last November, finished the job. Iowa farmers, for example, defeated former Senator Guy Gillette, a 90 percent supports man, and elected a new Senator who favored flexible supports.

This was a clear test on the issue. proved that in the Corn Belt, at least-ranging from Ohio west through Nebraska-rigid supports have lost their glitter. They may still be favored by many Southern producers of cotton, tobacco, and peanuts, and by dairy producers in such States as Michigan and Minnesota. But these are sectional appeals.

Farmers in general seem ready to turn to something else-if not flexible supports as now in the law, at least to something more inviting than 90 percent supports, with their inevitable stress on production controls, and their inevitable piling up of surpluses in Government hands. By voting out their bill, the Agriculture Committee has given every Member of the House a chance to reflect this feeling, without the heat of a Presi-

dential campaign year.

We think that the results will show that it is no longer possible to make political hay with rigid supports. It is plain they do not solve the farm problem. Agricultural policy now must move forward to something better, and not backward to something that farmers have tried, and found seriously wanting, as a broad, national policy.

[From Washington Post and Times Herald of March 21, 19551

NINETY PERCENT POLITICS

More political mesmerism than economic logic is reflected in the bill approved by the House Agriculture Committee to raise mandatory basic farm price supports to 90 per-cent of parity. The committee makes a convincing case that farm income has gone down 22 percent since February 1951, that the January parity ratio was the lowest since 1941, and that farm debt is increasing. This is all true. What the committee neglects to point out, however, is that these conditions developed during a period when basic price supports were pegged at 90 percent. The new law permitting flexible supports down to 821/2 percent this year had nothing to do with these conditions because it will not take effect until new crops are harvested.

No one ought to be deluded that flexible supports are a complete answer to the problems in agriculture. The law came too late to prevent the accumulation of \$7 billion worth of surpluses and it may not be flexible enough. We should like to see the Department of Agriculture give more attention to the problems of low-income farmers through retraining and resettlement. But rigid price supports in the main have helped big farmers, not little ones; and it is the little farmer who is hurt the most by the acreage restrictions that inevitably stem from high fixed supports. High income, in other words, does not necessarily accompany high supports.

Rigid supports, moreover, produce other bad consequences. A good example is the bastardization that has taken place in wheat. Only about one-fifth of the present billionbushel carryover is millable wheat; the remainder is inferior quality fit only for feedbut still eligible for support. So long as this inferior wheat is commingled, it is doubtful how much more wheat the country could expect to export even under the two-price system the committee recommends. The investigation in Texas has amply demonstrated that a racket has developed in the commingling of inferior wheat with quality wheat for export purposes. The committee might well give some attention to curbing such abuses by requiring the Department of Agriculture to recognize quality as a basis for acreage quotas under the price-support

But while there is plenty of room for improvement in the price-support operation, it makes no sense to argue that the remedy for today's distress is the same system that helped cause the disease. That is what the House committee is arguing, and we hope that the House will understand the fallacy when it considers the bill this week. Even opponents of flexible supports ought to recognize that the flexible principle cannot be tested until it has a chance to work.

[From the New York Daily News of March 21, 1955]

CAPITOL STUFF

(By John O'Donnell)

Washington, March 20 .- A year ago, President Eisenhower won an important victory for every American who eats three meals a day and/or pays income tax. He won a victory for the city housewife by giving her some budget relief when she buys at the corner grocery and butcher shop.

Now it appears that the administration will have to win the battle all over again in the next week or 10 days. The Eisenhower administration faces tougher odds

than a year ago.

The victory that Ike won last year was the passage of the highly controversial farm bill which wiped out the fixed price supports (paid for out of income taxes, natch) at 90 percent of parity for basic farm productswheat, corn, rice, and (this a political sop to the South to line them up with the Midwestern farm bloc) tobacco and peanuts.

The administration bill, drawn up by Secretary of Agriculture Ezra Benson, substituted a sliding scale of Government support for the mandatory 90 percent. For example, wheat farmers got support this year at 82.5 percent of parity instead of the previous 90

percent.

Now the House Agricultural Committee, with Harold D. Cooley, Democrat of North Carolina, sitting as chairman in the spot held last year by Republican CLIFFORD R. Hore, of Kansas, has reported a bill which will go gack to the old New Deal-Fair Deal doctrine of rigid guaranties for the farmers, regardless of how it hits the city dweller.

The high-parity advocates hope to win this time by getting on their side the big-city Democrats who voted for the Eisenhower-Benson plan a year ago. This may well happen. CIO's President Walter P. Reuther in particular and the powerful labor lobby on Capitol Hill in general have promised to deliver the votes of Democrats in the big industrial districts to the farm bloc in exchange for a pledge from the farm lobby to boost the minimum wage to \$1.25 an hour. The administration proposes a 90-cent an hour minimum.

M'CORMACK AND CELLER WITH FARM BLOC

Reuther is credited with telling the farm bloc: "Last year you couldn't get the consumers to go along with you. Now, I'll deliver them."

When the vote was taken last year, 34 of the big-city Democrats in the House voted to support the Eisenhower-Benson plan despite the pressure by Americans for Democratic Action, the Political Action Committee of the CIO and the Farmers' Union. Directing the fight for the latter group at present is Truman's Secretary of Agriculture Charles F. (Baldy) Brannan and Truman's top economic adviser Leon Keyserling.

In the earlier battle, these forces swung to their side such Congressmen with large city constituencies as Brooklyn's Emanuel Celler, Manhattan's Franklin D. Roosevelt, Jr., and Boston's present majority leader John W. McCormack. Junior Roosevelt is no longer with us but McCormack and Celler (neither has so much as a truck farm in his district) will line up with the farm bloc and against the housewife with the market basket-and do their best to swing their city Democratic colleagues with them.

Regardless of how the present fight comes out, the new alinement of farm and labor is a significant political signpost pointing toward the 1956 White House campaign. Now looms the possibility of a closely united farm-labor party with Reuther in the driver's seat, attempting to dictate the platform and candidates of the Democratic Party or, if this falls, to go it alone.

As Chairman Cooley, speaking for the farmers, declared; "This is the first time in the 20 years I've been in Congress that we've had clear-cut labor support. If the farmers were as united as the city workers, there would be no question about the outcome.'

IKE AND BENSON WARNED LAST SUMMER

That's one of the political catches, of course. A lot of farmers are opposed to a return to the old rigid theory of price sup-port. Both Eisenhower and Benson were gloomily warned last summer that their farm bill would mean the loss of the farm vote in November's congressional elections.

It didn't work out that way. Take the great farm State of Iowa for example. The administration's farm bill was the one important issue in the Senate battle last November. Veteran Democrat Guy Gillette, who came to the Senate in 1936, damned it from one end of Iowa to the other in his fight for reelection. The then Representative THOMAS E. MARTIN, Gillette's Republican opponent, gave the bill his warmest support. Iowa sent Gillette back to private life and MARTIN to the Senate.

In the coming fight, despite the party division in the committee, the Democrats cannot count on their full majority to back up the effort to ditch the 1954 measure.

FARM BLOC ELATED BY SUPPORT

What the administration now needs, confronted with the sudden and critical danger to one of its pet measures, is time to organize its forces. The Fair Deal farm bloc, elated by the CIO-AFL offer of support (for a political price), had hoped to rush the measure

to a House vote by midweek.

Were this done, it is probable that the leftwingers would have jammed the bill through by a comfortable margin. But now it appears that the powerful House Rules Committee, which alone can give the green light to any legislation, wants time to think it over. Its conservative Democratic chairman, Representative Howard A. Smith of Virginia, who belongs to the same school of economic thought as his apple-growing colleague, Senator HARRY BYRD, can be slow and deliberate when the feeling moves him.

The betting tonight is that there will be no hasty House vote this week. Ten days or a fortnight hence is more likely. By that time the administration's leaders will have a

chance to deploy their forces.

Civil Aviation

EXTENSION OF REMARKS OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. MUNDT. Mr. President, the Scripps-Howard newspaper chain has conscientiously applied itself to the problems of civil aviation since this exciting new field came into existence. In aviation reporting Scripps-Howard has invariably led the field. What this great organization has to say about aviation editorially is certainly worthy of note and study by Members of this body.

The Washington Daily News, Scripps-Howard paper, carried a projective editorial last Saturday entitled "Pioneers' Penalty." In this editorial many inconsistencies which cause hardships to our civil airlines were pointed up in

striking fashion.

Mr. President, I ask unanimous consent to have printed in the RECORD the Washington Daily News editorial of March 19.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PIONEERS' PENALTY

Time was when a flight of a couple of hundred miles in a commercial airplane was a pretty far piece. Then planes were built that could go 500 or even 1,000 miles. That was the period of the pioneer airlines' greatest growth. The great airlines were estab-

More recently, we have witnessed dramatic increases in the range and speed of highflying big planes. This has made technically possible the joining together by nonstop flights big population centers which heretofore were served by airplanes which by necessity put down at intermediate cities for fuel.

Now you'd think that this would result in the already established airline simply laying on a longer range flight between the points It serves, as the newer, more efficient equip-ment became available to it.

But no; it doesn't necessarily work out The vigorous and continuing that way. hassle over air routes reveals how bureaucracy-which likes to expand, and politicswhich likes to play with taxpayers' money, join hands to make air routes cost as much as possible.

For instance, one airline (United) pioneered transcontinental flights, and had to put down at Denver for gas. Now, although its planes will fly just as far and fast as its rivals, it is forbidden to run nonstop transcontinental flights. It's stuck with Denver.

Pan American Airlines pioneered across the Pacific. It was necessary to make the flight in stages: Honolulu, Wake, etc. It is now possible to fly a great-circle route nonstop, but Pan-Am is forbidden to. Its newer rival can, though, even though both companies use the same kind of equipment.

Several United States airlines fly into Mexico City, but an American citizen who wants to go from New York to Mexico City nonstop must fly Air France. If he wants to fly in an American airliner, he must hop on and off airplanes at least twice, and, on some routes, four times. You see, United States airlines were the ploneers, and so they're stuck with their original short-range routes, and are forbidden to use their newer equipment the way it can be used. They are finding themselves slowly being pushed into the role of feeder lines, in many places, as airplanes get steadily bigger and faster, and more and more big population centers can be joined directly, nonstop.

The pioneers don't think this is fair. On the other hand, the newer lines can see no reason why they shouldn't take the air-subsidy gravy away from the pioneers if they

All we say is, it does seem silly to ask the taxpayer for a subsidy to establish some-thing, and then ask him to subsidize something else to knock the first subsidized outfit down.

Education in South Carolina

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered on March 17. 1955, by the Honorable George B. Timmerman, Jr., Governor of South Carolina, to the South Carolina Education Association, at Columbia, S. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE GEORGE BELL TIMMERMAN, JR., GOVERNOR OF SOUTH CAROLINA

Mrs. Medlin, Mr. Coates, ladies and gentlemen, a few dozen years ago I would have been delighted to give you my views on public education. I would have recommended less homework, more recess periods, and longer holidays.

The opportunity to tell you how schools should be run is mine tonight. I am not equal to the opportunity. I am no longer of public-school age. In fact, I think you are doing an excellent job.

Some of the things that I will say tonight I have said before. This is my fourth major speech since January. My inaugural ad-

dress and my first annual message contained comments on public education. I also discussed our schools recently in New York City. Some repetition is therefore inevitable.

OUR TWO PROBLEMS

Our State faces two major problems. Both directly concern our school system.

One is temporary; the other, the crisis of our time.

One can be solved. The remedy is finan-

For the other, there is no easy solution. It involves the many elements of human relationships.

The course of wisdom is to provide the best education we can afford for our children. is essential to their future. It is essential to the future progress of our State.

PUBLIC EDUCATION

The public education and training of our children is properly and traditionally a local responsibility.
With the consent of parents, our State and

its political subdivisions have assumed that responsibility.

PARENTAL RIGHTS IN EDUCATION

The parent is the natural guardian of the

The parental right to determine what is best for the child is fundamental. It is a divine right. It is a basic law of nature that no man, no group of men, can successfully destroy. It finds expression among all living things.

THE PURPOSE OF PUBLIC SCHOOLS

The public school exists for one basic purpose. It is to help the parent in the education of the child.

Educational assistance is the only justification for taking the child from the home and placing him in the public school.

Every hour that the child spends in the classroom is an hour away from the protective care and guidance of the parent.

This places a tremendous responsibility upon the teacher and the school administrator.

The public school possesses no monopoly on education. It is only one of several means available for the education of the child.

The surest way to undermine the public school is to deny the right of the parent to choose the educational environment for the child.

Without the parental right to choose, there can be little parental support for the public school.

Without parental support, the public school cannot survive.

When a public school degenerates to the level of the experimental laboratory, the purpose for its existence as a public school comes to an end.

There is a great need in public education for more realistic thinking in terms of parental rights and less academic speculation in terms of sociology.

SOUTH CAROLINA LAW

Our law, which has parental approval, requires that separate schools be provided for the children of each race and that no child of either race shall attend the schools for children of the other race. Our law applies equally to both races at the same time. It does not require that schools for one race be better than schools for the other race.

The opinion of the Supreme Court of the United States in the school segregation cases holds for the first time in judicial history that equality of treatment is discrimination.

When schools are unequal, the remedy is not to destroy the schools or the law. The remedy is to require that the schools be made equal.

THE INTEGRATIONIST

The integrationist, seeking to abolish parental rights in education, utilizes men of talent and little character to bombard the public with a barrage of false propaganda designed to lynch the character of a fourth of our Nation.

Never before has anyone seriously proposed that the children of two biologically different races should be compelled to mix socially.

The originality for that unique proposal belongs exclusively to the integrationist. Precedents can be found in the pages of

Precedents can be found in the pages of history for almost every other plan. No precedent, no parallel, can be found for

No precedent, no parallel, can be found for compulsory integration.

It is new. It is novel. It is contrary to the divine order of things.

Only an evil mind could conceive it. Only a foolish mind can accept it.

OPPOSING FORCES

Man today stands on the brink of destruction. He has attained this unenviable position through the scientific development of weapons that are powerful enough to wipe life from the face of earth.

This power to destroy all life is held by

two opposing groups.

God-fearing men who accept and defend the dignity of the individual are opposed by materialistic men dedicated to dominating and controlling the lives of all other human beings.

Those who seek to dominate the world seek first to weaken our Nation from within. Their goal is internal social unrest, discord, and dissension. They are not concerned with the progressive development of school advantages for children in the South or in any other sections of the world.

If these forces of evil are able to force on South Carolina the choice of no public schools with peace and friendly relations or public schools with hatred and strife and discord, it will be the first time a State has had to make that choice.

The seeds of dissension can be planted unwittingly by individuals and groups who are unrelated to those who seek our destruction.

Our enemies are resourceful.

The spark of more dissension than many like to admit was struck in May 1954, by the unwitting stroke of a pen.

Outside efforts to cripple our educational program should be opposed by the combined efforts of us all.

CLARENDON CASE

A fanciful fallacy has it that the integrationist is seeking judicial aid to protect a downtrodden minority race.

In the Clarendon County School District there are in round figures 2,800 Negro pupils and only 250 white pupils.

The integrationist is not seeking judicial aid for a minority race. He is seeking judicial aid to compel a handful of white chil-

dren in the Clarendon County School District to attend schools that will be predominantly filled with Negro children. I mention this to keep the record straight.

FINANCES

A State-supported system of public schools is not an isolated entity. It is one of the services rendered by our State government. It is closely related to other State functions.

Our economic health is vital to every State service. It determines in large measure the amount of revenue available for State services. It directly concerns all who work in our school system.

When I took office in January, revenue collections for the current fiscal year were below authorized expenditures. The unprecedented drought, coupled with Hurricane Hazel, had reduced the income of many of our people.

I do not believe that this slump indicates a permanent disorder in our economy. It does present a problem to the general assembly as it seeks to allocate anticipated funds to essential services.

They must provide for necessary State services and must provide funds to pay for those services. That task is not enviable.

EXPANDED ECONOMY

We can expand our ability to finance the things that are beneficial to the extent that we raise the income of our people.

It was that belief that carried me 2 weeks ago to New York City to encourage the location of future plants in South Carolina.

New industries will mean new jobs and

You have been of great benefit to our program of industrial development. In the years ahead, your work will become more evident.

The industries that provide the best jobs and the biggest payrolls need the services of men and women who are capable of attaining a high degree of skill. Education plays a large part in developing ability of that kind.

Some of the industries which have come here from other sections have found executives among our people. This is a sincere compliment to the work of our schooleachers.

As more industries come, and as industrial experience lengthens, the number of South Carolinians who become industrial executives will increase. If these men and women succeed in the opportunities that are being established for them, it will be because of the training that our public-school system has given them.

Your profession, more than any other, will determine how far we will go. The development of our State depends on the development of our people.

DEVELOPMENT OF PUBLIC SCHOOLS

The development of public education in South Carolina has been outstanding.

I do not subscribe to the negative view that we do not do much for public education.

I prefer to accept the more positive approach which says that we have done much and, working together, we will do more.

Too often we hear negative thinkers say that there is more to education than school buildings. That is true, but the implication that this is all that has been accomplished is not true.

In 1937 State aid for teachers' salaries averaged \$250 a year. Today it is \$2,312. During this same period the number of teachers had increased by 4,000.

State aid today accounts for all but \$18 of the average yearly salary of the classroom teacher.

In 1945, recertification of teachers was established, a new salary schedule was adopted, and the Retirement Act was passed.

During my first year as lieutenant governor, the 1947 general assembly increased

teachers' salaries approximately 26½ percent and wrote into law the first permanent professional salary schedule for teachers in the history of our State.

Each year our teacher certification program is providing annual salary increases for many of you.

This year the budget and control board has recommended an appropriation of more than \$40 million for State aid to teachers' salaries. Their recommendation is more than double the entire appropriation for education 8 years ago.

Our school progress has not been limited to increases in aid to teachers' salaries.

In 1936 the rental textbook act was passed. In 1943 the school-lunch act was passed. In 1944 the 12th grade was established to take effect in 1948.

In 1951 the legislature passed the new school law, which provided a 3-percent sales tax pledged to education.

School districts have been reduced from more than a thousand to 103.

Seven hundred and ninety-seven school projects have been approved, which involve expenditures totaling \$127 million. Fifty-nine percent has been allocated to Negro projects. Forty-one percent has been allocated to white projects. These projects include 450 new schools.

These projects have provided 8,000 new classrooms, enough to house 44 percent of the pupils now attending public schools in South Carolina.

Since 1951 transportation has been provided at State expense for all children who live too far from school to walk. The number of buses has been increased 79 percent. This year, almost 4,000 buses transport 240,000 pupils each day. A majority of these are Negro children.

Our school bus operating efficiency compares extremely well nationally. By latest reports, South Carolina is the second State in the Nation in operating efficiency.

We are building a school system equal to any in the Nation.

Our schools for Negroes are now superior to any in the Nation.

By sound planning and sound financing South Carolina has accomplished an educational revolution, while other States continue to face a crisis. The critical school situation in other States has been recognized by the President of the United States. He has advocated a \$7 billion program in an effort to correct the lack of school facilities. We are at least 4 years ahead of that program, despite the fact that our State ranks only 45th in the Nation in per capita income.

Our financial condition is so sound that we could not qualify for Federal aid under the school program proposed by the President.

That report sounded impressive when I gave it in New York City. I believe it would be impressive anywhere. We can be justly proud of what we have done.

And what of the future?

The general assembly has this year enacted into law a plan whereby you will be asked to vote on whether or not you and other members of the State retirement system wish to be included under Federal social security. If a majority of those in the retirement system vote "aye," you will be brought under that system.

Instead of 4 percent of your salary, you will contribute 5 percent.

But your benefits will be increased.

The full benefit of social security will be yours along with Federal survivors insurance, a feature not now included in the State retirement plan. You will retain the better part of State retirement. You will lose nothing that you contribute to the retirement system.

For many low-salaried school employees and those employees who joined the school system late in their working careers, it will mean higher retirement benefits than the State system can provide. SCHOOL BOND CEILING

The general assembly has been requested to increase from one hundred million to one hundred and thirty-seven and one-half million dollars the limit on bonds for school construction.

When this ceiling is increased, it will provide an additional \$81 million for school construction.

SCHOLARSHIPS

The general assembly is considering a bill to provide scholarships for those persons who wish to prepare themselves for the teaching profession.

GRESSETTE COMMITTEE BILLS

There have been enacted during this session of the legislature six measures recommended by the Gressette committee. This action is not a final plan. These measures, however, clarify our present law and will increase the efficiency of present administration.

They give to your school trustees more authority and vest in county boards of education the powers of trustees in those counties having only one school district.

Those additional powers for trustees include the authority to regulate school terms, the power to dispose of real estate with the consent of the county board of education, and the authority to decide when children living in another county shall be admitted to schools.

The most controversial part of the Gressette committee recommendations had to do with school attendance. I assure you we have not weakened ourselves in this respect.

The compulsory public-school attendance law was not widely enforced. Few if any cases were ever made. In practically every school district there were children who should have been in school who were not.

Under the new law, visiting teachers are provided. It is the duty of these teachers to encourage children to attend school.

The visiting teacher has been given authority to accept cash assistance, clothing, shoes, books, and similar articles for those children who are not now attending school for the lack of such articles.

Those parents who themselves were deprived of the benefits of formal education are anxious to have their children attend school. If our educated citizens fail to send their children to school, then I fear it is an indictment of our system.

The courts of our State have authority to deal in cases where parents fall to discharge their obligation to educate their children.

CONCLUSIONS

For many years our public-school system depended on teachers who were dedicated to their profession and our youth. They were underpaid, their equipment was substandard, their school terms often short and irregular.

We have no solved all of our problems. Our school system has not reached perfection. But we have become more conscious of our shortcomings.

I hope those dedicated teachers will be always with us. I hope that their number will increase.

For them, and for all of those men and women connected with our public schools, conditions will improve.

I have outlined here tonight some of the improvements which have been accomplished. I have told you of some of the plans for the future.

I assure you of the importance with which our State views public education. I pledge to you our efforts to meet our problems squarely and solve them to the best of our ability.

Together we will go forward.

Fund Raising by Citizens of Powell Butte, Oreg., for Construction of Community Church

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a most informative and inspiring article from the Sunday Oregonian of March 6, 1955, written by Mr. Wally Hunter, describing the successful efforts of the people of Powell Butte, Oreg., to raise funds for the construction of a community church in Powell Butte. The article demonstrates how public-spirited and courageous people can overcome obstacles to accomplish their goal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARVESTING THE LORD'S ACRE (By Wally Hunter)

Rising out of the sagebrush flats at the tiny community of Powell Butte between Redmond and Frineville is a trim and beautifully appointed church financed entirely through funds raised at one of Oregon's most unique events—the Lord's acre sale.

Powell Butte's community church, a \$61,000 structure unquestionably one of the prettiest in central Oregon, was completed and dedicated last summer, just 8 years after the first Lord's acre sale was held. Since the initial effort it has become a harvest-time tradition.

The unusual theme for the sale, tailor made for for the rural congregation, came from a custom started in the Southern States where the farmers, who found cash hard to come by, supported their churches by annually pledging the produce from one acre of land, or its equivalent, to the Lord.

Powell Butte's 230 member, nonsectarian congregation, under the leadership of Rev. Devere Penholiow, took this idea, added a staggering amount of hard work and imagination, and reached an overall 8-year total of \$40,000. This money has been used solely for the building fund. All other church functions and Reverend Penholiow are supported through other channels. This year's Lord's acre sale, held just before Thanksgiving, was the most successful. It netted a record \$5,400.

Just what crop can be produced on the Lord's acre? A glance at the various items donated by the farmers, townspeople, and merchants of central Oregon would provide several eye-popping surprises.

Among the more unique contributions were 120 gallons of boiling water delivered for the barbecue by a Redmond creamery, and several dozen jars of sourdough starter with a history dating from the stagecoach era. And typical of the personal sacrifices made was that of Charlle Smith, who travels round trip from Tulare, Calif., at his own expense each year so he can preside over the afternoon auction.

Activities start with the opening of the "country store" in the school gym, which adjoins the church. A bevy of church ladies is its proprietors, and customers are folks from all over the Bend-Redmond-Prineville area.

Goods for sale in the good-sized auditorium include the variety found in a supermarket, but the atmosphere is as homey as that of a crossroads cracker-barrel grocery.

Booths and counters lining the walls are crammed with everything from homemade soap and pickled pigs' feet to potted petunias. And it all sells.

starring in the toy department each year are the score or more old-fashioned jumping jacks hand-carved by 89-year old Arthur Page. Grandfatherly Page devotes full time to his private project and is always surrounded by admiring kids at sale time.

Great, white piles of homemade soap is another fast-selling regular item. Manufacturer is 76-year-old Mrs. Mary MacDaniel, who is far ahead of the soap pros in one respect. Her total supply is sold each year sans the tearful efforts of Our Gal Sunday or John's Other Wife.

In just 3 hours the meat market was sold out. During that feverish period the market crew sold the steaks, roast, and hamburger from 4 king-sized steers and 3 hogs. In addition, they moved 100 chickens, 96 ducks, 200 pounds of sausage, and several hundred pounds of lard.

The candy counter, whose calorie count would equal the national debt, netted the treasury a sweet \$275, and more than 250 ples, 50 cakes, 50 dozen cookies, and 25 dozen doughnuts shuttled out of the bakery.

By noon the country store was bare, and male church members donned white aprons and caps to serve the annual noon barbecue. Biggest attraction were 2 cooking pits which held 3 prime steers and 9 hams baked to their juicy finest after 24 hours underground.

Consumed, along with the meat, were 1,500 baked Deschutes Netter Gem potatoes, 120 gallons of coffee, plus 250 pints of milk, donated by the same dairy which contributed the coffee water.

Final event starred Auctioneer Smith, who fast-talked his audience out of \$1,300 while calling such items as hogs, heifers, hay, afghans, pillows, blankets, 4,000 board-feet of lumber, and a 3-year-old gelding.

This year the Powell Butte Church met its building loan payment, bought additional pews, and installed a pipe organ. Next year plans call for a new parsonage, but the dreaming won't end there. Possibilities are unlimited for the parish with the will and willingness to harvest the Lord's acre.

Ole! to the University of San Francisco "Dons"

EXTENSION OF REMARKS

HON, JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. SHELLEY. Mr. Speaker, last Saturday night was a great night for San Francisco, for devotees of the west coast brand of basketball, and for me personally when the University of San Francisco "Dons" sewed up the national collegiate basketball championship by winning the NCAA tournament finals at Kansas City by a handy margin. It was a great night for me because USF is my alma mater, and it was a great night for San Francisco and the west coast because a great team from a great little

school of 2,500 enrollment showed that it could go all the way against the best brand of basketball the rest of the country had to offer. That is why I say "Ole! to the 'Dons' and to their great coach." The evening must have been particularly sweet to Coach Woolpert, since he himself was a star player on the USF team which won the national championship in 1949, the last previous basketball crown won by the "Dons."

Although the USF boys had ranked first in the national standings during the regular season, the NCAA crown was the clincher which removed all doubt as to whether they were real champions, and the green and gold colors came through flying high. I am sure that all of my colleagues, be they from East, West, North, or South, will be glad to join me in congratulating the boys, the coach, and the school on their sweet victory.

This national championship is a fitting crown for the university, now about to celebrate its 100th anniversary. From little St. Ignatius College, founded in May 1855 by the Jesuits, the school has grown until it is now a splendid university. At the time I attended law school there the transition from college to university had just taken place, but even then we had a basketball team, on which I played, and we also played a little football. We did not win any national championships, but we had a lot of fun. As president of the student body in those days, I know what kind of a celebration we cooked up whenever we won a routine game. I can just imagine how bright the bonfires burned on the campus last Saturday night when the news of the final victory hit town. I only wish I had been there to throw another log on the fire and to join in a chorus of the USF victory song in my Irish tenor.

Mr. Speaker, I propose a toast to the University of San Francisco "Dons." national collegiate basketball champions for 1955. Long may they reign!

Turning Victories Into Defeats

EXTENSION OF REMARKS

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Turning Victories Into Defeats," written by Constantine Brown and published in a recent issue of the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

TURNING VICTORIES INTO DEFEATS—YALTA OFFERS US ABUNDANT PROOF THAT INTER-NATIONAL CONFERENCES SHOULDN'T BE HELD IN MIDST OF WAR

(By Constantine Brown)

Publication of the Yalta papers may serve, if nothing else, to support the view long held by many political men in Washington that international conferences should not be held in the midst of a war.

When Secretary of State Hull appeared before executive sessions of the Senate Foreign Relations Committee in 1943 and 1944 and was asked about our policies after the shooting was over he invariably replied; "Gentlemen, our only concern at present is to win the war. We shall cross the diplomatic bridges when we get to them after victory."

It is safe to say the world, and particularly this country, would not be in the present predicament if President Roosevelt and his advisers had followed the Hull horsesense principle. Teheran, Yalta, and Postdam would never have occurred.

We won a resounding military victory in World War II, and suffered an even more re-

sounding diplomatic defeat.

The Teheran, Yalta, and Potsdam meetings were not used to discuss military strategy as they were advertised. Military strategy was discussed only in the light of political deals between the then three allies. At Teheran the long and fruitful association with Britain was shaken because President Roosevelt and some of his advisers, such as Harry Hopkins, decided that it was best for the United States and the world to side with Stalin

Britain appeared to our leaders then as a brave but wornout and crumbling empire. while the U. S. S. R. was viewed as a power of the future. And in order to enlist Stalin's good will for a "better world," which he alone could help establish with his despotic power over an enormous land mass containing 180 million people, he was appeased and given

everything he wanted.

We gave Stalin everything he wanted at Teheran and confirmed and added to these give-aways at Yalta. As a matter of fact, all our military efforts and victories were nullifled at the political conferences of the Big Three which none of the lesser allies who were fighting gallantly on our side, were permitted to attend. They had only hearsay information on what was discussed and de-

The most successful diplomatic gathering of the "big" powers was the Vienna conference, at the end of the Napoleonic wars. The wars were over, Napoleon was defeated, and the military power of France had been crushed. It was only after all military objectives had been attained that the representatives of the then "big four" gathered in the Austrian capital and decided on carving up Europe in a manner which prevented the outbreak of another war of many nations for 100 years.

The Vienna Conference also marked the most prosperous postwar era in the history of

Nothing of the sort happened after the last World War. Had it not been for what is commonly believed to be the inexhaustible resources of this country, Europe and the rest of the world would have gone completely to pieces. The Soviet Union, after having been saved from military disaster and helped to victory by its Western allies, proceeded to enlarge the gains made at the expense of the free nations and expanded both in Europe and Asia. Tens of billions of American tax funds and much of our substance had to be poured into military expenditures in an attempt to arrest this movement. It is by no means certain that we have yet succeeded.

Stalin took advantage of the emotional frame of mind of our wartime leaders at the wartime conferences and succeeded at least partially in creating a split between the British and Americans.

The postwar conferences were held during the period known as the cold war. And we our shirts. The Berlin Conference in 1954 is a typical example. We went there to discuss with the Russian dictators peace treaties for Germany and Austria. They had other ideas. They wanted Indochina for their Chinese Communist allies. After 10 days of talking we yielded and agreed to go to Geneva to debate that issue. Nothing was done about Germany and Austria. Northern Vietnam was surrendered by the French to the Communists.

The unchallengeable fact is that our military victories have been turned into diplomatic defeats mainly because we went to the conference table while fighting was going on to discuss purely political matters with a temporary associate whose overall aims were in ideological opposition to those of the American people.

The results of these conferences were so distasteful that our then leaders decided to cover up by hiding from us the actual concessions they made to the Reds. They have been partly revealed after 10 years in which the American people shed blood, sweat, and tears without actually knowing the real origin of their hardships.

The division of Korea at the 38th parallel was arranged by our representatives at Yalta. It resulted in the Communist aggression of 1950 which cost us 165,000 casualties and some \$15 billion. And we have not yet seen the end of that conflict.

Robbing Peter To Pay Paul

EXTENSION OF REMARKS

HON, FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 16, 1955

SMITH of Mississippi, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sylvia Porter:

It's hard to rob Peter to pay Paul-even when Peter doesn't know he's being robbed. It well may be impossible to rob Peter to pay Paul when Peter does know what you're

up to. It was last July, you recall, that the President hiked the tariff on Swiss watch imports as much as 50 percent. The President admitted he did it reluctantly. But he did it; he ordered the first change in the watch tariff in 18 years. And the move was headlined around the world as a shocking example of how little our high-sounding phrases about freer world trade really mean.

Well, after the administration had hiked the tariff, it discovered it was into a new dilemma For under the trade agreement we have with Switzerland, we must offer compensation for losses she suffers because of the watch-tariff hike by reduction in tariffs on other goods.

We have therefore offered to talk tariff reductions on a long list of goods Switzerland sells us-including a wide variety of textiles, surveying instruments, chemicals, cameras, etc.

A conference between us is set for April in Geneva.

Now comes the ironic Peter-Paul twist.

For the textile industry isn't even waiting for the hearings to indicate what it thinks. Says William Pollock, executive vice president of the Textile Workers Union of America (CIO):

"It is unfair, immoral, and contrary to the national interest for the Federal Government to trade off one group of our citizens against another. . . We do not concede that the American textile industry must be sacrificed to preserve the American watch industry. * *

That isn't mincing words and it's just the

beginning.

The photographic industry certainly can plead that it is essential to our national defense and that it is getting plenty of competition from imports of German, Swiss, and Japanese cameras.

"When the hearings start, you'll hear some fancy fireworks from top men in this industry," forecasts an informed source.

The chemical companies are among the most vigorous, unreconstructed protection-

"De you think we're going to agree to a cut in tariffs just to subsidize the watch people?" said one chemical corporation officer when I called to ask the reaction. "Huh. Not us."

Peter knows he's being robbed to pay Paul-and he has no intentions of standing for it.

The whole miserable chain of events was set off by the tariff hike. And more and more miserable links will be added until the President breaks the chain by canceling the increase. Eventually the hike will be re-The sooner the better. versed.

Tribute to Congressional Medal of Honor Winner, Mitchell Red Cloud, Jr.

EXTENSION OF REMARKS OF

HON, ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. WILEY. Mr. President, this coming Saturday there will occur the reinterment of the mortal remains of Cpl. Mitchell Red Cloud, Jr., of Hatfield, Wis., who was awarded posthumously the Congressional Medal of Honor for gallantry on the field of action in Korea.

I send to the desk the text of a letter which I have addressed to the pastor of his church, along with the text of a newspaper article from the Milwaukee Journal on the award, and the official Army announcement.

I ask unanimous consent that this material be printed in the Appendix of the RECORD by way of my personal sincere tribute to this valiant American.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE. COMMITTEE ON FOREIGN RELATIONS, March 22, 1955.

Pastor MITCHELL WHITERABBIT,

Winnebago Indian Mission Church, Rural Route 5, Black River Falls, Wis.

DEAR PASTOR WHITERABBIT: Thank you very much for your kind invitation to me to convey a communication which could be read at the burial ceremonies of Cpl. Mitchell Red Cloud, Jr., who will be reinterred this coming Saturday.

It is an honor for me to submit the enclosed message.

May I advise that it will be my privilege also to include the text of this letter to you, along with the official Army notice of Corporal Red Cloud's winning of the Congressional Medal of Honor and a newspaper writeup thereon, in the Congressional RECORD

I only regret that the pressure of official duties prevents my being on hand in person

to convey my own personal sincere respects to this great patriotic American. With best wishes, I am,

Sincerely yours,

ALEXANDER WILEY.

A TRIBUTE TO MITCHELL RED CLOUD, JR.

No man can adequately do honor with mere words to what another man has achieved by unforgettable deeds, particularly a deed which has earned for a departed hero the Nation's highest military award.

The sacrifice which Mitchell Red Cloud, Jr., of Hatfield. Wis., made near hill 123 in Korea on November 5, 1950, is too great and too lasting for myself or any other man to attempt adequately to praise.

A mere recall of the facts regarding his actions against a numerically superior foe will convey to all who see or hear the epic

gallantry of Mitchell Red Cloud.

This 28-year-old lad was the descendant of warriors of old who fought with courage in every fray in which they participated. Mitchell Red Cloud, Jr., was worthy of that unbroken tradition. He symbolizes the heroism of the innumerable Americans of Indian descent who have shed their blood and given of their lives in the service of native soil which they themselves had owned long before the coming of the white man, and to which they have, nonetheless, given their patriotic devotion ever since.

To the bereaved mother of this courageous boy, Wisconsin and the Nation convey deepest sympathy in her great loss. She may speak in the Winnebago tongue more readily than in English, but the deed which her son performed speaks with a universal eloquence which no man in any tongue can match.

It is a deed which confirms once again that the color of a man's skin, the accent of a man's tongue, or that of his family or of his loved ones or of his forebears, is meaningless beside the true quality of a man's heart and the grandeur of a man's eternal soul.

Mitchell Red Cloud, Jr., Wisconsin's most courageous modern Indian warrior, will be laid to rest in an ancient ceremonial ground among his ancestors. But in truth, he has consecrated too that far-distant spot in Korea where his lifeblood drained into the ground. And by that consecration he has signified to all free mankind that the sons of America, as dearly as they love their own land have proven their willingness to die for a universal cause-peace and freedom-in lands far distant from their native shores.

It is the prayer and faith of free men everywhere that the selfless deed of Mitchell Red Cloud, Jr., and of 30,000 of his countrymen and of other boys under the United Nations banner who made the supreme sacrifice in Korea, will not have been in vain. May it have marked a turning point in the -old quest of man for a world in which right makes might and in which aggression shall no more occur.

May Mitchell Red Cloud, Jr.'s final resting place be a shrine to patriotic Americans of our State and Nation; and may it serve as a shrine to all free men's dedication to a warless, slaveless world.

The noble red men who fought for freedom on this continent against any odds have had a proud descendant in this fighting marine and Army infantryman who breathed his last on a far-distant continent.

May his matchless deed be an inspiration to us all. Thus, whenever our spirits may whenever we may become discouraged in the quest for peace, whenever voices of pessimists and mongers of gloom are heard throughout the land, may we remember the sight of Cpl. Mitchell Red Cloud, Jr., critically wounded near Chonghyon, Korea, pulling himself to his feet, using a tree for support, and continuing to fire to halt an onrushing enemy.

With that type of dauntless spirit, we cannot fall in our efforts, and we will be worthy of his eternal valor.

God rest his gallant soul.

MEDAL OF HONOR (POSTHUMOUS)

Cpl. Mitchell Red Cloud, Jr., Company E, 19th Infantry Regiment, distinguished himself by conspicuous gallantry and intrepldity above and beyond the call of duty in action against the enemy near Chonghyon, Korea, on November 5, 1950. From his position on the point of a ridge immediately in front of the company command post he was the first to detect the approach of the Chinese Communist forces and give the alarm as the enemy charged from a brush covered area less than 100 feet from him. Springing up he delivered devastating point blank automatic rifle fire into the advancing enemy. His accurate and intense fire checked this assault and gained time for the company to consolidate its defense. With utter fearlessness he maintained his firing position until severely wounded by enemy fire. Refusing assistance he pulled himself to his feet and wrapping his arm around a tree continued his deadly fire until again, and fatally, wounded. This heroic act stopped the enemy from overrunning his company's position and gained time for reorganization and evacuation of the wounded. Corporal Red Cloud's dauntless courage and gallant selfsacrifice reflects the highest credit upon himself and upholds the esteemed traditions of the Army of the United States.

Published in Department of Army General Order No. 26, April 25, 1951.

Date of award: February 19, 1951. Place of birth: Hatfield, Wis.

Entered military service from Wisconsin. Station: Chonghyon, Korea.

KIA November 5, 1950.

CPL. RED CLOUD TO GET A WARRIOR'S FUNERAL-CONGRESSIONAL MEDAL WINNER WHO DIED IN BATTLE TO BE BURIED THIS MONTH

HATFIELD, WIS.-Wisconsin's most courageous modern Indian warrior will be laid to rest among his ancestors this month in a cemetery so ancient that some graves still have the ceremonial boxes from which tribal spirits were "fed."

The warrior was Cpl. Mitchell Red Cloud, Jr., cut down by Communist bullets on November 5, 1950, on a ridge near Chonghyon, Korea. For preventing the enemy from overrunning his company, he was posthumously awarded the Congressional Medal of Honor, the eighth man to win it in the Korean war.

The medal representing the Nation's highest military honor was bestowed upon the hero's graying mother in a solemn ceremony at the Pentagon in Washington, D. C., in 1951 by soft spoken Gen. Omar Bradley. Some sny she swept away a tear. She said later that Indians don't cry, but bear their grief better than that. She finds it easier to speak in the Winnebago tongue than English.

BORN AT HATFIELD

Mrs. Nellie Red Cloud, now near 60, bears her pride well, too. A faint smile slips across her face when honors are bestowed on her son, as many have been.

Already two veterans' organization posts have been named after him-the Veterans of Foreign Wars unit at Black River Falls and the American Legion post at Adams-Friendship. Mrs. Red Cloud has often spent winter months at Friendship.

Young Red Cloud, 28 when he died, was born near this Jackson County community, where the family has always owned its own home on Indian lands. He is the most distinguished alumnus of Black River Falls high school. A bronze wall plaque at the school

pays tribute to his gallantry.

This descendant of warriors served in the Marine Corps for 4 years during World War II. He was one of Carlson's Raiders in the 1st Marine Division. He left Jackson County in 1941 as a junior in high school to fight Midway and Guadalcanal. His father tried to follow him into the corps but was rejected. Mitchell, Sr., a World War I veteran and a writer, died in 1946.

LAID LOW BY MALARIA

Red Cloud was a match for the Japanese but not for malaria. He left Black River Falls weighing 195 but returned to the Indian mission near here at 115 pounds. He got his high-school diploma while in service. When he recovered his health, he joined

the Army in 1948.

James Smoke, Tomah, of the Wisconsin Winnebago Veterans' Association, is not surprised at Red Cloud's valor. He says that the hero's great-grandfather was a fine sol-dier in the Civil War, and Red Cloud's relatives, not even citizens, fought in the Spanish-American War and World War I. Only one Winnebago mission youth was drafted in World War II, Smoke says, the rest volunteered.

On his mother's (Winneshiek) side, Chief Adam Thundercloud still has a silver medal presented to his ancestors (and Mitchell's) by George Washington in 1789, Smoke says.

STOOD IN BREACH ALONE

Red Cloud's rendezvous with death came in the first big battle between United States troops and Chinese Reds. His outfit was dug in near Hill 123 while the numerically superior enemy probed for a weak spot in its bridgehead.

At daybreak on November 5, 1950, the platoon commander, 1st Lt. John A. Anderson, Superior, heard Cpl. Red Cloud shout a warning and open fire on a large enemy force bearing down upon him. Then the corporal fell, critically wounded by burp gunfire, but pulled himself to his feet, wrapped his arm around a tree for support, and continued firing.

The enemy finally overran his lifeless body, but Red Cloud's company had been given time to reorganize. The Winnebago Indian's valor prevented heavy casualties. The enemy turned his body over to United Nations forces and it was buried at Sukchon, North Korea, prior to its return to the United States.

HONOR GUARD PLANNED

A military escort will bring his body from Oakland, Calif., to Black River Falls, arriving March 23. An honor guard of Winnebago Indians will remain with the casket at the Langlois-Galston funeral home there, where a short service will be held at 1:30 p. m., March 26. Services will be held at 2 p. m. at the Evangelical Reform Church at the Indian mission with the Reverend Mitchell Whiterabbit officiating.

The body will be interred near those of the hero's father and brother, Randolph, killed when only 18 on Army maneuvers near Fort Lewis, Wash., in 1949. Another brother, Merlin, of Black River Falls, will stand at his mother's side. He was a Navy Seabee in World War II.

Use of Helicopters in Europe

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

IN THE SENATE OF THE UNITED STATES Tuesday, March 22, 1955

Mr. PAYNE. Mr. President, in a dispatch from Vienna which appeared in

the Portland Press Herald on March 19. 1955, May Craig described the extensive use of helicopters in Europe and an American exhibit on atomic energy in Vienna. This country is far behind Europe in the use of helicopters for commercial air traffic. In order that all of the members of Congress may have an opportunity to read these interesting observations by May Craig, I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE AHEAD IN HELICOPTER USE (By May Craig)

VIENNA.-Europe is ahead of us in using helicopters for passenger service between cities, for short hops. In West Germany we saw it. In Bonn there is no commercial airport. You must get there by boat, road, or train-unless you are lucky enough to get a seat in one of the small helicopters that will set you down in Cologne, for instance in 20 minutes. Here in Vienna I wish we had helicopter service from the airport, which is 20 miles from Vienna.

Belgium's Sabena lines have the first network of passenger helicopters in Europe, and they have hauled 13,000 passengers this summer. Great advantage is that expensive runways and airports are not necessary; therefore the helioports can save the pas senger time. The airline saves money; countries where land is so precious are saved the requisitioning of farms for airfields. Helioports are so small, snow removal is no problem. Some of the largest cities in Europe, previously impractical for air service, are now linked by helicopter.

This Sabena fleet has Brussels as the hub. Businessmen, diplomats, tourists who are lucky enough, use these copters all the time, coming right down on a roof or in the heart of a city on the ground-home by dinnertime. The Sabena says it is arranging for big 40-passenger copters, but that will be some years from now. The Sabena is experimenting with service across the English Channel. Now it takes so long to get from a London hotel to the big conventional airports that it exceeds time of crossing the channel. Air traffic across the channel is taking most of the passengers away from the little steamers that used to toss seasick passengers all night. Flying time across the actual channel is 17 minutes. The conventional airports are not near the channel

Helioports are being planned now near the heart of London, Paris, New York, the dawn of a new era of convenience for travelers. London will have its first one near Waterloo So much of Europe has been bombed that getting sites for helioports is no problem, as it will be in New York.

Amazing exhibit of atomic energy for peaceful uses in industry and medicine and the daily life is now here in Vienna. The exhibit is American, by our Government. It is part of our propaganda of atoms for peace. This exhibit has been in Berlin and goes from here to Hamburg. Crowds jam the street for a block, waiting to get in. It is free.

In the lobby are pictures of the men and Madame Curie, who discovered and developed what is now nuclear energy utilization. Several of them are Americans, of course.

In the first room of the exhibit, painted all black and darkened, there hangs from the ceiling a radiant replica of what an atom is like, with proton and neutron, a whirling ball of gleaming wire with its heart varicolored. One remembers how short a time it is since we believed the atom to be the smallest particle of matter, indivisible.

In the second room is a fine picture of President Eisenhower and a quotation-in

German; this whole exhibit has German captions, of course. He said: "Our country does not intend to destroy, but to build. This is good propaganda, and worth the money we spend on it.

Throughout the exhibit there are demonstrations. For instance, one shows a plant taking radiation and sending it into the leaves, eaten by a cow, lights show how it goes through the digestion, the blood, and down into the milk in the udder. Physical processes can be followed by the radiant particles. It shows how functioning of the human being can be followed, how healing can be applied.

Resolution by Serbian Organizations of Cleveland, Ohio

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, March 18, 1955

Mr. FEIGHAN. Mr. Speaker, the city of Cleveland is proud to number among its population a considerable number of people of Serbian extraction. They are well known in Cleveland for their dedication to the principles for which the United States has beem symbolic since the days of its inception. All these loyal Americans of Serbian extraction have a deep concern for the welfare of their homeland which is now occupied by the Communists. They have very definite views on Tito which should be of interest to all Americans.

The following resolution was adopted at the regular meeting of representatives of 10 Serbian religious, fraternal, human, cultural, and educational organizations of Cleveland, Ohio, consisting of over 2,000 members, held March 5, 1955, at St. Sava Church hall, 1565 East 36th Street, Cleveland, Ohio, and under leave to extend my remarks, I include it here-

Whereas the official representatives of dictatorial Communist regime of Joseph Broz-Tito, and their known and unknown agents and followers in this country, are spreading news and propaganda of a necessity of invitation of said Joseph Broz-Tito to be guest of this country of ours; and

Whereas the American press is publishing stories about invitation of said Communist leader of Yugoslavia, which are disturbing the members of undersigned organizations: and

Whereas the Communist regime of Joseph Broz-Tito does not in any way differ from rest of the Communist regimes, tutored and supported by Soviet Russia; and

Whereas the political, religious and personal freedoms are nonexistent since the inception of the Communist regime of Joseph Broz-Tito in Yugoslavia; and

Whereas Americans of Serbian extraction are not unmindful of the fact, that their relatives in Yugoslavia are daily persecuted and tortured for their religious and political convictions by the order of Joseph Broz-Tito;

Whereas the dignity and honor of the American mothers, whose five sons were bru-tally murdered by the order of said dictator Tito, when they were performing military duty in peaceful mission, will be offended if said Communist dictator was invited to visit this country of ours; and

Whereas the Communist regime of Yugoslavia refused to cooperate with the Western Powers in defense of western civilization and the peace of the world, and by doing so, proved to the rest of the world its place is and always was with the rest of the Communist countries and regimes; and

Whereas Tito's coming here would result in completely opposite effect from that which was outlined by President Eisenhower in his recent address over the TV program "Crusade for Freedom of the Radio Free Eu-rope," that the masses of enslaved peoples behind the Iron Curtains, represent the main, obstacle of Soviet aggression against the West, as long as they are reminded of the fact that the free world has not forgotten them: Therefore be it

Resolved, That we hereby appeal to President Dwight D. Eisenhower, to reject every attempt of the official and unofficial Communist representatives who are trying to bring dictator Joseph Broz-Tito, to hold a speech in the greatest democratic institution and tribunal of liberties and human rights, the American Congress.

We trust that Mr. President will consider our reasons and remove the possibility of an

insult to our great democratic country.

It was further resolved that copy of this resolution be sent to President Eisenhower, Secretary of State Hon. John Foster Dulles, Hon. John W. Bricker, United States Senator from Ohio, Hon. George H. Bender, United States Senator from Ohio, and Hon. Michael A. Feighan, Hon. Frances P. Bolton, Hon. Charles A. Vanik, and Hon. Oliver P. Bolton, Members of the Congress from Cleveland, Ohio.

St. Sava Serbian Orthodox Church, Tom Simich, President; Serbian National Defense, N. J. Vurdelja, President; Fraternal Unit Lodge 15 of SNF, Bosko Zailac, President; St. Sava Lodge 1 of S. B. F. U., Sinisa Djokich, Secretary; Circle of Serbian Sisters, Ana Uzelac, President; Serbian Brothers Help, Inc., Sinisa Djokich, President; Serbian Cultural Club St. Sava, D. Lazarevich, President: Serbian-American Women Club, Zora Herkley, President; Serbian Singing Choir "Njegosh"; Anna Julylia, President; Serbian Chetniks, Dragan Chupkovich, President.

A Long-Range Program Is Needed To Preserve Our American Shipping and Shipbuilding Industries

EXTENSION OF REMARKS OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 8, 1955

Mr. WOLVERTON. Mr. Speaker, the importance of providing a long-term program to preserve the American shipping and shipbuilding industries was recently brought to my attention in a letter received from L. S. Blodgett, editor of Marine Engineering. The conditions he relates in his letter and the facts that support them are astounding. It clearly shows there is a need for remedial legislation at the earliest possible day. It cannot be delayed without resulting in irreparable damage to our shipping and shipbuilding industry. There is a clear and distinct duty to provide action in the matter at once.

The letter to which I refer and the open letter that is mentioned in the letter to me reads as follows:

MARINE ENGINEERING. New York, N. Y., February 28, 1955.

My DEAR REPRESENTATIVE WOLVERTON: For the postwar period, ship orders placed abroad have resulted in losses to the United States industry, employment and purchasing power totaling \$1,800,000,000, and these losses affect

every one of the 48 States.

In fact, right now only 14 merchant vessels of the 1.347 under construction in the world's shippards are being built in this country. To bring this problem and its serious consequences into sharp focus, Marine Engineering has published in its March issue an open letter to you and all other Members of the United States Congress, calling attention to the need for long-range legislation that will:

1. Encourage American ship owners to build and operate ships under the American flag. (In 1954 United States flag ships carried only 29 percent of this Nation's foreign trade.)

2. Insure a modern American-flag fleet, adequate shipbuilding facilities, and an effective force of trained professionals to meet a national emergency.

3. Expand the market for the wide range of materials used in shipbuilding which originate in every one of the 48 States.

Attached you will find a reprint of this open letter, together with a detailed summary of the more than 6 million deadweight tons of shipping ordered by American interests from foreign yards.

We hope you will give this national problem full thought and consideration in terms of long-range remedial legislation. After you have had an opportunity to read the attached reprint, we shall appreciate having any comments you may care to evpress.

Yours very truly,
L. S. BLODGETT

Editor.

[Open letter from Marine Engineering of March 1955]

LONG-RANGE REMEDIAL LEGISLATION FOR THE MARINE INDUSTRY IS NEEDED NOW. ADE-QUATE MERCHANT MARINE AND SHIPBUILDING FACILITIES ARE ESSENTIAL TO SUPPORT THE NATION'S WORLDWIDE COMMITMENTS FOR DE-FENSE. ACTION TO HELP THESE VITAL IN-DUSTRIES IS IMPERATIVE

DEAR MR. CONGRESSMAN: Marine Engineering, which has served the United States marine field for 77 years, views with concern the future of this vital industry. The major roles played by shipping and shipbuilding, both in war and peace, are being neglected. This matter affects you and your constituents, Mr. Congressman, as the marine industry uses materials and products of all 48 States

At the present time this crucial problem needs your attention. The fate of the United States maritime industries hinges on its solution. In the past, Congress has rushed to the aid of these industries as a fireman does to a When the fire is out, it is forgotten until the next alarm is sounded. Such stopgap procedures must be replaced with longrange planning to assure an efficient American merchant fleet needed not only for the safety of the country but for economic reasons as well.

No peacetime industry is adaptable so readily to the needs of war. The same skills are employed to man cargo vessels as naval anxiliaries. The same facilities and skills are used to build warships as are employed in the construction of merchant ships.

The tense world situation could turn into an all-out war in a matter of hours. turning point of World War II occurred when our shipyards were able to produce ships faster than the enemy could sink them. This was accomplished by the mass-production methods undisturbed by enemy bombings. God forbid we find ourselves engaged in another world war, but if it does happen you can be certain that our shipyards will be prime targets for enemy attack. Yes, we have a surplus of World War II ships in our reserve fleet, which even in 1943 were no match for enemy subs. Russia's concentration on submarine construction of improved design is ominous. All of America's industrial might will be of little avail unless our fleet and shipbuilding facilities are geared to such an effort.

One of your big headaches in any future all-out mobilization, Mr. Congressman, will be to offset the handicaps imposed on merchant marine industries in recent years.

It costs money to maintain an American merchant marine, just as it costs money to maintain the Defense Department. Actually, the cost to the Government to support merchant marine is about 1 percent of the cost of the Defense Department. It is the only "arm of defense" which private capital finances.

From the beginning of our history the need for a merchant marine has been recognized. George Washington urged Congress to offer "such encouragement to our own navigation as will render our commerce and agriculture less dependent on foreign bottoms." This need has increased many fold since then. The United States is not as selfsufficient now as it was in earlier years. Raw materials must be imported. Manufactured goods and agricultural products must be exported if we are to maintain a high rate of production.

We firmly believe a strong United Statesflag merchant fleet and a well-equipped, continuously producing shipbuilding industry is not only a national asset but also a national necessity. Some of the questions posed with regard to the merchant marine are outlined below. Volumes of testimony at congressinal hearings and articles are available on each of these questions. We believe simple statements can answer most of them and have given our views on them.

"Can the United States depend upon foreign-flag vessels in time of war or emer-

The experience of two world wars and the Korean emergency should have taught us that we cannot depend on foreign-flag ships when most needed. No future wars will be localized affairs between us and one other nation. Foreign countries will need all their ships to serve their accelerated production and to supply their fighting forces.

President Eisenhower has stated: were caught flat-footed in both world wars because we relied too much upon foreignowned and operated shipping to carry our cargoes abroad and to bring critically needed

supplies to this country."

The availability of American-flag vessels during World War II and the cooperation of the owners resulted in time-charter rates for freighters of \$4 per deadweight ton in-stead of the world rate of \$10.20 with an estimated savings of \$500 million to the Government.

"How important is a United States-flag merchant marine to national defense?"

President Eisenhower has called the merchant marine the "fourth arm of defense." The Army, Navy and Air Force could not long survive in foreign stations without a steady flow of supplies. The merchant marine is the blood stream of the three armed services.

"Is the United States merchant marine costing the taxpayer too much money for value received?"

More money is spent on many individual commodity price supports than is spent on merchant marine subsidies.

A United States-flag fleet on the high seas, serving our industries to and from every part of world, is a protection to all United States business firms. It helps insure against discrimination of the United States exporter in foreign markets by foreign

World War II saw the staggering total of \$17 billion spent on new ship construction. Experts have estimated that if these ships had been built prior to the war, \$13 billion could have been saved in construction costs plus a \$390 million a year interest charge. We are spending each year in interest slightly less than is needed to maintain our ships and shipyards at the required levels.

During the first 14 years of operation under the 1936 Merchant Marine Act, the subsidized lines paid \$130,503,000 in direct Federal income and profit taxes. Operating dif-ferential subsidy payments for the same period totaled just \$16,655,324 above this amount. When indirect taxes are considered, tax revenues to the Government far exceed the amount spent in operating subsidy payments. Foreign lines do not pay these taxes.

As of March 31, 1954, the total postwar operating subsidies after recapture amounted to approximately \$380 million. Figures submitted by the present Maritime Administration indicate higher payments because the Government was behind in payments. When arrears are adjusted, the subsidy appropriations will appear in a better light.

"How is the Government deterring ship-

ping and shipbuilding?"

Many minor and major factors enter this picture. The basic deterrent is the lack of a continuous well-charted program of merchant marine development. The inability of the Government to adopt a comprehensive program and to carry it out affects all phases of the maritime industry.

Disagreement between various governmental agencies on maritime policies has highlighted this lack of a continuous policy.

Nonsupport of our merchant marine on the part of the Department of State has been noted in many instances. The State Department can and should work to aid exporters in developing new markets. Diplomacy can do much to remove restrictions blocking currency exchange and trade imposed by foreign governments.

"Has the United States Government subsidized foreign shippers and shipbuilding?"

The Ship Sales Act sold World War II built vessels to American and foreign operators at the same reduced price. Foreign operators purchased nearly 1,100 of these vessels. Thus, the United States subsidized competitors by nearly \$2,500,000,000.

Millions of dollars of United States money have gone into the rebuilding of German and Japanese shipyards. From 1946 through 1951, the United States spent \$23 million to rehabilitate Japan's merchant fleet. servative estimates indicate that \$36 million of United States economic aid went into European nations to repair war-damaged shippards, shipping and fishing industries, between 1948 and 1951 only. American shipowners had to fight vigor-

ously before they received from Congress a guaranty that 50 percent of United Statesfinanced cargoes be shipped in American bottoms. They had every right to request 100 percent of such cargoes. No other nation is so generous to foreign competition.

"Does a subsidized fleet aid other United States industries and the Nation's economy

as a whole?"

A ship operator, by signing a subsidy con-tract, guarantees the American exporters that there will be ships salling on a definite schedule to deliver his goods to the world's markets. The ship operator must sail on assigned routes on schedule. He cannot flit about as his competitor can, using ships in a trade which happens to be more lucrative. Undue dependence upon foreign ships renders the American shipper vulnerable to excessive rates and inadequate service when shipping conditions are tight.

Further, a subsidized operator must buy his supplies in the United States. He must have all repairs to vessels made in American yards even though foreign yards are cheaper. American-flag ships purchased over \$100 million worth of food supplies in the United States during 1953. Out of the over \$100 million in wages paid to seamen on subsidized vessels each year, approximately \$20 million of this is returned in taxes

"Is it necessary to have tramp ships?"

Over 50 percent of our foreign commerce moves in ships employed in tramp operations, of which 83 percent is carried in foreign Tramp ships move the bulk tramp vessels. commodities: iron ore, coal, wheat, etc., that are so necessary to industry and agriculture. Tramp ships provide the flexible and balshipping services that the Military Sea Transportation Service deems essential to national defense. The tramp fleet provides the nucleus merchant fleet to meet immediate military demands in an emergency.

"Should tramp-ship operations be subsi-

dized?"

The tramp-ship operator is faced with the same high cost of labor as the subsidized operator. Industry requires the available ships to carry bulk cargoes to and from wherever it is needed.

Subsidies are, in effect, an adaptation of the tariff system generally available for the well-being of most American industry. Be-cause the shipping industry is international in scope, it is not susceptible to regulation by tariff legislation. Subsidies are the only way to equalize the differential between American and foreign living standards. Therefore, if applied to one segment of the industry, it should be applied to all segments facing the same problems.

"Should the Government require vessel owners to replace their vessels prior to obsolescence so as to avoid block obsolescence of

the merchant fleet?"

The Nation's shipyards are not geared now to build a quantity of vessels equal to that which will become obsolete in 10 When that period is reached, they will be less able to do so unless given steady work now. By a steady replacement program, planned now and scheduled for years ahead, the ship-yards can plan their work. Competent personnel can be trained and retained. Construction costs will remain at a minimum, A modern merchant fleet will be assured.

However, inducements must be offered to the private shipowners to make it advantageous to them to replace their aging vessels. Ship-construction costs have risen since the present vessels were built. These vessels are being depreciated at what is now a below cost figure. New ships will increase capital expenditures and increase over-all costs.

A realistic program can be worked out so that all ships will be replaced in an orderly manner, the reserve fleet up-graded and the shippards kept busy.
"Is the revival of coastwise and inter-coatal shipping vital?"

In World War II better than 50 percent of all war-material tonnage shipped from this Nation was petroleum products. The bulk of the vessels used were those withdrawn from coastwise service. Fuel and gasoline rationing testifies to this condition.

The coastwise cargo vessels supplied the needed bottoms to carry war materials. do not have this reserve to call on now.

A Government-sponsored revival of coastwise shipping can be started. Industry now is preparing a study on this subject for the Maritime Administration. We urge you to study this report carefully when submitted and take the necessary action.

"Are foreign ships going to be allowed to

steal the Great Lakes trade?"

The Great Lakes' ports have witnessed an alarming increase in foreign vessels carrying waterborne export and import cargo Due to present restrictions in vessel sizes, the United States does not have vessels that can compete on an economical basis with these

small ships. When the St. Lawrence seaway is completed, the influx of foreign vessels will increase. Our present type of ship will not be able to compete even then on an economical basis because the Seaway still will be too shallow. Foreign owners are building now for this trade, we are not.

An essential trade route must be established which includes the lakes ports as an incentive for United States lines to build for this trade.

Accidents are occurring on the lakes at an alarming rate due to the unfamiliarity with lakes regulations by foreign captains. treaty with Canada should be drawn up that will require qualified pilots on all vessels.

"Is our reserve fleet satisfactory for emergency conditions?"

Ships become obsolete because of age in the same manner as any other equipment. The sight of 2,012 vessels in the reserve fleet give a false feeling of security. Most of them are slow Liberty ships unsuited for present day military logistics. The Maritime Administration is working on methods of improving the Liberty ships plus maintenance of other vessels. However, the reserve fleets must be upgraded continually. Useless ships should be scrapped.

"Has the maritime industry done its share in promoting the merchant marine?"

One Congressman who has supported the merchant marine stated that there are so many divergent opinions within the shipping industry itself that it is a wonder how any fair legislation has been passed. The mari-time industry must resolve its differences so that one spokesman gives an overall report of legislative needs.

The shipping industry has overlooked the value of public relations. It spends far less on this item than other comparable induson this item than other comparable maus-tries. The industry is composed of many groups each having divergent views as to what the industry needs. Each is fearful for its own existence. If Congress were more sympathetic to maritime needs, there would be fewer partisan views to confuse Congress.

United States shipping lines have failed to convince industry that it pays to ship in American-flag vessels. Many traffic managers do not realize that it is just as cheap to ship in American-flag vessels as foreign vessels. Only 29 percent of our waterborne export-import trade was carried in United States-flag ships during 1954.

"Has labor a share in the process of building a strong merchant marine?"

The maritime-labor situation must be stabilized. Labor costs represent approximately 60 percent of the total ship-operation cost. In many instances high labor costs are forcing the American-flag ship from the seas. Labor demands must be moderated by the tight competition facing the American shipowner today.

Excessive demands by labor groups on a shipowner confronted with a depressed market will act to the detriment of all. Not only will it reduce the size of the merchant fleet. but will increase the number of trained personnel without work.

Management, labor, and Government must share the responsibilities in achieving maximum efficiency in ship operation and maintaining a strong United States-flag merchant The Nation as a whole has a very marine. large stake in the survival of the American shipping and shipbuilding industry. Therefore, since national interests are paramount, the Government must provide the strong leadership needed. There is no one solution. We hope, Mr. Congressman, that you will give these assorted but related problems the attention they warrant. Yours very truly.

MARINE ENGINEERING.

Implications of Federal Housing

EXTENSION OF REMARKS

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by James J. Kilpatrick, editor of the News Leader of Richmond, Va. The article is entitled "This Was the House of Our Fathers: The Implications of Federal Housing."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS WAS THE HOUSE OF OUR FATHERS: THE IMPLICATIONS OF FEDERAL HOUSING

(By James J. Kilpatrick)

Not very long ago the manager of a publichousing project in the little town of Hopewell, Va., passed an uncomfortable hour upon the public stage. He had issued a certain regulation, in a spirit of economy and social uplift, by which he proposed to maintain his project efficiently and to lead his tenants to the better life. Toward this end, he ordained that henceforth his charges could keep no pets; he decreed that no light bulb of a greater power than 60 watts could burn; and then he laid down the mandate that no tenant could consume intoxicating liquors in his own living room, or for that matter, in the kitchen or anywhere else.

Now the first of these might have been defended as a reasonable restraint upon one's liberties, for man's noblest friend can be a confounded nuisance; and the second of these might possibly have been defended in the name of economy, although this is doubtful. The tenants soon enough would thoughtfully have screwed in two 60-watt bulbs where a single 100-watt bulb had burned before, and the project's light bill would have soared by a full 20 percent.

But there was no defense for the third edict from the manager's office, as a vigilant press made clear forthwith. Virginia editors nailed the villain to a cross of scorn; local radio commentators took up the cry; a national television program found Hopewell and peered myopically into the project. From time to time we scribes and pundits are a little vague toward infringements upon individual freedom; often we overlook some subtle encroachment of the welfare state. This time we were alert. This time we were keen. A man's freedom to take off his shoes and drink beer was at stake, and this high freedom, though it seems not to have been enunciated with the other 4 or 5 in the fogshrouded Atlantic, is the sort of freedom one defends to the death. We gave him the

The upshot of all this was that the Hopewell Housing Authority nervously rescinded the order, or so much of it as applied to light bulbs and bourbons; the project manager, brooding over the unwillingness of fallen man to be uplifted, went back to collecting his rents; the local press went victoriously on to the basketball games. It was a 2-day story.

But unhappily, it seems to me, the real story was missed, for the Hopewell decree spoke eloquently of the evil abroad in our land; these petty, domineering regulations spoke of statism in terms the ordinary man could comprehend. Talk of governmental controls or warn of infringements upon individual liberty, and the talk and the warning are largely lost. But a 100-watt bulb is a tangible thing, and a can of beer may

adorn the humblest home. Here was the hand of the omnipotent state reaching into a citizen's living room, cutting off his lights and corking his bottle; here in Hopewell, in the person of an earnest if misguided Sunday-school teacher, big brother was watching us, and to contemplate the incident was to sense a sudden chill along the spine.

The lesson to be drawn in Hopewell was the lesson that some of us, beating in cheerful futility at our Underwoods, are forever attempting to draw, that governmental controls inevitably must accompany governmental subsidies, that the authority of the state inevitably will be used to curb the liberty of the individual, that as bureaucratic powers are extended, bureaucratic abuses must be extended also. But we do not often find a lesson in a light bulb. Here we did.

The same cold shadow of statism is to be found not merely in one public-housing project in Hopewell, Va., but in 450,000 public-housing units across the country; and not only in public housing, but in housing generally. It is doubtful if 1 person in 10,000 grasps the fantastic magnitude of the Government's operations in the field of housing and mortgage finance, or pauses to consider where current housing acts are taking

So-called low-income public housing offers merely the most obvious manifestation of the statist philosophy at work in the field. We have 3 such public-housing projects in my own city; they include 1,200 one-to-four-bedroom apartments, though they are not often called apartments. They are called units. These units are occupied by 1,200 families whose sole discernible qualification for the bounty of the taxpayers is that their incomes, or at least their reportable, discoverable incomes, are not above certain fixed amounts.

A man and wife may apply for admission provided their incomes do not exceed \$2,200 a year; a family of 4 is eligible up to \$2,400; a family of 5 up to \$2,700 a year. Hereabouts the tenants pay rent that may range all the way from \$14 a month to \$50 a month, depending upon a baffling table of values and factors. So long as they pay up by the sixth of the month and keep their incomes at a deserving sociological level, they are set: Stove and refrigerator furnished, all utilities included in the rent.

In theory, these rentals are supposed to be fixed at a scale one-fifth less than comparable private apartments would command; in practice, we found locally that apartments in the public-housing projects are renting for about half what comparable private property would rent for. Nationally, the American taxpayers put up a subsidy of \$63 million a year to close the gap between rental income and project operating costs. Locally, the figure can be pinned down to something more comprehensible: The taxpayers provide \$370 a year for each of the 1,200 families in our local projects. For every dollar in rent paid by the tenants, the taxpayer pays \$1, too. This is called the taxpayer's contribution to the public-housing program.

The interesting thing is that while low-income public housing is widely recognized and frequently resented (the House of Representatives is forever killing off the public-housing program, only to bow grumpily to the senior wisdom of the Senate), other governmental housing programs continue to expand to the sound of large, approving applause. What so proudly we hall as the boom in private-residential construction is a boom with a faintly hollow sound, for it stems entirely from the proliferate programs of Federal loan insurance.

You do not build a subdivision in America any more without Federal loan insurance; you scarcely build a single house without Federal loan insurance. The first question that is asked of an architect is not if his

plan is sound, or if his stresses are properly computed; the first question is whether his design meets the MPR, or to spell out the abbreviation, whether it meets the minimum property requirements of the Federal Housing Administration. Woe betide the builder whose kitchen shelf is 10½ deep instead of 11 inches, or whose closet is 35 inches wide instead of 36. Let us use steel cut nails on the flooring. Let us use steel cut nails, or there will be no insurance; no insurance, no loan; no loan, no house.

The building industry, that citadel of the free-enterprise system, has seen the light; it worships at the shrine of FIIA. And strange to say, the builders who wax indignant at public-housing subsidies are marvelously warm to loan insurance. It is plainly wrong for the taxpayer to pay the tenant's rent, but somehow plainly right for the taxpayer to assume the lender's risk.

What does the risk amount to? The Hoover Commission, in its report of March 14, put total loans, guaranties, commitments, and authorizations of all agencies in the housing field at \$59 billion. Senator Byrd, in a separate study, has placed the figure at \$61 billion. Whatever the accurate figure is, the contingent liability for housing loans alone evidently is now larger than the entire national debt of just 12 years ago.

tional debt of just 12 years ago.

No one assumes, of course, that all of these loans will suddenly go bad. Although the number of foreclosures is increasing, the number of foreclosures is still exceedingly small. Yet contingently and potentially, ownership of the vast bulk of housing erected in the past 10 years lies in the hands of the Federal Government.

They are far off, those hands, but they are busy hands. They are writing manuals, prescribing specifications, dispatching emissaries, issuing regulations. They are conducting research, they are testing materials, they are defining standards. They are bindand loosing controlling and directing. And many a responsible builder and banker and real-estate man, aware of this pervading influence from on high, admits an occasional uneasiness toward it all. It is faintly humiliating, somehow, for a good craftsman to submit his blueprints to officialdom; it is a bit enfeebling, in a sense, for a prudent lender to qualify his pledge of financial support on approval of Federal loan insurance. The homeowner, ready to sell his property, feels a sense of helplessness when he finds that the responsibility for fixing his price has been taken effectively out of his hands: No GI loan can be insured on property sold at a price higher than the GI appraisal, and the word of the appraiser is decisive.

To be sure, there is present, demonstable good to be found in the housing program. Many families move out of the slums and into a public-housing project, find there a measure of fresh dignity and hope, and then move out of the project as family income increases. In the field of loan insurance, it is doubtless true that Government support has stabilized the money market and opened new and profitable opportunities for builders and lenders. Many a young veteran, buying his house like rent, will make a go of the venture and find a source of pride, an inspiration to personal industry, in the sense of homeownership.

But goods and benefits must be weighed in terms of the price one pays, and the price is to be reckoned in much more than dollar subsidies and Government salaries. We pay for the housing program in terms of responsibilities surrendered and authorities granted; we pay in the extension of Government into the housing business, which is no business of Government; we pay in the abuses of privilege and the corruptions of power; we pay in a fantastic bubble of 40-year loans on small equity or no equity at all; and we pay, almost unknowingly, in the diminishing of those qualities of thrift and personal sacrifice and hard achievement that once

made the purchase of a home a thrilling and prideful milestone for the family.

The loss is not a loss of money. It is a loss

The loss is not a loss of money. It is a loss calculated in the vitality and integrity of the enterprise system. When the notion takes root that whole groups of citizens have a right to be subsidized in their rent by their brethren, something happens to old standards of family incentive and personal initiative. When builders and bankers alike surrender their responsibilities so that remote taxpayers may hold the risk, there is a weakening of the fiber, a little tarnishing of the spirit.

And when the presence of Government pervades the whole structure, counting the lightbulbs and measuring the shingles, we let down the moat, we open the castle. This was the house of our fathers. Soberly, one raises the question: What have we made of it now?

Indian Winter

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. METCALF. Mr. Speaker, Harold E. Fey, executive editor of the Christian Century, has been making a personal survey of the Indian reservations in the West.

His first article is an interesting report of an objective observer and merits the thoughtful consideration of all Members concerned with legislation affecting the American Indians:

INDIAN WINTER

(First of a series of eyewitness articles on the present situation of the American Indians)

(By Harold E. Fey)

During the past frigid month I have circled the western two-thirds of the United States, visiting the major areas of Indian life and talking with Indians and whites about what the future holds for the 400,000 descendants of the original Americans. Almost without exception, I found Indian leaders full of foreboding. The present attitude of the American people, including that of the people who seek to do the Indians good, worries them. They have long memories. They recall other periods like this one and remember what happened then. The actions of recent Congresses fill them with alarm, When Glenn L. Emmons, United States Commissioner of Indian Affairs, visited the Northwest on January 21, 1955, the official representatives of the numerous Indian tribes in that area presented him with a Written statement. One sentence reads: Indian affairs are in a crisis more acute than any that has faced the Indians at any time."

When it is recalled that this was said by representatives of a people which less than a century ago seemed to be headed for extinction, its gravity is apparent. If not all Indians would attach such urgency to their appraisal of the immediate situation, it is because pressures affecting all Indians have reached their greatest intensity in the re-Source-rich Northwest. But even in the Southwest, Indian leaders with whom I talked were aware that they will not be spared for very long, and realize that they must make common cause or be overwhelmed. And near the Canadian border a tribal chairman said Indians are preparing to fight with all their might against present trends in Washington, trends which reflect the attitudes of average Americans in all parts of the country. He said that until recently his people believed they would do better just to throw themselves on the mercy of the Government. The results convinced them that the Government has no mercy, that slambang tactics are the right ones even though white men tell them this approach is bad.

HUMAN RELATIONS ARE PRIMARY

It is right that the American people, whose turn toward walking humbly with God has been the subject of so much recent comment, should also do justily and love mercy. Justice and mercy should be exercised in relation to their Indian minority as well as in other relations. No question of human relations involves our spiritual integrity more deeply than this one. At no point does the relation between the "white" and "colored" races more clear pose the issue of social justice. In no situation on this continent could an awakened conscience do so much good, and do it so quickly. The means to correct ancient and recurring wrongs are at hand. It is possible for us to make our actions more nearly consistent with our Christian professions. All we lack is knowledge of a situation that exists here in our own country right under our noses, humility to confess our sins, and the will to repent of them.

It is expedient as well as right that we should move now for justice and help for American Indians. Nearly every day some refugee from Europe or Asia assures us that the United States is the hope of the oppressed people of the world. We could dismiss these statements as self-serving rhetoric except for evidence that these widespread hopes govern the policies of a good share of the governments of the world. Faith and hope in America is a political fact of inescapable significance. Whether we like it or not, whether we are prepared for it or not, history has laid this faith and hope on our shoulders. Our burden of responsibility compels us to ask ourselves: Are we as just, compassionate, careful and wise as should be to bear this burden with fidelity? The answer to that question depends on the answer to another: Have we achieved at home what we are asked to do abroad?

ONE POLICY NOT TRIED

Honesty requires us to admit that we have largely bungled our relations with the original inhabitants of this continent and their descendants. In more than three centuries of association with this race, we have tried nearly everything. Some of the early European invaders tried enslavement, and that failed. Others tried to divide and rule, and that did not accomplish the desired results. From time to time there have been local attempts at extermination. These did not succeed, although they came closer than we like to think. Then many people, including some missionaries, tried to make the Indian over in our own image, without conspicuous or lasting success. The policy fol-lowed by our Government with most per-The policy folsistence has been to isolate the Indian, first in underdeveloped parts of the country, and then on reservations. But that has not worked either.

Since the beginning of this century our Government has spent more than a billion dollars to improve the economic condition of this minority. But the simple materialistic faith that filling stomachs solves all other problems, which seems to underlie our policy toward underdeveloped countries threatened with communism, has not solved the problem of our relations with the Indians. The only policy we have not tried consistently, determinedly and on a large scale is the policy of study of the Indian heritage, respect for the Indian as an individual and for his social groupings as essential to his way of life, and persistent,

long-term cooperation on the basis of full Indian understanding and consent toward the realization of a good life for both races in the continental home we occupy together.

Perhaps one reason we shy away from the discipline of understanding Indian attitudes today is that we fear to see ourselves as others see us. We should confront that necessity, in the present situation of the United States in world affairs, and recognize that it applies at home as well as abroad. We should examine the assumptions Indians have concerning American Indian affairs. Such an inquiry will help us do our part to improve relations with the Indians by establishing them on a basis of consent and mutuality. It will also help us understand something of the assumptions which dominate the thinking of people in India, Indonesia, Latin America, and many other places whose destiny is linked with our own, It may even help us understand ourselves

In February 1954 the editors of the American Anthropologist worked up a list of the basic assumptions underlying our national approach to what is sometimes inaccurately referred to as the "Indian problem." problem is at least two-sided, but we will not discuss that now.) These assumptions were circulated among more than a score of scholars and administrators, who made their comments and corrections. The corrected version was then discussed in a conference held at the University of Chicago on February 24, 1954, and the results appeared in the June issue of the American Anthropologist. Part of the record is a tentative list of Indian assumptions concerning American-Indian affairs. Ruth Hill Useem, who presented these to the conference, did not venture to assert that these assumptions were held by all Indians, but based her statement on what she knows of the Sioux. However, I found them echoed many times among the dozen tribes I visited in a swing from Santa Fe to Tacoma to Bismarck.

WHY DO THEY FEAR?

Mrs. Useem started by observing that "most Indian assumptions are negative, unenthusiastic and fearful-the outlook of a heaten people." Nevertheless the first Indian assumption reveals a certain thoughness. It is that "the Indian in the foreseeable future will remain a series of separate and identifiable groups, despite the fact that some individuals are absorbed into the dominant population." This contrasts sharply with the assumption which the conference found to underlie white American thinking and Government policy: That "assimilation of the American Indian into the normal stream of American life is inevitable," that "Indian tribes and communities will disappear." This fundamental contradiction helps to explain centuries of failure and fustration in Indian-non-Indian relations.

Here the anthropologists side with the Indians. They point out that while there is continuing adaptation of Indian groups to the non-Indian society around them, "forced or coercive assimilation is self-defeating in practice, tending to antagonize and drive underground in the Indian groups those leaders who might develop constructive and . . noncooperative attitudes toward * Indian society." They believe Indian communities will continue to maintain themselves as cultural islands, of which many already exist in the stream of American society. And plain Americans who are not anthropologists may well ask themselves: Why not? What is so wrong with self-determination that we cannot tolerate the thought that anybody should be different from ourselves, who differ so much from each other?

The second Indian assumption is that "over the years, the Indian can expect no consistency in policies concerning him. No

matter what the policy is today, tomorrow it will be different, even opposite." History sustains this dour opinion. Following the American Revolution, Indians were driven over the Alleghenies and told they might live and hunt there freely. Then President Andrew Jackson headed the movement which pursued them across the Mississippi, where they were told they might roam undisturbed. Then gold was discovered in the Far West, and the reservation system was started so that Indians would not endanger the wagon trains bound for California or Oregon. Next the Government, without consulting its wards, decided to make farmers and stockmen out of them. Beginning in the eighties, it allotted reservation land for individual holdings,

The result was that land in Indian hands shrank from 130 million to 52 million acres in less than 50 years, and Indian population reached the lowest point since long before Columbus. In 1934 the Government reversed itself again and passed the Indian Reorganization Act, which stopped sales of Indian land to non-Indians. Conditions improved for the Indians, although they were still the most disadvantaged group in American life. Then last year came another turn. Congress announced that the policy of the United States was to terminate the responsibilities the Federal Government had assumed in a long series of treaties and agreements written to endure "so long as the grass shall grow and the waters run."

A third Indian assumption is that "the

interests of the dominant society will take precedence over the interests of the Indians in any policy decision; Indian interests will be considered only when they coincide [with] or do not contradict white interests." The assumptions of white people are that the Government coddles the Indians, that they receive more consideration than they deserve. But what can we reply to the Three Affiliated Tribes of North Dakota when they ask us to witness what happened to their reservation lands when the white people of that State and of the Missouri valley decided to build Garrison Dam? As usual, the Indians were not consulted by the Congress which in 1944 authorized construction of the dam. Today their reservation is cut into five segments, with all the best land gone and their former homes, schools, and churches inundated. Or what shall we say to the Pimas and Papagos of Arizona, whose irrigation water-assured by solemn agreements supported by acts of Congress, which built dams and impounded water on which Indians held prior claim-is being taken by white farmers? Or to the Klamaths of Oregon or the Menominees of Wisconsin, whose valuable timber resources are in jeopardy?

NOT SO HELPLESS

The fourth Indian assumption is that "the Indian can do little to affect decisions concerning" his own rights, and that "non-Indians who are most sympathetic to Indian interests are individuals who have little power either to make or to influence decisions." These sympathetic but ineffective people conspicuously include churchmen and university people. But two factors contradict this gloomy prognosis. All over the country there is a wholesome beginning of organization by Indians to do just what most Indians assume cannot be done-to affect decisions concerning Indian rights. today the organizations of people friendly to the Indian have come closer to agreeing on what to do in his defense than ever in the past. These friendly forces include the leadership of Protestant and Roman Catholic churches, which do have considerable power to influence decisions if they choose to exert it.

There can be no doubt that the fifth Indian assumption is correct: "That whatever the policy enacted, the Indians will be told that such policy is in his best interests, or is for his own good." The sixth is much more important: "That the turning over of Indian affairs to the States is inevitable." There are many signs that this is coming, In the beautiful council house at Window Rock, Ariz., I heard an agricultural-extension agent tell the 73 men and 1 woman on the Navaho tribal council what he thought this was giong to mean to the 75,000 people in this largest of the Indian tribes in the United States. Faces were tense as he spoke, and prolonged discussion ensued when he had finished. Some spoke in Navaho and others in English, but each language was translated into the other. There was general agreement that there was no way to stop the development and that certain things, which were also laid down by Mrs. Useem, would follow:

"(a) That a State administration is more likely to be hostile to Indians than is the Federal administration. There is more patterned hostility toward Indians locally. (b) That State administrations will be less able to render health and welfare services (e. g., hospital care, relief, rehabilitation). Local State governments have fewer resources to run these programs than have the Federal agencies. (c) The State administrations will be run by persons with whom the Indians are in direct competition for land, tax dollars, services, etc., and therefore, even though they may understand the Indian more, they will be less likely to take Indian interests into account."

A SACRED TRUST

Two other Indian assumptions remain. One is that the stated goals of a policy may be and usually are quite different from the consequences of a policy, and that the goals are usually more favorable to Indians than the consequences. It is possible that this assumption applies to all human purposes, but the Indian finds difficulty in detecting the principle of universality in his particular situation, which makes him especially sensitive to hypocrisy. Finally, he assumes that some type of governmental agency should and will be responsible for Indian affairs, no matter what is said. He knows that Senator MALONE, of Nevada, will continue every year to introduce his perennial bill to abolish the Indian Bureau, but he expects the Bureau to survive in some form. He will continue to berate the Indian Bureau for its failures to come up to his hopes. But in spite of innumerable betrayals, he cannot believe that the people of the United States will finally and irrevocably violate what he regards as a sacred and perpetual trust.

These assumptions help explain negative, unenthusiastic, fearful mood of our Indian fellow citizens today. It remains to ask to what extent they are justified. interesting light was cast on this question by a farmer from Washington State-a fellow passenger on a bus northward bound in California. At a luncheon stop I learned that he had been basking in the sun at Phoenix, but had not seen a large cotton farm run by Indians in that vicinity. He was skeptical about my report concerning the success of the farm, which is managed and operated entirely by Indians. "I haven't heard of an Indian working since I was a boy," he said. "They're no good. was young two Indians came and helped us shear sheep and butcher, but they weren't spoiled as they all are today. Now the more you do for them the less they do for themselves. I hear the Government has given the Yakimas \$15 million because the Dalles Dam will spoil their fishing rights on the Columbia River. It doesn't make sense. They have the best land in Washington and don't have to pay taxes on it. They just lease it to white farmers and live in idleness. Imagine grown men dressing up in feathers and dancing. Now I'm told they are trying to claim the fishing rights on the whole Yakima River just because the lower river flows through their reservation. What brass. Some Congressman has put in a bill that would make them all leave their reservations and go out and work like other people. It would be a good thing if it passed. We are certainly not getting anywhere the way we are going."

It is not difficult to see the relation between this farmer's mood and the apprehensions of Indians in the United States today. For it happens that the views held by this farmer, with their explosive mixture of truth and error, are politically powerful in Washington and Olympia and other capitals. If they prevail and become the basis of public policy, they will only compound centuries of tragedy and frustration. To keep that from happening and to open the way for a new and mutually rewarding day in the relations between Indians and non-Indians, we must seek a deeper insight. The next article will look into Indian experience with Anglo-Saxon law and customs.

Resolutions of the Free Sons of Israel

EXTENSION OF REMARKS

HON, ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include

leave to extend my remarks, I include herewith two resolutions passed by the Free Sons of Israel at their recent conference held in New York: Whereas one line of American policy has

depended upon the erroneous assumption that West Germany could be made into becoming a dependable ally of the free world against totalitarianism; and

Whereas it appears from the growth and resurgence of nazism within Germany that she is not effectively interested in adopting an American form of political democracy; and

Whereas in spite of enormous financial and other inducements, there is a great lack of unanimity in Germany of support for any form of political or military alliance with countries of the Western World: Therefore be it

Resolved, That this conference urges upon the Government and the people of the United States, and all right-thinking people of the organizations with which they may be connected, that the Government of this country ought to engage in an immediate reappraisal of any and all policies concerning our relationship with Germany and any and all policies dependent upon any anticipated military or political support from Germany in situations involving conflict between the interests of the free world and the totalitarian governments.

Whereas investigations conducted by an official committee of the United States Senate 4 years ago disclosed that an enormous illicit trade had developed between West Germany and the Iron Curtain areas, in spite of Allied regulations to the contrary:

Whereas current trade statistics show that West Germany has become a major exporter of manufactured articles to countries in the Soviet area of control: Be it

Resolved, That the United States of America immediately exert its authority to forbid the continuation of such trade between West Germany and countries in the Soviet area. H. R. 4644

SPEECH

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. DINGELL, Mr. Speaker, the inadequacy of the bill, H. R. 4644, providing for pay increases relating to postal employees according to my appraisal is insufficient in its provisions. I cannot support this bill, which is said to be the committee's best composite effort, because I am committed to a straight across the board increase of 10 percent. I was, I believe, the first Member of the House to introduce a bill providing for a straight 10-percent acrossthe-board increase, and I do not like this 616 or 716 percent. I thought that this time the committee and the House would go "whole hog" and for once try to come abreast of the pay problem and that it would be done without quibbling or procrastination. Unfortunately, the majority of the committee did not see their way clear to do this.

Many of the committee members felt they must go along with the Eisenhower proposal of 5 percent or a little bit above that figure; others on the committee were browbeaten by the administration to go along with the program under threat of a Presidential veto. As a party man I would not permit the chiefs in my party ever to dictate to me in this instance or in any other. They never have

and they never will.

I have no fear about a Presidential veto either. In the first place, I do not think the President will have the courage to attempt to veto this early in the session. I did not think it was smart or courageous when the President waited until Congress went home in the 83d session before he vetoed the previous pay raise. Not having that advantage in this session he will not take the risk of a veto, but even if he should I would be the first one to vote to override it. because the demands of the postal employees and of the Federal employees generally for a 10-percent increase is not. according to my mind, too much, but I would rather have it too much than too little. I joined with my good friends. Senators NEELY and Johnston, and introduced an identical bill in the House, H. R. 2117, for the purpose of eliminating differences and controversy between the two Houses, and thus expediting the earliest possible pay increase law.

As a matter of principle I cannot vote for this bill. I do not believe the House will sustain the passage of the bill under suspension of rules, nor do I believe that the distinguished chairman of the committee should have made such an attempt, because it is obnoxious and offensive for the reason that it bars amendments and does not allow a sufficiency of debate. So on the double score of niggardliness and because the average Member is being denied the privilege of expressing an opinion or offering an amendment for a higher rate of pay,

I repeat, Mr. Speaker, I shall vote against the bill. Should the bill be defeated, there will be an opportunity to vote on the Senate bill which provides a retroactive clause at a higher rate of pay, and is in every respect more generous and desirable. If worse comes to worst, any attempt to bottle up the bill to give the President another chance at postadjournment veto can, and I am sure will be circumvented by the initiation of a petition which will blast my companion bill to the Senate Johnston-Neely bill out of committee. That is, of course, a last resort, and I would prefer not to undertake it, but there may be no choice nor any other alternative.

At any rate, I am voting against the Murray bill, H. R. 4644, and am urging my colleagues to do likewise.

Federal Aid for School Construction

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1955

Mr. METCALF. Mr. Speaker, the bogy of undue Federal control over education if Federal aid for school construction is given is discussed by John K. Norton in the NEA Journal for March 1955. Dr. Norton is head of the department of educational administration, Teachers College, Columbia. He effectively dispels any fears of infringement on traditional American educational policy by the enactment of legislation for Federal aid for school construction.

The complete article follows:

FEDERAL AID FOR SCHOOL CONSTRUCTION

(By John K. Norton)

Probably the most frequently voiced objection to Federal aid to public education today is that American education is by tradition strictly a State-local function with which the Federal Government should not be concerned.

Is this objection valid? History gives us the answer.

In the ordinance of 1785, 2 years before the Constitution was drafted, the Continental Congress reserved lot No. 16 of every township in the Northwest Territory for the maintenance of public schools. The same action was soon extended to the Southwest.

The ordinance of 1787 set up a clear policy of Federal aid for education, a policy which was subsequently followed by the Federal Government.

The Federal aid provided in the early period of our history was no mean amount. The 175 million acres set aside for school support was the greatest grant for the development of education in all history.

It is a historical fact that the Federal Government played a substantial role in the establishment of our State school systems and in providing for their support.

This decisive action of the national Government in promoting public education was consistent with the viewpoint of our Founding Fathers.

Washington advocated the establishment of a national university. Franklin, Adams, Madison, Jefferson, and many others emphasized the necessity of popular education as a foundation for a free society.

Since 1785 no less than 50 major bills concerning education have been enacted by Congress.

In 1862 Abraham Lincoln signed a bill providing for the establishment of a college of agricultural and mechanical arts in every State. This action, along with the supplementary acts of 1887 and 1914 providing for the experiment stations and the extension service, brought into being a remarkable program of collegiate and adult education. Federal legislation established this program, and Federal aid ever since 1862 has provided for its partial support.

In 1917, Woodrow Wilson signed a bill providing for the establishment and continuing support of a program of vocational education at the secondary level in all States.

Fifty-six major educational activities are now financed by the Federal Government at an annual cost of more than a billion dol-

Federal interest in education and Federal aid for its promotion are definitely a part of the American tradition. Those who oppose Federal aid for school-building construction on the basis that education is solely a State-local matter are disregarding historical fact.

A second reason given by some people for opposing Federal aid for school buildings is that the need is not great enough to justify Federal assistance.

And yet to correct present housing conditions in the public schools within a 5-year period would require over \$5 billion a year. In an 8-year effort, close to \$4 billion annual expenditure would be necessary.

Unless decisive action is taken, the classroom shortage will become more acute on the basis of children already born but not yet of school age. The annual enrollment increase will be well over a million a year in the immediate future, and—unless the stork gets wing weary—will continue to rise in the more remote future.

There are children now graduating from the eighth grade who have never attended school except on a part-time basis. More than a million and a half children are attending school in rented churches and garages and other makeshift quarters. Many are crowded into basement rooms, hallways, and obsolete firetraps.

Some people insist that the States can meet the need for school construction solely on their own resources. They say that the United States is merely a summation of the 48 States.

To these people we should say that there is a vast difference between action by each of the 48 States individually and Federal action. For example, industries and other taxpaying entities seeking to dodge their just share of the cost of schools and other public enterprises are able to move from one State to another, bribed by the prospect of a tax-free status. Such maneuvers are not possible when the Federal Government is concerned.

But, say opponents of Federal school aid, the way to meet the need is to slash Federal expenses and thereby make revenue available to States and localities.

This is a disarming argument, but the facts are that in spite of much fanfare about reducing Federal taxation, the cuts made thus far have been relatively small, and estimates indicate that in 1956 the Federal Government expects to collect more revenue than in 1955. Nor is there much promise of substantial future cuts, considering the world situation.

A variety of proposals for action in the States is being made by those who at any price would deny Federal assistance to education.

We are told that the local property tax should be reformed. This is true. But to-day the local property tax—which falls primarily on homeowners with modest in-

come—is raising more than half of the total public-school bill. Would the opponents of Pederal aid burden these taxpayers further?

Then, we are told that more State aid should be raised for education. This is true for some States. However, for the country as a whole, there has been a substantial increase both in the amount and proportion of State aid for education. In 1920, 14 percent of public-school funds came from the States. In 1954-55, the figure is 38 percent. Would that the Federal Government had been similarly responsive to school needs.

The States differ substantially in ability to finance education. Sole reliance on State fiscal capacity promises in the future, as in the past, to result in shocking inequalities of educational opportunity among the States.

We are also told that the States should

We are also told that the States should reorganize their local school districts. This is still true of some States. No State, however, has reduced expenditures by consolidating school districts.

There are two other points that are likely to be raised by those who place money high and children low in their scale of values.

The first is: Why do anything to increase Federal taxes—why not reduce them instead? We can and should afford public expenditures which are clearly essential to the progress and security of the United States. If these can be assured on a reduced tax bill, that will be fine. But if essential services such as education require increased funds, it would be folly not to provide them.

Another objection raised by the opponents of adequate school support is that we are too poor—our economy cannot afford the cost. This objection is perhaps the most unsound of all.

Gross national production exceeds \$355 billion a year. Disposable personal income, which is what individuals have to spend after personal tax payments, is at an alltime high. Disposable personal income per capita increased 45 percent in purchasing power between 1939 and 1954. Personal savings, approximating 20 billions a year, far exceed those of any other period.

Beardsley Ruml in a recent report of the National Citizens Commission for the Public Schools estimates on the basis of reasonable assumptions that: "The gross national product in 1965 can hardly be less than \$525 billion."

It is ridiculous to claim that such an economy cannot afford to spend whatever is necessary to house satisfactorily its school children.

Objectors to Federal assistance for school buildings always conjure up the bogeyman of Federal control.

Federal control of education does not result from mysterious forces which creep out of the night. The nature of the educational legislation is the determining factor.

If detailed specifications are contained in educational legislation, if special Federal authorities are created, if Federal agents are given both supervisory authority and discretion to determine how much money each State or locality is to receive, then Federal control of education is foreordained.

But, we have many examples of Federal aid for education which have not resulted in control.

Witness our program of higher education, research, and adult education established by the act of 1862. How many people think of our State land-grant colleges as under Federal control? And yet the Federal Government appropriates about \$50 million a year for the support of these institutions and their related activities.

Federal control has been avoided in this and other examples because the legislation did not specify in detail how the States were to use the funds in developing educational undertakings, and did not set up Federal authorities with general supervisory and discretionary fiscal powers.

As a result, the people in the States took charge and went beyond original conceptions as to the educational programs to be developed and the amount of support to be provided from State and local funds.

This experience seems to justify a basic conclusion: Federal aid properly allocated to education in the States strengthens rather than weakens State-local initiative, and this is the surest safeguard against control at the Federal level. Federal control is most likely to result from Federal fiscal starvation of the schools, which so weakens them that eventually the Federal Government feels obliged to take over.

The fear that supplementary Federal aid for such an essential purpose as school buildings will result in loss of local initiative finds little basis in past experience.

Most of the States now have offices in their State departments of education qualified to provide overall leadership in developing local school-building programs. This provides an additional means of resistance to possible Federal domination.

Furthermore, the area of school building is one of the least open to the dangers of Federal control. Even if some control were exercised in this area it would not lead to the capture of public education by the central Government.

In reviewing past experience, we find the considerations and principles which may well govern future Federal-State relations in education.

It should be a cooperative relationship. The Federal Government should promote and financially aid educational activities which are of fundamental national concern. Legislation to bring this about should be the type which inhibits centralized, bureaucratic control, and which places the expenditure of the supplementary Federal aid in the hands of the legal educational authorities of the States and localities.

The allocations to the various States from the Federal appropriation for assistance to school construction should be determined in the legislative act according to an objective formula; and one which anyone who can do arithmetic can calculate.

By these means we could eliminate the school-building shortage in from 5 to 10 years. This would not solve all the problems of education, but it would be a major and desirable step in this direction.

Utilization of Surplus Property

SPEECH

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, I move to strike out the requisite number of words.

May I ask the gentleman from Massachusetts a question: This being a bill that he has introduced and that has the approval of the departments, all of them, is it not a fine example of the complete harmony that prevails here between the Democratic leadership and the Republican administration?

Mr. McCORMACK. I think this is a very excellent illustration of harmony.

H. R. 4644

EXTENSION OF REMARKS

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. GUBSER. Mr. Speaker, yesterday I was disappointed to again see a postal pay raise voted down by this House. I was firmly of the opinion that H. R. 4644 was the limit to which we could go without inviting a Presidential veto. The employee organizations, led by the national leaders for the clerks and carriers, were, from all indications, extremely active in promoting yesterday's refusal by the House to suspend the rules and pass this 71/2 percent postal pay increase. If a better bill emerges as a result of yesterday's defeat, they will have made the right decision. For the good of more than 300,000 clerks and carriers who sadly need a raise, I hope they did.

I cannot help but compare this situation with the one which existed in the closing days of the 83d Congress. If you will remember, the House refused to suspend the rules and pass a 7-percent increase last year. Some will say that the reason for last year's refusal was because a postal rate bill was tied to the pay measure. I am convinced that the same pressure from employee groups which was evident in the Halls yesterday. and the same hope that a better bill would result out of the defeat, was what caused failure of the 7 percent postal pay bill last year. You will remember the statement made by the present majority leader, Mr. McCormack, that if the 7-percent bill were defeated under suspension of the rules, the House would have another chance to vote on a pay bill. Mr. McCormack's prediction proved true. We did have another chance to vote on a pay bill, but it was not a better bill. If you will remember, instead of giving the employees 7 percent, it called for a much lower figure of 5 percent. It was overwhelmingly passed, and President Eisenhower vetoed it.

Thus, last year, we saw a 7-percent bill defeated for the purpose of waiting for a better one. What happened was that we passed a bill far less favorable to the employees, and this was vetoed. The employee leaders gambled and lost. They are gambling again. Will they win this time? Let us hope history does not repeat itself, because if it does, the leaders of the postal unions made a very unwise choice yesterday.

In order to avoid a repitition of last year's events I therefore urge both sides of this controversy to cast aside politics and personal feelings. I urge them to earnestly consider the question, "What is the highest possible pay raise which can become law?" When the question is answered, there is no reason why we cannot all join together in a bill which will give much needed relief to our postal employees. Personalities and politics must not enter when the welfare of human beings is being considered.

The Ukrainian Insurgent Army: Prime Symbol of Freedom in the Russian Communist Empire

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 23, 1955

Mr. FEIGHAN. Mr. Speaker, students and observers of developments in the Communist empire have for a long time marveled at the patriotic tenacity and national exploits of the Ukrainian insurgent army in its heroic fight against Russian occupation of Ukraine. For 10 years, without any assistance from the free world, it fought the Communist enemy, both militarily and politically.

Since 1952, because of tremendous odds, it has continued its underground, patriotic struggle politically and through various propaganda channels. Periodic reports on its successes still continue to filter through the Iron Curtain. Not so long ago the British veteran soldier, William Piddington, who spent years in the Russian slave labor camps, attributed the widespread strikes in the Vorkuta camps to the Ukrainian underground movement-United Press release, Berlin, July 9, 1954. That such reports amply show the Ukrainian Insurgent Army to be truly in the vanguard of freedom's struggle behind the Iron Curtain, there can be no doubt.

Being intimately familiar with the imposing record of patriotic, national heroism on the part of the Ukrainian Insurgent Army, it was my privilege last year to provide the introduction to the fascinating and informative book entitled "The Ukrainian Insurgent Army in Fight for Freedom." This compact and factually packed work has furnished countless Americans with a genuine insight into the liberation struggle of the large Ukrainian nation against the domination of imperialist Moscow.

It is my pleasure now to insert in the Record, under leave to extend my remarks, an address on the subject of the Ukrainian Insurgent Army, delivered by Dr. Lev E. Dobriansky, professor of economics at Georgetown University and president of the Ukrainian Congress Committee of America, before the Society of Veterans of the Ukrainian Insurgent Army in United States of America, at the Hotel Commodore, New York City:

THE UKRAINIAN INSURGENT ARMY: PRIME SYMBOL OF FREEDOM IN THE RUSSIAN COM-MUNIST EMPIRE

Anyone who has honestly and objectively reviewed the concrete and tangible evidence provided by the Ukrainian insurgent army in its truly heroic struggle against the tyranny of Moscow-centered communism can arrive at only one conclusion—that the Ukrainian insurgent army is the prime symbol of freedom in the Russian Communism Empire. The imposing record that it has built up in behalf of the forces of freedom behind the Iron Curtain is the object of reepect on the part of many leading Lithuanians, Bulgarians, Rumanians, Poles, Slovaks, and Hungarians. It is the object of keen interest on the part of numerous West

European nations and many leading Americans. Above all, it is a shining tribute to the invincible urge and aspiration of the highly important Ukrainian nation to cast off the yoke of Russian Communist rule for genuine self-government, sovereignty, and independence.

Many notable events and developments over the past 12 years lend themselves to much sober reflection and appraisal of our own political behavior as a nation. It is significant that while the forces of the Ukrainian insurgent army were fighting since 1942 both the German Nazis and Russian Communists, the Western democracies, whether out of necessity or no, were incautiously allied with the totalitarian forces of the Soviet Union which, to add vinegar to salt, were widely publicized by some of our governmental agencies as being essentially democratic. The threat of the Red totalitarian menace had not yet struck home. But those whose national homes had been invaded, pillaged, and ravaged well knew that the struggle for freedom would not cease with the defeat of Nazi Germany and the elimination of its brand of totalitarianism. Those, like yourselves, who joined the ranks of the Ukrainian insurgent army to wage battle against both Russian Communist totalitarianism and the Nazi German type were in every sense of the word in the vanguard of the continued struggle for national and individual freedom. The patriotic sons and daughters of Lithuania, White Ruthenia, Poland, Slovakia, and others who aided and collaborated with the Ukrainian insurgent army, who were inspired by its tremendous truth that the Soviet Union is not and cannot be monolithic, are united in this vanguard of freedom.

In full and essential reality, the glorious Ukrainian insurgent army is the manifest historical projection of the continuous struggle of the large Ukrainian Nation for independence. Its spirit is the spirit of the patriot, the spirit of enlightened nationalism, the spirit that every true, patriotic American can easily recognize, sense, and uphold. Its will is one of natural resistance to a dehumanizing force that through skillful technologic means of systematic genocide is unalterably bent upon the destruction of nations, including our own country. The military battles that it fought during and after World War II, even to the point of necessitating the tripartite agreement among Moscow. Warsaw, and Prague to stamp out its military resistance, are feats of human glory that no historian of the contemporary fight for free-dom will be able to ignore. The irresistible force of enlightened nationalism, so brilliantly and heroically crystallized in the unassisted exploits of the Ukrainian insurgent army, cannot be extinguished by the Red empire builders of Moscow. It is the basic force of freedom throughout the world today. It is the natural force that Russian Communist imperialism fears most, and seeks to destroy every form of its evidence, as in the case of the Ukrainian insurgent army. Enlightened nationalism-patriotism for God and country—is the preserver of our own nation. And it should be clearly understood that anyone who deliberately plays down the gallant expressions and evidences of enlightened nationalism in either the free world or in the slave world of the Russian Communist empire deserves to be questioned as to his true loyalty. The freedom of nations is as important as, and oftentimes a prerequisite to, the freedom of persons.

Despite the increasing disclosures of the aboveground and underground operations of the Ukrainian insurgent army in the 1940's, disbelief prevailed in the free world as to its very existence. Much of this was dispelled by the appearance of several of its members in Western Germany in 1947, living proof that under extreme hazards made its way from the depths of the Carpathian for-

ests to convince the skeptical free world of the freedom fight being waged in the very front yard of imperialist Moscow. Still, as you and I know, there were some in this country who continued to disinform the American people as to the existence, no less the performances of the Ukrainian insurgent army. Curiously enough, representing themselves as anti-Communists, they repeated here the denials of Stalin and the Kremlin as to the existence of any such army and its resistance forces in Ukraine and elsewhere. It is this same Russia-first clique in this country, made up of certain Russian emigre writers and politicians, their unwitting American friends, and the most loval followers of Mr. Kennan, that today argues against any utilization of the powerful centrifugal forces, as represented by the non-Russian nations in the Soviet Union, for the defeat of Russian communism. By their words and deeds, they appear to be Russia first, in its basic territorial empire and its present power, rather than America first, in its proclaimed universal independence of all na-

The perseverance and continued existence of the Ukrainian insurgent army, now an underground in political rather than military warfare, is a thorn in the side of Kennanism and its advocates of the myth of peaceful coexistence. Despite the change in the administration of our Government, this breed is still heavily entrenched in the State Department, and influences greatly the foreign policy of our Nation. It would like to see no policy formulated toward the Soviet Union other than the one of status quo. But so long as resistance continues on the part of the Ukrainian insurgent army and on the part of other non-Russian groups in the Soviet Union, the day cannot be long postponed when such a formulation will become necessary. The opportunity and ca-pacity for resistance, as exemplified by the Ukrainian insurgent army, constitute also the basis of justification for a sound policy of liberation which, sooner or later, must come to pass. It it should come to pass too late, it might well fall short of success.

The expansion of national political undergrounds in the Russian Communist empire is in the crucial interest of our Nation. Aid and assistance for such expansion can only be provided through a policy of liberation interpreted solely as a continuous process of political warfare on the terrain of the Russian Communist empire. Given time—the chief commodity they are seek-ing today with their New Look of peaceful coexistence-the Russian Communists can attain to a superior advantage of position over us, in spite of all of our alliances, in spite of all of our nuclear weapons. Once their empire is consolidated and the sources of national resistance with leadership reduced to a shell, this position will have been formed for aggression with reasonable expectation of success. Present containment facilitates this: the policy of liberation, with its premium on resistance groups, can obstruct this and save nations from destruc-

Lest They Forget

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the Record, I include text of an editorial entitled "Lest They Forget," appearing

in the March 12 issue of the Army Times, relating to a most important spot in Arlington National Cemetery, namely, the Trophy Room. This room is visited by literally thousands of people each year who go to see the Tomb of the Unknown Soldier and to visit the graves of

loved ones.

It is hope that this room can and will be maintained in proper order and repair so making it a fitting place to hold the collections of those items which mean so much to our American history.

The editorial follows:

LEST THEY FORGET

The Quartermaster Corps of the Army was more than a mite unhappy this week when it was learned that we had taken a series of pictures of the entranceway trophy room at Arlington National Cemetery. We were even more unhappy when we got a look at the pictures.

A spokesman for the Quartermaster Corps told us that the Army had been working for 2 years on the problem of submitting to Congress a proper request for enough money to repair the long-neglected damage. The request—in the amount of \$179,000—appears for the first time in the 1955 budget approved in January by President Eisenhower's Budget Bureau but not yet acted upon by the Congress.

Somewhat in conflict with the Army's 2 years of work to get an appropriation request before Congress, Representative Peter Roding, Democrat, of New Jersey, has charged that maintenance of the building "has been neglected for 7 years."

We know from long experience the difficulty sometimes encountered by Government agencies in their attempts to get repair items approved by the House Appropriations Committee. But we know also that the Army easily could have made satisfactory temporary surface repairs to replace the broken plaster and peeled paint so that the appearance of neglect and unconcern for our No. 1 national war memorial would not appear so obvious.

Relatively speaking, the distressing neglect of the trophy room at the near-sacred memorial, might appear to some as a minor matter. But to us, it is one more example of the official who cares? attitude toward the memory and problems of those who served with our Armed Forces.

We don't know who is to blame and we aren't going to point a finger at anyone. When the Department of the Army is partly responsible for fighting a hot war or streamlining itself to be at the ready throughout a long cold war, a paint and plaster job in a memorial trophy room undoubtedly rates no priority. But we've seen too many non-priority jobs of less merit done simply as a matter of convenience.

This newspaper has been receiving complaints about the slum-like appearance of the trophy room. We never ignore that type of complaint, but we confess that we didn't believe the appearance of the Arlington Cemetery room could be as bad as it was "painted." Then we saw the actual photos taken by our own cameraman.

Newspaper photographers notoriously are pretty thick-skinned guys (they have to be), but even our Sam Morris was shocked by what he saw and pictured.

The story and pictures about the trophy room—which is a full-page feature on our back page this week—is published not to needle the Army for its neglect, but in the hopes the pictures will be helpful in getting Congress to appropriate without a lot of fuss the funds necessary to make permanent repairs.

We hope it works out that way.

Children in Trouble

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent radio address on the subject of juvenile delinquency delivered by Charles Eliot Sands, assistant chief probation officer of the Boston juvenile court, delivered over radio station WVOM on February 4, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RADIO ADDRESS BY CHARLES ELIOT SANDS, FEB-RUARY 4, 1955; MORGAN MEMORIAL CHURCH OF ALL NATIONS, OVER STATION WVOM, 1600

As a probation officer for some years at the Boston Juvenile Court. I have observed quite a large number of so-called bad boys and their families, over a considerable period. These boys have been individuals, and some of them individualists, no two alike in mental ability, physical power, family upbringing, emotional adjustment, or experiences. However, if we leave out of consideration the children who get into trouble only once, or perhaps twice, and consider only the delinquents who more or less continuously break the law, we find that this group has certain characteristics which I should like to discuss briefly.

The most commonly observed trail and one which I believe to be basic, is that they are unhappy. A fair number have really good mental ability, but they are not really good at anything-in school, in athletics or competitive games, in craftsmanship or in art. In most forms of activity they tend to be mediocre to poor. Physical and mental deficiencies in some cases contribute to this, but not in general. A second contributing cause to this feeling of unhappiness may be the sense of insecurity resulting from cordant and irregular family life. Children need from their families essentially regular attention-warm affection and encouragement, and kindly but firm control and discipline. Children are not mature enough to be permitted to go their own ways; they must be guided and supervised. The parent who neglects his family for the bottle is no worse than the parent who from pressure of affairs or business has so little time to spend with the family, that the children grow up without necessary parental attention. Neglected children are unhapply children whatever may be the cause of the neglect. A third factor sometimes contributing to the delinquents' unhappy state, is the development within him of a feeling of hostility, merited or unmerited, against some member of his family or less unusually, an outsider, a teacher, a policeman, or perhaps a probation officer. The working out of this resentment may take the form of delinquent acts of all sorts, and against people completely different from the original object of the resentment.

The conclusion is forced upon me that a large number of the boys and girls whom we see, misbehave for reasons of prestige or getting attention. They want to be considered as amounting to something by somebody. They don't want to be ignored. They greedily snatch the newspapers to read accounts of their crimes, even though names of juveniles are not printed. One of my most pathetic—and aggravating probationers,

only recently is alleged to have remarked when he saw the account of the shooting of the filling station owner north of Boston-"I'll make the headlines yet." It is this desire to be noticed-for standing in the group to which they belong, which is their own undoing. There would be no point in "pulling a job" as they say, unless they told others about it—and that is usually what brings about their arrest. Policemen presenting complaints against children in court frequently begin their statements with: "As a result of a conversation," and continue perhaps, "I went to the home of the defendant who was in bed, but got up and showed me where he had hidden the articles he had stolen from so and so." In very few cases is the culprit able to refrain from bragging about his job; and prosecutions con-tinue to be begun "as a result of a conversation." Among other characteristics frequently met within our delinquent population is an apathetic attitude, a lack of thought for the future, a sense of futility and discouragement, with regard to work involving sustained effort and interest, largely the result of irreglar upbringing and lack of parental attention. The necessity of military service has been used by many of these boys as an excuse for not seriously attempting to find a steady employment. Many of them have actually found themselves in the service and acquire the maturity they lacked-in the regular life-duty and opportunity for recognition afforded by the Armed Forces.

Some of the boys are influenced by hero worship. It is not uncommon for one boy to state that if his friend is to be "sent away," he should go too. Recently a bright youngster whom I knew, though he was not on probation, came to the office where my probationers report each week, to inquire about his friend who, already on probation, had got into more serious trouble. He wanted to be committed if his friend was, and to prove his right to be committed recited a list of three breaks in which he had taken part, though no complaints had been made to the police. I subsequently verified that he had been telling the truth.

For those of us who are parents, there is much to be learned from observation of children such as these. First we learn the necessity of spending time with our children, of recognizing their actions by appropriate praise and reprimand as the case may be, of checking on their whereabouts-and their companions, but principally finding the time to be with them. It is important to set and maintain standards of honesty, truthfulness, duty, and consideration for others, to inculcate reverence for the spiritual values and truth which religion has passed on down through the ages. Such a task is difficult enough for both parents working in harmony to accomplish. When one of the parents is missing, or unable or unwilling to perform his duty, the burden on the other is greatly increased. I have the greatest admiration for the valiant efforts being made by those mothers who are handicapped by the loss of the husbands, to bring up their children to be God fearing and law abiding They de-serve every help, and our social agencies, Department for the Aid to Dependent Children, the Big Brother and Big Sister organizations. Guidance Centers, the Family Society, Morgan Memorial Goodwill Inn, and many others do a great deal to lighten their load.

In the last analysis courts such as the one I serve, and criminal courts in general, are a measure of our own inadequacy in the bringing up of our children. Courts or similar institutions we shall always have with us, but I find it somewhat shocking to contemplate that general observance of the Golden Rule would render all criminal courts obsolete.

Props Change Emphasis on Kansas Wheat

EXTENSION OF REMARKS

HON. ROBERT D. HARRISON

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Tribune of February 28, 1955:

PROPS CHANGE EMPHASIS ON KANSAS WHEAT-QUANTITY SOUGHT, NOT QUALITY

(By Russell Freeburg)

A change has occurred in the last decade in the varieties of wheat covering the plains of Kansas, the leading wheat producer in the country. Grainmen point to the shift as a prime example of the bad habits encouraged by the Government's price support program for farm commodities.

Kansas wheat production from 1944 through the 1954 harvest each year was based less on quality and more on bigger yields and earlier maturity, Charles Pence, vice president of the Kansas Wheat Improvement Association, said in an interview in Chicago.

NO DEMAND FOR QUALITY

The Government loan program makes no distinction as to quality of wheat. Anything goes if the wheat meets normal grading standards such as cleanliness and moisture content.

Pence said as a result, the production of medium gluten wheat in the State rose from 15.6 percent in 1944 to 70.2 percent last year, while output of strong gluten wheat in the same period feil to 16.7 percent from 52.2.

Gluten is the sticky, tenacious substance which gives adhesiveness to dough. Medium

and strong gluten wheats both can be used for bread, wheat's best customer, but the top heavy medium production has caused a shortage of the high quality which wheat bakers prefer and which makes better bread. Also, some producers have concentrated on growing undesirable baking varieties strictly for the loan program, said Pence.

These varieties are cheap to grow.

OFFER TWO EXAMPLES

He gave two counties in the western part of the State, a region long known for premium wheat, as examples.

In Finney County, located in what is considered the heart of the State's premium wheat belt, 49 percent of the wheat the 1954 harvest was of the undesirable varieties, Pence said. In Meade County 58 percent of the 1954 planting was of the unde-Birable varieties.

The large increase in production of the medium varieties was attributed by Pence to the bigger yields, increased test weights, and earlier maturity they provide. The earlier maturity is advantageous in the annual scramble for storage space, now limited because of the surplus.

EASTERN WHEAT RISE

Pence said there has been an upswing of wheat acreage in eastern Kansas, where feed grains such as corn formerly were raised. The farmers there make more money raising Wheat for the Government than in raising feed grains, he said.

The wheat grown in eastern Kansas doesn't make baker's flour, but family flour for which

there is little demand, said Pence.

Despite about 500 million bushels of wheat in storage in Kansas, millers in the State have been importing the bread grain from Nebraska and Wyoming, where producers have concentrated more on quality.

Because of the shortage of high quality wheat, the higher prices it has been bringing, and an educational program, Pence thought the harvest in many areas of Kansas this year would show an increase in high quality milling wheat.

Resolution in Commemoration of Lithuanian Independence Day

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert the text of a resolution passed by 1,000 Americans of Lithuanian descent on Sunday, February 13, who were gathered at Webster Hall in New York City, to commemorate the 37th anniversary of Lithuania's independence:

We, Lithuanian Americans, citizens of the city of New York, gathered together upon the occasion of the observance of the 37th anniversary of the declaration of independence by the people of Lithuania, at a commemoration sponsored by the Lithuanian American Council of Greater New York, at Webster Hall, in said city on the 13th day February 1955, duly noting that Lithuania had proclaimed her independence on February 16, 1918, after 120 years of unceasing struggle against foreign domination, which had brought to Lithuania a most brutal enslavement and the prohibition of the Lithuanian language press in violation of the most sacred rights of the Lithuanian people as human beings and as a sovereign nation. Lithuania had played a long and honorable part in the destinies of Europe and had been traditionally blessed with internal liberty and tolerance of religious and political beliefs.

Noting that the same ruthless tyrant returned in 1940 to forcibly enslave Lithuania again, do now and here declare the occupation of Lithuania by the Soviet Union as unlawful, as are the continuing deportations under the guise of volunteer work to unknown and remote regions of the Soviet Union; and

Taking into consideration the Soviet propaganda line of peaceful coexistence and noninterference in internal affairs of sovereign nations, obviously aimed at perpetuating the Communist satellite regimes over the enslaved peoples of Lithuania and other similarly situated nations of Europe and Asia, we do here and now respectfully request the Government of the United States of America to demand in international conferences, to which the Soviet Union be a

1. That the Soviet Union live up to its international commitments heretofore solemnized in international treaties of peace and nonaggression concluded between the Soviet Union and the Republic of Lithuania, as well as other states of central and eastern Europe, and the Soviet obligations, as signatory of the Atlantic Charter and the United Nations Charter;

2. That the Soviet occupation troops and Soviet administrative personnel be with-drawn from Lithuania and other similarly situated countries:

3. That the Soviet Union return to their homes from the Arctic tundras and Siberian exile, the nationals of those countries;

4. That unless the Soviet Union complies with such demands, that it be declared an ag-

gressor, and be so branded, so long as the Soviet armed forces and Soviet Communist Party officials remain in occupation of those countries; and we do further respectfully request

5. That a new committee to investigate the facts, circumstances, and techniques of Communist aggression be appointed by the 84th Congress in order to continue and complete the work already commenced during the last Congress by the special House committee to investigate the forced seizure of the Baltic States by the Soviets, later called the Select House Committee on Communist Aggression; and we do further respectfully request

6. That the Genocide Convention be immediately ratified by the Senate of the United States, so that Soviet Russia may be declared criminally responsible for the Genocide perpetrated by it in the Baltic States and other countries behind the Iron Curtain; and we do further respectfully request

7. That the Government of the United States do not fall under the illusion of socalled peaceful coexistence, for the Soviet Russian meaning attached to said phrase means consent and a resignation to the enslaved control by the Soviet Union of hundreds of millions of people behind the Iron Curtain and as Abraham Lincoln expressed it so aptly nearly 100 years ago: "America could not endure permanently half slave and half free," and so, too, today the world at large cannot be half slave and half free.

P. J. MONTVILA,
Chairman. STANLEY J. GUXLAS, Secretary.

Termination Bill Should Be Revised

EXTENSION OF REMARKS

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. METCALF. Mr. Speaker, in the 83d Congress a concurrent resolution was adopted (H. Con. Res. 108) declaring it to be the sense of Congress that certain Indian tribes be freed from Federal supervision and control and from all disabilities and limitations specially applicable to Indians.

Among the Indian tribes designated for termination were the Klamath Tribe of Oregon and the Flathead Tribe of Montana. The so-called termination bill passed for the Klamaths. Recently the Portland (Oreg.) Oregonian published an editorial calling for revision of the Klamath bill. The Glacier Re-porter at Browning, Mont., called attention to this editorial and noted its application to the Montana Indians. The comment of the Glacier Reporter and the editorial from the Oregonian follow:

[From the Glacier Reporter of February 25, 1955]

TERMINATION BILL SHOULD BE REVISED

A lucid explanation of the dangers involved in the administration's so-called Indian termination bill appeared in the Portland (Oreg.) Oregonian as a lead editorial in the issue of Sunday, February 20, under the caption "Revise the Klamath Bill."

While the editorial had to do particularly with the situation as it would affect the Klamath Reservation in Oregon, it is equally applicable to all reservations, as the termination bill, with few exceptions, is aimed at all Indian reserves. The editorial is re-

printed herewith in full:

"Congress should amend the act (Public Law 587) that sets up a 4-year program for termination of Federal controls on the Klamath Indian Reservation. There are several things wrong with the law, but we will examine herein only one of them, the withdrawal provision.

"Congress provided that after an appraisal of the tribe's wealth any adult member may decide to withdraw and require that property be sold to give him his cash share of the commonly held property. The act provides, further, that heads of family may make this decision for their minors.

"If the reservation is not to be wrecked, Congress must take a realistic view of this matter of withdrawals. Is it the wish of Congress to spoil completely the prospects of the Klamath Indian tribe? As it stands, this provision of the termination bill will do just that. It is pointless to argue that if the Klamaths are ready for termination of Federal controls, they are ready to break up the reservation. They are what they are and it is the United States Government that has made them dependent.

"Should the withdrawal provision be left unchanged, the future of the tribe collectively and of most of its members individually could easily be forecast. There are 2.070 members of whom 1.053 are minors. Of these, one-third, 690, live off the reservation. They will want their money, whether the reservation is continued or not. There is na firm record of how many of the other 1.380 actually live on the reservation, or merely use it as a place to stay between per capita payments. But enough are in this category to raise to about half the tribe those who would immediately demand a lump settlement of their shares of the tribe's property.

"The Klamaths own about 800,000 acres of land on which stand billions of board feet of virgin timber. There are thousands of acres of grazing lands, mineral rights, an irrigation system and good farm land. The reservation is worth more than \$40 million by any estimate.

"Each share would be worth upward of \$20,000. If 1,000 Indians want out, the tribe must pick out and sell property appraised at \$20 million. What would be left when the smoke cleared away? It is doubtful if anything like full value would be realized in a sale—or a closely-spaced series of sales—in such magnitude. The market would be glutted. And the reservation would be apoiled for development as a well-balanced agricultural-forestry unit to support the 1,000 Indians who wanted to stay.

"One or two—or even five—out of every 10 Indians who withdrew might realize something like maximum benefit from receiving a lump sum of \$20,000. But it is more likely that at least half of them would wake up with deep, throbbing headaches in a few weeks, their money gone and no reservation to go back to live on.

"Congress should give the tribe some control over liquidation of its assets beyond those flimsy controls in the termination bill. It is doubtful if 1 in 10 of the Indians on the roll is capable of going out to make his way unaided. Every one of them for many years past has grown accustomed to receiving per capita payments of up to \$800 a year from sale of tribal timber.

"We have no quarrel with the philosophy of termination of the Indian Bureau's control of the reservation. We support the switch in thinking in the Indian Bureau under the Elsenhower administration, a switch we would describe as a change in view: The American Indian is no longer an anthropological curiosity; he is an American of Indian descent.

"But we doubt that the provisions of Public Law 587 would accomplish the purposes

sought. Rather, we believe that it would serve to destroy the good things inherent in the Klamath Reservation system and to perpetuate the bad things. We foresee a time when Klamath county's public welfare lists would be burdened with destitute Indians. The income to be derived from taxing the reservation when it becomes possible to do this would not come near balancing the extra welfare costs that could be created by the uninhibited withdrawal discussed here."

Nixon Sets a Precedent

EXTENSION OF REMARKS

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial written by Mr. George Putman and published in the Salem (Oreg.) Capitol Journal:

NIXON SETS A PRECEDENT

Vice President RICHARD M. NIXON has set a new precedent for his office as an ambassador of good will, in which, according to all reports he has been most successful in creating friendship for the United States in foreign lands.

Nixon and his wife have just returned to report to President Eisenhower from a 7,500mile friendship mission to Central America and the Caribbean. Before that he made a similar successful trip to the troubled lands of southeast Asia.

Nixon visited 10 republics on his monthlong swing. He was warmly received by government officials and the man in the street in Cuba, Mexico, Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, Panama, the Dominican Republic, and Haiti.

In each he talked and listened to the heads of state, industrialists, farmers and workingmen. He acted as an unofficial go between to help ease the years-long tensions between Nicaraguan President Anastasio Somoza and Costa Rican President Jose Figueres.

Nixon wound up his tour with a strong appeal to the countries he visited to form a strong regional coalition to insure their political stability and economic prosperity. Such a Caribbean bloc, he said, would thwart any Communist design to infiltrate the Western Hemisphere through the smaller republics.

publics.

The Vice President throughout the long history of the Nation has been a sort of glorified fifth wheel in government, an onlooker whose duties were principally social, and played no part in government, but recently has been permitted to attend Cabinet meetings as observer. His was an emergency office to keep the Government in orderly operation in case of the demise of the President.

The Nixon tour in Asia is admitted, even by Democratic critics as fully important in psychological effect as that to Central America. His cooperation, friendliness, tact, and sociability were appreciated and most effective, and he showed an unusual grasp of their problems, and won him cheering applause.

There is already talk of another such good will Nixon expedition next fall perhaps to the Middle East. Anyway, he has set a fine example as to what a Vice President can do to make himself useful to his Government. The era of stuffed-shirt figureheads, partisan stooges, and fat calves Vice Presidents has, it is hoped, passed away.

Youth Aliyah

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1955

Mr. CELLER. Mr. Speaker, when I survey only the cold statistics of Youth Aliyah, 65,000 youths from 72 countries have been brought to Israel in the past 20 years by Youth Aliyah; 45,000 Youth Aliyah graduates have formed 40 new Kibbutzim during this time; 31,000 youths have been trained within the past 5 years; 13,000 are training this year; 500 children are being integrated each month; 235 Youth Aliyah centers educate, house, and prepare young people for life in Israel; 160 of these are agricultural settlements.

I repeat, when I view these cold statistics, there emerge from them 2 figures—one, the youth itself who, by virtue of these statistics, can throw off the shackles of the past to enter into a new life of promise and fulfillment; and the other of the giver whose vision and heart compel him to remember the preciousness and promise of youth. As youth is served, so shall youth serve.

Perhaps no one would blame us if the young ones entered into Israel to take their chances in finding a new way of life, not receiving the proper training; if, hit or miss, they struggled to adjust to the culture of Israel; if, untrained and uneducated, they turned haphazardly in any and all directions to make their way in life. But it was the same foresight, the same intensity of imagination that brought Israel into being that fathered the birth of Youth Aliyah 21 years ago. No country can reckon without its resources, and the youth of the country are the most valuable, the least expendable, the most significant, of a country's resources. How the country will fare ultimately, how a country looks toward peace, toward liberty, toward the welfare of its citizens depends on the quality of its youth.

Youth Aliyah is a dramatic concept, and those who share in its work are participants in a drama as large, as poignant, as significant, as life itself.

Let me illustrate. A few months ago, I returned from a trip to North Africa. Today about half of Youth Aliyah children come from North Africa. French Morocco has a population of 8,500,000. Of this number, roughly 214,000 are Jews. There are two divisions of Moroccan Jews: The Berbers, who live in the southern part of Morocco in the neighborhood of the Atlas Mountains, have been there for centuries-even before the Jews were banished from Spain. It is thought that they are the descendants of the Israelites driven out of Palestine by Joshua. The others are the Sephardim Jews-descendants of those who fled from Torquemada.

The Berber Jews are nomadic and live chiefly in Saharan mountain villages. They are conspicuous by their black cloaks, black skull caps, and round black

G. P.

hats. They hold steadfastly to the customs and faith of their ancestors.

In addition to these Jews, there are some tribal Jews, a fanatical sect who live deep in the Sahara Desert and in the Atlas Mountains. They are warlike and are a fierce-looking people, and are known as the fighting warrior Jews of Morocco. They are said to be able to trek for hours and hours across the Atlas Mountain ranges with their children strapped across the backs of their women.

There are also some albino Jews residing in the mountain fastnesses along the coast. They are blind as moles, with yellowish hair, pinkish eyes, and a reddish complexion.

The Sephardic Jews, to a great extent, live in the mellah or ghetto. A mellah is found in every Moroccan city-Casablanca, Rebat, Marakeesh. In the mellah, thousands of Jews have lived and suffered, persecuted for centuries. In the old days, they never ventured forth. To remain within the mellah was their best protection from the onslaughts of the Moors. The Jews have suffered and still suffer injury, misery, and humiliation. They are not even second-class citizens in Morocco. The very word, "mel-lah," means salt. The Moor Caid, in the old days, were wont to decapitate the "infidel" or "unfaithful," or non-Moor, and place the head upon a pike to be exhibited in the public square. The head, however, was first salted and pickled in vinegar. This was done by the Jewish butcher, and the word "mellah"-saltwas finally applied not only to the place or abode of the Jewish butcher, but to the ghetto where they all lived as well.

Algeria is a part of metropolitan France, and its inhabitants are citizens of France. Under the Cremieux decree, Jews have been citizens of France since 1870, and this includes the Algerian Jews. The protection of Jews in Algeria parallels the period during which France has been in possession. The French have had a protectorate over Morocco only since 1914, but they have been in Algeria since the early part of the 19th century, and in Tunisia since 1870. The longer the French have been in control the greater has been the security of the

The position of the Jews is strongest in Algeria and weakest in Morocco. There is little or no evidence of any independence movement in Algeria. There was a flareup of Fellaghas or outlaws, who operated in the southern part of Algeria—in the Province of Constantine, as well as in the western part of Tunisia. They seek independence for Tunisia and Algeria. As far as Algeria is concerned, the movement is quite negative.

There are about 140,000 Jews in Algeria, most of whom live in Algiers and are happy and contented. A small number have gone to Israel. The Jews in Algeria have great faith in the French.

Hence, these newcomers from North Africa have had very little, if any, opportunity for education or training. Beds, shoes, forks, books, schools, pajamas—all items which we ourselves take for granted, are alien to them.

I would say that in the main the oriental parents object to the education

of the children. Into the sensitive area of familiar relationships. Youth Aliyah steps cautiously and constructively to win over the parents to these new concepts. Youth Aliyah, then, I shall say, is a magnificent act of husbandry, insuring the richest harvest for the future of Israel itself.

Which brings me to thoughts of Israel's future general. Israel today lives in military isolation, through no act, through no fault, through no desire of its own. Inclusion in the Middle East Defense Alliance has been denied her. Shipment of arms is denied her. Export licenses for the purchase of arms from the United States are denied her. Her avowed enemies, the Arab nations, are wooed and soothed by present administration policy. The only answer given to Israel's question is "You have nothing to fear," and all the while the arms are shipped to the hostile Iraqui Government, and all the while the economic boycott of Israel by the Arab nations continues, and all the while the infiltrations, the marauding, the thefts, and the murders continue on Israeli borders, and all the while the Arab nations will take not one little step forward toward peace with its democratic neighbor. "You have nothing to fear," say American policymakers, and yet will make no move to insure the territorial integrity of Israel's borders. What manner of answer is this, as Israel lives daily in a sea of hostility, outnumbered and without powerful friends. Even a child can understand that an equation of arms plus hatred equal disaster. The Arab nations are in possession of arms and are possessed with hatred. Is it, therefore, the conclusion of our policymakers that Israel is expendable? Are our policymakers subject to the blandishments of the Arab nations, who say, "Let mine enemies be thine enemies and we shall be friends"? Is this ever, in all the world's history, the base for any trustworthy friendship?

Let there be economic aid to both the Arabs and Israel. Let there be mutuality in a regional defense alliance based upon an earnest wish for peace. I have repeated again and again in previous statements, and I say it once more, if the United States is to feed the strength of the hostile Arab nations who make no secret of their enmity toward Israel, then surely it is to the very best interests of the United States in avoiding the outbreak of war in the Middle East to preserve likewise, and to feed likewise, the strength of the fledgling democratic State of Israel. Only preservation of balance can best serve the interests of the United States in that area.

Certainly it would be most desirable to keep shipments of arms out of that area. Certainly it would be most desirable that a Middle East defense pact be developed, including Israel. Certainly it would be most desirable for the United States to throw all the weight of its prestige and power in the direction of influencing the Arab nations toward an acknowledgment and acceptance of Israel's existence. But since an affirmative policy has already been set by our State Department toward wooing Arab favor, throw-

ing the scales of equity out of line, then counterpart action should follow to set those scales straight and right. The least, the very least, that the United States can do toward the restoration of balance would be, first, guarantee the integrity of present Israeli borders; and second, remove the military disadvantage of Israel brought on by shipment of arms to Iraq.

I note that the Secretary of State indicated a few days ago at a press conference that the Gaza incident would delay new United States guarantees of Israel's integrity. The Tripartite Declaration of 1950, in which the United States, Britain, and France pledged themselves to avoid an arms race between Israel and her Arab neighbors and to uphold the status quo in the Middle East, it is apparent from Mr. Dulles' statement, has no meaning in law. Now, using the Gaza incident as a further excuse for delay, Mr. Dulles makes no mention of the bitter tensions in that area which led to that incident.

Egypt has been censured 35 times by the United Nations Mixed Armistice Commission for its activities on the Gaza frontier. These censures are blandly ignored in a press conference where it is made to appear that the whole burden of guilt rests on Israel. That the Arab nations will not make peace is not of sufficient importance for Mr. Dulles to note this in a press conference. Naturally, Mr. Dulles failed to state anything at all about Egypt's efforts to wreck the Turkey-Iraq Pact. Mr. Dulles knows as well as you and I know that the one, the only answer to the tension of the Middle East is the conclusion of a peace. He knows that sooner or later, in the best interests of the United States, such a peace must be established. He knows as well as you and I that the Arab nations will not make peace, and he knows as well as you and I that the United States will have to bend, ultimately, all its efforts in the direction of making that peace. There is no other answer.

Is it some fanciful wishful thinking that if the United States woos the Arab nations long enough, the Arabs will yield to the pleas for peace? Does he want to believe, as a child believes, that if he shuts his eyes to the unpleasantness the facts themselves will disappear? Does he wish to believe that the Arab nations, once cradled in the security of United States protection, will consent to a peace? If so, what is his estimate of time—a month? a year? 5 years? 10 years? a generation? a lifetime?

In the meantime, the tensions grow, the economy of Israel suffers, the democratic growth of Israel is impeded, the welfare of the Arab peoples themselves, diseased and poverty stricken as they are, is held back, the fires of hostility are fanned—and yet the United States confesses that it waits.

Our policy in the Middle East is at odds with history, is at odds with our own moral principles, and serves only the fitful winds of expediency, and, at that, an expediency that has never been thoroughly thought through nor dared to state toward what end it reaches.

But the people of America will not desert Israel; we see that daily. We see it in the work of all the friends of Israel, and we see it concretely in the work of Youth Aliyah, a work that projects itself into the future and harvests for Israel the potential of youth, its buoyancy, its vitality. Through and with its youth, Israel will endure.

From Where I Stand

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1955

Mr. MULTER. Mr. Speaker, the following words of Rabbi Harry Halpern are well worth reading; they appeared in the Bulletin of the East Midwood Jewish Center, of Brooklyn, N. Y.:

FROM WHERE I STAND

The desire to get ahead and to succeed in life is understandable and praiseworthy, but it must be watched very carefully lest it deteriorate and become an overpowering drive which can ruin the highest ideals of life. In intimate relationship with the desire for success stands the love of honor. That we should crave recognition is perfectly natural but that this craving should be satisfied at the cost of riding roughshod over others is both irreligious and inhuman.

If one becomes interested in a cause, we have a right to assume that he is convinced that it is worthwhile. Beyond the satisfaction of knowing that one is helping achieve some great objective, there should be no expectation of any other reward. If honors come they should be regarded as a bonus which one is glad to receive but cannot claim as a right.

It is pathetic to see how often people are offended because their name is not mentioned at a public function or because their names are unintentionally omitted from a program. The fact that their feelings are wounded by such petty things could be overlooked and forgiven if these people did not make the state of their feelings so obvious. One observes these people and is impelled to laugh at their strategy in calling attention to themselves.

Poor, unhappy men and women, who are not content until they are sure you know whose hand they have shaken and which celebrity they can call by a first name. And, if you don't know these facts, they do not hesitate to tell you about them. The important thing is that you must be impressed. These seekers after honor do not realize that they betray their pitiable insecurity and feelings of inferiority by their attitude. They do not understand the words spoken by Emerson, "I cannot hear what you say because what you are speaks so loudly."

When one gazes upon a beautiful stage set, he is impressed by the ingenuity involved in fashioning the sight before our eyes. But if we were to walk behind this scenery and see the struts and the props, the rags and the paint—the materials of which it is made—I am sure that much of our delight in it would vanish. Similarly, the sight of a person who plays an active role in communal affairs is a sight which makes us rejoice. However, as soon as we get behind them and discover the mechanism which impels people to work, our enthusiasm wanes. Wisely did the rabbis of old say that honor cludes him who chases after it, for, if one pursues it, it ceases to be an honor.

The Communist Program—Article by Louis F. Budenz

EXTENSION OF REMARKS

HON, KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1955

Mr. MUNDT. Mr. President, the students of the International Relations Club of the Mount Marty, S. D., High School, have formed the commendable practice of studying and analyzing current magazine articles dealing with the tricky world situation.

The Mount Harty International Relations Club recently sent me an article entitled "Scaring Us to Death," written by Louis Francis Budenz, and published in the February number of the St. Anthony Messenger, which it felt was outstandingly good, and which it recommended to the consideration of Congress.

I ask unanimous consent that the article be printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCARING US TO DEATH

(By Louis Francis Budenz)

Anyone whose duties compel him to read Communist literature regularly, as mine do, is struck by one current dominant Red note. It is like a tom-tom beat in a jungle, incessantly repeated. Frequently it breaks out in the Daily Worker in words that shrick.

"The H-bomb danger grows!" "Halt the danger of war!" "Stop the atom-manlacs!" runs the refrain.

There is being worked up the same frenzy in regard to fear of war that was brought to a hysterical height by the Soviet fifth column in the "battle against McCarthyism," which paralyzed the American Government so successfully. We Americans are to be made to cringe in our homes, frightened by the possibilities of atomic warfare upon us, in order that our leaders can be persuaded to surrender once more to Soviet demands—this time by again betraying Nationalist China.

Hundreds of thousands of pamphlets, containing the program of the Communist Party have been mailed to non-Communist citizens in many American cities and have even penetrated into small communities. center of that program is the danger of war. The make-believe picture which it presents can be summed up in this quotation from its pages: "Wall Street has done all in its power to build a worldwide coalition against the Soviet Union. But this coalition is now falling apart. Wall Street has no real allies. Even its present so-called allies cannot deliver on its commitments. The people of the world, including the American people, do not intend to goosestep to the martial music of Wall Street. They are tired of constant war tension, unbearable armament burdens, the threat of atomic devastation, and of both hot and cold wars. They want

United States leadership is presented as aggressive, thirsting for a war, and over against it is depicted the Soviet Union, mighty and invincible but set upon peace.

This description of the present state of affairs is such a caricature that it would be laughable if it were not the basis for such possible tragedy to the American people. The leadership of the Government of this country has been timid, hesitant, constantly weakening before Soviet pressure under the

plea that this was the only means by which we could hold "our allies." If we are today uncertain as to who are with us and who are against us, it is because our Government has refused to take a firm stand. It is our planes which are shot down, and all that our Government can do is to send notes which are in effect thrown into the Soviet wastebaskets. This weakness and vaciliation was no better indicated than by a brief but important sentence in the statement of Secretary of State Dulles, at the Cabinet session presented over television on October 25.

It was then that Mr. Dulles said, in discussing the Paris agreement to rearm Germany partially, that this agreement was designed "to protect Russia as much as it protects anybody else against the possible resurgence of German militarism." When I heard this statement. I could not believe my ears. Therefore, I turned to the copy of the full transcript of this Cabinet session as presented in U. S. News & World Report of November 5. And the amazing sentence, believe it or not, was there.

Such an attitude indicates the lack of a realization in Washington of the nature or objectives of Soviet communism. It tells us that the Government is still pursuing the policy of "peaceful coexistence," a term invented by Stalin in 1927, to throw dust in the eyes of non-Soviet nations and to aid Soviet world conquest. Our leaders are living in the make-believe world that the German people have on them permanently the mark of the beast, instead of understanding that they can become our greatest and stanchest al-That they are likely to do so becomes all the more probable since the West Germans can look across the border and observe in East Germany the slavery and degradation to which their fellow countrymen are subjected under Soviet rule.

This Dulles' statement is a concession to Soviet propaganda against German rearmament for our defense. It is more than ironic that our State Department felt the necessity of stating that we must "protect" the Soviet dictatorship from these Germans. Has he forgotten that the Soviet is the very dictatorship that is committed fundamentally to our destruction? I cannot but recall once more that for the Kremlin the present period of history is "the period of world revolution," that is, of Soviet conquest. It is in this period, as Stalin has written in his Foundations of Leninism, that the dictatorship in Soviet Russia is to be used as the base for the overthrow of all other governments.

But this "overthrow" and world conquest are not to be advanced by a direct military attack on the United States by Soviet Russia in the days immediately at hand. The Kremlin knows better than we do our physical strength, our productive capacity, and our pre-eminence in physical science. It was this which caused Stalin to underscore "American efficiency" in his writings and speeches. During World War II, it was "American productive capacity" to which Stalin referred as being the great asset to the Soviet dictatorship in its death struggle with Hitter.

The Kremlin also knows better than we its own weaknesses. These are expressed in the widespread slave labor, the unrest of the people in the satellite regimes, and the labor passport system. Under this last, no "free" worker dare leave his job without the consent of the government bureaucracy. Under such gross conditions of slavery, it is no wonder that the constant plaint in the Soviet press and in the solemn statement by Dictator Malenkov last spring concerns "the lag in production." Slave labor and the machine system do not work together, and slave labor is a weak instrument upon which to rely in time of military conflict.

There is a real H-bomb that the Kremlin has in its possession and to which the Communists do not refer in their feverish efforts to frighten us to death. It is the continued penetration of American public opinion by

the Communist line, making use of the general press, television, and radio as "transmission belts" for that line. It was by this means that the United States was persuaded to agree to its own defeat on occasion after occasion. That was the road followed in our betrayal of China and Poland to Moscow. That is the means which has been employed to win such great Red victories over the American Nation in "the battle against McCarthyism." That is why the titular heads of the Republican and Democratic Parties have now mouthed, along with Winston Churchill, the Stalin-created slogan of peaceful coexistence." And most tragic of all, it was the Communist influence in our own media of information which led to the policies which lost the war in Korea, a war that we now know could have been won.

It is not surprising, therefore, that we note in the general press many items referring to "the growing strength of Soviet Russia," while at the same time the prospect of durable peace is held out to us if we only continue negotiations with the Kremlin.

It is quite evident that these echoes in the general press of the outcries of the Communists are not dictated by any apprehension that a general war is imminent. They are handed out to us, in order to stampede us into new surrenders to Moscow, this time

by a deal with Red China.

Several times during the month of Norember, the commentator Walter Winchell has warned all America that the State Department is preparing to betray Chiang Kaishek and to make an arrangement with Mao Tse-tung. On November 9, the well-informed New York Daily News declared editorially: "How about the disquieting rumors again cropping up that the administration is inching around to a sell-out of Chiang Kai-shek and his Nationalist Chinese Government on Formosa?" To which the editorial adds; "Appeasement of Communists never has worked yet. Some of the Eisenhower administration's current moves look alarmingly like appeasement." The Communists, when writing for them-

The Communists, when writing for themselves and for their own instruction, blandly let us know that these assumptions are correct. Nothing shows the fraudulent character of peaceful coexistence more than the article by William Z. Foster, leader of the Soviet fifth column in this country, on that subject. It appeared in the August issue of Political Affairs, official theoretical organ of the conspiracy in the United States. Falsely holding out peaceful coexistence as the only alternative to a general war, Foster then relates the conditions on which this coexistence can be assured. They tell their

own story.

In order that the United States may carry out this coexistence, Foster declares that this Nation must give up all defense preparations, establish such trade relations as will build up the Soviet war machine, encourage Communist-led revolutions in all countries, and abandon NATO and the defense of Europe. Primarily and immediately, this whole chain of events must be set off by the seating of Red China in the United Nations.

Look those conditions over again, and you will come to realize their arrogance and the contempt they indicate for the intelligence of the American people. The whole scheme is quite clear. We shall be persuaded to enter into negotiation after negotiation, first coming to an arrangement with Red China under the name of peace, and then being compelled to go on and on, until the United States has surrendered completely.

There is nothing new about all this. On August 8, 1953, Dictator Malenkov laid down similar conditions, starting off with recognition of Red China, as the sole means whereby there could be "an easing of international tensions." That is simple enough, is it not? The United States can win peace by capitulating, step by step, to Soviet demands—

until our Nation is so undermined that Soviet Russia can readily attack and conquer us. If anyone wants a Soviet-controlled America, the path of peaceful coexistence is the way to get it.

As early as May 1, 1952, I wrote in my book, The Cry Is Peace: "In Soviet terminology, the cry for peace is but a cover for expanding war. This has tended to be wilder the American mind. And the bewilderment has increased when the forces of appeasement in our midst have used peace and the averting of general warfare as their excuse for yielding to Soviet aggression. This has prevented us from taking that firm stand which would have halted a foe bent on world domination and only thus opened the road to

real peace."

Every experience that we have had since those words were written has confirmed them. It was by the claim that we would bring on a general war if American forces bombed beyond the Yalu that Gen. Douglas MacArthur was forbidden to win the war in That immediately released the Korea. Kremlin's armies in Asia to assault Indochina. Thereupon, in the name of a "durable peace," we were inveigled to go to Geneva, where the European Defense Community was destroyed, France left our side completely, and a new area in Asia was turned over to Red control. That arrangement now makes it possible for Red China to threaten Formosa, with Moscow declaring in the New Times and other international Red sheets, that there will be no more peace until Mao Tse-tung takes over that island.

This method of procedure is quite logical from a Communist viewpoint. To the Kremlin and its followers, the only peace that can ever be established is after the world Soviet dictatorship is set up and then withers away into the earthly paradise, the Communist society. That is why Foster, while urging the comrades to plug for peaceful coexistence, also advises them that both Stalin and Lenin warned that the only way to get rid of the danger of war is to get rid of American imperialism—that is, by overthrowing the American Government.

The contention, which is heard in the most unexpected quarters, as the result of Communist stimulation, that the only alternative to peaceful coexistence is a general war turns out to be the height of folly. The big alternative the United States has is to stand on its own feet, to face Communists squarely by breaking off relations with Soviet Russia and its satellite regimes. That would lead to disturbance in the countries under satellite control, would compel Soviet Russia to retreat, would complicate the Soviet dictatorship's problems, and eventually lead to its collapse. If anyone doubts that, he should sit down some quiet evening with Prof. James Burnham's book, Containment or Liberation, and learn what the ingenuity of America could do if we actually moved politically against Soviet aggression.

Professor Burnham could sum up our peril—that is, our real peril—in a single sentence. It holds even more weight today than when his book was written 2 years ago. And it is this: "If the Communists succeed in consolidating what they have already conquered, then their complete world victory is certain. * * * The simple terrible fact is that if things go on as they now are, if for the time being they merely stabilize, then we have already lost."

Is it any wonder, then, that Moscow and its agents are doing all in their power to throw fear of atomic war and general military conflict into the American mind? They have everything to gain, if they merely succeed in making us stand still. But as things now shape up, they are doing better than that for themselves and for their proposed world Soviet dictatorship.

The worst thing that we can do is to throw up our hands and give up hope. We can yet

upset the Soviet plans. To do so, it is necessary that we proceed unafraid, unaffected by the synthetic warnings of the danger of war. We will have to look realities in the face, and understand that to save the United States and the world, it is essential that we give hope to the peoples of the world by cutting off all relations with Soviet Russia and those regimes which it dominates.

We are in a big battle on the home front, to win the American mind to a courageous and intelligent position. In that battle, resolutions in organizations, letters to the press, letters to Senators and Representatives, talks to community groups, are as vital as hand grenades and bullets in military contests. As a result of her trip to Moscow, Senator Margarer Chars Smith, of Maine, who has hitherto had a quite contrary opinion, added her voice to those who have already urged President Eisenhower to take this step. She now sees no other alternative but to break off relations between Moscow and Washington. If it has to be done—and it does—then it is much better that it be done now.

Pricing Formula

EXTENSION OF REMARKS

HON, ROBERT D. HARRISON

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. HARRISON of Nebraska. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Manitoba Co-Operator of February 17, 1955:

PRICING FORMULA

A modernized method of formula pricing for the establishment of support prices for agricultural products was submitted to the annual convention of the Canadian Federation of Agriculture at Edmonton the last week of January this year. The recommendations of the policy committee were approved by the board of directors of the CFA and the Government will be asked to include the formula pricing in the Agricultural Prices Support Act.

The pricing formula is unique. It is free from rigidity and suggests a range of 65 percent to 85 percent of the basic price established for a number of agricultural commodities. It differs greatly from the United States parity price formula in that the support price should never become an incentive one. Under normal conditions it offers some measure of guidance over the production of various commodities although crop hazards or exceptionally favorable growing conditions must naturally influence the production picture.

The support price formula recommended by the Canadian Federation of Agriculture appears economically sound. It is tempered by moderation and under conditions that can be considered normal can prove to be a definite insurance to the efficient producer. At the same time it is not intended to sustain the man operating a poor farm or the inefficient operator. The formula is a pattern that can be followed by the Government in its price-support program. It also narrows what might be considered speculation in establishing a support level to a 20-percent range—that is, of 65 percent to 85 percent of the basic price.

This pricing formula is the only one that has ever been submitted for the consideration of the Government of Canada and it has the support of Canada's national farm organization from coast to coast.

A Lesson in Government

EXTENSION OF REMARKS

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Record, I would like to introduce the following editorial from the Oceanside Daily Blade-Tribune, Oceanside, Calif., of February 28, 1955. This editorial most clearly points out the great difficulty in retaining good men in public office. I believe it is especially timely in view of the recent controversy over the raise in pay for Members of Congress:

A LESSON IN GOVERNMENT

The resignation of John Bemis as Oceanside's mayor is regrettable because the city will lose the services of a man who has won respect for his integrity. The resignation also affords an interesting study in American government.

Here you have a man who had a proud career as a Marine Corps officer, retiring as a general, but who never intended to be a politician, and was certainly not one in any sense that the word usually means. He is not a handshaker, not the hall-fellow-well-met type. He expected to be elected and was elected because he had an honorable career and people respected his education, his background, and his quality of uprightness.

John Bemis probably didn't know, when he ran for office-or if he did know, he didn't fully understand-the manner in which the American public is accustomed to treating its elected servants. For the sum of \$25 per month—not enough to pay half the expenses of the banquet and luncheon tickets he had to buy-John Bemis worked at the public business conscientiously and well. He worked all day, and most nights, and he took the decisions that had to be taken, most of them unpopular with one group or another. From the time of his election until he resigned last Friday, very few people ever said to him, "Good job." Nobody ever thanked him for his service to the city. Most people who called him at his home called to swear at him. In the last few months no friend dropped in to see him just to be friendly. Throughout the town he heard the second-hand gossip that some decision he had made or was about to make would put money in his pocket. sense of shock that cut deep into his pride he heard himself and his fellow councilmen referred to on the streets as "the gang at city hall."

A few weeks ago John Bemis began to think that he had no friends, and that what he had hoped would be honorable retirement had become a life of calumny. So he quit.

His resignation is not altogther the fault of Oceanside. Americans learn in their schools the respect that is due to public officials, but anyone who knows anything about politics knows that this respect seldom gets communicated to the politician himself. It may be that John Bemis ought to have known. Nevertheless, the abuse which we Americans are inclined to communicate to our public officials has come as a shock to many of them, and some who reach high-office coudn't stand it. It broke Ulysses S. Grant, and it has made an old man early out of Dwight D. Eisenhower.

But to some extent the Bemis resignation is Oceanside's fault. We are a small city and a growing one, and so we subject our public officials to greater scrunity than larger populations do. We are a growing city and not a settled one, and we witness constant fighting and bickering among each other about which road to take, what way to grow. There's nothing wrong in this. What is wrong is that in our arguing and fighting we are inclined to forget that government of the people, whether city, State or Nation requires both governors and governed. We are inclined to forget that if a government is to function, the relationship between the governors and the governed must contain the element of mutual respect.

Effects of Imports of Foreign Oil

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1955

Mr. REES of Kansas. Mr. Speaker, I am including as a part of my remarks a statement made by Robert L. Williams, of Wichita, Kans., representing the Kansas Independent Oil & Gas Association, to the Finance Committee of the United States Senate on March 15, 1955. This statement, in my judgment, represents rather clearly the position of the independent oil and gas industry in Kansas. Excessive imports of crude oil from foreign countries has become a serious problem in the oil-producing industries of our country.

Mr. Williams' statement follows:

I am an independent oil producer of Wichita, Kans., and I submit this statement as a representative of several thousand independent oil producers and small investors in the Kansas crude oil industry who are dependent upon a demand for a sufficient quantity of domestic crude oil production which will permit them to continue their operations and investments on a reasonably profitable basis.

The oil and gas industry is the second ranking industry in Kansas, exceeded in dollar volume only by agriculture. Kansas is the fifth ranking oil-producing State in the Nation—exceeded in daily production only by Texas, California, Louisiana, and Oklahoma. Thus, the future of the Kansas oil industry is important, not only to the State of Kansas, but to the economy and safety of the Nation as a whole.

I wish to recall to your attention the chart submitted in the record to this committee on Friday, March 11, by Mr. Eugene Holman, chairman of the board, Standard Oil Co. (New Jersey), which graphically portrays the static position of Kansas oil production for the past 8 years at approximately 100 million barrels per year. This chart does not disclose that national consumption of crude oil has increased more than 40 percent during this same period, nor that unrestricted imports of foreign oil have increased by 140 percent. Obviously, then, our Kansas Pro-ration Department has been unable to increase the allowable rate of crude-oil production in the State during these past several years as imported oil has acquired the market created by the expanding national consumption.

The Kansas per well allowables have already been reduced to an irreducible minimum allowable (barring another complete shutdown similar to October 1953) of 25 barrels daily, which does not permit the small producers and small investors sufficient profit margin to adequate expand their ex-

ploratory operations in the search for new oil reserves, nor does it encourage the development of known oil reserves.

If imports of foreign oil are restricted by congressional action, thus eliminating a portion of this unfair competition, Kansas would receive a share of the accumulative increased domestic demand for crude oil over the past several years and also a part of any increase or decrease in future national demand.

The subsequent increased allowable rate for the Kansas wells would then permit the small independent producers to initiate more aggressive exploratory programs which would contribute to the economy of Kansas and make available more of the State's oil resources in peace or war. This would be in the best interests of the national economy and national defense.

Conversely, if imports of foreign oils are not restricted by quotas imposed by Con-gress, the small independent producers of Kansas, who in the past have discovered the preponderance of new oil fields in the State. will be faced with the danger of everincreasing imports of foreign oil, and our State's allowable production must necessarily be reduced. Only the major oil companies, particularly the five large importing companies who also produce substantial quantities of oil in our State from oilfields usually discovered by an independent producer, and possibly the larger and stronger independent companies, could well survive such a condition of a further reduction in allowable production. The small producers, who must be relied upon to discover the largest percentage of this Nation's future oil reserves, many of whom are already burdened with financial arrangements that require minimum monthly payments from their crude oil runs, would not be in a healthy position to risk capital in the search for new oilfields or develop their proven

It becomes readily obvious that congressional action in imposing quotas on imports of foreign oils is both desirable and necessary in the interests of the national economy and national defense.

"Lameduck" Civil Defense

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I insert an editorial appearing in the Shreveport Journal, Shreveport, La., of March 17, 1955. Civil defense is important to each individual in the country and I take this means of bringing this editorial to the attention of the Congress. The editorial is as follows:

"LAMEDUCK" CIVIL DEFENSE

One week we are told there is only one defense against the hydrogen bomb, and that we must prepare to evacuate the cities and towns within a hundred miles of any prime target area because the fallout will spread out over an area of 7,000 square miles.

The next week we are told to build some sort of underground shelter, right now, and stock it with sufficient food and water to last for 5 or 6 days as the most that any individual citizen can do for his own and his family's protection.

These two conflicting advices were issued by the same man, Federal Civil Defense Administrator Val Petersen. At the same time, he announced a nationwide civil-defense test to be held, not right now, the time he was urging individuals to dig their shelters, but next June, 3 months hence. This, though he rightly said, "No man has any way of knowing when an actual attack may come. We hope it may never come. But it may come sooner than later."

This was in testimony before a Senate Armed Services Subcommittee. It was prompted by the appearance before the committee of Gov. Christian A. Herter, of Massachusetts, who told the committee State governments are in the dark as to what should be done to protect their populations

in case of an attack.

If the truth be told, so is everyone else in the dark. One reason is that civil defense has been a matter of political patronage from the start. President Truman appointed a lame duck Governor of Florida the first civil-defense administrator. President Eisenhower followed the same political pattern by appointing Petersen, former Governor of Nebraska, to the post.

Civil defense today is part of the military defense of the country. Foreign invaders may come to this land by air for the first time since our independence. The Congress has shown a realistic understanding of the role of civil defense by giving the Armed Services Committee jurisdiction over it. The Executive should be no less realistic. There are enough retired, well-trained and experienced high officers of the Armed Forces to head up and give the country the awareness, discipline, and organization needed for the civil-defense effort necessary for survival in a hydrogen age. They should be in charge

Arab Border Attacks Continue

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1955

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following news item which appeared in the March 4, 1955, issue of the Israel Digest:

ARAB BORDER ATTACKS CONTINUE

JERUSALEM,—Arab attacks against Israel from across the border have continued unabated in the past 2 weeks. Following is a partial list of the incidents:

On February 14 a tractor driver from the settlement of Shamir in the Hule Valley was fired at from across the Syrian border.

On February 14 the settlement of Sh'ar Yashuv in the Hule Valley was attacked by Syrians.

On February 15 a tractor driver from the settlement of Bohan, in central Israel, was attacked by shots fired from across the Israel-

Jordan armistice lines.
On February 17 an Israel patrol was attacked north of Duweima in the Negev.

On February 17 an Israel patrol encountered Egyptian marauders north of Nir Izhak in the western Negev. The marauders fled into the Egyptian-controlled Gaza strip.

On February 17 Syrians penetrated into Israel territory and fired at the settlement of Gonen in upper Galilee. The attackers were repulsed. The same day Syrian marauders opened fire at a border patrol in the area. Later in the day the settlement of Gonen was again fired at.

On February 18 an Israel patrol southeast of Duweima in the Negev was attacked by Jordanians. One Israel soldier was wounded.

On February 19 Syrians fired at a boat belonging to the settlement of Gonen in the Hule.

On February 20, Syrians opened fire from across the border at a group of harvesters from the settlement of Gonen.

On February 22, shots were fired from across the Israel-Jordan Armistice Lines at an observation post in Ramat Rahel, a settlement on the outskirts of Jerusalem.

On February 23, Jordanian infiltrators attacked an Israel patrol near Beit Govrin in the south,

On February 24, shots were fired from across the Israel-Jordan Armistice Lines at Magal, a village in the Sharon.

On February 24, Jordanians attacked an Israel patrol east of Beit Naballa in the Shefela.

On February 25, an Israel cyclist was killed by Arab infiltrators near Rehovot. The next day, an Israel patrol encountered three infiltrators near Yad Mordecai in the south. The infiltrators escaped across the Egyptian-controlled Gaza Strip border. Investigations of the United Nations Truce Supervision Organization revealed that the footprints of these men matched those found near the man murdered in Rehovot.

On February 25, two police vehicles were attacked by Arab infiltrators south of Yavne, in the Shefela.

On February 27, 3 students—two Israel Arabs and a young Jewish woman from the United States, were kidnaped by members of Jordan's Arab Legion near Beit Tsafafa, south of Jerusalem. They were returned to Israel the next day after having been interrogated by legion officers.

A Positive Approach to Juvenile Delinquency

EXTENSION OF REMARKS

HON, LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I submit an article which appeared in the December 1954 issue of Federal Probation, an official publication of the Administrative Office of the United States Courts in cooperation with the Bureau of Prisons of the Department of Justice. The author is the Reverend John Edward Coogan, S. J., of the University of Detroit, where he is chairman of the department of sociology. Father Coogan is recognized as one of our leading contemporary sociologists who has been most articulate in the field of corrective penology. The article follows:

RELIGION A PREVENTIVE OF DELINQUENCY

(By the Reverend John Edward Coogan, S. J., chairman, department of sociology, University of Detroit)

Only religious faith, perpetually renewed, President Eisenhower has warned us, "is equal to the challenge of today's tyrants." I Of the absolute need of religion to control one of the most menacing of those tyrants, the spirit of lawlessness in American youth, the director of the Federal Bureau of Investigation grimly agrees. Speaking from 30 years' experience in his office, Mr. Hoover declares:

Footnotes at end of speech.

"Invariably when you analyze the reasons for such (criminal) actions, certain facts stand out stark and revealing—the faith of our fathers, the love of God, and the observance of His Commandments have either been thrust aside or they never existed in the heart of the individual transgressor. * * The secular way of thinking must give way to the spiritual if our Nation is to stand. * * What we need most in this country are the things unseen—spiritual development, moral power, and charter." ²

But is even "religious faith," the "faith of our fathers," so urged by our President and Mr. Hoover, "equal to the challenge" of this lawlessness? The casual attention commonly paid to its possibilities by academic criminologists and penologists would not seem to indicate much hope. As Pauline V. Young remarks in her impressive volume, Social Treatment of Probation and Delinquency, "It is significant that little space is devoted to the church and religion by writers on delinquency. * * Not a single paper is listed under "Church" or "Religion" in the 1947 and 1948 Yearbooks of the National Probation and Parole Association-volumes dedicated to Redirecting the Delinquent and Bulwarks Against Crime.3 The three subsequently published yearbooks are as silent on religion. The Gluecks include "religion and ethical instruction" among the means that must be used if we are to make much progress in delinquency prevention. Yet they all but ignore the striking evidence (included in their own findings) for such need, preferring to give us a thousand ex-quisite details of physical measurements in their study of erring youth.

PLACE OF EELIGION IN DELINQUENCY PREVEN-TION GIVEN LITTLE ATTENTION BY CRIMINOLO-GISTS

A more interesting study of the importance of religion for delinquency prevention and control is that proposed and generously financed by the late Richard Clarke Cabot, Harvard professor of social ethics and clinical medicine. We mean the Cambridge-Somerville Youth Study, employing 84 investigators in all during a period of 9 years, and resulting in a record of 22,000 singlespaced typewritten pages. The study was meant by Dr. Cabot to test his theory; "In every case of criminal reform known to me, someone has come to know the man in so intimate and friendly a way that he comes to a better understanding of himself and to a truer comprehension of the world he lives in." Could not then-Dr. Cabot askssuch a "sustained ego-ideal for boys in trouble" turn them from delinquency?

Authors of the study are inclined to conclude that Dr. Cabot's theory failed in their test. But he had stipulated that religion be central to the preventive treatment used, a stipulation almost completely ignored during the 9 years of the test. Only a single counselor, Dr. Cabot's personal appointee, followed his directive regarding religious emphasis. Her success was the highlight of the entire experiment. Otherwise, as one boy remarked, "They taught us the names of snakes, what to do in case of fire, how to make a boat, and how not to steal and hop trucks." *

EVIDENCE OF REFORMATIVE POWER OF PERSONALIZED RELIGION

In ou surmises as to the importance of religion for delinquency prevention and control, are we left to the reluctant findings of such formal research projects? Has life itself and the reformative efforts of society given us no real evidence on which to go? We think that there are many such examples of the power of personalized religion. To confine myself to a single example with which I have had some special acquaintance, let me point out the worldwide system of

Footnotes at end of speech.

the Good Shepherd homes with their reformative efforts for girls and young women. This example is in a sense denominational. But few religious efforts go very far or very deep on any other basis. Moreover, the nobility of the objectives and the absence of denominational barriers among the beneficiaries of the Good Shepherd efforts should win for the efficacy of those efforts a sympathetic scrutiny. In the work of the Good Shepherd Sisters,

In the work of the Good Shepherd Sisters, the first evidence of the reformative power of religion is shown in its gathering of so many dedicated volunteers pledged for life to its labors. Begun in France in 1835, the order had spread to every continent in the world by the time of the death of its foundress. In 1952 it carried on its work of prevention and correction in 389 houses. In a spirit of religious dedication, its now sainted foundress had proclaimed:

"You will go forth, my daughters, and pitch your tents from one end of the earth to the other. Your zeal must comprise all lands and all peoples. I do not wish any longer to be called French. I am Italian, English, German, Spanish. I am American, African, Indian. Every country is my own where there are souls to be saved."

Today there are nearly 10,000 of these Sisters carrying on their work, largely among young women. Seventy-seven of their institutions are in North America. Essentially the same methods are used everywhere: but let us, in order to be concrete, single out for study one of their homes. Vista Maria is in the midst of a beautiful campus of 87 acres on the outskirts of Detroit. It comprises 10 modern buildings, including 5 student residences, a clinic, school, and auditorium. This impressive institution was built a dozen years ago, largely by general subscription from the entire Detroit community. The interdenominational response was the consequence of an appreciation of the spiritually reformative results achieved during nearly 60 years in Detroit with much less suitable surroundings and facilities.

THE PROGRAM OF THE GOOD SHEPHERD HOME

Admission is by court placement or personal application and is without restriction of race or creed. Religion is the animating and coordinating spirit of the entire project, but religious instruction is obligatory only in accordance with the faith of the participant. Non-Catholic students are under the instruction and attend the services of a minister appointed by the Detroit Council of Churches. Catholic students have classes of religion four times weekly. The formal day begins with chapel services for those who wish to go (two-thirds of the students are there), only the Sunday service-lasting about 1½ hours—being obligatory, and that only for Catholics. Short prayers morning and evening are held in the residence halls, sometimes in common, sometimes alone. Group religious exercises are made interesting and beautiful-music, lights, flowers. artistic vestments, all combining to emphasize that God is Himself both beautiful and good. Reception of the sacraments is always encouraged, but is a personal matter, never of obligation. Habitual confession, available normally once a week, is the preparation.

The importance given sacramental confession in the Good Shepherd scheme makes advisable here a somewhat extended discussion. Tributes to the value of confession for mental and emotional normalcy are today being found on all sides. Thus Pierre Janet, the unbelieving French psychiatrist, has declared: "Regular confession might have been instituted by some mental specialists of genius. * * * Confession acts upon all states of despondency like a healing balm to pacify trouble and quicken dying hopes." ** The

American psychiatrist, Dr. Edward A. Strecker, remarks, too, that while "confession is good for the soul" may be a hackneyed phrase, "it is a very true one. Confession at once decreases and devalues anxiety and tensions. It does this in many way. * Frightening, concealed ideas and emotions are robbed of much of their terror by objectifving them in a frame of words. At the same time, confession both lessens and punishes built." " The insistence of Alcoholics Anonymous upon the frank and habitual avowal of fault is, of course, well known. Finally, as William James has declared, "For him who confesses, shams are over and real-ities have begun." If one has not actually ities have begun." If one has not actually gotten rid of his faults, "he at least no longer smears it over with a hypocritical show of virtue-he lives at least upon a basis of veracity." is

Such tributes are paid by experienced scientists even to confession as a mere human act. Sacramental confession, sincerely believed in, stands on an essentially higher level. Here the confessor is conceived of as the human instrument of a divine pardon, so that the penitent who acknowledges his faults with regret for the past and a firm determination to make the future worthy, has the conviction that-as Isias put it: "If your sins be as scarlet, they shall be made white as snow." Girls admitted to the Good Shepherd homes are advised, in preparation for the general confession of previous mis-deeds, "Look into your hearts, but with deeds, "Look into your hearts, but with cheerful eyes." Even a misspent past has its uses: "We can use all our past in the service of God, even our sins." Moreover, "What-ever my past has been, I can still do my best; and neither God nor man can ask more from After such a sacramental confession. the girls are taught to treat the past as dead. They are not to look upon themselves as something unworthy; rather, "In many things we all offend." And as for the future, "There are 40 million reasons for failure but not a single excuse. So, my dears, laugh up to God and try again."

The confessors provided for the girls of the Good Shepherd homes are priests picked for their long experience and sympathetic understanding. They are surprised at nothing and ingenious in finding reason for hope. They know not merely what faults to expect but what are the likely causes and their remedies. Confessions are made as anonymously as the girls may wish, through gratings and a curtain such that not even a kindly eye is the witness of such embarrassment as may be. On the other hand, the penitent may wish from week to week to be guided in her reform of life by the confessor who retains the memory of past difficulties. The past need never be mentioned yet should not be looked upon as a "chamber of horrors" that will not bear a helpful backward

IMPORTANCE OF A CLEAN-CUT CODE OF MORALS

Both in preparation for her first general confession and in her subsequent religious formation, a girl in a Good Shepherd home is given a clean-cut code of morals. It is built up on the foundation of the natural law, the law declared by the Founding Fathers in our Declaration of Independence to be "self-evident"; the law promulgated by the Creator through reason, binding upon all men, and largely summarized in the Ten Commandments. In addition to this code, Good Shepherd girls are given a strong sense of personal worth. They are taught to look upon themselves not as spontaneously generated adolescent female anthropoids, but as divinely created, "a little less than the angels." Loved children of Almighty God, made to "praise, reverence, and serve Him in this life, and to be happy with Him for-ever in the next." And such virtuous service is to win for them "an hundred-fold, even in this life." They are taught, again in the words of Scripture, that "a holy and modest woman is grace upon grace." And no matter how sordid the past, the sweetly striving girl of today is a thing of beauty. As Lionel Johnson declares:

"Fair though it be, to watch unclose
The nesting glories of a rose,
Depth on rich depth, soft fold on fold:
Though fairer be it, to behold
Stately and sceptral lilies break
To beauty, and to sweetness wake:
Yet fairer still, to see and sing,
One fair thing is one matchless thing:
Youth in its perfect blossoming."

"I CAN DO ALL THINGS IN HIM"

No matter what bad habits the past has known, the girl striving to reform is given complete assurance that "I can do all things in Him who strengthens me." She is taught the fact of free will; that no matter what may be the pressure of temptation arising from abused nature and soiled memory, given full advertence of mind to the evil character of the suggested conduct, she can stand firm in her virtuous resolves. She is convinced, too, that the God who gave us His morality code will give clarity of mind and firmness of will to those who in their crises cry out to Him from prayerful hearts. (Of course all that is the sheerest nonsense to the aprioristic academician who has never made the test; but then, as the Episcopalian Canon Bernard Iddings Bell has declared: "I have heard more astonishing absurdities about Christianity from grave dons in faculty clubs than in any other place where men and women of intelligence meet together."

In addition to this conviction of personal power and divine assistance, the girl is taught to live under the eyes of an ever-present God: "I am never as little alone as when I am alone." She learns that it is not what man thinks of one that counts, but what God thinks; and "I am what I am in the This loving living under the eyes of God urges to aversion from unchastity even in thought. A truly virtuous life, she is taught, cannot tolerate deliberate compromise even about its fringes. "He that con-temns trifles shall fall by little and little." And "He that loves danger, shall perish in The search for virtue, therefore, is not for the Good Shepherd girl a matter of playing with temptation, followed by a belated suppression of half-fomented desires. It is a determined living in a purer atmosphere, with a gaze deliberately averted from corrupting sights and memories. Of course there may frequently come weaker moments and perhaps deliberate and serious fault, But the firm, clean standards are there and can quickly be returned to.

This concept of a life lived under the eyes of God is quite other than some skeptics have pictured it, showing Him, "spending every moment of His eternity in exvesdropping and spying on immortal man, haunting every bedroom and listening to every obscene story, and equally observant of the murderer with his bloody chopper and the child with its fingers in the jam." The religious concept is that God, because He is by nature infinite, cannot fail to know; but His purposes are benevolent and "His mercles are above all His works." When to the claims of God the Father upon the Good Shepherd girl are added the claims of the Son, the suffering Redeemer, the girl is readily brought to ask, "What shall I give to the Lord for all He has given unto me?" The quick answer is, "Love never says, 'it is enough'."

PRECEPTS ARE SUPPORTED BY EXAMPLE

Those being trained to a better life in the Good Shepherd Homes have held before them, in addition to the life of Christ—

"fairest of the sons of men"—His blessed mother. As Christ upon the cross gave her to St. John, saying, "Son, behold thy mother," so these girls are taught she is given as a mother to each of us. They are assured of her continued interest in them and readiness to help at the mere asking. For them, too, the example of St. Mary Magdalen, the sinful woman raised to sainthood because "she has loved much," has its personal lesson. The Good Shepherd girl has only to imitate the Magdalen in her love and devotion to Christ, then all will be eternally well with her.

But it is not only through faith that the girls of the Good Shepherd come to see and believe in supreme virtue. They are sur-rounded by women who have left home and human aims to give themselves for life to the ennobling of young women misused by the world. Of such consecrated women, even Lecky, the rationalist, was forced to confess: "In the Sisters of Charity the religious orders of Catholicism have produced one of the most perfect of all types of womanhood." 14 From much more intimate experience, Florence Nightingale adds her tribute, begging to be permitted a nun's training in preparation for her own nursing career: "For what training is there compared with that of a Catholic Those ladies who are not Sisters have not the chastened temper, the Christian grace, the accomplished loveliness and energy of the regular nun." 18 At the continued sight of such lives, devoted without recompense to an unceasing service in their behalf, these girls cannot maintain the cynicism that scoffs, "Everybody's got his racket. What wonder that in daily association with such beauty of character the blighted maiden grows to sweet and modest womanhood?

Such, then, is the religious formation of these girls. In other respects their Good Shepherd training is much that of any good girl's boarding school, with the one exception that these girls seldom leave the spacious grounds, and then only for home visits as a reward for good conduct. Academic instruction is given from grades 7 to 12. The graduates have been trained to competence in cosmetology or office work. Music is much used even in school hours, filling minds and memories with haunting, wholesome meladier.

BY THEIR FRUITS TE SHALL KNOW THEM

All this with what final result? Is conduct improvement notable and firm? The Sisters frequently regret that the average stay with them is only 14 months, often a pitiful little while for lives so badly scarred. But most of the girls are committed by the courts and over their removal the Sisters have no control. These court cases are returned to the court caseworkers to whom they had been assigned and remain under their care until at 19 they pass out of the age group with Which we are concerned. A lack of financial resources has made it impossible to maintain individual check on graduates; but many remain in friendly contact with the Sisters, happy to tell of subsequent jobs, marriages, and children. And while no ade-Quate followup can be maintained, there is much testimony from unbiased and professional sources that the resuults are good, indeed.

In preparation for this article a letter was sent to the 27 juvenile courts in the United States making principal use of Good Shepherd homes. The presiding judges were asked whether the homes were a help to them in their efforts; how much, and why—if helpful at all. Of course, their answers would be matters of opinion, but intelligent, informed, reflective opinion. Where is anything better to be had? Despite the fact that the inquiry was made in the heart of the vacation season, there came these follow-

ing 15 prompt replies. From Marion K. Mathews, probation officer of the Peoria court: "The Sisters and their program have impressed me enormously. * * * In no case have I ever heard any epression but warmth and regard for them from the girls themselves. * * * In the girls I am working with the moral, ethical, and spiritual teaching has made very real inroads and is a positive influence in their behavior."

By Judge John J. Wingrave, of the New Orleans juvenile court, we are told: " * * In 95 percent of these cases the Sisters are able to work wonders with these girls, because of religious training and general spiritual at-From the Nashville juvenile court, Judge D. F. Blackman writes: always found the spirit of cooperation and attitude of the institution most pleasing. * * * The convent is a very valuable asset not only to this court but for the State as well." A Helena district judge, Victor H. Fall, reports that the girls he commits are often too far gone to be much impressed; however, "I know of girls of that age who have been affected by, and, of course, help-fully, being brought face to face with active practicing Christianity." From the Cleveland juvenile court, Judge Harry L. Eastman reports: "On the whole, very good work is being done at this school. The influence of the Sisters has been helpful and few girls who have completed their period of training are returned to court."

A Seattle judge of the superior court. William G. Long, is equally impressed: "Every contact with the management impresses me with their earnestness and devotion to the best welfare of the children. * * * Accordingly. I consider the Home of the Good Shepherd one of our most valuable resources for rehabilitation and redemption." The St. The St. Louis juvenile court judge, James F. Nangle, adds his praise: "You may be assured that I cannot pra e the good work of the Sisters too highly. Without their help we would find it quite difficult to function in this community." A judge of the circuit court, Kansas City, Mo., Henry A. Riederer, feels he has too recently assumed office to speak with other than an interested citizen's experience of many years; he believes that the sacrifices of the Sisters are a great boon to the communities fortunate enough to have their services.

The Omaha juvenile court, through Judge James T. English, reports: "Our overall experience with the local Good Shepherd Convent has been most satisfactory. * * out the facilities offered by the Good Shepherd, the court's work would lose much of its effectiveness." The Portland, Oreg., juvenile court judge, Donald E. Long, says that the convent is "one of our major resources for older adolescent girls having difficulty making an adjustment. Our working relationship with it is very close, and I might add a most happy one." We have two reports from the magistrate's courts of New York City. Judge Abraham M. Block says, "The religious teachings, the warmth and the understanding of the good sisters are a significant contribution to the moral reawakening of many of our girls." And Judge Peter M. Horn: "I have worked with the Sisters for over 14 years. Our record of achievement would not be possible were it not for the cooperation of the sisters. * * It is my firm conviction that in the planning of training schools of the future, we should encourage their establishment under religious aus-

The Louisville Juvenile Court uses its Good Shepherd home for difficult placements. Of it Judge Louis H. Jull says: "The results speak eloquently of the good work of the Sisters. * * * To me the success of the Sisters is amazing. I would not take time to argue with one inclined to the contrary view." From Cincinnati Juvenile Court, the chief probation officer, Harold R. Muntz, re-

ports "a most enthusiastic response" from his staff regarding the corrective work of their local home: "* * There are a few failures and if the Sisters are allowed to retain the girls until adjusted, the results have been most gratifying." Judge George Edwards of the Detroit juvenile courts tells much the same story: "There is no question about the importance of religion in the rehabilitation of wayward children. * * Vista Maria and Villa Maria have proved excellent answers for the future of many wayward girls sent there by this court whose lives otherwise would have continued in a criminal and immoral pattern."

We have kept to the last the response of Philip B. Gilliam of Denver, given as president of the National Council of Juvenile Court Judges, with 17 years of judicial ex-

perience:

"In my opinion the Home of the Good Shepherd has been a great assistance to the juvenile court * * * the guidance given to the young girls is excellent. I am not of the Catholic faith and you may be assured that this is a strictly unbiased report. Many girls have written me thanking me for placing them in the care of the convent. * * * Frankly, I would be at a loss if I did not have the convent to help solve these more difficult problems."

Not content with that testimony, Judge Gilliam has sent the enthusiastic comments of a Mormon girl from Utah, at 14 years of age guilty of long distant and repeated flights from home, and of parental defiance.

The following is from her story.

"My probation officer had previously recommended delinquent girls to the Home of the Good Shepherd and many of them had come back with outstanding qualities in their character makeup toward becoming good citizens. * * My mother was greatly impressed since she thought the one principle I needed was religion and it was definite that I was in need of a change in environment. She knew, too, that the thought and practice of religion were almost completely absent within our home as a result of long years of negligence. It was decided I be sent to the Good Shepherd Home in Denver. * *

"The warm welcome from the first Sisters I ever met deeply impressed me, and it was something I will never forget. On the third day of my arrival I was placed with the girls some of whom were not very sociable. Because of this I frequently kept to myself and was absent from recreation. I occupied my spare time reading. Because I was homesick and repenting for my previous occasions of wrong-doing, I found a great deal of comfort in reading religious literature, and novels. This was certainly to my advantage, for I learned a great deal of what religion was and what it meant. * *

"The wonderful sisters took great interest in my ambitions and tried to accommodate me in every way, and I am deeply grateful for their kindness. I, too, tried to help the sisters in every possible way; although I did little, I always felt happy for what I could do, and I felt I received ample grace for my generosity in helping them do God's work.

"The letters I wrote to my family were always on the spiritual order. I found so much happiness in learning to know and love God that I wanted my family to share a little of the joy I possessed.

"In my senior year I made the final decision of wanting to be a registered nurse. At this time I also received the \$25 war bond from the Honorable Philip Gilliam as the most outstanding student of our graduating class.

"I feel that my progress has been largely due to the religious environment in the Home of the Good Shepherd, and has contributed greatly toward the development of my character. It has also played an important part in regards to my outlook on life—namely, the spiritual side."

Footnotes at end of speech.

To sum up: In our use of the Good Shepherd homes as examples of the delinquencypreventive and corrective force of religion we have shown religion as the force that attracted and welded together the 10,000 dedicated women who are giving their lives to this work in the Good Shepherd Order around the world. We have shown religion, too, as the force that inspired the donors of funds for the erection of their institutions. We have finally shown religion as the means and final end of the retraining of each problem girl. Our testimony has been to the power of religion as religion, the "spirit of reverence of the individual for Almighty God." Thus our claim for religion is something quite other than the concession of the secularist to the reformative powers of religion acting as a mere welfare institution maintaining asceptic swimming pools, character-building rumpus rooms, and dairy bars. Religion can and should use such things. But religion has its own unique contribution to make over and beyond.

CAN SECULAR METHODS (OR SECULARISM) SUC-CEED IN DELINQUENCY PREVENTION?

But, we are asked, aren't such results of delinquency prevention possible from secu-lar methods? From methods consistent with the naturalistic concept of man as a product of blind materialistic evolution from a life cell spontaneously generated on the shore of a Paleozoic sea at low tide, from sunkissed slime? In reply it should be remembered, as Reinhold Niebuhr has well said, that secularized morality "lives parasitically upon the religious convictions of the past." What, in fact, is morality in a frankly secularized social order? Dr. Millard S. Everett, of the University of Minnesota, makes bold to give us his manmade earthbound sex

"Any desire whether powerful or weak, or any end whether chief or small, may with perfect morality be realized, and should be realized, providing it does not interfere with the realization of other desires to the extent of reducing the sum total of human sat-

isfaction." " And Dr. Donald Taft, of the University of Illinois, is somewhat more specific in his description of what-with no word of approval-he conceives to be the current sex

code of the secularized college campus:
1. Though "necking" is permissible and even advocated, it should stop short of actual intercourse.

"2, "Heavy necking" should be confined to a couple who are "going steady." Though generally excluding intercourse this implies: "3. A sort of temporary monogamy.

"4. Married couples should ideally be true to each other." "

No wonder Dr. Kinsey has found so many hard-eyed coeds who count the day lost that has not known its orgasm. Such casual campus queens would be quarantined from the honest unwed mothers of a Good Shep-

herd home. The embarrassment of the consistent secularist in his work of developing character even among nondelinquents is clear from probably the outstanding plan of the kind, the Children's Morality Code inculcated through the Iowa plan, both projects of the Character Education Institution, Washington, D. C. The authors were faced with task of developing character within a framework which could allow no reference to God, to religion, to spiritual soul, or free will. The motive for morality should be "to be a good American." The ultimate urge to morality lay in "the earth life in which we live and move and have our being." person is morally safe, we are assured, "who has reverence within his inner parts." (What are the inner parts of a mere anthro-

poid, we are not told.) Characteristically vague, too, and at most half true, are such generalizations as, "Admiration for comely objects is schooling in the highest act of worship." (Flo Ziegfeld with his Follies worship." (Flo Ziegfeld with his Follies built better than he knew.)

But whatever the merits of the secular scheme, its possibilities are all available to the religious. Religious character training gives point and spirit and compelling motive to the finest product of secularism. With some chosen spirits, as George Washington has said, secular motivation may perhaps suffice; but "reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle." With the added wisdom of a century and a half of national experience, President Eisenhower reminds us again of that truth: "Only religious faith, perpetually renewed, is equal to the challenge of today's tyrants.'

The California Avocado Crop

EXTENSION OF REMARKS OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to advise that I have just received a report from the avocado growers of my congressional district in southern California, which indicates that this year's crop is reaching an all-time high in production. Ten to twelve carloads are being shipped to all parts of the United States each day. Prices are now 25 percent lower than last year's crops, and the quality is of the best. The avocado is appreciated not only for its wonderful flavor but for its practicability and high protein content. For economy and value, I am urging that Government agencies give consideration to purchasing avocados while they are so plentiful.

St. Patrick's Day Address by Judge Leonard P. Walsh

EXTENSION OF REMARKS

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. HARRIS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following address by Leonard P. Walsh, chief judge, municipal court for the District of Columbia, March 17, 1955, before the Ancient Order of Hibernians:

Mr. Chairman, Your Excellency Arch-bishop Patrick A. O'Boyle, Your Excellency Bishop McNamara, Right Reverend and Very Reverend Monsignori, Reverend Fathers, the Honorable Oren Harris, of Arkansas, and his learned colleagues, distinguished guests, members of the Ladies' Auxiliary and of the Ancient Order of Hibernians, and friends, it is a signal honor to be invited by the Ancient Order of Hibernians to say a few words on this anniversary of the death of the patron saint of Ireland. St. Patrick's Day is a traditional occasion in America when everyone becomes Irish.

Would that I had the eloquent accent of a Robert Emmett or of a Daniel O'Connell to bring to you some new expression or new description of a day set aside in the hearts

of the Irish.

St. Patrick's Day is synonomous with laughter, galety, and a common expression of an inward feeling for a land that most of us have never seen, but which gave birth to those closer than all others in the worldour own mothers and fathers.

At a tender and impressionable age we came to know and love that land, its habits, traditions and history, from a most authoritative source-the oral recitations of our parents. Undoubtedly many of the sorrows and painful experiences of an oppressed and poverty ridden people were described through eyes and recollections that dimmed the sadness and enhanced the gladness of their recollection. For no land could be as beautiful as painted by them.

And so it is that we are gathered here tonight as representatives of an ancient order-an order that reaches back through the centuries to an early period when the Knights of the Golden Charm and the Bardic Order gathered around the ancient kings. Their basic concepts of social ideals were expressed in patriotism to Ireland.

As we know, the order itself was part and parcel of the ancient island, and was in existence and receptive to the presence and the teaching of the patron saint. The Ancient Hibernian Order of Knighthood was consecrated by the early Christian priesthood. The form was enriched with religious ceremonies, and its close alliance with the mother church has continued to the present

OUR MODERN DAY

As we know, because of political oppression and religious persecution many of the Irish scattered abroad-not only to America, but to Spain, to France, to Austria.

The Sons of Erin-loyal sons of the mother church-joined together in the modern order with the basic concept of pledging friendship, unity, and true Christian charity. The ancient order was transferred to our friendly shores in 1836. The charter is clear and expresses the basic concept better than any other words:

"You must love, without dissimulation, hating evil, cleaving to the good. Love one

another with brotherly love-let the love of brotherhood abide in you, and forget not hospitality to your emigrant brother that may land on your shores, and we advise you, above all things, have natural charity among yourselves."

In 1838 our society became known as the Ancient Order of Hibernians, and since that time its members have remained steadfast in loyal service to the King of Kings.

The ladies auxiliary is not the least of this order and has in the past and is at present the heart of our organization. The auxiliary in the District has been paid great honor by having among its members, Miss Lillian Fay, a national president. We pay our respect to the ladies of our order and to their patronnesses, the Holy Mother and St.

The Ancient Order of Hibernians is this year signally honored by having as its national president that fine man who bears the name Michael Dowd, whose only interest in life is to be helpful to other people. We are proud of his accomplishments and suc-

cess.

But, why do we cling to the memories, and why are we so proud of a land that is so small, so lacking in world importance, with no wordly goods, no great place in the seat of nations, no great political influence?

We are proud, and we are gathered here tonight, because the people of that land have ideals of liberty and freedom that predominate and persevere. They are God-given ideals and are kept alive by families from one end to the other of our land. There is no division in these ideals, they merge one into the other, they go to make up an entity. These ideals of liberty and freedom are best exemplified in

1. Love of God and the Holy Mother the Church.

2. Love of home and family.

3. Love of country.

Tonight we pay tribute to that land's patron saint. St. Patrick took with him into Ireland, and handed to posterity, two great and related ideas, faith and freedom.

We know St. Patrick was born in what is now Wales, late in the fourth century, the son of a Christian deacon. At the age of 16 he was captured by pagans and taken to Ireland as a slave, and tended swine. After 6 years of slavery, he escaped to England and then went to France and studied in a monastery and was ordained. About 432 A. D. he returned as a missionary to Ireland. While studying for the priesthood he received the call for his missionary work, to return to the land of his captivity.

St. Patrick's time was an era of confusion. The Roman Empire was disintegrating and with it the political structure of the civilized world. Britain was no longer protected by Roman troops and was invaded by pirates. There was fear and uncertainty where once had been the order of the Roman Empire.

It should be remembered that Ireland was not a part of the Roman Empire; it was beond the limits of the Roman order and civilization. St. Patrick returned to the land which had held him a captive, where there were few Christians, and no ordered society existing.

As an apostle of the Christian faith, St. Patrick made Ireland dominantly Christian, and for the next 700 years Ireland was a center of learning, and a center of missionary activity. From Ireland went missionaries to Scotland, to northern and central Europe, and to all parts of the world.

As an apostle of freedom, St. Patrick, the former slave, endeavored to make people free. He inspired the people of Ireland to live under laws and to purify the literature in their schools. St. Patrick loved the Irish character and he sought to save their ancient language and literature and to reconcile them with Christian character. He enabled the Irish folk to throw off their ancient

pagan beliefs and to olish a national life LAWS RELATIVE TO THE PRINTING OF and government according to Christian principles, and instilled in them an ideal of freedom and good government based upon a spirit of justice and enlightenment for which the Irish have fought and died throughout the past 15 centuries.

The Irish have carried on the fight for their ideals of liberty and freedom in a bold imaginative manner. Their humor, wit, and fighting qualities have always been used to accomplish these fundamental ideals.

This heritage has been handed down through the heroes of other days-Cormac, Finn and Brian Boru, Tyrone, Red Hugh, Hugh O'Neil, Robert Emmett, O'Connell, Parnell, Collins, our own Barry-and untold thousands of leaders in our own land up to the present day.

That ideal has spread throughout the Western World and to America. It is not necessary to note that the Irish were numerous in the colonization of America and brought with them ideals of freedom-of religion, speech, and assembly. There were Irish among the pioneers of American liberty and they have remained vigorous defenders of the rights and liberties of the common man. They brought with them and have maintained a loyalty to ancient spiritual sanctions and a strain of poetic tenderness in the American life.

As we all know, the Irish have made outstanding contributions to the American scene and history—as signers of the Declaration of Independence; Members of the Continental Congress; soldiers under George Washington; in the settlement of the West; in religion, professions, industry, politics, and government; and in our culture, entertainment, humor, and sports.

Just to deviate a moment, let us reflect on one of the great institutions of learning and its history. Even the lineup of the Norwegian-started "fighting Irish of Notre

lists 1 or 2 Irish names. Dame"

We Americans of Irish descent, with our inheritance of faith and love of freedom in all things, must carry on in the tradition of St. Patrick and his followers against the evils of the present day, at home and in the world. We must keep alive those God-given qualities of love of God, the Holy Mother the church, love of home and family, and love of country.

The sons of Erin are well equipped in personal qualities to carry on as leaders in any and all fields—warmth and enthusiasm; a sense of humor, no matter how great the adversities of life; a fear of God; the ideal of family life, with the mother as the personification of the Christian virtues inspiring the entire family to purity, integrity, and unity. With these, we cannot fail. We are citizens of the country that is the fairest flower in God's great garden and we must preserve our ideals and history.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when

recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing. who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable). copies of the daily RECORD, of which I shall be delivered at his residence, I at his office, and 1 at the Capitol.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the dally RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Meeting the Communist Menace

EXTENSION OF REMARKS

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "Meeting the Communist Menace," delivered by Hon. Herbert Brownell, Jr., Attorney General of the United States, before the Greater Boston Chamber of Commerce, in Boston, Mass., on March 21, 1955. The address is a fine exposition of what his Department and the Government are doing with relation to that problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEETING THE COMMUNIST MENACE

(Address by Hon. Herbert Brownell, Jr., Attorney General of the United States, before the Greater Boston Chamber of Commerce, Boston, Mass., on March 21, 1955)

Nearly a year ago, at President Eisenhower's request, I reported to the American people on the threat of Communist infiltration here at home and what the Federal Government is doing about it. I said that the menace of communism was very real; that it would be foolhardy to minimize the dangers it posed; that we should not have exaggerated fears of those dangers; that our Government was well aware of them and was meeting them in an orderly and effective way.

We have made a great deal of progress in the past year-progress which I shall outline to you today along with new problems Which have arisen. But it is clear from the intelligence information provided to me by the FBI that we cannot lower our guard. We cannot relax our vigilance. The dangers-even many of the same problems-still exist, because of the very nature of the Communist conspiracy. It is a worldwide plot, directed by scheming, ruthless men Would bend the whole world to their selfish Will. They cannot rest, they cannot succeed, until they have enslaved all the world. When repulsed in one area, they try another. When one plot is exposed, they hatch an-

The hard core of Communists in this country are cast in the same mold. They are willing to devote their lives to destroying in this country the very freedoms which allow them to speak and write and act.

The Communist Party, U. S. A., is like an iceberg. Only a small part can be seen, but the bulk is beneath the surface. The exposed part of the Communist conspiracy in this country is shrinking but there continues to be much activity beneath the surface. The members of the Communist Party resort to secret meeting places, secret schools, even secret symbols or numbers in place of hames. They use an Aesopian language in

describing their aims and functions, an admittedly protective form of expression which most of us consider just plain doubletalk.

The Communist Party line has not varied much in the past year. The Communists still use any available issue or incident to villify the United States and glorify the Soviet Union. They oppose rearming West Germany; they advocate admission of Red China to the United Nations. At home, they seek repeal of the Smith Act, the Internal Security Act of 1950, and the Communist Control Act of 1954. They advocate merger of Communist-dominated unions with others affiliated with the CIO or A. F. of L. Stress is laid on infiltrating non-Communist groups to advance Communist objectives, on penetrating basic industries and on recruiting members, particularly Negroes, youths, and industrial workers. They have attempted to step up Red propaganda. Last fall, for example, they distributed more than half a million copies of a pamphlet carrying the party program. That pamphlet was entitled innocently enough. It was called the American Way to Jobs, Peace, and De-

But I can report to you that the Communists are having their troubles, too. are not having much luck recruiting, or even maintaining their membership. know their fund-raising drives are falling short. They are hard pressed to keep an active leadership intact and functioning in the face of Government actions. They have set up their own internal security apparatus to offset infiltration by the FBI. That apparatus has not only been ineffectual, it has spread fear and distrust within Communist ranks, and created disorder in party communications. The party's schooling program is dwindling. Its largest school, the Jefferson School of Social Science in New Yorfi, has been disrupted by the Subversive Activities Control Board hearings. These have resulted in a recommendation the school be required to register as a Communist front.

The SACB hearing examiner held that the school was established by the Communists to teach both Communist ideas and work. The school trustees have been trusted party members. The Communist organization supplied funds to run the school and provided quotas of students. Instruction ranged from Marxist theory to such more practical subjects as recruiting party members.

Similarly, proceedings brought before the Board of the Department of Justice against the Labor Youth League has hampered Communist efforts to recruit members and spread hate propaganda among our youth. After other lengthy hearings, the Board has ordered the Labor Youth League to register with the Attorney General as a Communist front, so the public may know its officers, its financial support, and the objects to which its resources are devoted.

Evidence shows that the Labor Youth League has never deviated from the Communist Party line. It can't, because it has been supported financially and otherwise by the Communist Party; persons who directed and led youth activities of the party became the leaders and officers of the league. The evidence showed that these persons were subject to Communist discipline and that

the league personnel and funds have been devoted consistently to furthering the aims of the Communist Party.

Meanwhile, we have continued to strike at the Communist conspirators with a number of other legal weapons. Another 250 subversive aliens have been deported or ordered deported since last April 9. Six persons have been convicted of lying to the Government about their Communist affiliations and another six indicted for the same offense. Four persons were convicted of harboring fugitive Communist Party leader Robert Thompson, who was himself jailed with an extra penalty for jumping bond.

The Smith Act, which makes it a crime to advocate the violent overthrow of the Government, remains a most effective legal weapon to strike at the leadership. Nine party leaders and organizers were convicted at Philadelphia and five others at St. Louis in the past year. Seven were indicted at Denver, eight at New Haven, and eleven in Puerto Rico. Four leaders have been apprehended on indictments under the membership count of the Smith Act. One of these four has become the first person to be convicted for membership in the party, knowing that its aim was overthrow of the Government. He was Claude Lightfoot, of Chicago.

Lightfoot, as our evidence showed, was member and leader of the Communist Party for 20 years. In recent years he had joined other leaders in the party underground. He was indicted last May 14, apprehended by vigilant agents of the FBI in June, tried and convicted in January, and sentenced in February to 5 years in jail. At his trial, his own counsel conceded that Lightfoot was a member of the party; conceded that Lightfoot had held offices ranging from local organizer to alternate member of the national committee, the Communists' highest governing body. He conceded that Lightfoot understands communism and has taught its meanings in classes and in writings. Lightfoot told students in a secret party school in 1947 that the party would spill blood, if necessary, in carrying out its objective of overthrowing our Government.

Two new laws are added deterrents to those who would play the Communists' game.

The first of these is the so-called immunity statute. One case under it already is before the courts. It involves William Ullman, a man identified in sworn testimony before a congressional committee as a member of a World War II Communist spy ring. Ullman was called before a grand jury and refused to testify. Under the new law, a Federal judge was asked to grant him immunity from self-incrimination and order him to testify. The judge did so, but Ullman persisted in his refusal. The judge sentenced him to 6 months in jail for contempt of court. Ullman has served notice of appeal.

The second tool comes in the Communist Control Act of 1954. It utilizes machinery of the Subversive Activities Control Board to determine if Communists have subverted a legitimate business or labor organization and to enable members to free themselves from such domination.

It is no secret that the Department of Justice is reviewing and updating files on various unions which were thrown out of the CIO some time ago on the ground that they had fallen under Communist domination. When those reviews are complete, we will bring whatever proceedings are war-When those reviews are complete, we ranted by current facts.

Meanwhile, some of the unions which might be involved have made moves to do

1 or more of 3 things:

1. Take action to cleanse themselves of Communist domination, which is exactly what Congress wants them to do.

2. Attempt to conceal such domination.

3. Seek affiliation with other unions which which are members of the A. F. of L. or CIO and thus gain exemption from the act. This, recall, is one of the new facets of the Communist line and responsible leaders of the major unions have warned their member unions to look very cautiously at such affilia-tion proposals and to insist on certain safeguards to insure that they will not be allowing themselves to be infiltrated through affiliation.

Perhaps the heaviest blow which this ad-ministration has dealt the Communist conspiracy has been to dry up sources and po-tential sources of information in Government, to virtually eliminate the opportunity of setting up a fifth column within the Gov This has been done by establishing a realistic employee security program.

The Civil Service Act of 1912 established minimum procedures for dismissal of per-manent employees for the good of the service, but left much discretion to agency

heads.

During the early years of World War II several attempts were made by Congress to obtain better security precautions in the executive branch. Summary removal powers for national security purposes were enacted late in 1942.

Then, in 1947, Executive Order 9835 initiated an employee loyalty program. But only when an employee was held to be currently disloyal was any action generally taken under that order until 1951 when it was broadened to include reasonable doubt of an employee's loyalty. It made no allow-ance for the fact a person might be a risk to our national security even though his loyalty was unassailable.

Congress, in 1950, passed Public Law 733, after pointing out that persons subject to blackmail, those who talked too much and those with unsatisfactory associations or habits, could constitute a serious security danger as well as traitors. During hearings, one high official testified that a single act of a disloyal person and a single act of an indiscreet employee can do equal damage

to our security.
When President Eisenhower took office, he established the present employee-security program to carry out the purposes of the 1950 law enacted so overwhelmingly by Congress. As the law demands, the head of each department or agency is made responsible for effective security within his de-partment or agency. The order requires investigation, in varying degrees, of all appointees to Federal positions. It establishes criteria for judging whether employment is consistent with security. It requires suspension and, after review, termination of employment of those deemed security risks. And, right here, let me quote a little of Public Law 733. It says:

"To the extent that such agency head determines that the interests of the national security permit, the employee con-cerned shall be notified of the reasons for his suspension and within 30 days after such notification any such person shall have an opportunity to submit any statements or affidavits to the official designated by the head of the agency concerned to show why he should be reinstated or restored to duty.

"The agency head concerned may, following such investigation and review as he deems necessary, terminate the employment of such suspended civilian officer or employee whenever he shall determine such termination necessary or advisable in the interest of the national security of the United States, and such determination by the agency head concerned shall be conclusive and final."

The law, and the machinery under the order, provide for written statements of charges to suspended employees, an opportunity for them to answer, a hearing upon the employee's request, a review of the case by the agency head or his representative, and a written statement of final decision.

An example of the effectiveness of the employee security program is the case of Joseph Sidney Petersen, Jr. He was a trusted employee of the National Security Agency, one of our most sensitive agencies. In the course of a security check, allegations arose which could have led to his dismissal under the Executive order. In the ensuing investigation, information was obtained indicating Petersen might have illegally in his possession certain highly classified documents. Under the order, the investigation immediately was referred to the FBI. Petersen admitted having stored such documents in his apartment, where they were recovered, and also admitted furnishing contents of the documents to representatives of another government. He was arrested and indicated on three counts of the espionage laws. He finally entered a plea of guilty to one count and was sentenced to 7 years in prison.

tremendous job of checking the 2,300,000 Federal workers is almost completed. Ahead, then, the big task will be only to screen applicants for Government jobs. This administration is dedicated to a policy not only of getting security risks out of Government, but also we propose to keep them out of the Government as long as we

are in office.

As a result of all this progress in the fight against communism, resulting from our new Internal Security Division under Assistant Attorney General William F. Tompkins, the Communists themselves have recently made a major shift in the emphasis they place on their various programs. It is becoming increasingly clear that the current violent attack against Government witnesses and against the FBI's confidential sources of information has many of its roots in a Communist effort to stem the successful campaign against subversion.

The Communist Party has sought for years to uncover, to smear, to destroy the informant system of the Federal Bureau of Investigation. Communists call the FBI the enemy. The party's Manual of Organiza-tion, published in 1935, discussed how to "safeguard the party organization against stool pigeons" and "how to expose stool pi-geons." Those "stool pigeons," included anybody who worked for the FBI, who provided information to the FBI, or who testified in court against the Communist Party. Other articles in Communist publications have repeated this attack year after year.

A young man named Harvey Matusow has become the current focal point of the attack. Harvey Matusow testified for the Government in two criminal prosecutions. He also appeared before the SACB and before congres-

sional committees.

Matusow now claims that virtually everything he said in those appearances was a lie. The Department of Justice, 2 Federal courts, a grand jury and a Senate committee have been investigating and 1 case has come to a conclusion which I believe is well worth reporting today.

Fourteen months ago, Clinton E. Jencks, an official of the International Union of Mine, Mill, and Smelter Workers, was convicted of filing a false affidavit to the National Labor Relations Board in that he denied being a member of the Communist Party. Seven witnesses, including Matusow, testified con-cerning Jenck's Communist connections. Jencks himself, when confronted with Matusow's testimony by a Senate committee, invoked the fifth amendment and to this day has not denied, under oath, any of Matusow's testimony.

Despite this, Matusow filed an affidavit in the United States district court at El Paso, Tex., where Jencks was convicted. Matusow claimed in that affidavit that his original testimony was false. Jencks simultaneously filed a motion for a new trial, based on the affidavit.

District Judge Robert E. Thomason, who had presided over the original trial, held hearings for a week on the Jencks' motion.

Presented in evidence at the hearing was tape recording made by the publisher of Matusow's recent book of a conversation between himself and Matusow. In that conversation, Matusow declared of his original testimony:

"I knew Jencks was a party member and I said so."

Then Matusow added:

"I can't say here that Jencks wasn't a party member after he signed the affidavit (to the NLRB) because I know that he was.

And yet Matusow went into court and tried to convince the Judge that Jencks was not a Communist. Evidence also showed that the original book outline prepared by Matusow did not even mention Jencks, the El Paso trial or false testimony in any criminal prosecution. The Government showed that material prepared by Matusow differed markedly with the finally published version in other respects and that the mine-mill union of which Jencks was an official advanced several thousand dollars to the publishing house in connection with the book, some of which in turn was advanced to Matusow, before and after he signed his affidavit claiming he had lied.

Judge Thomason denied a new trial, stating that "there has been nothing developed" in the hearing "in the way of evidence or testimony that has caused the Court to have any doubt" that Jencks was guilty as

charged.

The judge then ordered Matusow before him and declared:

"By recanting your former testimony, given in this court, which I believe in substance was true, you have, in my opinion, deliberately, designedly and maliciously at-tempted to obstruct the justice of this court."

Judge Thomason found Matusow in contempt of court. Last Wednesday, he sentenced Matusow to 3 years in jail. the statement Judge Thomason made at that time sums up that phase of the Matusow case as well as is possible at this time.

Let me read it to you: "I am firmly convinced from the evidence of the witnesses, including that of Matusow, not only that the evidence offered, in support of the motion, is not worthy of belief, but that Matusow alone or with others, wilfully and nefariously and for the purpose of defrauding this court and subverting the true course of the administration of justice and obstructing justice, schemed to and actually used this court of law as a forum for the purpose of calling public attention to a book, purportedly written by Matusow, entitled 'False Witness.'

"This court finds the fact to be that as early as September 21, 1954, responsible officials of the IUMMSW under the guise of seeking evidence in Jencks' behalf, subsidized the writing and publication of this book by authorizing the expenditure of union funds This at a time when, from for that purpose. the evidence, Matusow had no intention of writing any such book as was here exhibited or of changing his testimony given in the Jencks trial. I find that this subsidization was deliberately done the more easily to persuade Matusow to lend himself to the perpetration of a fraud on this court by means of the filing of his recanting affidavit and his testimony given herein. I find that Matusow wilfully and with full knowledge of the consequences, lent himself to this evil scheme for money and for notoriety. "It is my firm conviction, moreover, that this hearing was deliberately brought on for the purpose of attacking the judgment of this court, attacking the Federal Bureau of Investigation and the Justice Department, in a carefully thought out scheme to generally discredit by these means the testimony of undercover agents and former Communist Party members who give evidence against the Communist Party of the United States and its adherents. Matusow, by his action, conduct, and testimony, had, and done in my presence during this period, ob-Viously made an effort to convert these proceedings into a trial of the Department of Justice rather than of the issues before this court. Nothing that Matusow has offered in his defense has persuaded me otherwise."

As you see, while the fight against communism goes on, the tactics of these diabolical conspirators change. But the important thing is that we are making great progress in our fight against them.

Release of the Yalta Papers

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Wednesday, March 23, 1955

Mr. KEFAUVER. Mr. President, in the New York Times of today there appears a most revealing story by Drew Middleton as to the manner in which the State Department dealt with the British Government in regard to the release of the Yalta papers.

It has been said here that Sir Winston Churchill reluctantly and finally agreed to the publication of these documents. If Mr. Middleton's dispatch is accurate, and we can hardly doubt that it is, we are forced to place a new interpretation on the word "agreement."

Mr. Middleton refers to revelations by Sir Winston in the House of Commons as to his part in the matter. Sir Winston informed the Commons that on February 11 the British Government had been informed by the Department of State that our Government had decided not to publish the documents. Four days later, the Prime Minister said, "we Were told publication could not be re-Sisted any longer."

I submit that being told that publication could be resisted no longer is vastly different from being asked to agree to publication.

It must have come as something of a shock to the British Prime Minister to learn later than the State Department had been forced to release the Yalta documents because this same State Department had deliberately leaked the full text of the documents to the New York Times.

This, it seems to me, is duplicity com-pounded. And when the victim of this duplicity happens to be our most important ally, it becomes all the more shocking.

I ask that the full text of the article in the New York Times be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHURCHILL CHIDES UNITED STATES ON YALTA CASE—SAYS PUBLICATION OF PAPERS WAS UNTIMELY-VANDALS SMEAR ROOSEVELT

(By Drew Middleton)

LONDON, March 22.-The United States Government changed its mind over the untimely publication of the Yalta Conference documents, Price Minister Churchill told the House of Commons today.

The British Government was informed March 11 that the administration in Washington had decided not to publish its record of the Three-Power meeting, Sir Winston said. Four days later "we were told publication could not be resisted any longer," he

The concern of both the Conservative and Labor members of Parliament over the publication of the Yalta papers was emphasized by the cries of astonishment and dismay that greeted Sir Winston's statement.

In the view of Government and opposition spokesmen, the release of the papers may prevent a meeting between the Soviet Union and the Western powers. By giving the Russians a pretext to make the proposed meeting a platform for their propaganda, publication of the Yalta documents may impede any real progress toward a relaxation of the tension between the East and West, these sources say.

BRITISH PUBLICATION OPPOSED

British opinion in the highest circles is opposed to the publication by this country its record of the Yalta meeting. sources are critical of the United States plans to release the minutes of the Potsdam and Teheran conferences.

"Where will publication end?" a senior British official inquired today.

Won't the Republicans now ask for the minutes of the secret sessions of the Council of Foreign Ministers since the war and if these provide no ammunition for the minutes of all other meetings we have held with the Russians or even among ourselves?

"Do they really believe in Washington that the United States can negotiate with any country successfully if everything said in private meetings is to be thrown open to public?" the source added.

The British policy, as put forward by one of the Nation's most respected statesmen, is: Open covenants secretly arrived at.

Sir Winston's distaste for the whole affair, obvious to anyone in the Commons, was heightened by news that the words "Traitor of Yalta," had been scrawled across the base of the statue of President Roosevelt in Grosvenor Square.

The writing was in red oxide paint, and. according to official of the Ministry of Works, it may do irreparable harm.

The statue was erected as a memorial to Roosevelt "as a great war leader, a great man of peace, and a great citizen of the world." It was unveiled by Mrs. Roosevelt in April 1948 in the presence of King George VI and Queen Elizabeth, the present queen mother.

At the time of the Yalta conference, Churchill doubted the wisdom of Roosevelt's policies, and he does today. But these doubts do not outweigh in his mind the debt of gratitude owed to Roosevelt for his help in 1940 and 1941.

Although there is much criticism of the issuance of the Yalta documents there is little of Roosevelt in this country. The de-facing of the statue introduced a note of blind hatred that is alien to public opinion

The Prime Minister gave the Commons a detailed account of the exchanges between his Government and the administration in Washington about the Yalta documents.

These began last summer when the British were informed of the administration's wish to publish papers relating to the big power conferences at Yalta and Potsdam and the United States-British meeting at Malta that preceded the Yalta Conference.

GALLEY PROOFS SENT TO BRITISH

The British received galley proofs of the Yalta documents in December. But Sir Winston said sharply it was not the duty of the British Prime Minister or his Foreign Secretary to read through such a vast amount of material about the past.

"I was consulted on a few points of detail,"

Sir Winston conceded.

Sir Anthony Eden, the Foreign Secretary. with the Prime Minister's agreement, sent a message to Washington deprecating on general grounds detailed record of important international documents being published so soon after the event.

The Foreign Secretary told Secretary of State Dulles, January 12; that while he did not suggest the abandonment of publication he thought it most undesirable at present, the Prime Minister added.

"On March 11 the United States Government informed us they had decided not to publish," Sir Winston continued. "But on March 15 we were told publication could not be resisted any longer. Twenty-four hours later it occurred.

"The British Government has not decided whether to publish its own reports of plenary meetings and the foreign ministers conferences at Yalta," Sir Winston declared. "These reports are being carefully examined to see whether publication is necessary," he added.

The Prime Minister said that, although in his opinion the British representativesthat is he and Sir Anthony—came out of the Yalta report very well, this did not alter his conviction that publication was untimely.

Taxed by a Laborite member about a remark attributed to him in the documents to the effect that he did not like the Poles. Sir Winston said he did not remember having made any such remark and "if so, it must have been completely out of context."

Anyone who cares to read the documents can see how "again and again I fought for the interests and rights of Poland at Yalta and Potsdam," Sir Winston asserted.

Clement R. Attlee, opposition leader, asked Sir Winston to negotiate an agreement with the United States to prevent the release of documents on future international meet-

Sir Winston replied that the Yalta documents might have been influenced by accidental circumstances and their release should not be judged as definite United States policy.

Other ministers and senior civil servants fear the United States Government, at the request of the Republican right-wing Senators, will continue to issue documents on international conferences. They believe that, as a result, the prospects of talks with the Soviet Union or any sort of serious diplo-matic negotiation will be reduced.

Public Power Projects

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, March 23, 1955

Mr. NEUBERGER. Mr. President, the distinguished broadcaster, Edward P. Morgan, made some very pertinent comments on the attitude of the President of the United States toward public power projects.

These observations were included in the March 16, 1955, program of Mr. Morgan, under the auspices of the American Federation of Labor, over the network of the American Broadcasting Co.

I ask unanimous consent that Mr. Morgan's remarks be printed in the Appendix of the RECORD.

There being no objection, the text of the broadcast was ordered to be printed in the Record, as follows:

President Eisenhower doesn't like to see the Federal Government in the power business. He thinks the idea creeps, socialistically and otherwise. He prefers what he is fond of calling partnership—letting local communities and private utilities work out their power problems together. If something gets too big for them, Washington can lend a hand but it prefers to beam a sort of big brotherly encouragement at a distance. The implication is that partnership is a package bargain: Power at the cheapest price, in the best tradition of free enterprise, plus a kind of insurance policy against creeping socialism.

But somehow at his news conference this morning, the President made both the partnership and the price features of this package seem a little less than real, or at least a

little less than a real bargain.
The city of Memphis, Tenn., is growing fast and needs more electric power. But Mayor Frank Tobey announced defiantly last month that Memphis would built its own plant before it would buy private power from Dixon-Yates. Queried on the subject, Mr. Eisenhower gave Memphis, in effect, his blessing, "Local private ownership of power," as he termed it, could be not only a good thing but very effective. But, the President added, referring to building powerplants, "when the Federal Government does this, they can print money to do the job," and that means, he added, cheapening money, taking something out of every dollar in a taxpayer's pocket.
You couldn't help wondering how this

You couldn't help wondering how this squared with things in Memphis and whether the Federal Government had ever explored these things in a partnerlike way with the city before telling Dixon-Yates to go ahead and build a powerplant; after all it was Memphis' expansion that produced the main need for more power in west Tennessee. It was easy to get Mayor Tobey on the telephone and this reporter did. No sir, he had detected no gesture of partnership. "We were never consulted by Dixon-Yates or the Federal Government at any time," he said.

Memphis buys power from TVA now and is a satisfied customer except that it wants more; it doesn't really want to build its own plant. But Mayor Tobey said, "Before Memphis accepts power from a Dixon-Yates plant, directly or indirectly, it will build its own."

Why was the mayor so opposed to private power? Memphis had it, he said, before 1938, and doesn't want to return to the extreme high rates of those days. But what about President Eisenhower's statement that you had to print money to finance public power?

Why, Mayor Tobey said, "When the President says it's taking money out of the tax-payers' pockets he is wrong. * * * TVA is a seif-supporting institution. * * Dixon-Yates can't possibly supply electrical energy as cheap as TVA can supply it."

"I'm just afraid," Mayor Tobey of Memphis

"I'm just afraid," Mayor Tobey of Memphis said, "that the President is determined to defeat TVA."

So much for partnership and price in Memphis. As for projects in the Pacific Northwest, Senator Neuberger, a Democrat from Oregon, quotes figures from Secretary McKay's Interior Department to the effect that Bonneville Dam on the Columbia River is some \$65 million ahead of schedule in repayment of its capital investment. In 11 years of full operation, Neuberger says, Bonneville has returned \$48 million to the Federal Treasury in power revenue, from a total capital outlay of \$128 million in construction, maintenance, and operation.

Against that not exactly creepy figure, NEUBERGER calculates that under the administration's proposal to build highways by the bond-issue plan, for every dollar spent on roads, 55 cents will go to banks to pay the interest—which would total \$11½ billion over the life of the program. It makes you wonder whether this business administration can really get it for you wholesale.

Address by Hon. Pat McNamara, of Michigan, to the Friendly Sons of St. Patrick

EXTENSION OF REMARKS

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1955

Mr. O'MAHONEY. Mr. President, the Friendly Sons of St. Patrick, of Rhode Island, had the rare privilege and opportunity on St. Patrick's Day of hearing a speech by the distinguished junior Senator from Michigan [Mr. McNamara], who now occupies the chair, and thus is presiding over the Senate at this moment. I ask unanimous consent that the speech made by him on that occasion be printed in the Appendix of the Record, because of the rare vision and spirit of prophecy and understanding it displays.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address by Senator Pat McNamara Before THE FRIENDLY SONS OF ST. PATRICK, PROVI-DENCE, R. I., MARCH 17, 1955

I feel truly privileged to have been chosen to reply to the toast to the United States. And to respond to that particular toast here in Rhode Island is a real challenge, for it was in these parts that so much of American history was made.

I pride myself on the fact that I was born and grew to manhood in New England. And I am made happy by the fact that today, as a Senator for the State of Michigan, I feel myself at home, really at home, whether I am in Michigan or here. Maybe I should add, at this point, that if ever I feel as much at home in Washington as I do here, why, that really will be something.

We have come here tonight to honor the land of our fathers and the patron saint whose kindness and wisdom shone like a beacon light through the pagan atmosphere of early Ireland. It was the good St. Patrick whose deeds and example have done so much to make the Irish into the militantly kindly people that one associates with Ireland. I do not know whether I have the skill or anyone else has the insight to put into words the deep feelings that move us on St. Patrick's Day. It might sound a little like a paradox if put into words—at least, it might to anyone who has no Irish blood. But anyway, let me say it plainly—we all feel somehow that what is truly Irish is truly Ameri-

can. I am sure we don't feel that this is just an accident of history. I think we feel that America is good fruit of the Irish spirit just as the Irish spirit has always had in it a yearning of which America is the best expression.

I think we are proud of our ancestry, but we really did not come here tonight just to glory in it. I do not think the true American lives or wants to live in the shadow of his forebears. I say to you tonight as I would say to any American worthy of his citizenship: "Never mind who your grandparents were—that does not prove you are a good American. Think of what your grandchildren will be—there is the test of your Americanism. You have earned no credit for your grandparents, for who can choose his ancestors? But you do have it in your power to deserve credit for your grandchildren.

I cannot help but think of the great faith of the men and women who put their imprint on America, and through America—on the world of today and of tomorrow. They were prophets, as was St. Patrick, who transformed a hundred pagan tribes into a great people. You know, we often misunderstand the function of the prophet. The true prophet is not one who foretells the future as by magic or through a crystal ball. The prophet is not the man who foretells the future—he is the man who makes the future.

It is easy to have the gift of hindsight. Who among us is not sure that, listening to a St. Patrick, he would have forsaken the heathen idols of his fathers and embraced the true faith? Who among us is not sure that, faced with the challenge of the Revolution, he would have rallied to the call of the Continental Congress and offered his life that a new nation might be born?

But let us consider the times and the circumstances of the rebellion which brought forth the United States of America. If you or I had then lived, could anyone have blamed us if we had said: What kind of delusion are you trying to sell the colonists? You are asking them to rebel against constituted authority for the pursuit of life, liberty, happiness, democracy, and equality. But is it equality which denies the vote to anyone who is not a property owner? Is it democracy which denies to the women of America the right to vote? Is it liberty which denies the slave or the bondsman the right to be free? Is it life or happiness which conceives it to be the duty of government to stand aside while the strong devour the

Such questions would have been honest questions. They would have been pertinent questions in that day. Indeed, we are still in the process of finding the answers to some of these questions.

But if one knew enough about the American people—if one were wise enough to realize that America was more than just the defined quantity—if one understood the yearnings of the American people, the silent philosophy of the Catholic, the Protestant, the Jew, the longings of the Negro and the white, the worker and the farmer, he would have anticipated the answer to these questions.

He would have known that in every society, as in every individual, there is a gap between the self-expressed ideal and the reality. He would have known that progress is the process of closing that gap. He would have known that within a few years the franchise would be extended to all men. He would have known that four score years after the Declaration of Independence a bitter and bloody civil war would be fought to free slaves. He would have known that a century and a quarter after the adoption of the Constitution women would get their vote. He would have known that the time would come through a century and a half of slow prog-

ress after the Revolution that first one great political party, and then by precept and example another great political party, would accept the idea that it is not the proper role of government just to act as an umpire, or to stand with folded hands at one side while vast parts of the Nation live in misery.

But to know all this he would have needed faith, faith in the ideals of America and faith in the upward thrust of the American people toward the realization of those ideals. He would have needed faith, not just faith in the Colonies as they were at the time of the Revolution, but faith in America for what she would become if enough Americans had faith

When you stop to think of it, wasn't this Just what St. Patrick started going in Ireland? Isn't this the Irish spirit? This was the Irish spirit—and this is the American spirit.

So it seems to me that the lesson of this day for all of us may well be—that America is a land in the making. That America will always be a land in the making. A land in which the noblest flowering of the human spirit will find finer expression than ever before. A land with a constant challenge—the challenge of better living and a measure of basic security for more and more people; the challenge of translating into reality the teaching of all the saints whose destiny it has been and always will be, to mold a better world. And the greatest challenge of all—the challenge of that great faith in mankind, which, as age follows age, hammers the world into the prophetic concept of the Kingdom of God.

My friends—this is my reply to the toast to the United States: Let us strive to make the world all the things our hearts desire.

The Stock Market Investigation

EXTENSION OF REMARKS

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1955

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Why Is the Stock Market So Sensitive?" published in the Arkansas Gazette for Thursday, March 17, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY IS THE STOCK MARKET SO SENSITIVE?

Throughout the Senate Banking and Currency Committee's study of the stock market, Senator Homer Capehart, of Indiana, has shown himself to be more interested in turning the issue to partisan advantage than in reaching the essentially nonpartisan goals fixed by Chairman J. William Fulbright, of Arkansas.

Senator Fulseight's announced purpose is to find out whether existing legislation is adequate to prevent repetition of the 1929 crash. This secondary purpose is to find out whether the present laws, if they are adequate, are being properly administered by the Federal agencies established during the recovery era to ride herd on the market.

These goals may be difficult of attainment. The questions they involve will get as many diverse answers as the more immediate question of whether the Senate committee study itself was primarily responsible for the break

in the market earlier this week. Nevertheless they are legitimate goals of congressional inquiry, and a lot of people besides Senator FULBRIGHT have decided that it is time the questions were asked.

However, Senator Capehart took off on a partisan tangent on the very first day of public hearings and has never returned to earth. The ranking Republican member had barely got his seat warm before he attempted to lead the president of the New York Stock Exchange into an affirmation of the thesis that the soaring market was sound as a dollar used to be and represented nothing more nor less than a feeling of confidence in the Eisenhower administration. The witness refused to bite, but Senator Capehart didn't give up.

Unfortunately, Treasury Secretary George M. Humphrey now has chosen to give Senator CAPEHART the partisan answer he's been looking for.

Mr. Humphrey says that the market's rise in recent months has represented a rebirth of confidence in the functiong of our free-enterprise system. There is no need for concern over the extent of that rise, he contends, but there is ground for fear that any inquiry into other possible causes of the rise may jeopardize that reborn feeling of confidence.

However, the Treasury Secretary's answers lend themselves to some interesting new questions.

If the reborn child is so rachitic as to be knocked off its feet by the kind of conservative, low-keyed inquiry that Senator FULBRIGHT is given to conducting, then there is that much more reason to believe that the study was necessary

study was necessary.

In his testimony before the committee last week, Benjamin Graham, the chairman of a New York investment house, put it another

"If this study puts the market down, then the market was due to go down and should go down."

Secretary Humphrey, and of course Senator Capehart, obviously feel differently.

However, if Mr. Graham and others are right, and Senator Humphrey and others wrong, it just may be that the people will be better served by getting the shakedown news from a Senate committee rather than by waiting for one of Mr. Walter Winchell's advance tips.

The Forest Service

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a most informative article published in the Missouri Conservationist, paying tribute to the United States Forest Service on its 50th anniversary.

This great organization, founded half a century ago by Gifford Pinchot, has done more to save the resources of our country for all the American people than any other agency of Government. As a resident of the State of Oregon, which has 15 percent of its area in national forests, I have been in a position all my life to appreciate the morale and ability and public-spirited service of the men of the United States Forest Service.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIFTY CANDLES FOR FOREST SERVICE

(By Dan Saults, editor, in the Missouri Conservationist)

It was just 50 years ago that the United States Forest Service was born. Its sire was Gifford Pinchot and its dam was Intelligent Planning; its god father was Theodore Roosevelt and its godmother was Congress.

The Service has had a distinguished llf's since then, and it would appear to be in a state of vigorous maturity today. It was reared, nurtured, and educated according to a basic precept enunciated by Godfather Teddy: "Forestry is the preservation of forests by wise use." And wisdom has been a pretty good guide to behavior even though men change the legends by which they live.

Gifford Pinchot became the first chief of the Forest Service; he was also the first native American to have professional training in forestry. And the Service has been run by professionals ever since. This seems a reasonably sound idea, too, in fields as widely separated as medicine and baseball.

Forest Service has a lot of children, now. Nearly all States have their agencies working in the field, just as Missouri has its Forestry Division in the Conservation Commission. Thirty universities and colleges, among them the University of Missouri, offer full instruction in forestry. (Pinchot had to go to Europe to learn.) Forty-five States, including Missouri have extension programs in forestry conducted by the State agricultural colleges. And today, some 5,000 professional foresters are employed by private industry.

Back in the days of its callow youth, Forest Service wasn't quite socially acceptable and frequently got snubbed by local people. But at 50 years of age, Service has become not only respectable but even a romantic hero, subject of movies, novels, and radio programs.

How times do change in 50 years. Too bad the men who dreamed the great dreams, who birthed the idea, aren't around to see people accept their scion.

Just consider the matter of public forests, pretty much taken for granted today although attacks are still being made on them by interests who have learned nothing and forgotten nothing since the turn of the century. Ever think what would have happened to our national forests if a protecting hand hadn't been laid on them a half century ago?

Those public forests—nearly 1,500,000 acres of them in Missouri—are big lumbering operations on the controlled-use principle, though our acreage here is only now developing into the harvest stage. Apart from sustained yield, they were visited by 35 million people last year—not just visited but used by those people for hunting, fishing and outdoor recreation.

The Service is helping educate a lot of people, too. The most dramatic example of that is the development of Smokey Bear as symbol of cooperative forest fire prevention, a program jointly conducted by the State foresters and the Service.

It has been a good 50 years, despite two world wars and an amazing growth in population and industry, which meant tremendous pressure against the Forest Service. But what will the future bring?

The Service doesn't know any more than in 1905 it could foresee 1955. But it guesses there will be steady growth for forest recreation and for timber needs; that the forest's protective role on the watersheds will become even more important. Perhaps forestry research will develop new and better kinds of trees and other concepts of timber management.

Fifty years can be a long time to men, but it isn't much to a redwood or even to a Missouri white oak.

So the 18-year-old Conservation Commission of Missouri wishes the 50-year-old Forest Service of the United States a cheery golden anniversary and many, many happy returns of the day.

New Story of Masaryk's Fall Again Denies Suicide Version

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. FLOOD. Mr. Speaker, on March 20, 1955, the Baltimore Sun published a remarkable story about the death of Jan Masaryk, in which the Communist version of Masaryk's suicide was denied according to a new evidence which came from the intelligence sources of the Slovak underground.

In the cold war which is being waged between the East and West the underground intelligence is to us of inestimable value. Due to its day-by-day knowledge of what the Communists did in the past or what the Communists are doing and planning now, it serves us, the people of the West and many times it gives us an efficient weapon or instrument to refute the big Communist lie. Would we support the underground intelligence more fully it could very well be one of the decisive factors in preserving freedom and peace in our world. Reds comes from various sources. It is only at the end of the line that all bits of information are pieced together into a comprehensive picture and then coordinated and evaluated. This is necessary because the underground intelligence is not one, but several networks which work independently. In the Slovak underground intelligence, certainly one of the best behind the Iron Curtain, there are some networks whose operations were conducted with the neatness and finesse of a highly successful and well-organized group. Their deep knowledge of everything connected with the Communist domination of their homeland makes these networks or the men who head them an asset on our side of that cold war. One such network was that of Dr. Michal Zibrin or that of Col. J. Muran, and more recently the group headed by Capt. M. Baar or the one of Col. Jan Bukar. It is safe to mention at least these few as concrete examples because the Reds in their native Slovakia know about them and it cannot harm them any more since other Slovak patriots are carrying on the work started by these active opponents of communism.

The denial of Masaryk's suicide published by the Baltimore Sun is a good illustration of the value of the underground intelligence. Knowing the truth about Masaryk's death is not only important to us here in the West, but more

so to those who are still oppressed, because knowing the truth gives them one more reason to defy their masters who deprived them not only of freedom and prosperity, but who—for obvious reason—perverted even the meaning of the truth itself.

The article referred to is as follows: New Story of Masaryk's Fall Again Denies Suicide Version

Washington, March 19.—On this ninth anniversary of Jan Masaryk's death a local outpost in Czechoslovakia's anti-Communist underground released today a new version of it, contesting the Prague regime's report of suicide.

Almost simultaneously, American authorities here made available a study of how the Communists, having got rid of Czechosiovakla's last anti-Communist Foreign Minister, have since been striving to eradicate both him and his father, the late Thomas G. Masaryk, from the memories of Czechoslovak peoples.

This has involved them in, among other things, a repudiation of pledges they made immediately after their February 25, 1948, coup d'état, the study showed.

MASARYK'S STATE

It noted that shortly thereafter—on the 98th anniversary of the elder Masaryk's birth—the late Klement Gottwald, then premier of the Communist regime, laid a wreath on the grave of the Czechoslovak Republic's founder and Vice Premier Nejedly, also a Communist, broadcast on that same occasion this assurance to the Czechoslovaks:

"Today's republic is Masaryk's state and, in regard to safeguarding his great liberation, it is even much more protected now than before. * * If anyone claims that the present people's democracy is not Masaryk's, it is an insult * * * to Masaryk, the founder of this state and one of the last great democrats of the Old World."

NO SUCH CEREMONIES NOW

There were no similar ceremonies in honor of the elder Masaryk this month and none in honor of his son who was found dead beneath the windows of his suite in Prague 12 days after his father's rites in 1948.

The only comparable event the Communist regime has celebrated was the second anniversary on March 14 of the death of Gottwald, billed in its memorial preachments as our first workers' president.

The new account of how the younger Masaryk died was made available by V. Stefan Krajcovic, local representative of the National Committee for Liberation of Slovakia,

Slovaks have a special interest in the Masaryks, for, though Masaryk père was a Czech, he was born near the edge of Slovakia and, beside speaking a dialect close to Slovak, was so sympathetic as to be called the lonely Slovak at Prague.

The gist of Krajcovic's report is that the younger Masaryk did not commit suicide but, instead, was "killed by a Major Sram" of the Communists' State Security Police and that Sram was "himself liquidated" 2 months later. The report, relayed from a spot on the Iron Curtain's fringe, is the work, Krajcovic attested, of two of his committees "experts on Communist methods."

Most of its circumstantial details are of a physiological and unprintable nature.

TESTIFIED FOR UNITED STATES COMMITTEE

Krajcovic identified the reports' authors as Col. Jan Bukar, who testified before a congressional committee here in May, 1953, and Stefan G. Lukats, who, he said, is now in Munich but coming to Washington next month.

According to their report, a Dr. Teply, the first police surgeon to reach the spot where Masaryk's body lay, made findings that con-

troverted those of a Dr. Hajek, who performed the subsequent autopsy on which the Communista' suicide charge was based.

The Bukar-Lukats report says Dr. Teply found that Masaryk had died hours before the 6 a.m., discovery of his body plus multiple evidence that he had not jumped from a palace window but, instead, had been clinging desperately to its ledge before he finally fell, feet first, to the ground.

DOCTOR CALLED SUICIDE

It also says that Dr. Teply stuck by his findings in opposition to the Communist verdict and committed suicide on Christmas. 1948.

It adds that Dr. Hajek, who underwrote the Communist verdict, had previously been imprisoned by the Russians for serving the Nazis on the international commission they organized to investigate the so-called Katyn massacre of Polish officers by the U. S. S. R.

The Bukar-Lukats report asserts, in addition, that whereas other Communist officials hastily summoned to the Masaryk death scene were so roughly clothed as to indicate they had been roused from bed, Viado Clementis, who was Masaryk's deputy and became his successor as foreign minister, showed up not only promptly but impeccably dressed.

SAYS CALLS WERE TRANSFERRED

It asserts, too, that Clements, who was later involved in the Slansky espionage trial and executed by his Communist confreres, had ordered all Masaryk's calls transferred to him during the night that ended in Masaryk's death.

The foreign ministry's day book showed that, the report says.

The study by American authorities of how the Communists have been going about eradicating memories of Masaryk among their subjects links their efforts to the U.S.S.R.'s "hate Americans" campaign and notes that those efforts extend to more than

tearing down all statues commemorative of "Masaryk's state."

ELDER MASARYK ACCUSED

They have extended, instead, the study says, to the issuance of a book Masaryk's Antipopular Policies, in which the Czechoslovak Republic's first President is accused of:

- 1. Plotting to murder Lenin.
- 2. Warmongering against the U.S.S.R.
- 3. Selling his country to American, English, and French imperialism.
- 4. Wallowing in a mud of lies, larceny, and corruption.

"Documents allegedly found in Masaryk's archives are published to back the charges, but," the study says, "they are so flimsy as to suggest that those responsible for the book may have had in mind sabotaging the endeavor.

"If they meant what they said, they have committed a despicable act of national selfabasement.

"They have committed it in their desire to kowtow before the Kremlin and to invelgle the young generation by painting the Masaryk republic in the blackest black and the Communist era in the purest white."

The 5,250-word study, from which the above is quoted and which is attributable only to Ameircan authorities; undertakes to dissect and disprove scriatim each charge the official Communist publication has made in derogation of the Masaryk who, born in 1850, died in 1937.

Opining that "Masaryk's American connection may have heightened the desirability of removing him from his pedestal, literally and figuratively," it notes that "he married an American girl and used her maiden name—Garrique—as his middle name" and adds: "The hate-America campaign in the Soviet world has thus engulfed even a Czech hero because of his relatives."

Deserved Honor for George Meany

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. ZABLOCKI. Mr. Speaker, for the first time in the 73-year history of the annual presentation of the Laetare medal by the Notre Dame University, this high honor was bestowed upon a man drawn from the ranks of organized labor-the president of the American Federation of Labor, George Meany.

It is, indeed, fitting that Mr. Meany should have been selected to receive this, the highest honor bestowed by the Notre Dame University on a Catholic layman. His distinguished record of untiring activity on behalf of American labor has won the respect and recognition of peo-

ple throughout the Nation.

In presenting Mr. Meany with the Laetare medal, Notre Dame University has honored him both for his personal integrity, and for his considerable contribution to the task of raising the entire labor movement to a position of new importance.

I wish to take this opportunity to congratulate Mr. Meany upon this deserved recognition of his accomplishments. At the same time, I should like to include in the RECORD two editorials which ap-Deared in the Milwaukee Journal of March 20, and in the Washington Sunday Star of that same date, commenting on the 1955 Laetare medal award.

[From the Milwauke Journal of March 20, 1955]

DESERVED HONOR FOR MEANY

Notre Dame University has chosen wisely in selecting George Meany to receive its Laetare Medal for 1955.

The award, announced on each mid-Lenten Lactare Sunday since 1883, is made to Catholic men and women whose genius has ennobled the arts and sciences, illustrated the ideals of the church, and enriched the heritage of humanity.

As the first labor leader to receive the award, the president of the American Federation of Labor is honored both for his own achievements and in recognition of the position of importance to which he has helped raise the entire labor movement.

In the 30 years he has held offices of leadership, George Meany has fought hard for labor. His ability has been universally rec-Ognized, his integrity never questioned. He has struggled to rid labor of racketeering influences and protect it from subversive elements. He has also stanchly defended the free enterprise system, for as he himself has sald:

"Where there is no individual liberty, there is no free trade union movement, either. We are dedicated to freedom, not only political but also economic, through a system of free enterprise. We believe in the American profit system. We believe in free competition."

As fitting as is the award, so is it timely, because the AFL president is destined to head the larger federation that will result When the CIO returns to the AFL fold as the result of the merger efforts he so largely initiated.

It is reassuring to know that a man whose faith and stature are now so properly recognized will be at the helm of labor.

[From the Washington Sunday Star of March 20, 1955]

LASTARE MEDAL WINNER

The University of Notre Dame has turned for the first time to the ranks of organized labor in naming George Meany, president of the American Federation of Labor, as 1955 winner of the Laetare medal. The award is considered the highest honor bestowed by the university on a Catholic layman and Mr. Meany joins a distinguished list of men and women in the 73-year history of this annual presentation.

In selecting the AFL head this year, Notre Dame has recognized Mr. Meany's service not only to the labor movement but to his church and to his country. It made particular mention of his militant opposition to communism, and its attempts to infiltrate the labor movement both in this country and abroad. There is a timeliless, too, in selecting Mr. Meany in the year when he is scheduled to become president of the largest labor organization in American history, resulting from the pending merger of the AFL and the CIO. It is a deserved recognition.

Newsprint From Bagasse

EXTENSION OF REMARKS OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. WILLIS. Mr. Speaker, I take this opportunity to hail a new era in the industrial development of Louisiana and in the production and processing of sugar cane, one of our major crops.

As Representative in Congress from Louisiana's famed Sugar Belt, I am particularly pleased to call attention to the fact that 25 weekly and daily newspapers in my home State recently joined in issuing their publications on newsprint made from bagasse, heretofore generally considered a waste product of the sugar mills, but which now offers unlimited possibilities.

The Valentine Pulp & Paper Co.'s plant at Lockport, La., becomes the first in the world to use both the pith and the fiber of sugarcane to make paper. This outstanding achievement climaxes a research and experimental program which Valentine began in the 1930's and which has been watched with intense interest by the publishers of newspapers and the printing industry as a whole.

In addition to the new product, the Valentine plant produces fine writing paper, book paper, mimeograph paper, and tablet paper. A large part of the company's output is sold to the United States Government. The \$4½ million facility at Lockport was completed last

Having been in close touch with the progress of the research and experimental program, I am especially pleased and gratified over the successful culmination of the efforts expended by those who have worked so hard to make the production of paper from bagasse a reality. The action of 25 newspapers in using the newsprint obtained in this process is a fitting tribute to those who have pioneered in this movement, as well as a

practical demonstration of the project's

The successful use of bagasse in the production of newsprint is of tremendous and vital importance to the sugarcane industry which centers in the Third Congressional District of Louisiana—the Sugar Bowl. This development has brought enthusiastic comment from public officials and leaders in the industry who see a far-reaching effect on the future welfare of this phase of agriculture and upon the economy of the entire State of Louisiana.

The fine plant at Lockport was constructed and engineered by Brown & Root, Inc., of Houston, Tex. The Valentine Pulp & Paper Co. was formed by Brown & Root, and the Valite Corp. of Lockport and New Orleans. Will J. Gibbens, Jr., president of the corporation, has been a pioneer in the utilization of bagasse in the manufacture of a variety of products. For instance, Valite produces industrial synthetic resins from bagasse. These resins are widely used by the major domestic phonograph record companies and are used in Europe, Australia, and South America.

Board members of the new paper company are Mr. Gibbens and T. M. Barker. the latter of Lockport; Herman Brown, George R. Brown and Herbert J. Frensley, all of Houston. The executive vice president and general manager of the company is W. A. Zonner, a nationally known and widely experienced figure in paper-mill operations. W. L. Hendrix, formerly general superintendent of Herty Laboratory in Savannah, is general superintendent. Consulting engineers are Edwin L. Powell, of Chattanooga, and Thomas R. McElhinney, vice president and technical director of Valite, an affiliated company of Valentine Sugars, Inc. of Lockport.

Valite revealed just a few years ago that it had patents pending on a process of making pulp from bagasse. were proven to be very satisfactory and this was verified by independent observers. Mr. McElhinney played a leading part in developing the Valite process. In 1948 the paper engineering firm of Merrit, Chapman & Scott investigated the process and declared that it was economically feasible. Following the Korean war the program was accelerated and the company firmly established the fact that economical white, unbleached pulp could be made from bagasse.

In 1953, Brown & Root, Inc., and Valite announced formation of the Valentine Pulp & Paper Co., to build a paper mill at Lockport capable of manufacturing 50 tons of finished paper products daily. Fine grade writing paper, newsprint, mimeograph paper and book paper were produced by the plant, and the Government contract secured. The demand for paper products was such that the company has revealed it is launching an expansion program that will increase the capacity to 80 tons daily.

Sugar cane has now created yearround employment in the Lockport area of Louisiana and we can forecast the apparent development that will follow in other parts of the 18 sugar-producing

parishes—counties—of Louisiana which together produce 300,000 tons of bone dry bagasse, less than 40 percent of which is now used for industrial purposes.

The paper mill at Valentine employs 180 persons. During the regular harvest season an additional 200 persons are employed in the sugar factory.

To me the brightest and most important aspects of this new industry are twofold. First, it was conceived, developed and financed through private sources under our system of free enterprise. And second, this new outlet for bagasse, a by-product of sugarcane, is an argument which speaks with more force than mere words in fayor of the adoption of an amendment to the Sugar Act to increase the mainland area sugarcane quota.

Elsewhere in today's Record I have exposed the propaganda by paid Cubanminded lobbyists who would deprive our domestic sugar industry of the right to a fair share of our expanding domestic sugar market, due to yearly population increase. No one should hesitate to encourage an industry which has shown not only willingness but ability to increase and expand its efficiency; and to those who put out such propaganda I say, "Look at the new plant at Valentine and think twice before you presume to speak against the best interests of our farmers."

The Louisiana newspapers which have so well demonstrated the value of bagasse newsprint by printing on this product include the Abbeville Meridional. Bastrop Daily Enterprise, Bunkie Record, Clinton Citizen-Watchman, Colfax Chronicle, Coushatta Citizen, Denham Springs News, DeRidder Beauregard News, Donaldsonville Chief, Eunice News, Franklin Banner-Tribune, Houma Courier, Jena Times, Jefferson Parish Times, Morgan City Review, Napoleon-villion Assumption Pioner, New Iberia Daily Iberian, Opelusas Daily World, Port Allen West Side Journal, Ruston Daily Leader, St. Martinville Teche News, Sulphur Southwest Builder, Thibodaux Lafourche Comet, Ville Platte Gazette, White Castle Iberville Parish

The cooperative project of these newspapers in making use of the newsprint produced from bagasse has received widespread publicity in their columns and in other publications. Among editorials summarizing the outstanding effects of this development and the great future it forecasts are the following from three of the participating newspapers published in the Third Congressional District of Louisiana, in their issues of February 24, 1955:

[From the Franklin (La.) Banner-Tribute]
THE SUGAR BELT MAKES HISTORY TODAY

Thursday, Pebruary 24, 1955, will go down in history as one of the most momentous days in the economic revolution that is taking place in the Sugar Belt of Louisiana.

All over the 18-parish area in which sugarcane is grown, and even in some sections of Louisiana that do not cultivate and harvest the tall, sweet grass, small-town weekly and daily newspapers are going to press today with a special type of newsprint.

The cooperating publications are publishing their regular editions on paper that has

been made from Louisiana sugarcane bagasse by the Valentine Pulp & Paper Co., of Lockport, La.

This significant announcement means that at long last a byproduct of the principal crop grown in southern Louislana is being put to use for the manufacture of one of the most important commodities consumed in a free country. Over one-half of the 700,000 tons of bone-dry bagasse that has been produced in the State has largely gone to waste. Now it is going into newsprint and other paper products to help to satisfy the needs of a dynamic, growing population.

There are many far-reaching aspects to this official announcement. For one thing, it means that now the sugarcane farmer will be growing a crop that will be used in its entirety. It marks the beginning of an era when year-around employment will be realized in the cane patch, supplanting the uncertainty of the seasonal cane grinding. The Valentine properties at Lockport substantiate this statement. The new paper mill adjoins the sugar factory, canefields, and research department of the company. There are jobs to be had in the sugar mill and the fields and in the laboratory, and now there are 180 more men and women employed in the paper mill.

This has resulted in a boom in the Lockport community and throughout the parish of LaFourche. A big new housing development is now going into Lockport, and the new payrolls will mean new families and new homes and a higher standard of living and a bigger and better town.

What the smokestacks of Valentine have done for that area will be accomplished throughout the sugarcane-growing part of the State just as sure as night follows day. St. Mary and her sister parishes are bound to benefit from this program.

This is a rich and diversified agricultural area but cane is king in the land. The farmer can grow sugarcane better than he can grow any other kind of crop. He has proven this for over a century now, overcoming every conceivable type of obstacle from disease to world politics. He has developed new varieties of sugarcane and by sound farm practices he has been able to realize a higher yield per acre with each passing year. Now he will be growing cane for sugar, sirup, molasses, feed—and paper.

It there has even been any doubt in the mind of the cane planter about the value of research the Valentine mill should erase it forever. This new development was due to hours and months and years of patient, painstaking work and experimentation in the laboratory of the Valite Corp., an affiliate research company of Valentine's. The work began back in the 1930's and was accelerated after the Korean war. In 1952 newsprint was made from 100-percent bagasse by the company on an experimental basis at the Herty Laboratory in Savannah, Ga.

After economic feasibility was established Valentine interests banded together with Brown & Root, one of the world's greatest construction firms, to form the Valentine Pulp & Paper Co. A mill capable of producing 50 tons of paper products daily was built at Lockport. The success of this mill is attested to by the fact that hardly had it been completed but what the company announced that it was being expanded into a \$4½ million facility capable of manufacturing 80 tons of paper a day, including newsprint.

Small town newspapers in Louisiana and all over the Nation have been confronted with a problem that parallels the problem of the cane farmer in magnitude. Newsprint has been a scarce and expensive commodity. Most of it had to be imported. Financially unable to build their own mills or even enter into long-range contracts the small newspapers have had to fight for news-

print in the open market on a catch-ascatch-can basis. During wartime the situation had been particularly acute and the black-market operators thrived.

The newsprint market has improved considerably, but the future for the small town newspaper had been in doubt. Now, with the mill at Lockport able to supplement established sources the nonmetropolitan press can face the future with confidence. Newsprint is the basic commodity on which the free press is printed and if it is cut off the real victims will be the American people because without the newspaper for the dissemination of news and advertising freedom would die on the vine.

Member newspapers of the Louisiana Press Association look on the mill at Lockport as "their mill" because for almost 4 years now the LPA has been working hand-in-hand with the Valentine company on this project. The ultimate benefit to the economy of the State of Louisiana is beyond the imagination.

There is one last conclusion that can be drawn from this development. The Farm Bureau of Louisiana, the American Sugar Cane League, Louisiana Congressmen, and other agencies have fought a hard but discouraging fight for an increase in the mainland quota of sugarcane. If there had been any hesitation on the part of the Congress or the national administration to justify this increase that question should now be resolved in favor of the increase. There are about 120 small town newspapers in Louisiana and over 8,000 in America. They won't all use bagasse newsprint but this new source may one day mean the difference between success or fallure to many of them.

This story is being told in Louisiana today, but in a few days it will be known all over America and in most foreign countries. Great industries are built over a long period of time. The south Louisiana paper manufacturing industry will be built around bagasse. The only way to insure its full growth is with an ever-increasing supply of sugarcane now and in the years that lie ahead. The only safe and sure way to obtain the product needed by the American farmer and American publisher is to have it grown on the same ground that gave birth to the red, white, and blue.

[From the Lafourche Comet, of Thibodaux, La.]

SUGAR HAS NEW ALLIES

Along with the accolades which will pour into the office of the Valentine Pulp and Paper Co. this week, we, of course, want to offer ours.

Out of the expressions of congratulations and best wishes which will be given to the company, we sincerely hope there will come the real recognition of the tremendous accomplishment of the men who had the courage to carry out an idea.

The \$4,500,000 paper mill built in Lafourche Parish is an important addition to the industry of our locale, but its true significance can only be measured in what it has done for two major industries in the United States. It has brought together for the first time the mainland sugar industry and the paper industry. It has also brought the Nation's greatest disseminators of news, the weekly and daily newspapers to the side of the sugar growers and processors.

Through their foresight, the men who built the Valentine paper mill, have given the sugar people powerful allies which must stand alongside them in the fight for the continued expansion of the mainland sugar

Just a few months ago the newspaper publishers of this country were at the mercy of the Canadian paper manufacturers and just a few years ago all paper manufacturers felt the pinch of a serious paper shortage. With

this country continually at odds with an ever more powerful Red menace, it is not too hard to conceive of other periods of paper shortage unless we take advantage of the important development in the use of bagasse by Valentine.

We know the wood pulp paper manufacturers are always confronted with a lengthy growing period ranging from 12 to 40 years for their main ingredient but with the use of bagasse, this country can have an inexhaustable supply of pulp for its paper.

Today the 18 sugar producing parishes of Louisiana produce approximately 800,000 tons of dry bagasse annually. Of this amount about 35 percent is purchased for the manufacture of wall board, fertilizer, and feeds.

While Valentine will not use the balance of the bagasse available this year, or the next, it is not beyond the realm of belief that other paper mills similar to Valentine will be built in just a few years in Louisiana, in Florida, and possibly in Cuba and Puerto Rico, A half dozen more mills like Valentine Pulp & Paper Co. will soon put bagasse in short supply.

Action in Congress this year can provide for the future. Congressional action in amending the Sugar Act to increase the mainland quota by 100,000 tons this year will not only ald the sugar farmers but will protect the tremendously important paper in-

An increase of 100,000 tons of sugar over the regular quota will give the industry an additional 150,000 tons of dry bagasse annually. And bagasse properly stored does not

The mainland sugar quota of 500,000 tons has been in effect for a number of years. Even though the sugar industry has spent thousands of dollars perfecting improved varieties of sugarcane for greater productivity, Congress has continually curtailed the growth of the industry by the flexible quota.

Today this country uses in excess of 8 million tons of sugar annually and during the past 5 years the population of the country has grown substantially. However, the sugar quota for the mainland producers has been at a stalmate. No consideration has been given to population growth, nor to improved productivity in the industry.

proved productivity in the industry.

This week, through the use of bagasse newsprint by some 25 Louisiana weekly and small daily newspapers in Louisiana, it becomes apparent that our mainland sugar crop is tremendously important to not only a small area in Louisiana and Florida but to the entire Nation, and it must be allowed to expend

[From the Daily Iberian, of New Iberia, La.]

BAGASSE NEWSPRINT A REALITY

Today's issue of the Daily Iberian and Jeanerette Enterprise are printed on a new kind of newsprint, produced from sugar cane waste known as bagasse, and made at Lockport, La., by the Valentine Pulp & Paper Co.

Production of this fine quality newsprint from a fiber that has experienced difficulty in being utilized, may well lift the economy of the mainland sugar-producing States to a higher level.

Sugar cane farmers will welcome this new product that makes a brand-new industry for Louisiana which means additional employment and the utilization of a raw material into finished product.

Member newspapers of the Louisiana Press Association have played a big part in keeping alive the interest in developing a newsprint plant for Louisiana to help break the stranglehold that Canada has always had on the manufacture of newsprint.

Newspaper publishers can well remember how the price of newsprint zoomed upward from \$40 per ton before the First World War to the present level of \$130. The same pub-

lishers can recall during the war that they often had to buy newsprint on the black market which cost as high as \$300 per ton.

The use of bagasse will have a tremendous effect in keeping Canadian mills in line, if nothing else.

Since it opens up new opportunities for employment, it is highly possible that Secretary Benson, and Congress, will listen with a sympathetic ear to the pleas of sugar farmers for an increase in the mainland quota.

As the market for the bagasse paper continues to grow, it will need larger and larger amounts of bagasse, which means more and more sugarcane.

It is only reasonable to assume that as the bagasse newsprint catches on that additional mills will be built. One of the additional mills could conceivably locate in Iberia Parish where there is an abundance of sugarcane bagasse. This would give mill operators and eventually farmers more return for their sugarcane.

We salute this new industry and the courageous and pioneering executives and owners of the Valentine Pulp & Paper Co.

Louisianians will live to see the day when most of her vast supply of natural resources will be processed here as finished products and build the economy to its rightful position.

Sugar Quotas

EXTENSION OF REMARKS

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. WILLIS. Mr. Speaker, we have under consideration a proposal to renew the Sugar Act and at the same time to amend it so as to increase domestic sugar quotas.

Let me hasten to point out that the proposed amendment will simply permit domestic producers to participate in our expanded sugar market in the United States as our population increases in the future. In other words, under the proposed amendment Cuba, in the future, will not receive a pound of sugar less than she received in the past.

To understand this we must realize that under the present law Cuba gets a regular quota; then she gets 96 percent of the unused quotas of other areas, and finally she gets 96 percent of the annual increase of domestic sugar consumption. Our population increases by approximately 2,500,000 every year, and as a consequence our annual consumption increases by about 125,000 tons of sugar every year; and Cuba has been receiving 96 percent of this windfall. Thus in the last 10 years Cuba has received at least 1.250,000 tons of sugar, over and above her regular quota, under the formula of the Sugar Act, and over and above her lion's share-96 percent-of the unused quotas of other areas.

On the other hand, under the terms of the Sugar Act, the domestic sugar quotas are rigid, the mainland area cane quota being fixed at 500,000 tons per year. But that is not all. While the mainland area arcreage has not varied over 2 percent in the last 5 years, greater yields have been achieved due to better farming and milling practices, under the

guidance and encouragement of the Department of Agriculture. And instead of being rewarded for good performance, the farmers' acreage was cut on an average of 10 percent in 1954 and an additional 8 percent has been ordered for Therefore, while Cuba has been enjoying an annual increase from our consumption, our farmers have been suffering a cutback. This, in short, is what the current proposed amendments seek to correct, by devoting to our own farmers a fair share of the annual increased amount of sugar it takes to feed our own babies, without deducting from or taking away a pound of Cuba's present quota. What is wrong with that?

Any fairminded person will admit

that the proposal under consideration is fair and equitable. Since a just cause cannot be fairly combated, paid Cubanminded lobbyists have resorted to propaganda. I brought this out in a speech on the floor recently and I pointed out that these lobbyists had resorted to veiled subtle threats and big talk. Now I find that they have been trying to use the poor-mouth strategy, by means of a letter inserted in Investor's Reader, a publication of Merrill, Lynch, Pierce, Fenner, & Beane. As a complete answer to this poor-mouth strategy, I wish to call to your attention the reply of a group of responsible people engaged in the domestic sugar industry. The people who signed this reply represent the beetsugar industry, but their problems are common to the domestic sugarcane industry in Louisiana and Florida. Their reply, which appeared in the March 9, 1955, issue of Investor's Reader, follows:

GENTLEMEN: In your issue of January 26, space was given to the publication of a letter from a paid publicity man for certain Cuban sugar interests. This being so, we assume that you will give at least equal prominence to this letter from us.

Part of the Cuban sugar industry has set itself against any consideration of changes in the Cuban share of the United States market decreed by existing law. To accomplish this objective it is part of the Cuban strategy to talk poor mouth.

For example, the writer of the letter which you published complains that Cuba no longer can fill the Philippine sugar quota in this market, a backhanded protest against the rehabilitation of the Philippine sugar industry. Cuba knew that the privilege given her of filling the Philippine deficit was only temporary and that she could not hope permanently to augment her output at the expense of the Philippine industry.

of the Philippine industry.

Cuba protests that out of her quota some relatively small increases in the shares in the United States market of Peru, the Dominican Republic, and Puerto Rico were made in 1951. What was done was approved, in fact, initiated by the State Department. It comes with poor grace for Cuba to protest any transfer to other foreign countries, many of whom are also friends of the United States and numbered among its best customers. Cuba today receives approximately 96 percent of the entire share of the United States market set aside for foreign suppliers shows how generous the present situation is to her. That large percentage also explains why other sugar-producing countries to the south of us have initiated a determined claim to part of Cuba's share.

The present law was enacted in 1947. From that year to 1954, United States annual consumption has increased over 1 million tons. Neither the domestic beet industry, the mainland cane industry, or the Hawaiian indus-

try received 1 ounce of this large increase in consumption. Not only that, but the way the law was framed and stands today, foreign suppliers, with Cuba getting 96 percent, will continue to get the entire and complete benefit of the increase in consumption sure to take place in the future. The domestic in-dustries complain that they should not be foreclosed from a share in the growth and progress of this country. They are helping to make this growth possible. Actually, Cuba's basic quota—disregarding deficits—increased between 1948 and 1954 from 26.7 to 33 percent of the total quotas of all areas supplying sugar for United States consumption. The fixed-tonnage quota of the domestic industry obviously results in gradually reducing the percentage of the expanding United States market which the domestic industry is permitted to supply. The domestic beet-sugar quota, for example, was 25 percent of the total quotas in 1948, and now is less than 22 percent.

The sugar brought by consumers from the domestic area is produced with less man-power and greater efficiency than that which reaches us from foreign sources. Finally, it takes fewer minutes of the average workingman's employed time to buy a pound of sugar in the United States today than at any other time in history or in any other place in the

world today.

Very truly yours,

J. A. SUMMERTON, President, American Crystal Sugar Co. Frank A. Kemp, President, The Great Western Sugar Co. MERRILL E. SHOUP, President, Holly Sugar Corp. Douglas Scalley,

Executive Vice President,

Utah-Idaho Sugar Co.

Elsewhere in today's Record I commented on the fact that 25 weekly and daily newspapers in my home State of Louisiana recently joined in issuing their publications on newsprint made from bagasse, heretofore generally considered a waste product of sugarcane, but which now offers unlimited possibilities. The story of the Valentine Pulp & Paper Co.'s plant at Lockport, La., as unfolded elsewhere in today's RECORD, is a tribute not only to our free-enterprise system but is an argument in favor of the proposed amendment to the Sugar Act, as a wellearned encouragement to an industry which has shown itself capable of everincreasing efficiency.

National Better Material Handling and Packaging Week

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include herein several communications relating to a National Better Material Handling and Packaging Week:

> AMERICAN MATERIAL HANDLING SOCIETY, INC., Toledo, Ohio, March 21, 1955.

Hon. Peter W. Rodino, Jr., Member of Congress,

House of Representatives, Washington, D. C.

DEAR MR. RODINO: I am enclosing a letter from C. C. Furnas, chancellor, University of Buffalo, N. Y. which was sent to Chester LeVine, president, Niagara Frontier Chapter, American Material Handling Society, Inc.

The letter refers to a check for \$1,000 presented to the university for the purpose of establishing a fund for the purchase of books for a material handling library and for awarding a series of prizes to students presenting the best papers on the subject of material handling.

This gift, proceeds of conference and exhibit staged by the Buffalo group, is only one of the many such gifts to institutions of learning throughout the Nation by the men of the material handling industry and profession to help promote the advancement of the art and science of material handling.

In the interest of the effort to establish National Better Material and Packaging Week, may I request that this letter be included in the record as beneficial to the program.

Very truly yours,

J. W. HALL, National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

THE UNIVERSITY OF BUFFALO, Buffalo, N. Y., February 25, 1955. Mr. CHESTER LE VINE,

Niagara Frontier Chapter, the American Material Handling Society, Inc.,

Buffalo, N. Y.

DEAR Mr. LE VINE: I am very happy, indeed, to acknowledge the check for \$1,000 which you presented to the University of Buffalo on behalf of the Niagara Frontier Chapter of the American Material Handling Society. Inc.

It is a pleasure to express my thanks and appreciation on behalf of the university to you and to the members of your chapter for this substantial evidence of your interest in the continuation and strengthening of engineering education at the University of Buffalo. This check is a symbol of the interest which the members of your society have in the continued growth and welfare of the University of Buffalo. It is a demonstration of the kind of interest which we believe the citizens of this community will be demonstrating in ever increasing numbers in the active support of university education at the University of Buffalo.

Sincerely yours, C. C. FURNAS, Chancellor.

AMERICAN MATERIAL HANDLING SOCIETY, INC., Toledo, Ohio, March 21, 1955. Hon. PETER W. RODING, Jr., Member of Congress,

House of Representatives, Washington, D. C.

DEAR MR. RODINO: I am enclosing for your information a letter, written by Mr. G. C. Stewart, general manager, National Safety Council.

It is with extreme pleasure that I ask that the letter from this organization, devoted only to the increased safety of every human being, be included into the record as a part of the effort to establish A National Better Material Handling and Packaging Week.

Very truly yours,

J. W. HALL. National Secretary, Westinghouse Electric Corp., Meter Division, Newark, N. J.

NATIONAL SAFETY COUNCIL, Chicago, March 7, 1955.

Mr. J. W. HALL,

National Secretary, American Material Handling Society, Care of Westinghouse Electric Corp., Meter Division, Newark, N. J.

DEAR MR. HALL: Your letter of February 24 inviting the National Safety Council to

endorse a proposed National Material Handling Week was received with much interest.

The increased use of material handling equipment has been a factor in the reduction of occupational injuries. Further, we know of the good work of equipment manufac-turers in fostering safety training for em-ployees using their equipment.

We are, therefore, happy to endorse and commend your effort to draw attention to the safety, as well as economic benefits often derived from material handling equipment. Cordially,

G. C. STEWART, General Manager.

This Is Your Country

EXTENSION OF REMARKS OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include a series of three articles written by my very good friend, Louis Bromfield. As usual, these articles are well worth reading:

> THIS IS YOUR COUNTRY (By Louis Bromfield)

No matter what action Congress takes with regard to the proposed dangerous program for universal military service or even for the extension of the so-called Selective Service Act, it would be well to consider how this act has operated in the past, its many faults and its failure to carry through its original intent and purpose. This failure and the muddled situation arising from its loose and varied administration can be laid primarily at the feet of Congress itself which never had the courage to put through a law which had reality of purpose and the necessary explicitness which would have produced the results originally asked for by President Roosevelt and the writers of the bill.

In Congress there were too many men without courage and character who, realizing that an unpopular forced military service act was a necessity, ducked their responsibilities and simply tried to produce a law which would make them as little unpopular as possible. The result was to leave the law wide open to any interpertation of it the Armed Forces chose to make and to shift onto the shoulders of the longsuffering, selfsacrificing and honorable citizens who served on the local draft boards all sorts of responsibilities for decisions and interpreta-tion which Congress itself should have set forth definitely in the first place.

The very name of the act, which eventually came to have no meaning owing to the way it was interpreted, implied its original purpose and the soundness of that purpose. It was not meant to be simply a draft such as was imposed during the War Between the States. Its original purpose was to set up a law under which every citizen within certain age limits would be put to a task in which he could be of the most use to his country under conditions of total war. Until World War I there had never been any such thing as total war in which civilians were killed and maimed in greater numbers than the actual troops, conditions under which it was necessary, as in the case of this country, for one agriculturally rich Nation to provide food, not only for its own population and Armed Forces but for the nations which were her allies, conditions under which frequently a skilled scientist or food producer

listed or conscripted soldiers.

Well, as we all know, that original purpose became lost all together. Because the law became subject to virtually any interpretation any village draft board saw fit to give it, the whole program merely degenerated into a helter-skelter conscription of every man, regardless of his ability or talents or contributions, into the ranks of the infantry where nobody in particular wanted to serve.

There has been much talk about the necessity for providing a large and permanent army and reserve force for defense, but there has been very little talk of creating such a force selectively and with a purpose. In other words, the fact that we live in the atomic age, in which total war is more total than ever before and when malnutrition or actual starvation for millions lies only a few days behind the outbreak of war, there is still no intelligent program under which every citizen can serve in the place in which he can contribute most to the welfare, defense, safety, and victory of the Nation. Selective Service has never existed in this country. does not exist today and apparently is not even being considered. Where the intent of the law has been carried out, it has only been through the wise judgment and commonsense of an individual draft board or of officers here and there in the armed services.

In European nations and even in those Latin-American countries which have long suffered the blight of forced military service, the laws governing conscription have been based largely upon the fact of total war and administered and carried out on the basis of putting the citizen where he can contribute most. In Britain, when a man is doing a valuable work, from raising food to atomic research, he is frozen into the job he is doing for the period of his military service and is so listed in the reserve forces. Even in Soviet Russia, the man or woman making an authentic contribution economscientifically or even culturally, to the nation, is left free to continue his work and encouraged to do so. Exactly the opposite occurs in this country and there are already protests from those with proper knowledge and authority, that we are failing to produce engineers, doctors and dentists, scientists and agricultural producers in sufficient numbers to meet the needs of peace let alone the extremely urgent needs of total war.

Moreover, there is little evidence that any effort has been made to round up the draft evaders who have never even taken the trouble to register for the draft. I should think it probable that, if any effort were made in this direction, the pool halls, the beer saloons, the dance halls would yield up a whole army of idle and shiftess young men who have never bothered to register or make any contribution whatever toward the welfare of the Nation.

The whole Selective Service Act and its administration has been from the beginning an inefficient, unscientific, ramshackle, hit and miss affair, which has contributed as much as any other single factor in the production of juvenile delinquency and crime tince it has made impossible for countless young men to plan steady work or undertake a steady job or career or to be employed by any employer who wants to count upon steady solid help which is not going to be snatched from him at any moment by the draft.

Nor is it possible to say that the discipline of the Armed Forces has been on the whole beneficial to delinquents; the record, the evidence and the statistics are altogether on the other side as indeed they are in any European country where conscription has long been in practice. I suggest that every

or technician had the value of dozens of en- citizen think twice about the whole problem of conscription and universal military service and then write to his Senator and Rep-

THIS IS YOUR COUNTRY (By Louis Bromfield)

During the coming few weeks Congress will have many serious things to consider but perhaps the most serious of all in its effects upon the freedom, welfare, and future of the Nation is the question of military service in one form or another by its young This is a difficult and complex prob lem yet it can be solved, and solved I think without resorting to the blight which Europe has long endured because for centuries there have existed side by side nations poised to attack one another. In the past, in Europe, conscription in some countries was a barbaric necessity and sometimes in the poorer countries it served to solve economic problems of low living standards and un-employment. None of these conditions have ever existed here and do not exist today. The need for large armies of foot soldiers to protect us from Mexico or Canada is obviously nonexistent and the idea absurd.

Why then are there advocates in Congress and elsewhere for large land armies? There can only be one reason-that these same advocates would send our conscripted American young men as cannon fodder into such messes as that in Korea or the potential mess in Indochina or that we must continue to draft our American young men to provide an army for the defense of Germany and Western Europe which has a total population about three times as great as this

Why do these same advocates want to draft our young men for a period of 2 years when in most European countries the conscription period, in the case of the young men who are drafted, is much shorter than that for American boys?

We maintain in Europe today more than six divisions of young Americans, most of them in Germany, where there is no conscription and where there is great agitation at the moment among the against any military service at all. You against any military service at all. Why at the moment among the younger men should they endure the hardships of con-scription so long as the American Government will supply an army of drafted young Americans equipped by and paid for by American taxpayers. Why should young Germans want to undergo compulsory military service, or the taxpayers and industrialists pay the heavy taxes for armament and defense when the Americans will take care of all of this?

The truth is that if our troops were withdrawn from Europe and the job of defending Europe and Germany was left to the Europeans and Germans, there would be no need for compulsory military service in this country and the budget might be balanced and taxes reduced. The situation is especially grotesque considering the fact that only recently Germany was a cruel and bitter enemy and, as not a few wise Europeans fear, might easily become again within a generation.

We poured more than \$2 billion into Indochina to force the French to continue a colonial domination from which they were only eager to free themselves. There was left behind for the Communist-dominated enemy hundreds of millions worth of war material paid for by you and me-a fact which the Armed Forces and the interventionists are not mentioning. Yet there are still generals and admirals who advocate continuing this kind of policy in what remains of Indochina, where conditions are worse now than they were at the time of our earlier intervention.

General Ridgeway himself has voted consistently against any further military intervention in Asia because we "do not have sufficient ground troops to carry out such extended operations." The implications of this statement are worse than if the general had voted for intervention because it implies that in our Armed Forces there are generals and admirals who would be willing and even eager to involve us in the intervention everywhere in the world and even to start the most evil of all maneuvers-a preventive war-such a policy mean that from now on we should conscript cannon fodder year after year to be into such tragic messes as Korea and Indochina as well as for the defense of a Europe and a Germany which drag their feet.

The recent reductions in the Army and in the draft quotas were not made by an irresponsible and inexperienced or political President angling for votes as other Presidents during the past generation have done. They were ordered by a man who is probably the most able and experienced military man of our time, who is not only a great tactician but a great executive, as any man who carried out the Normany invasion had to be. He is also a man with greater experience in international politics than any other American. He is also a good man. The biggest reproach brought against him from some quarters is that he does not understand politics and that he refuses to act from cheap political motives. Why then should we doubt the wisdom of his decisions as against those made by hotheads or old men in Congress and in the Armed Forces who are living in a world which no longer exists, planning war in terms of the Battle of Bull Run?

The truth behind all of this is that if Congress and the Armed Forces chose to make a career in the Armed Forces attractive enough, with the rewards worthy of skilled intelligent and able men, we should not need conscription at all in any form. We should have a volunteer Army, Navy, Marine, and Air Force of the very highest type trained in truly modern warfare with modern weapons * * indeed an organization very nearly invincible in offense and defense. And it would cost us all much less money and fewer lives. And who can doubt the superiority of a volunteer, professionally trained army over one made up of reluctant, poorly trained temporary conscripts?

THIS IS YOUR COUNTRY (By Louis Bromfield)

The acceptance by any nation of permanent conscription and forced military service in peacetime is a step downward and backward and one which should certainly not be considered or accepted by a free people who have never before suffered blight upon the life of its young people.

Forced military service in time of peace, when there is no real necessity, is an actual abrogation of the Bill of Rights which involves involuntary servitude. But other equally important rights-those of a trial by jury or a legally constituted court are abrogated at the same time. And at the present time the Armed Forces and especially the Army are operating under regulations, traditions, and even codes of discipline which are archaic and barbaric with little or no relationship to advances in civilian codes of law and justice. Actually the code of the Army is that set up for the British Army in 1732. Very few changes have been made and under such a code every sort of injustice can occur either to conscript or volunteer who had been forced to give up the major portion of his rights as a free American citizen.

In time of peace such servitude and abrogation of rights is unspeakable and should not be considered by a free people. Yet this is exactly what is being asked under any program of conscription, universal military service, or even by an extension into peacetime of conscription under the existing absurdly unreal name of selective service.

It is abundantly clear that if opportunities, honors and rewards were made worthy of the object in view-that of creating an expert, professional, modern Armed Forces, there would be no difficulty whatever in finding a sufficient number of vigorous, intelligent and even skilled volunteers to supply all the needs of the Air Force, the Navy, and the Marine Corps. If there is a difficulty at the moment in producing sufficient man-power for the Army, it is because great armies of foot soldiers have become obsolete and are needed in this country only if we propose as a permanent policy to intervene in every sort of border war throughout the world or to supply conscripted cannon fodder for the defense of other nations unwilling to defend themselves.

If this is the kind of permanent policy which the advocates of conscription and big armies of footsoldiers have in mind, let them come out honestly and say so. There is no other condition which could possibly justify large armies of footsoldiers in the atomic age. But even in the case of the Army, it is probable that if conditions of military service were modernized and the rewards increased by Congress and the Armed Forces, there would be little difficulty in finding a sufficient number of young volunteers willing to take up the Army as a permanent career.

Outside the admirals and the generals—and one cannot include some of the wiser ones among these—the advocates of universal service or of extending conscription are the world savers, the warmongers, the hotheads, and those who are amazingly ignorant of international politics, economics, and world conditions.

Conditions of freedom, of decency, of living standards in Soviet Russia have not improved over those existing in the time of the Czars and in some fields conditions are actually worse today. Many observers believe Russia to be weak even as a military nation. The principal reason is that for nearly two generations the biggest part of the Soviet budget has been expended upon military might and land armies. The youth of Russia, which might have been contributing enormously to her industrial and agricultural production and to her advance politically and culturally has been conscripted into military service. Yet if war broke out tomorrow it is possible that this vast and hideously expensive army of foot soldiers might be completely useless.

Soviet Russia may choose to live under conditions of the 18th century but there is no reason why we should imitate the Communist Russians. Who can believe that in any modern atomic war or even in a war of planes, any war would last long enough to require the use of infantry in great numbers or even the use of infantry at all? Or who can believe that under modern conditions large armies or Russian infantry would have time enough to invade the United States or even Western Europe.

There has been a great deal of talk about the New Look at the Armed Forces and much of it has come from those whose profession is war or from old and middle-aged men in Congress and out, who are in no danger of being conscripted. The only fault has been that the New Look has not yet been new enough or extensive enough. Certainly under conditions of modern werfare, large armles of foot soldiers armed with rifles and machineguns have become as obsolete as the cross bowmen at Agincourt—unless we are going to conscript young Americans to provide the rest of the world with a police force.

No intelligent European would consider universal military service or conscription anything but an evil in every sense of the word and there is no European nation today which would not be delighted to be freed of its blight. It seems to me therefore that the American people and their representatives in Congress should think a long while before voluntarily establishing an evil which may not and probably is not neessary in this modern world.

Admitting Hardship Cases of Single Persons To Public Housing Projects— What Hardship Really Means

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1955

Mr. RODINO. Mr. Speaker, it is hard for a person who is well-fed, well-housed, and in comfortable circumstances, as most of us are today, to realize what the grim tragedy of inadequate housing means in old age, especially in obtaining decent housing at a price you can afford to pay. Sometimes this lack means the difference between continuing living and almost committing suicide

So, before I comment upon a bill that I wish to present to this body on the vital question of admitting aged single persons in hardship cases to low-rental, federally aided housing projects, I would like to indicate briefly, the importance of this matter by giving you a dramatic case in point. It is nothing unusual, and could be duplicated many times during my terms in office, and I assure you each one is always a heart-rending experience.

I shall clothe the name of my constituent in anonymity to spare his feelings by merely calling him Mr. Smith. For many years Mr. Smith and his wife lived comfortably in a modest home until the years crept up upon both of them. Then, after a prolonged illness and great medical expense, she died and Mr. Smith was left all alone, an old, forlorn householder.

Their home was now too large, and it was beyond his economical and physical abilities to maintain. Nevertheless, it was rich with memories. Every piece of furniture and each object in the household was clothed with loving memories that recalled the many happy years they lived together. Gradually, work fell off, his income dropped, and he no longer could afford to keep up their former home. For months on end, he continued the long and dreamy rounds of seeking, through the newspapers and the realestate offices, a simple place where he could move to and live with some of his cherished household effects and their treasured memories. It was in vain. The rents were all prohibitive.

So he turned to me as the Representative from his district and begged me to see if I could not possibly help him to get into a public-housing project. It was a forlorn, dejected, and desperate man who pleaded with me. I was visibly moved.

I approached our Public Housing Administration and was advised that under the present law only couples could be housed in low rent public-housing projects that were aided by the Federal Government. They were right. The present law leaves them no other alternative.

When I gave Mr. Smith that tragic news, it was mere chance that kept him from taking his life. I resolved from that day forward that the same law which was designed to help families of low income should also assist aged persons who are the helpless victims of circumstances and cannot afford to pay the high existing rentals from private landlords.

Are we to cast them out upon the streets? Are we not all concerned as our brother's keeper in providing decent housing for the aged, and handicapped, the crippled, the disabled veteran, the widower, at a price that they can afford to pay? How can we hold our heads high when we attempt to rehabilitate the decrepit shacks and villages in South Korea, in Japan, or Indochina at the same time that we neglect our aged at home, who, unlike these Asiatics are able and willing to pay rents within their financial means?

While the original purpose of the Federal Public Housing Act was to provide decent housing in a good environment so that the families and children could get out of the slums and live in healthy surroundings, there is no logical reason why this same philosophy should not be extended to aged people who by chance or circumstances now find themselves unable to pay the high prevailing, existing, private rentals. Under the general-welfare clause of our Constitution we are trying to promote a form of Government which advances the general welfare of all the people. This means not only those who can afford it but those of lesser means as well. Assuredly, this concept of promoting the general welfare includes the aged and the less fortunate in our midst.

Moreover, aged couples now commonly occupy units in the low-rent federally aided public housing projects. Shall we deny to an aged, single person that which now is afforded to those who are couples? By what form of twisted logic are the benefits to be withheld from a handicapped or elderly person merely because his spouse is no longer alive?

Actually, in many public housing projects throughout the Nation, it is now the policy of the administration to permit the remaining spouse to live in such property where the other one passes on. So the reality is that such elderly persons are actually now living alone in such housing.

Shall we again draw a distorted distinction between an elderly single person who remains in public housing because he or she formerly had a spouse, and a similar person who is trying to get in there in the first place?

Moreover, the most compelling reason of all why a single person in hardship cases should be admitted to low-rent housing projects is to be found in the fact that under the existing law enacted by Congress in the last session, tenants displaced from slum clearance projects have first priority to public housing. Likewise, they cannot be displaced from their present slum residences until such public housing is provided for them. As a result, in large cities like New York and Chicago, single persons are now obtaining first priority, in federally aided, low income housing projects. This should be precedent enough for my bill which provides similar opportunities for other elderly hardship cases.

All of these facts and precedents point to one inescapable conclusion, sound public policy requires that we treat all aged hardship cases alike. This is simple justice to the individual and to the community in which he lives. To this end, I have this day introduced a bill which will authorize the Federal Public Housing Administration in its dealings with the local public housing authorities, to permit, in hardship cases, elderly single persons and related hardship cases to be admitted to federally aided low-rent housing projects.

St. Jude's Parish Federal Credit Union: A Study in Self-Help

EXTENSION OF REMARKS

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the REC-ORD I should like to report a visit I made recently to the St. Jude Parish Credit Union of East Side Detroit, Mich. I was very impressed by the spirit and cooperative attitude of the members of this organization and the financial institution they have organized for their mutual self-help. It reemphasized the Latin proverb "Multae manus onus levius faciunt"-many hands make the burden light. So it is with the community-spirited parishioners at St. Jude's, a cooperative enterprise designed to lighten the financial burdens of its faithful. The following is a short history of this organization's development and a description of its method of operation.

The St. Jude credit union is the first parish credit union on the east side of Detroit to operate on a full-time basis and in January of last year opened an office to serve its members. The credit union has a membership potential of 3,000 and is presently serving over a third of this group with loans, a shares depository and free credit life insurance. Since its inception 4 years ago with paidin share holdings of \$1,700, the credit union has made 1,038 loans for \$539,-043.13 and has presently on its books \$210,240.58 in loans and \$182,240.62 in shares deposits.

On the occasion of my visit to this fine organization, I presented the first claim paid under the credit unions free credit life-insurance program with the Credit Union National Association mutual lifeinsurance program. Under this program all loans and shares deposits up to \$1,000 are insured free to members, and the premiums are paid by the credit union. I presented Mr. John Jacobs a check for \$500, which represented the amount equal to the shares deposited with the credit union by his mother, Mrs. Rose Jacobs, deceased.

The credit union is under the general auspices of Father J. J. Ording, pastor of St. Jude parish, and the business management is attended to by an able board of lay parishioners having a president, vice president and treasurer. All administrative offices of the organization are elective and for a term of 1 year. This permits greater group participation and serves to make a greater number of the community familiar with domestic problems of finance and credit. At present the credit committee members are making a study of the differences between Federal and State regulated credit unions which should be very helpful to all legislators concerned with such problems.

Secretary for Peace

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. OSTERTAG. Mr. Speaker, when President Eisenhower assumed office, Frank E. Gannett, president of the Gannett newspapers, wrote him urging that he establish a Department of Peace. For more than 20 years, Mr. Gannett has advocated such a step in newspaper editorials and public addresses. Peace, he has pointed out many times, is not merely the absence of war; it is the presence of justice. Nations sometimes blunder their way into war; they cannot blunder their way into peace. It must be planned for, nurtured, promoted, and everlastingly protected.

In urging the creation of a Department of Peace, Mr. Gannett was, of course, giving voice to thoughts which have been shared by millions of people. The Reverend David Rhys Williams, of Rochester, N. Y., foresaw, with prophetic vision, that such a dream might materialize under President Eisenhower. In a sermon during the Christmas season of 1952, Dr. Williams said:

Some day, some soldier of commanding genius is going to have the imagination to test the Christian principle of overcoming evil with good on a grand enough scale to succeed.

Could it be that President-elect Eisenhower has come to power to play some such prophetic role for our time? Having reached the pinnacle of fame in the field of war with no further military luster to gain that could be greater than what is already his, could it be that he has undertaken the arduous and exacting responsibilities of the Presidency to see what he can do to establish some measure of peace among all nations?

Mr. Speaker, President Eisenhower has indeed played such a prophetic role, ever

since he assumed office. With firmness, with dedication, with restraint, he has labored patiently but resolutely to foster peace among the nations. This week he took the further dramatic step of appointing FOA Administrator Harold E. Stassen as, in effect, Secretary for Peace, a post with Cabinet rank.

Mr. Stassen's task is of enormous dimensions. So also are his opportunities. There is no more vital work to be done in the world today than that of halting the current deadly arms race, and replacing it with a truly just and lasting peace, a dynamic peace that will channel men's minds and energies into the building of a better world.

It is an undertaking that will capture the imagination of all mankind. Certainly it will be welcomed by those like Frank Gannett and Dr. Williams who have yearned for, and prepared the ground for, such an eventuality. Mr. Stassen's appointment, and the considerations which led up to it, may prove to be one of the most historically significant events of our time.

Modesto and Turlock Irrigation Districts Oppose Engle Bill, H. R. 2388

EXTENSION OF REMARKS

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. JOHNSON of California. Mr. Speaker, in 1913 a very important bill was passed through the Congress which became known as the Raker Act. The law gave San Francisco certain rights-of-way in the Yosemite National Park and permitted the city and county of San Francisco to construct dams and appurtenant works on the Tuolumne River. The reservoirs which impounded the water behind these dams are known as Lake Eleanor and Hetch Hetchy Reservoirs.

The Raker Act recognized the prior rights to water under California law. This recognized the rights of both districts to 2,350 second-feet of water and 4,000 second-feet after April 15. This represented from 600,000 to 1,200,000 acre-feet a year.

From the revenue from this power and by direct taxation, the districts became two of the most successful in California. Practically all of the bonded debt of both districts has been paid off.

The result of these operations was also to furnish water at a very cheap rate to the irrigators—perhaps the cheapest rate of any of the irrigation districts in California where we have over 150 irrigation districts.

The Turlock Irrigation District and the Modesto Irrigation District and the city and county of San Francisco entered into an agreement in 1949 with the Federal Government to operate their reservoirs on the Tuolumne for flood control, the Federal Government to pay for flood-control benefits only.

These districts not only developed the water resources for their members of the districts who were irrigators but they also developed an electric system which provided cheap electricity for the area served by the districts.

These irrigations districts, as well as their officers and members, are practically all in my congressional district—

the 11th District of California.

The leading newspaper in the area comprising these districts is the Modesto Bee, a McClatchy newspaper. It is an aggressive and intelligent publicity organ and in a recent issue of the paper summed up the case in its editorial columns very well.

Under leave to extend my remarks, I am including this editorial, which

DISTRICTS ACT WISELY IN OPPOSING ENGLE BILL

The Modesto and Turlock Irrigation Districts have set forth clearly the seriousness of attempts being made to amend the Raker act, national legislation which protects Tuolumne River water and power rights of the districts and the city of San Francisco.

In a well worded resolution, the irrigation districts have declared themselves unalterably opposed to any such proposition as is being made by Congressman CLAIR ENGLE, Democrat, of the Sierra and Mother Lode Counties. ENGLE wants to take from the city of San Francisco a power site which it owns and give it to another agency.

Such action would cut to the heart of the cooperative use of Tuolumne River power and water resources by the districts and San Francisco. Already \$250 million has been spent on this highly beneficial development.

If this program is jeopardized it will have a lasting detrimental effect upon the irrigation and electrical operations of the two districts

Recognizing this threat, the boards of directors of the two irrigation districts have instructed a delegation to go to the Nation's Capital to press the fight against it.

With them will go the resolution which outlines the basic arguments of the irriga-

tion districts.

The Modesto and Turlock Irrigation Districts, which even now are using privately generated power because the Tuolumne generating capacity is used up, have an urgent need for all the electrical energy which can be manufactured at power sites now under consideration.

In order to guarantee satisfactory irrigation conditions for every year regardless of drought, the two irrigation districts need increased holdover storage capacity which can be realized only through the construction of the greater Don Pedro Dam. Should this power site be taken from the city of San Francisco, the districts declare "the entire program or plan for the construction of new Don Pedro Reservoir will be greatly delayed, if not abrogated, and the districts will be deprived of the great benefits resulting to them in the form of increased holdover storage and the additional quantities of electrical power that would otherwise be made available."

And finally in fairness, the districts argue, that the city of San Francisco should not be deprived of the site which is of value only because of the city's \$20 million investment in the Hetch Hetchy Reservoir a short distance upriver from the disputed site.

Tampering with the Raker Act is dangerous under any circumstances and the proposition now being considered poses a special threat to the irrigation districts.

It is well that officials of the two districts are awars of the hazard and are carrying their fight against modification of the Raker Act to every battlefield necessary. The fight must be fought with all the vigor the districts can muster. Loss of water or power rights would mean a loss of the lifeblood of the region which has made it one of the Nation's richest agricultural areas.

Medicine for a Hangover

EXTENSION OF REMARKS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I offer a recent editorial from the Wall Street Journal which comments upon current proposals for disposal of surplus wheat:

MEDICINE FOR A HANGOVER

Normally, the American economy consumes about 700 million bushels of wheat a year. The American farmer grows in excess of a billion bushels. The problem: What to do with the other 300 million or so bushels.

The answer might seem quite simple since there is a vast market for wheat in other countries of the world. But it is not so easy as that because the world price of wheat is considerably below the domestic price of wheat. And the domestic price of wheat is above the world price of wheat because the United States Government makes it so.

Why should anyone sell wheat abroad for a low price when the Government will take it for a higher price?

Ever since the Government started helping American farmers with price supports, world prices and United States prices for the major crops have been getting further out of line. Foreign production, quite naturally, has been encouraged to increase to take advantage of this. The war brought a brief respite, but now the plight of United States growers of wheat, cotton, and other commodities is so bad that the farmers' friends in Congress have decided to do something about it.

The proposal—in the case of wheat—is an export subsidy to help the wheat farmer recapture the foreign markets lost by the domestic subsidy. The House Agriculture Committee wants the Government to keep wheat prices high for the United States consumer; wheat would then be sold abroad at the lower world price with the Government making up the difference to the farmer.

Since this would take care of the export problem, the committee concludes it can also hike the domestic support price even higher without losing the farmer any world markets; it wants a return to rigid 90-percent-of-parity price supports for wheat and other basic crops.

And, of course, with all the marketing problems thus neatly disposed of, there would be, the committee thinks, no need for any production limitations. Under this plan there would be no acreage restrictions; a farmer could grow as much as he liked so long as his excess was sold abroad.

Well, we doubt if the House committee members will be much bothered by what this dumping operation will do to the economies of our foreign friends. But they might reflect on what it will do to United States consumers and taxpayers—and to United States agriculture.

As it is, the United States consumer is penalized twice for his wheat; once in taxes to support the support program, and again in the higher price which is the result of the support program. How much extra it will

cost to have this new program for subsidizing exports is hard to estimate, but it will be considerable.

More importantly, this is a program for making the United States farm problem worse, not better. The root of the present trouble is that the support program encourages production without any regard for the demand in the marketplace. A program which puts support prices higher, which then dumps the surplus abroad to make way for more surpluses and which at the same time encourages still more production—all this intensifies the very ills that are the present sickness.

The hair of the dog that bit you may give brief respite to a hangover. But it's the kind of medicine that long repeated gives the

patient delirium tremens.

Partnership in Power and the Public Interest

EXTENSION OF REMARKS

HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. ELLSWORTH. Mr. Speaker, political opponents of the administration proposal for expediting the construction of badly needed multiple-purpose river development projects which include power by permitting local participation have distorted the meaning and intent of the partnership plan. In an effort to set the record straight on this important subject, I prepared an article which was printed in a recent issue of the Reporter magazine. Under leave to extend my remarks, I include the article which follows:

PARTNERSHIP IN POWER AND THE PUBLIC INTEREST

(By Representative HARRIS ELLSWORTH)

In an attack on the Eisenhower administration's partnership policy which appeared in the Reporter of February 24, Senator RICHARD NEUBERGER of my home State, Oregon, closed with the sentence; "The public good must come first."

I agree.

But what is the public good?

For power development in the Pacific Northwest, the public good is to get the job done—so that the people and industries of that rapidly growing area will have the electrical energy they need when and on the scale they must have it and at a cost they regard as fair. The Pacific Northwest has only one-tenth of the land area of the United States and only one-thirtieth of its total population, but it possesses 40 percent of the Nation's hydroelectric power potential—and only one-seventh of this has been developed so far. The potential of the Columbia River system alone is about 34 million kilowatts, of which more than two-thirds remains to be developed.

Even though much has already been accomplished, all agree that the abundant remaining water resources of this region must be harnessed to human use. The remaining question is how we are going to do it.

ACTION VERSUS NO ACTION

For 20 years the Federal Government has been in the field of power development on a large scale, and there are those, Senator NEUBERGER among them, who claim that only the Federal Government can do this enormous job. But what is the record?

History demonstrates that exclusive reliance on the Federal Government for the development of power resources has too often meant no development at all. The Government just does not have the tax money to develop all the projects that have been proposed for all the rivers of our land and do the other things it must. In a number of instances Congress has been unable in good conscience to authorize or to appropriate money for new power development around the country. As a consequence, the result in particular regions has frequently been no action at all.

The problems inherent in exclusive development by the Federal Government are emphasized by the fact that the projected power needs for the Pacific Northwest during the next 10 years will require an investment in the Columbia River Basin area alone of roughly \$2 billion. Even though the Northwest has received a most generous share of total appropriations for public works, it would require new funds out of all proportion to past appropriations to meet the future power-development needs of the Pacific Northwest area alone. We, in the Northwest, cannot be so foolish as to sit back and make plans for the future in the hope that Federal appropriations will be forthcoming on such a lopsided scale.

Thus we are presented with a clear choice between a serious slackening of industrial development or the rapid evolution of a dynamic new program realistically designed to

meet projected power needs.

Faced with the stark reality of this situation, the men in the Pacific Northwest began to explore the possibilities of local interests cooperating with the Federal Government in financing multiple-purpose projects. This was the germ of the partnership idea.

THE PARTNERSHIP POLICY

In August 1953 the Eisenhower administration formally set forth a new, constructive, forward-looking policy of partnership in power development. This policy was designed to promote the fullest possible local participation in power development. Only by bringing every possible resource to bear, private and governmental, can we expect to accomplish the job that has to be done. The policy is also advocated by the President because, as he has said, partnership will permit the American people in their communities and homes throughout the Nation to "reserve to themselves as many of the basic decisions as possible. In this way, our people will remain free to carve out their destinies as their predecessors did."

The partnership idea of power development means people working together. It means that local interests will be encouraged by the Federal Government to go ahead with necessary power projects on their own. It means further that the Federal Government will continue to sponsor those projects which because of their scope and cost cannot be undertaken locally. It means also that in certain instances, where feasible, the Government will share the cost of a project with local interests.

In other words, the Eisenhower policy means that no method of supplying the power needs of the Nation will be arbitrarily eliminated; it means that all sources of financing will be utilized—private, State, and Federal—to meet this enormous challenge. It means, finally, that we shall not have to rely solely on the Federal Government, which, as history demonstrates, is too often without tax money for allocation to this purpose.

When President Eisenhower dedicated McNary Dam in the Pacific Northwest last fall, he said: "Where local enterprise can shoulder the hurden, it will be encouraged and supported in doing so. But where local action cannot or should not fully meet the need, we shall have Federal action." We can therefore be assured that the Federal Gov-

ernment will continue its active participation in the development of our water resources.

There is a complete determination on the part of the Eisenhower administration to boost power development in accordance with the Nation's requirements. By encouraging the maximum possible local cooperation and partnership with the Federal Government, the vast amount of work that remains to be done will be most rapidly accomplished.

ALTERING COUGAR DAM

To illustrate concretely how this policy is working, Congress, some time ago, authorized the construction in the district I represent, of the Cougar Dam for flood control. By altering the design of the dam slightly and increasing its height, it was found that 37,000 kilowatts of power could be produced in addition to the millions of dollars that would be saved in flood damage to farmlands and buildings in the area. Congress, accordingly, modified the authorization to include construction of these power features at an additional cost of \$11 million. The Eugene Water and Electric Board, a publicly owned electric utility system operated by the city of Eugene, Oreg., finding itself in need of additional generating capacity, offered to construct the power part of the Cougar project and thus obtain the power it needs for the people it serves.

Under the partnership legislation introduced last year, the city of Eugene proposes to pay the entire \$11 million cost of the power facilities, and in addition, to contribute \$500,000 toward constructing the flood-control part of the dam. Further, it would pay 15 percent of the cost of operating the flood-control portion of the project throughout the 50-year life of its license with the Federal Power Commission. That payment will total another million dollars.

The water board believes this to be a good proposition because its system will acquire an additional 37,000 kilowatts of power which it needs. The cost of construction per kilowatt will be about on a par with its other capital investment for such facilities and the type of power generated can be integrated into the rest of its system.

This partnership project will also be of distinct advantage to the Federal Government. The people will get the flood control and power they need, but the cost of installing and maintaining the power facilities will not be an unnecessary burden upon the Federal taxpayer.

All partnership proposals have the same purpose—to get additional power as quickly as possible and at the least possible expense to the Federal Government.

And how is the Eisenhower administration's partnership policy working out? Is it getting the job done? Results to date have been eminently rewarding. They indicate conclusively that industry and local government are more than willing to assume their share of the responsibility. Since the administration's announcement of its partnership program, the kilowatt capacity represented by applications made to the Federal Power Commission has increased by 50 percent.

The President, in his Economic Report to the Congress this year, said: "During the last 2 years applications to the Federal Power Commission for permits to survey potential hydroelectric developments represented a larger total of kilowatts than was covered by the applications during the prior 7 years." He went on to say: "At the end of last year the volume of such permits outstanding was by far the greatest in the history of the Commission. The workings of the partner-ship policy are also illustrated by six multipurpose projects for which provision has already been made or is contemplated in the coming fiscal year. It is estimated that these projects will result in a Federal expenditure af about \$200 million, while an

additional \$800 million may be expended by local interests, private or public."

Fourteen Federal Power Commission license applications by local interests plus another project to be built on a partnership basis would mean an additional 4 million kilowatts for the Pacific Northwest.

This would be the equivalent of two Grand Coulee Dams and would mean an investment approaching \$2 billion, not supplied unnecessarily by Federal taxpayers but by private savings.

Illustrative of savings produced by the partnership approach are four projects which would have cost the taxpayer \$575 million if authorization for their construction by the Federal Government had not been withdrawn. Private and local government development of these projects will not only relieve the United States taxpayer of the burden of their initial cost, but as to those projects constructed by private industry, it will mean additional tax revenue and thus a corresponding lightening of the citizens' tax burden. These economies are another example of the broad benefits that result from the application of the Eisenhower partnership policy.

One of the four projects is the Alabama-Coosa River project, authorized for Federal construction in 1945 under legislation sponsored by Senators John Sparkman and Lis-TER HILL of Alabama. During the next 9 years, however, no funds for the project appropriated by Congress. Last year Senators Sparkman and Hill supported new legislation which took the Federal Government out of the picture. The Federal Power Commission has already granted a preliminary permit to the Alabama Power Co. to build a 239,500-kilowatt project. The Federal project would have developed only 200,-000 kilowatts and would have cost the Federal Government \$114 million which it was apparently unable to make available.

REVIVAL OF INITIATIVE

One of the most heartening developments that the President's partnership policy has produced is a noticeable improvement in attitude. No longer are our local people, whether in private or public activities, waiting for the Federal Government to take care of their needs and spoon out power to them.

Renewed vigor and initiative are now abroad in the land. Local groups interested in power are exhibiting a new independence, a willingness to provide for themselves. They see now that only in this way can they get what they need, when they need it, and on their own terms. Eloquent testimony to this fact can be found in the recent action of the Oregon Legislature memorializing Congress to approve three partnership projects.

Another important point that must not be overlooked is that the savings made possible by the partnership power policy will make money available for other pressing responsibilities of the Federal Government for which there are no alternative sources of funds.

In his article Senator Neurrors made the rather startling observation that partnership over the years will deny to the Treasury hundreds of millions of dollars. Apparently he assumes that once the cost of a project has been paid the Government will maintain rates at the same levels and thus produce a profit for the Treasury.

Nowhere in any act of Congress, however, is there any general authorization for the Federal Government to go into or conduct a power business as such. The Bonneville Power Administration in the Department of the Interior, for example, operates the great Bonneville system into which power from all Northwest projects is fed. It sells the power at wholesale to publicly and privately owned distributing systems. The Bonneville Act of 1937 spells out how the rates shall be made: "Rate schedules shall be drawn having regard

to the recovery of the cost of producing and transmitting such electric energy, including the amortization of the capital investment

over a reasonable period of years."

There is no provision in that law for the Government to make a profit for the Treasury from the Bonneville system. After the people who use the power have paid for the system, they may and probably will enjoy a reduction in rates when the amortization charge ends. The Treasury gets its money back with interest. That is all. Thus, unless Senator Neuserger proposes that the power business be socialized and turned into profit-making enterprise for the Federal Government, his assumption that the partnership program will "deny the Treasury hundreds of millions of dollars" is palpably false.

The Senator also makes the strange argument that the Federal Government under the partnership plan will be "saddled with the apparatus that returns no cash dividends-locks and fish ladders." He neglects to mention that his apparatus has long been considered a Federal obligation and that even the TVA specifically excludes these costs in determining its power rates. Does the Senator want only the people of Oregon and the other Northwestern States to pay for flood control and navigation in their electric bills? His comparison to the department store with its revolving doors and sales counters is cute but misleading.

Remember also that where power is developed by private companies the public interest is always fully protected. Private and local power projects must be licensed by the Federal Power Commission, and before the Commission grants a license it must see evidence that the project makes maximum use of the developed resources. And, as President Eisenhower has made clear, when a project is licensed it is not removed from public control. Rates and services remain under regulation, State and Federal. Moreover, as Senator Neuberger has failed to mention despite his burning interest in adding to Federal revenues, every privately op-erated electrical utility, like any other corporation, pays a corporate income tax of 52 percent if it earns a net income. In the year 1953 the Federal treasury collected \$875 million in income taxes paid by electrical utilities.

STEVENSON, SPARKMAN, AND HILL

But let us get back to the fundamental issue that is involved here: The problem of meeting the enormous and increasing power

needs of our growing Nation.

The real question is whether we are going to use every available resource, private, State, and Federal, to get a job done that has to be done, or are we going to flounder around, moving at reduced speed, because some dogmatically insist, with Senator Neu-BERGER that water resources should remain undeveloped unless the Federal Government does it alone?

The answer, it seems to me, is clear. It is also clear to many others, I submit, regard-less of party lines. For example, two leading Democrats, Senators Sparkman and Hill, of Alabama, have recognized that Federal spending alone is not the answer. And in Portland, Oreg., in May of 1952, Adlai Stevenson, later leader of the Democratic Party and its chief spokesman, said, "Where private enterprise can and is willing to do the lob, I think it should be left free to do so. It seems to me that Government enterprise should be primarily addressed to the maintenance and enforcement of competition in our economic life, not its destruction.

Senator Neuserger, on the other hand, prefers to take his stand with the past and with former Secretary of the Interior Harold L. Ickes, who in 1941 predicted that the Pacific Northwest would in due course be a public power domain.

On the strength of these facts, I am compelled to conclude that Senator Neuberger is out of step with the new needs and conditions of our times and with the leadership and other important members of his own party. The evidence equally compels me to suggest that Senator Neuberger, liberal though he may claim to be, is certainly, on this issue at least, a reactionary.

Diplomatic Papers-Historical Political Weapon

EXTENSION OF REMARKS OF

HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. FLOOD. Mr. Speaker, under the leave to extend my remarks in the REC-ORD, I include the following article from the Washington Post of March 22, 1955:

HISTORICAL POLITICAL WEAPON

(By Irving Brant)

To get a proper perspective on Secretary Dulles' release of the Yalta papers, one needs to go back to a time when diplomatic dispatches were the principal weapon in American politics. That was in the first decade of the 19th century, when politics and di-plomacy were really boiling in the United States and the world was as much of a madhouse as it is today.

In that decade-near the high point of Napoleon's colossal power—England and France were engaged in a hot war with each other and each of them in a cold war with the United States. Charges of French influence were hurled at leaders of the Democratic Party (then called Republican) as zestfully as "20 years of treason" is today. Diplomatic dispatches were held back or published with one eye on Europe and the other on American politicians and newspapers, but with differences more important than the resemblances to the Dulles pattern.

The campaign literature which was used to elevate James Madison to the Presidency in 1808 consisted of diplomatic letters, about half of them written by himself as Secretary of State. These letters were given to Congress and the press in two batches-one of them so voluminous that it filled the newspapers for 2 months. And all were written within a year, not held back 10 years. However, everything that would have betrayed confidential talks with European officials was pared out, as such material was in a dozen other releases of papers by the Presidents in that era-releases regularly made in connection with their annual messages to Con-

Individual Senators were as irresponsible and unethical then as now. To emphasize the wickedness of Bonaparte and the treason of Democratic officials, Federalist Senators surreptitiously secured the publication of dispatches from Paris sent to the Senin confidence—an action which made Minister Armstrong's position at Napoleon's court almost untenable. Again, a British diplomatic dispatch mysteriously appeared in the American press. It looked as if British Minister Erskine had slipped it to a newspaper to hurt the President. But he had a simple and convincing explanation. To protect himself against Federalist criticism, he had shown the dispatch in confidence to 2 Senators of that party and 1 of them secretly copied it. Such incidents, however, were not the official acts of responsible officers of Government.

Had some counterpart of the Yalta papers been given to the press in 1810, with all the circumstances corresponding to the course pursued by Mr. Dulles, the manner of itthe presumed motive-would shocked the country. It would have been shocking on four accounts, all deeply grounded in American politics:

1. Not one of the Presidents who held office in that decade-John Adams, Thomas Jefferson, James Madison—would have dreamed of disclaiming responsibility for the action of his Secretary of State. Any one of them might have called it a Cabinet action, in which he shared, but to say publicly that he had no part in it would have lowered him in the eyes of every American.

2. Lumping Presidents and Cabinets together, not one of the Executives in that decade would have published such a set of papers under pressure from Congress, or to gain political advantage, if such action adversely affected the country's interest or its international standing.

3. Not one of the Secretaries of State in that period-not even the incompetent Robert Smith-would have said at one moment that the papers would not be released and released them the next.

4. Not one of those Executives would have released the papers in opposition to the wishes of a friendly European statesman concerned in them, or even, one could safely say, in violation of the amenities toward an unfriendly statesman.

The year 1810 is taken as an example because such an issue arose at that time. In the preceding fall, President Madison cut off all diplomatic relations with British Minister Francis Jackson-in effect ordering him out of the country-because he felt personally insulted by that Minister's conduct. The political heat that followed was terrific-Federalists supporting Jackson and Democrats upholding the President. And everybody asked: How would England react to the dismissal?

Sailing ships sped eastward across the Atlantic and beat their way slowly back. Four months passed without a word. Crucial spring elections lay just ahead—elections of State legislatures which would choose United States Senators.

Then, on March 12, the administration's chief newspaper organ published a little item. The Secretary of State had received a private note from the American minister in London, saying that Lord Wellesley "did not attempt to vindicate Mr. Jackson," but admitted he was in the wrong and would recall him.

Here was a statement which upset the Federalist election campaign. They called the letter a forgery, a thing which did not exist. Produce it, they cried. The House of Representatives, coerced by the minority, passed a resolution asking the President to transmit late dispatches from London. Madison replied that none but this private note had come, and "personal considerations of a delicate nature" forbade its disclosure.

After Congress adjourned the cries of "forgery" became a veritable scream when it turned out that Wellesley, in recalling Jackson, gave him praise instead of censure. Every political consideration now demanded publication of the private note. Continued silence would cast doubt on the President's integrity and imperil Democratic chances in the congressional election.

Why not publish this brief record of a confidential talk, which furnished evidence that a British foreign minister had said one thing and one the opposite in a controversy with the United States? Why not add American Minister Pinkney's later statement that Wellesley had changed his attitude when he learned that the Federalist Party in the United States was supporting the ousted British diplomat? There were two reasons for not doing so: It would weaken Pinkney's position in London and would be a discourtesy to the British foreign minister.

The President said nothing. The Federalists were still crying "forgery" when Madison received this personal note from Pinkney:

"I am glad you refused to lay my private letter before the Congress. The publication of it, which must necessarily have followed, would have produced serious embarrassments."

In that same decade, European diplomats called the United States a nation ruled by public opinion. So it was, but it was a nation ruled by the opinion of an informed public, wise in political ways and contemptuous of men who lacked the nerve to stand firm against political clamor.

The Merchandise Mart of Chicago

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. WILEY. Mr. President, I am always pleased to read the stimulating pages of the noted magazine, Think, published by the International Business Machines Corp., a great business organization which has contributed invaluably to American growth.

Among the many articles of deep interest in its current March 1955 issue is one on that fabulous institution, the world's largest commercial building, generally described as the greatest showcase on earth—the famed Merchandise Mart of Chicago.

This enormous enterprise, the foremost display center for wholesale business in the Midwest and in the Nation, is representative of the miracle of American distribution, which has brought costs down so low for mass sales in this country, the greatest market of the world.

The Merchandise Mart, too, represents the vision and enterprise of its forward-looking owner, Mr. Joseph P. Kennedy, Sr., father of our distinguished colleague from Massachusetts. Mr. Kennedy, Sr., has, within a decade, regenerated the Merchandise Mart and brought it to its present peak of efficient, modern service to the great heartland of America and to the United States free enterprise system.

I ask unanimous consent that the text of the Think article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD'S GREATEST MARKET PLACE (By Irving Wallace)

In the heart of Chicago and, strangely shough, on a site where Indians once brought their wares to frade with the white men, stands the world's largest market place, the Merchandise Mart. This mammoth building was conceived and built by one of the greatest names in the merchandising world, Marshall Field & Co. When it was opened in 1930 to tenants and the public it was the largest structure, in actual size, in the entire world. Today, only the huse Pentagon Build-

ing in Washington, D. C., is larger than the Merchandise Mart, but it still has the distinction of being the world's largest commercial building—with no close second.

This structure covers 2 entire city blocks, having a gross area of 4,023,400 square feet—equivalent to 93 acres. The constant stream of humanity through the main halls (there are 7½ miles of corridors), entrances, and transportation facilities makes one think of a busy railroad depot at the height of a holiday rush period. Yet all moves in orderly fashion.

Literally, the Mart is the largest showcase on earth. No other single structure has such an amazing example of merchandise display methods. The very latest in lighting effect, use of color, material and design is here for the storekeeper anxious to increase his business back home. More buyers and more stores order more wholesale merchandise from firms located in the Mart than from any other market in the world.

Consulting the directory, one sees that there are 700 pages devoted to goods available and to the 3,200 manufacturers offering them for sale. In alphabetical order—from acetate fabrics to yarns—one finds items ranging from airplane kits to waste baskets, from baby boots, balloons, and barometers to wheel goods. There are 1,209,000 items on display.

From every corner of the world come buyers of merchandise, seeking the latest in everything. The children of India now play with metal toys fabricated in America because businessmen of Bombay and Calcutta trekked to the Merchandise Mart and placed their orders for shipment to the Orient.

But this is strictly a market for wholesale business. No huge stock of individual goods is stored here, only samples of the newest and finest products made. Here are some of the goods displayed: 948 lines of china, glass, pottery, and gifts; 205 lines of furniture; 407 of housewares, appliances, radios, and TV sets; 348 of men's and boys' clothing; 174 of curtains, draperies, and fabrics; 133 of floor coverings; 125 of toys, games and wheel goods; 224 of lamps, shades, and lighting fixtures; 817 of women's, children's and infants' wear; and 161 of linens, bedding, and domestic goods.

Though only registered buyers from recognized stores are permitted to make purchases, the general public is cordially invited to visit. During the week, Monday through Friday, specially trained personnel conduct tours on a half-hour schedule, and hundreds of people each day pay a nominal fee to take the 1½-hour tour to see the city under 1 roof. Surveys have shown that, as a direct result of the tours, a large percentage of tourists placed orders through their merchants at home for items seen in the Mart.

Here is truly a "city under 1 roof," with a daily working population of more than 20,000 people, and another 20,000 or more who come each day on business. Robert Ripley of "Believe It or Not" fame astounded the readers of his newspaper feature when he revealed that all the people of Chicago could be placed in the building at one time.

Housekeeping at the Merchandise Mart is on a gigantic scale, with a staff of over 300 and an annual budget of \$1,500,000. The locksmith must keep track of the keys to 15,000 locks, and there are over 10,000 telephones to take care of. Washing windows isn't a seasonal chore but a year-round job, for there are 6,500 windows to keep clean. Last year they used 30,000 gallons of paint, and this figure didn't include a carload of a water-soluble variety. Nearly all the rooms and corridors are air-conditioned. Equipment for this plant weighs over 7,000 tons.

Those who are appalled by winter fuel bills may take consolation in reading that as much as 27,000 tons of coal have been used in a single year to heat the Mart, and as much as 225 tons have been consumed in

a single day. New heating equipment has been installed, making it possible to use gas, oil or coal, or any combination of these fuels.

The huge building also has its own police force and traffic officers on duty round the clock. Mail carriers assigned there aren't bothered by rain, sleet, snow, biting doks nor the chilly wind from Lake Michigan. For they need not leave the building as they deliver some 40,000 pieces of mail and approximately 1,000 parcel post packages on their 4 daily trips. The post office has an average annual revenue of \$2 million, making

it the fifth largest in Chicago. Many of the Nation's outstanding industrial companies maintain their home or regional offices on the lower floors or in the tower. Yet it is not an office building. But it is only in such an amazing structure that the entire office force of a huge corporation could be placed on just a part of a single floor in an area comprising almost three acres, as are the general offices of the Pullman Co. Other outstanding companies to take advantage of the facilities offered include Quaker Oats, United States Rubber, Borg-Warner Corp. (Norge division), Dear-born Chemical, and Westinghouse, whose whose offices have cost as much as \$700,000 to design and construct. The upper floors have both the National Broadcasting Co. and the American Broadcasting Co. studios and ecutive offices, as well as television studios. The major space, however is allotted to display rooms with floor after floor of showrooms, beautifully decorated, and filled with

the finest products in the Nation. One of the Nation's leading commercial banks is located on the main floor. The Merchandise Mart National Bank has deposits in excess of \$74 million. On the first two floors there are 11 eating places where more than 30,000 people dine each day. These restaurants range from coffee and sandwich bars to the swank Fantasy Room operated by Henrici's, a popular restaurant name in Chicago. Also on the lower floors, employees-as well as the public-find firms giving all the services expected in a small city. There are 40 independent retail establishments selling groceries, drugs, gifts, cameras, tobacco, liquors, food for pets, shoes, sports equipment, radio and television supplics, appliances and housewares. Personal services include doctors, dentists, barbers, beauty parlors, and travel information.

The Mart is a magnificent structure, dominating Chicago's entire Loop area from the northern end. The main portion is 18 stories high, and the tower continues to 25 stories, 353 feet high. It has a 577-foot riverfront between Orleans and Wells streets. The building was erected on 458 caissons which go down into the earth 100 feet.

It is difficult to comprehend the large amount of material needed to construct a building this size. Some of the important items needed were: 3,915,000 cubic feet of concrete; 9 million feet of steel reinforcing wire for floors; 5 million feet of lumber; 20 million bricks; 54,000 tons of steel; 380 miles of wiring; 60 miles of plumbing; 35 miles of pipe for heating; 142 miles of piping for sprinklers; 132,000 square feet of glass; 7,000 tons of granite; 16,000 tons of terra cotta; 200,000 cubic feet of stone; 70,000 sprinkling heads and 40,000 lighting fixtures. The original cost was \$32 million. Actually construction started in 1928 and the first tenants moved in during 1930. (Eighty-two percent of the original tenants are still there.)

There are 30 large electrically controlled passenger elevators to accommodate the thousands of employees, businessmen, and visitors. Officials estimate the elevators carried more than 25 million people last year. Five freight elevators, each capable of carrying a 5-ton load, handle the tremendous amount of incoming and outgoing merchandise.

Few buildings, if any, in the United States have freight transportation facilities comparable to those of the Mart. It is served by railroad, water, air, and highway. Trucking facilities play the major role in today's business. There are truck-loading platforms on two levels, and the largest can handle as many as 80 vehicles at one time. There are 6 railroad tracks running under the building where railway cars can deliver fuel and merchandise right to the freight elevators. Other iver front are docks 2 blocks long and on the roof is a landing area for helicopters.

For passenger transportation facilities, Chicago's elevated trains come into a depot on the second floor, making it possible for the traveling public to reach any point in Chicago. The North Shore electric trains, serving suburban cities north of Chicago all the way to Milwaukee, use this same depot, where more than 2 million fares are collected annually. The Mart is but a few minutes ride from any of the major rail terminals. There is easy access for buses and taxis.

The building was sold 10 years ago to Joseph P. Kennedy, Boston banker, and former United States Ambassador to England. "Chicago's Merchandise Mart brought me a challenge and an opportunity," Mr. Kennedy said. During his ownership he has carried on a steady development program for the convenience of tenant firms and customers. Even so, the Mart is something to be watched, for Mr. Kennedy says he has only started.

The Yalta Conference and President Roosevelt

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Roosevelt Was Right at Yalta," published in the Montgomery Adviser of March 18, 1955.

Mr. President, I should like to call attention to the fact that the four editorials which I am presenting for the Record on the subject of the Yalta Conference are taken from newspapers which supported the Republican ticket in 1952. Therefore I am certainly not introducing any partisan material. I believe they are very objective views on this perplexing and complex subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROOSEVELT WAS RIGHT AT YALTA

The uncorking of the Yalta papers is causing a misbegotten effort to discredit the war leadership of Franklin Roosevelt.

Though Roosevelt was often a slick and dishonest hornswoggler, he was undeniably

His vision and realism concerning communism were not of the order of the supreme prophet, Churchill, but this country owes a great debt to Roosevelt for his splendid war leadership.

The current controversy over Yalta is an effort to prove that our troubles with Russia would not exist had Roosevelt not made unnecessary concessions to Stalin in order to get Russia to come in against Japan.

Many mistakes were made concerning Russia, and you can argue to good effect that Roosevelt's enormous vanity led him to sup-

pose that he could handle the Russians, But making concessions to get Russia into the war against Japan was no error. He could not have done otherwise without betraying a million and more American soldiers and their families.

It must be remembered that at the time of the Big Three meeting at Yalta, Germany had not been vanquished. The A-bomb success was 5 months off. As Churchill records in his Yalta memoirs, American war planners thought it would take 18 months after the surrender of Germany to defeat Japan.

It was further thought that the storming of the Japanese islands would be one of the bloodiest events in the history of warfare.

But it would be much less bloody if the Russians joined in, assailing Japanese forces on the one hand and preventing the large and powerful Japanese Army in Manchuria from marching to the defense of Japan.

This reinforcement with Russian forces was a great prize to be won, and we should not forget how anxious we were in those days over whether Russia would come in. With the frightful vision of the bloody Japanese beaches before him, Roosevelt would have registered a colossal failure indeed had he not nailed down the help of the Russians. He owed that to every American soldier, sailor, and airman.

There are a lot of wise ones today croaking and rasping that Japan was by this time already used up and hence it was not necessary to entice Russia into the fray. Such was the case, but the same military leaders who had provided the brilliant victory in the ETO were convinced that Japan would slaughter many Americans in her death convulsion.

There are those who contend that, actually, there was no way to keep Russia out of the war on Japan. Probably that is true, but there never was a time when any man, not even Churchill, knew what the Russians would do in a given situation.

As for the Yalta agreement, what matter is it what Russia might have been induced or coerced to sign? Russia would not have honored the agreement in any event.

The Yalta Conference

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Yalta Papers Should be Studied in Relation to 1945 Conditions," published in a recent issue of the Birmingham News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YALTA PAPERS SHOULD BE STUDIED IN RELATION TO 1945 CONDITIONS

It is no secret to anyone now that the late President Roosevelt was unwise in agreeing to Asian concessions to Stalin's Russia, at Yalta; or that it was unwise to allow Russia to have 3 U. N. votes to 1 for the other powers; or that Roosevelt and Churchill thought they had a reliable agreement with Stalin as to free postwar elections in East Europe. And it is not news about a great many other things discussed at the Conference held in February 1945.

What well might be remembered with respect to a principal decision, that involving concessions to bring Russia into the war with Japan, is that when it was made Russian troops were on the east bank of the Oder, Allied forces were at the Saar, in Italy the fighting continued tough below Balogna. Manila was afire. And when Churchill, Stalin, and Roosevelt were meeting, United States planes were bombing Iwo Jima dally—as they had been for more than 2 months—in preparation for the Marines' attack, which came the next week. There was still very much war going on.

Military representatives at Yalta, the papers show, thought the European war could run until the end of 1945. It was estimated by them that the end of the war with Japan would come 18 months after Germany's defeat. This was the estimate Mr. Roosevelt had to rely on when he considered whether to try to win from Russia agreement to join in the Japanese war. It ought to be remembered, also, that Operations Olympic and Coronet—the Japanese Islands invasion-were in the early stages of planning at that time. Okinawa was not even ours. In brief, a good case can be made that there was reason to want Russia to share part of the expense in blood and arms apparently to be required before the fanatical Japanese were brought to surrender.

No atomic bomb had been exploded, and there was vagueness about that weapon. A report of the period by Maj. Gen. Leslie Groves, of the Manhattan project, obviously did not forecast anything like the destructiveness which Hiroshima showed possible.

So hindsight, for some, has brought a view which is wholly critical of most of what was decided at Yalta. But, as has been said, that is due not so much to faulty decisions—some undoubtedly were—as to the fact that Stalin and Soviet Russia as we later learned had no intention of respecting such agreements. In the warm glow of wartime friendship and common purpose in arms, we let our guard down. But it is hard to keep a guard up against a friend and use his support in conflict.

The British are reported much disturbed. But the British have known—knew then—the American view was that Hong Kong should be turned over to China (it was then Nationalist China), and we cannot see much grounds for affront because Mr. Roosevelt feit British aid would not be needed in the postwar Korean situation.

The release of the papers manifestly brings conditions which are almost certain to put new strains on diplomacy. Mr. Dulles apparently is already reacting to pressures certain to come, as demonstrated by some testiness when asked in Washington why he had elected to release the papers now. He had, in fact, said only a few days ago they wouldn't be released. One explanation offered by an unidentified State Department source is that a New York newspaper already had a copy of the report. But that is not a good explanation—inviting only further inquiry as to how copies of the report were guarded.

Our American debate about Yalta ought not to be weighted by political considerations. Some Republicans long, now, have sought to use the Roosevelt decisions as a weapon against the Democratic Party. This has placed an unfortunate burden on foreign policy.

The Yalta Conference

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an excellent editorial entitled "Yalta After 10 Years," published in the Christian Science Monitor of March 18, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YALTA AFTER 10 YEARS

At Yalta in one fateful week, Churchill, Stalin, and Roosevelt attempted to shape the postwar world.

Yalta was from the first indictable for secrecy, and the secrecy on its major decisions was too long maintained. But Sir Winston Churchill declares that the release of details in the State Department's report

is even now unwise. He also adds that there are serious mistakes in the American version. So the report may easily start more controversies than it will settle.

Indeed reactions at home and abroad suggest that a Pandora's box has been opened, and that once more domestic political considerations have been placed above the Nation's position in the world.

Yet its publication has one great value. It helps to place the Yalta decisions more clearly in the context of 1945 events. The Soviet Union's breaking of Yalta agreements has made the whole arrangement appear much worse than it was. But even in 1945 voices of warning were raised against the assumption that those agreements—particularly on Eastern Europe-would hold.

Commenting on President Roosevelt's report to Congress, this newspaper said March

"We are less confident than Mr. Roosevelt appeared to be that the arrangements made or planned will end spheres of influence or the balance-of-power system. The results of the pledged cooperation to set up free governments will have to be seen to be judged."

We added that they would be tested by whether elections were honest.

History will not excuse Franklin Roosevelt for seriously misjudging the Kremlin's postwar purposes. He was so intent on winning the war he failed to plan adequately for peace. He disregarded Sir Anthony Eden's good advice on concessions to Rusgia. But the light shed by these documents sharply jolts the easy hindsight of recent years which has explained Yalta in terms of treason or incredible naivete.

We acquire clearer views merely by noting

that Yalta's agreements were made when the American Army, recovering from the "Bulge," was just entering Germany, that Russian troops were within 40 miles of Berlin; that in the Pacific American power had only reached Manila, and that the atomic bomb was still only a promise.

The report reminds us of several other factors which are essential to fair judgment of Yalta. The ghost of Brest-Litovsk peeked over the shoulders of western diplomatsthey remembered that agreement with Germany in 1918 by which Russia withdrew from World War I. They greatly feared a repetition. The Joint Chiefs of Staff were saying it would take 18 months to subdue Japan after Germany was beaten-and urg-

ing efforts to win Russian aid. Yalta did not give Stalin all he sought, and in only a few cases did it give him anything his forces did not already hold. Finally, it should be remembered that much of the Postwar expansion of Soviet power followed not so much from gifts at Yalta as from a retreat of American power caused by disbanding armies to bring the boys home.

We have misjudged Yalta by forgetting some of the circumstances surrounding it. But in another sense we are too close to itand too partisan about it. Even now our information is not complete. Yet the disclosure of these records might well give us wisdom for today:

1. To seek a clearer line of action based more on enduring moral principles, less on temporary military urges, so that today's friends will not become tomorrow's enemies.

2. To base peace planning on a deeper sense of brotherhood and effective cooperation with like-minded peoples.

3. To avoid talking beyond our power to perform; to take positions carefully, and then support them vigorously by moral, military, and economic strength.

The Yalta Conference

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the Yalta Conference, published in the Washington Evening Star of yes-

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YALTA POLITICS

One feels impelled to agree with Senator BRIDGES that the Republicans are at liberty to discuss the "mistakes" made at Yalta, and that "by studying the mistakes of the past and trying to avoid them in the future we can help our country."

It is not so easy, however, to reconcile this high-level pronouncement with the news that Senator Bringes has instructed the Republican Policy Committee, which he heads, to compile information from the Yalta documents, for use by GOP speakers.

This has all the earmarks of an attempt to pounce upon the Yalta texts for partisan. vote-getting purposes. If so, the move is one which should and which probably will meet with little success.

Of course, mistakes were made at Yalta. They ought to be studied at a responsible level with a view to guarding against repetition in the future. But this is no job for stump speakers armed with vest-pocket editions of oversimplified speeches lifted, in all probability, out of context by a vote-conscious policy committee.

After all, the mistakes at Yalta were made years ago in the closing stages of the world's costliest war. This, of course, does not excuse the mistakes. But it does suggest that the Republicans are not going to be able to squeeze much political advantage out of them at this late date-especially since there is no apparent way of rectifying the errors except through another war, which the GOP is not likely to advocate.

It is to be hoped that responsible Republican leaders will balance the slim prospect of political gain in this business against the potential injury to the national welfare if the Yalta agreements should become the subject of a cat-and-dog partisan fight. Nor should the possible extent of this injury be underestimated.

The Christian in Politics

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 17, 1955

Mr. VAN ZANDT. Mr. Speaker, during a conference last fall of the Blair County, Pa., ministerium held in the city of Altoona, Pa., it was my privilege to deliver the following address on the subject the Christian in Politics:

THE CHRISTIAN IN POLITICS

(Address by the Honorable James E. Van ZANDT, of Pennsylvania)

In speaking to you on the subject the Christian in Politics it is appropriate to consider briefly some of the definitions or statements defining politics.

We are told for example by Webster that "politics is the art and science of govern-

ment."

James Freeman Clarke says: "A politician thinks only of the next election—a statesman of the next generation."

And finally Daniel O'Connell admonishes

that "Nothing is politically right that is mor-

ally wrong."

To these definitions I wish to add the following statement attributed to Andrew Oilver of Boston and written over 155 years ago. It summarizes, in telling fashion, what I think is a brief and comprehensive word picture of the term "politics" and is as true today as when uttered over a century and a half ago. Andrew Oliver said "Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures. Neither is there any in which by mere loss of nerve he may do widespread harm. Nor is there another in which he may so easily lose his own soul. Nor is there another in which a positive and strict veracity is so difficult.

"But danger is the inseparable companion of honor."

With all the temptations and degradations that beset it politics is still the noblest

career any man can choose. When I decided to become a candidate for Congress I was told in a jovial manner, and then again by some serious minded friends that in entering the political arena I was choosing a career in life that has been described by careless slanderers as a

cesspool of inquity.

How often have we heard the caustic remark, "that politician," or "its just politics," or "I'm not going to vote for any of them, they're just a bunch of politicians."

Such unworthy remarks are directed daily at persons in public life by thoughtless people that it is little wonder that many good men and women shun public office.

President Eisenhower in a public pronouncement, warmed the hearts of great army of honest public servants when he admonished those who have an active interest in political affairs "to wear their political badge with considerable pride." He continued: "For politics ought to be the part-time profession of every citizen who would protect the rights and privileges of free people and who would preserve what is good and fruitful in our national heritage."

"Politics," said the President, "must be the concern of every citizen who wants to see our national well-being increased and our international leadership strengthened. In that combined sense politics is the

noblest of professions."

The Chief Executive of this great Republic seems to have echoed the thoughts of Andrew Oliver, of Boston, uttered 155 years ago, thoughts that are as applicable in this hydrogen-atomic age as they were in the infant days of the Republic.

It is a serious setback to the millions of American citizens interested in good government to reflect upon the widely publicized results of a Gallup poll published in 1953. This poll revealed that 70 percent of the persons interviewed stated they would not like to see their sons go into politics as a

This attitude is disturbing because the poll was not sectional or confined to any group

of partisans.

The expressed opposition to politics as a career was nationwide and extended to all walks of life. Since politics should be, and essentially by nature is, an honorable profession inseparable from the welfare of society, such a nationwide indictment is not to be dismissed lightly.

When it is revealed that a profession that

touches the life of every man, woman, and child is regarded as having fallen into disrepute, it is imperative that an explanation must be sought for such an unwholesome

situation.

It is true that in politics there are found weak-kneed persons who are not as Ceasar's

wife "above suspicion."

Yet considering the constant temptations that confront even the most virtuous, it would be too much to expect that in the field of politics all men would be paragons of virtue endowed with infinite wisdom and actuated by a sincere desire to fully justify the confidence placed in them.

In all segments of American life we have misfits who do not measure up to their responsibilities. Yet we refrain from denouncing their profession or vocation in life and charging it as being wholly responsible for harboring such misquided mortals.

By the same token we should, in exercising Christian charity, recognize the frailties of human nature and refuse to be stampeded into subscribing to the wholesale indictment of corruption and moral degradation leveled collectively at all persons in political life.

We should, on the other hand, examine such a sweeping indictment and try to find the reason for such widespread criticism. In so doing, we will find that among the chief causes for the scornful attitude directed toward those in political life is the fact that some unscrupulous and irresponsible politicians, by their conduct, have reflected discredit on all public servants and have cast the stigma of suspicion and distrust on them as a class.

In addition to corrupt public officials who are few in number, due to the high and exacting standards required of men in public affairs, there is the regrettable tendency on the part of the public to characterize every politician as demogog and a knave, thus judging all of them by the misconduct of a relatively few who have fallen by the wayside in violating the public trust. Such sweeping criticism is unjust and can serve but one purpose, and that is to discourage good men and women from entering politics.

For the few corrupt politicians that are exposed from time to time, there is a vast army of loyal and faithful public servants who should not be made to suffer by careless criticism directed at the sins of the few.

A Senate committee report on ethical standards of Government published in 1951 contains the testimony of Comptroller General Lindsay Warren, recognized as a militant crusader for higher moral standards in the public service. While testifying before the

Senate committee he expressed his opinion that "an overwhelming majority of Government people are honest, capable, and conscientious."

The Senate committee, in its conclusions, went so far as to say "the ethical standards of public officials are probably higher than those prevailing in business and other walks

It is convincingly evident from the results of the Gallup poll and the tendency to degrade politics that it is time the American public must begin to discriminate between the good and bad politician. This is difficult to do, however, when public apathy is so prevalent on election day, that only about half of the American people qualified to vote exercise their precious franchise.

Herein lies the solution to this distressing indictment of those in political life who, in Webster's definition, are engaged in a career in that lofty profession defined as "the art

and science of government."
Undoubtedly many interviewed in the Gallup poll exercise their right to vote. Yet when we realize that a recent report stated there would be over 100 million Americans privileged to vote on November 2, based on the previous voting records of the American people, it will be a modern miracle if the 1952 vote which was recorded at 611/2 million will be equaled, let alone surpassed.

The point I wish to make is that when only about half of the American people go to the polls are we not guilty, by comparison, of only a half-hearted effort in electing capable and honest public officials to administer the affairs of government? Are we not indicting ourselves when we complain of "that bunch of politicians" when half of us refrain from exercising the precious privilege of voting for public officials who literally hold our future as American citizens in the palms of their

If we cry out against "stuffed ballot boxes" are we not aiding the culprits in political life by "starved ballot boxes"? Clean and honest government will never be achieved by halfhearted efforts on our part.

When only half of us vote it shows that we only half care about how our Government is operated. Such an attitude of indifference is certain to permit the election of persons we later criticize.

Yet, if we spent an hour on election day in casting our vote we could have helped to avert such a calamity.

The churches of the Nation are of utmost importance in the crusade for good government because they are eternally dedicated to the seemingly endless struggle against the forces of evil. Therefore, as spiritual laboratories, they watch over, nurture, and develop the inner man from the time his name is inscribed on the cradle roll until the day that he is summoned for a final accounting by the same God who made him.

In the interim the Christian mode of living becomes ingrained on his heart and in his soul as he absorbs the eternal truths taught him regarding his purpose here on earth. Fortified with the Christian way of life it follows that any man devoted to his faith in Almighty God is certain with the help of divine grace to lead an exemplary life, and in so doing merit the respect of his men. Such a man is an asset to his community and a force for good in its civic life. If he has the inclination and the will to enter politics the community, State, or Nation is richer by his presence for he is capable of rendering public service of the highest order based on the Christian ideals which have been indelibly inscribed on his heart and in his soul.

How often in recent years when the very foundation of our form of Government has been menaced by sinister and atheistic forces, have we heard repeated over and over

again the stirring prayer of the poet as he implores divine providence:

"God give us men!

A time like this demands strong minds, great hearts, true faith and ready hands:

Men whom the lust of office does not kill; Men whom the spoils of office cannot buy; Men who possess opinions and a will;

Men who have honor; Men who will not lie."

The churches of America from their spiritual reservoirs of manpower, have supplied such men and will continue to do so.

From personal experience I know that the thousands of God-fearing men I have met have elevated public life by their services to mankind. Their edifying conduct and spotless reputation have served to rout the scoffers who jokingly, or in earnest, regard politics as a questionable and disreputable means of making a living.

The church can gain nothing from becoming engaged in partisan politics, yet it fails in its mission if it hesitates to take an unmistakable position on any moral issue affecting the spiritual welfare of its members. Such a solicitous attitude does not require that the church identify itself with any particular political party for it would be folly to attempt to destroy the freedom of its members to select the political party of their choice.

The point is that a good Christian will practice his faith in everyday life and by so doing, he transmits his sense of moral sponsibility to others, regardless of whether he is an elected public official or prefers to portray the role of the average American citizen.

With the granting of the franchise to women in 1920 and since some 30 million of them voted in 1952 as compared to over 31 million men, the family now plays an important part in deciding political issues. The Christian family, therefore, can wield the balance of power in any election, provided its members become informed on the issues and above all vote.

It is inspiring to realize that there is a mounting interest in Washington in the spiritual side of official life. Such increased interest is edifying and is a good example to the rest of the Nation. Prayer breakfasts attended by President Eisenhower are held at frequent intervals in the Mayflower Hotel and the response to the invitations extended greatly exceed the fondest expectations of the sponsors. In addition, a prayer room has been erected in the United States Capitol where Members of Congress may retreat to a chapel-like atmosphere and engage in silent meditation.

During the 83d Congress legislation was approved adding the words "under God" to the pledge of allegiance to the flag. This spiritual attitude that is being publicly displayed in official circles in Washington, reveals that despite the stereotyped and baseless slanders against politicians as a class, there are countless men in public office who are concerned not alone for the material needs of the Nation but they are convinced, like our forefathers, that Almighty God has dominion over the affairs of this Nation. They know that the inscription on the great seal of the United States when translated from Latin says: "He has favored our undertakings." They know, too, that on our coinage the founders of this Republic inscribed, "In God we trust," and that Abraham Lincoln at Gettysburg, expressed the same basic idea when he said that this Nation's "new birth of freedom" would be "under God."

Holy Scripture also reminds us of the Master's majestic and dramatic words in defining our duty to God and to the state, "Render to Caesar the things that are Caesar's and to God the things that are God's."

Our Divine Lord was making it crystal clear that the church and state should work in harmony-each in its proper field for each has rights over man and both have common origin in God.

With this divine interpretation of the relationship of government to God, Christian men and women, because of their dedication to the religious ideals upon which this Nation was founded, can serve their country well in political life because they are aided by their love of God and love of their neighbor.

With such an abiding faith in their country, their neighbor, and their God they are the instrument through which, by their interest in politics, public office can be elevated to its proper place in our everyday lives, thus refuting the accusations of those who degrade it when they speak of it as a career to be shunned.

The Day We Celebrate

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. RIVERS. Mr. Speaker, on the occasion of the annual St. Patrick's Day celebration of the 154th anniversary of the Hibernian Society of Charleston, S. C., on March 17, 1955, the Most Reverend John J. Russell, bishop of the Roman Catholic Diocese of South Carolina, delivered a magnificent and most thought-provoking address. He reviewed, with a masterful voice, the events at the time of St. Patrick, the events of today and the challenge confronting each of us in the present mortal strife beween Christianity and international communism. He reminded us of our responsibilities.

Mr. Speaker, he spoke for countless

millions of Americans.

Mr. Speaker, he spoke for my peoplehe spoke for me.

THE DAY WE CELEBRATE

Hibernians all. On this day we celebrate, I am both honored and happy. Honored to have the privilege of speaking to this distinguished gathering of friends and fellow Charlestonians. Happy, here in our charming city where we hear much of St. Michael's steeple, St. Philip's churchyard, St. Cecelia's Society, St. Andrew's Parish, happy to put in a word for St. Patrick's feast day. French Society, the German Society, the Scotch Society, the New England Society, all take a back seat today for on St. Patrick's Day we Irish take over completely.

"So, come all o'ye; and share our jubilation! Oh, the music in the air

An' the joy that's everywhere-Shure the whole blue vault of heaven's wan

grand triumphal arch, And the earth below is gay Wid its tender green the' day

Fur the whole world is Irish on the Seventeenth of March!"

The whole wide world over, March 17 is St. Patrick's Day. Shamrocks suddenly blossom, and green ties or little green ribbons are Worn with belligerent pride or a casual selfconsciousness or with teasing good nature. Even for a lone Irishman in any city or nation, St. Patrick's Day is a grand holiday. Where two Irishmen are gathered it becomes a celebration. If there are three, naturally

there is a parade. You cannot have a parade with less than three, for there must be a grand marshal, the main marching body and the rear guard. Here we have more than a mere parade-we celebrate the 156th anniversary of the Hibernian Society-Charleston's 156th celebration of St. Patrick's Day.

The usual pattern is for speakers on this occasion to turn the warm and mellow phrase to the glories of St. Patrick and an Ireland no proper Irishman believes is anything, but solely and exclusively a land of saints and There is much that is justified and some that is extravagant, and mixed with it all is many a story to lift a banquet hall high in mirth. Too much does St. Patrick's Day oratory sing of the past, too little of today and tomorrow. And so tonight I speak not of Ireland's past, but of her present, and of America's use of our Irish heritage.

The world hangs under a cloud today, cloud of apprehension occasioned by the threat of totalitarians. The Republic of Ireland shares that apprehension, and yet in many respects the situation there on this St. Patrick's Day is better and more encouraging than it has been at any time since the invader first set foot upon its shore.

Ireland's place among the nations of the world is what previous generations there, and previous generations of those of Irish extraction elsewhere, hoped and prayed for. They never for a moment doubted that one day Ireland's hope would be realized, but the obstacles were so great, that they sometimes were tempted to think that the day of

achievement would be far, far in history.

Today, however, Ireland exercises all the powers of a sovereign nation, with Hon. John J. Hearne, chief envoy in the United States, having the rank of ambassador, and with the United States represented in Ireland by Ambassador William H. Taft, III, the grandson of a former President and Chief Justice. In as disturbed a period as the world has seen short of war, Eire is enjoying internal peace; there have been fewer changes of government there since Ireland's independence was restored than in any major country in the world.

Only one more development is needed to fulfill Ireland's hopes, and that is the end of partition—the partition of the nation into two political entities, not by majority will of all Irishmen but by outside force-and this in the face of statesmen's pious preachments on a small nation's right to self-determinataion. With our objection to partition of Korea and Indochina by enemy invasion, Americans particularly should understand that justice requires the ending of the partition of Ireland, where northern Ireland, 5,238 square miles in extent, is artificially separated from the 27,137 square miles of the republic. May this be one of the last of the St. Patrick's Days observed in an Ireland that is partitioned.

So much for Ireland-now how about America-does St. Patrick's Day have a lesson for us? St. Patrick's great contribution to the world was that he taught his followers faith and patriotism, love of God, and love of country. These have been the chief characteristics of Irishmen down through succeeding centuries.

Suppose St. Patrick were to land on our shores today, 1955, in the atomic age, what would be his message to America?

He would call upon our leaders and our citizens as he summoned the Irish rulers and people to accept, to profess and practice the same principles of righteousness-to adore and obey Almighty God. He would say, "You will not find the lasting peace you crave which like every good and perfect gift cometh down from the Father of Lights unless you live like the sons of God." call ourselves a Christian Nation, we invoke the blessing of God upon the sessions of Congress-our public meetings are opened and closed with prayer to the Almighty; the seal

of our Nation bears the words "In God we trust", yet out of deference to atheists we acquiesce in leaving God out of the deliberations of the United Nations. Half of our citizens acknowledge no religious affiliation and take no part in any religious exercises.

"What God has joined together let no man put asunder," yet nearly 1 out of 3 marriages in our country ends in divorce, family life is declining, juvenile delinquency in-creasing, scandals, treachery, and treason in high places no longer shock us. As a nation, we seem to have squandered our birthright; to have lost along with our faith in God, our patriotism and even our sense of shame. Patrick, who saved Ireland, would save the United States by the same means—faith in God-the faith which is the salvation of men and of nations.

As he tore down the false gods whose shrines dotted the emerald isle, so he would tear down the false gods that men have placed upon pedestals in our own midstthe gods of lust and luxury, worshiped by defiling the home and family, by the pagan immorality of much of our entertainment; of our reading matter, of the gods of avarice worshiped by injustice in business, in industry, in government, the gods of ignorance worshiped by spending millions of dollars on the education of millions of American children, teaching them nothing about the God who made them, so that many of the present generation do not even know the Ten Commandments. He would remind us that of the 19 civilizations the human race has known, 16 of them perished from within, from decadence resulting from disregarding the moral law established by the Supreme Lawgiver. Patrick would say, If you want God's blessings upon America, make America less unworthy of God's blessing. If you want peace and security against the forces of atheistic communism, if you want God on your side, first be on God's side.

As he did of old with the pagan Irish, he would take what is good in our national character, our native courage, energy, resourcefulness, our inventive genius, our mechanical know-how; he would elevate and strengthen, but he would root out whatever is weak and wrong and venal and dishonest and pagan in our American way of life.

Let the lesson of this day we celebrate be for each of us this-that just as one man under God saved and reclaimed a nation, so each of us as individuals, if we have the courage and strength of conviction and fortitude and moral fiber of Patrick, can make a mighty contribution to the salvation and redemption of America. That my friends is the first lesson and the first message and the first inspiration of the day we celebrate.

And the second is this: Patrick taught love God and love of country. I am afraid he would be ashamed of us on both counts. We have secularized our society and our government, our national life to the point where we no longer put God first-and in our dealings with other nations we do not put America first. At Yalta, Teheran, and Potsdam we surrendered the countries of Eastern Europe to Stalin, then we refused the necessary help to the Chinese Nationalists and let the Communists take over the mainland of China. We have been witnesses if not accomplices of the development of atheistic communism into a force controling the destinies of one-third of the human race, and atheistic imperialism goes on enslaving people in Europe and Asia, determined, if possible, to enslave all free people. Meanwhile, we lack the courage, the forti-tude, the free and patriotic spirit of our forefathers.

We have thrown away everything we had built up over a century of effort on the mainland of China. More than 500 million Chinese were firmly convinced that the United States was the most powerful nation

in the world and regarded America as their friend and protector. Now we have lost face and they have lost faith in us and hope. A small group of pro-Communists and pseudointellectuals have effected, in a few years, one of the greatest turnovers in history. Now we send a foreigner to talk with the Chinese reds, begging them to release American citizens and soldiers from prison and we even seem to be content to remain ignorant of the answer that was given.

The west (our friends and allies to whom we give lavish gifts) trade with China and other Red countries and thus feeds the workers who produce the guns to kill Americans. How Mr. Churchill, Mr. Dulles and other negotiators of lesser stature in the free world can contemplate dealing with these men who come to the conference table with hands reeking with the blood of our soldiers is beyond comprehension.

How low must burn the feeble flicker of our self-respect, before our American spirit blazes forth once more a beacon of light, hope in the world and a warning to those that would assail us? And yet it is better to light one candle than just to curse the darkness, so from reflecting on the virtues and teachings of a man dead 1,500 years who in his day changed the world in which he lived-let each of us determine to do what we can-I am only one, I cannot do much, but what I can I must do and with God's help I will do-to live right in God's sight nd to put my country, America first.
That, my friends, is the lesson of the day

we celebrate.

To Make Our Security System Secure

EXTENSION OF REMARKS

HON, PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an article from the New York Times magazine of March 20, 1955, entitled "To Make Our Security System Secure," by Vannevar Bush:

WASHINGTON .- After a spell of fever the country has now returned to an almost normal temperature as it regards the problem of loyalty on the part of its citizens in high or sensitive places. Key cases have disappeared from the front page, the last of these being so patently absurb that it was ludicrous. Oppenheimer is living a happy and constructive life, contributing to our losophy if not to our defense. Condon is teaching physics rather than making new kinds of glass, and no doubt teaching well. Ladejinsky is back at work on his specialty.

But no one looks back on the recent imbroglio over loyalty procedures with any pride or satisfaction. For widely different reasons the feeling prevails that the system of loyalty clearance under which we have operated has been defective. We need a new system, not a bit of tampering with the old; we need a 1955 model, not an antirattling device to be attached to a Model T.

The new system should be built from the ground up by a competent body of men with an unrestricted assignment. That should include members who are vigorously alive to the dangers of subversion and others who are equally alive to the rights of citizens. It should not be just a collection of scientists. It must, by all means, be divorced from politics. It need not be hurried at its job, for our present situation is apt to continue a long time. But it should be so thorough that it will bring the whole problem of enemy penetration and disloyalty under control, without again making it a political football and without wrecking the careers of humble public servants.

First, the body should visualize the world conditions under which the revised system is likely to operate; second, it should analyze the objectives and methods of our enemy in the field of propaganda and subversion; third, it should write down the objectives which the new system is to accomplish; fourth, it should establish a group of principles to which the system should conform; and, fifth, it should create a system that is to attain our objectives in accordance with the established principles. Here we can touch only the high spots of this program.

As nearly as we can now see, we are entering a period of technical stalemate, in which wars are unlikely to occur, though secondary wars fought with limited means may be a common occurrence. This seems, at least, to be the best that we can hope for at present. For no great war can ever again be won; it can only end with the partial or complete annihilation of both contestants.

Our enemy relies chiefly on the weapons of penetration and subversion to weaken us so that later he can destroy us. He tries to steal our secrets, to penetrate our organizations and influence our actions, and, all, to spread confusion and mutual distrust among us. In this last purpose he has been extremely successful—so successful, in fact, that he need hardly try further; for we are carrying on the process without his aid.

The enemy's success in this respect has had an especially severe impact on the scientific community. For scientists occupy a key position with respect to those secrets that should be most strictly kept. They are an individualistic lot; otherwise they would be

of little value as scientists.

While they concentrate in their special fields, they are often extremely naive in others. When we dreamed of world understanding as a means of ending all war, there was a greater portion of gullible men among them than among most other intellectual groups. And there were a few-an exceedingly few-traitors among them.

Much of the recent witchhunt, therefore, seemed to concentrate on their profession. Yet in no other place could its effects be more disastrous to our national interest. Young men hesitate to enter the scientific professions, and in particular to participate in the scientific programs of the military arms because of the danger to their reputations and success. We must change this situation if we are to compete on even terms with the enemy.

But let it be perfectly clear that scientists ask no special privilege. To restore the principles of the Bill of Rights in all the processes of government is not to grant special privilege. To urge a revision of our present faulty security system is not to seek special privilege.

The great question now is whether our recent public behavior is a passing phase, or whether we propose to change our part of the free world until it becomes a replica of the captive world which opposes us. If we choose the latter, the struggle will be over, for it will then no longer matter which tyranny prevails.

What, then, should be our objectives as we construct and operate a system for examining into the lovalty of Government servants and those who serve voluntarily on boards or committees?

In the first place, we want to throw the Communists out. If there is a man, of any rank in the Government, who is taking his orders from the Kremlin, we want to get rid of him promptly. If there is a teacher who is imparting to the young principles which are not his own but are dictated to him by the machinery of the Communist

Party, we want to see to it that he stops teaching.

There is a point here which needs more

discussion. We believe in free speech and a free press and that any man has a right to express his honest opinions and to criticize his Government.

We believe with Brandels that "freedom to think as you will and to speak as you think are means indispensable to the discovery and spread of political truth; that without free speech and assembly, discussion would be futile; that with them, discussion affords ordinarily adequate protection against the dissemination of noxious doctrine; that the greatest menace to freedom inert people; that public discussion is a political duty; and that this should be a fundamental principle of the American Government.

We have generally accepted the statement by Holmes that 'We should be eternally vigilant against attempts to check the expression of opinions that we loathe and believe to be fraught with death, unless they so imminently threaten immediate interference with the lawful and pressing purposes of the law that an immediate check is required to save the country."

We hesitate, however, to go as far as Lincoln did when he said, "This country with its institutions belongs to the people who inhabit it. Whenever they shall grow weary of the existing Government, they can exercise their constitutional right of amending it, or their revolutionary right to dismember or overthrow it."

But there is a vast difference between the honest citizen who would change our system of Government because he thinks he has a better system-even when his acts border on the violent-and the person who is part of a foreign conspiracy to wreck the Nation. Regarding the latter we have no doubts and no hesitancy. If he is a citizen, he is a traitor. If he is a guest in the land, he is a spy. In either case he must be found out and dealt with according to his deserts.

This alone, however, is not a sufficient objective. We want to make it possible for a humble citizen to serve his Government without fear of powerful men, we want de-cency in our national life. More than that, we want to establish an atmosphere of trust and mutual confidence among our citizens. Our security system needs to have two objectives, one to get rid of our enemies and their adherents, and the other to encourage, support, and protect honest, loyal citizens as they work on matters that are important for our safety and our prosperity.

If a man was once a fool, do we condemn him for life, or do we let him prove that he has outgrown his folly? If we excluded from Government and from other employment all who have sometimes been foolish. we would not have enough left to man our guns or run our factories. But we are concerned here more particularly with the man who once subscribed to or flirted with the Communist philosophy and later, realizing his error, became a loyal citizen.

There are all degrees of involvement, of course. We certainly don't want to welcome with open arms, and introduce into sensitive spots, the man who professes sudden reformation. But neither do we want to exclude permanently from the practice of his trade or profession the man who did no more than attend a meeting of Communists out of curiosity when he was an adolescent.

The best proof of a change of heart is loyal service, and there are plenty of places in the Government where one can serve loyally without having access to military secrets. In the struggle with Russia we shall need all the capable men we can muster.

Quite apart from the question of decent humanity, we cannot afford to waste our most precious resource: the talents of our trained citizens. So, one object of our system should be to give the individual about whom there is doubt a chance—a safe one, certainly, but a path up instead of down, and an opportunity to remove whatever doubt exists.

If a new system is to be built, there are several principles to be kept in mind. A considerable catalog of them is contained in the Bill of Rights.

There seems to be a feeling about that the Government does not impose a penalty on a person unless it fines him or puts him in jail, and two fallacles have emerged from the confusion in this regard. It is said that to work for the Government is a privilege and, therefore, that the Government has a right to terminate one's employment with it arbitrarily.

There is no question of privilege involved. When a citizen serves the Government he is paid a salary and presumably gives capable, honest service in return. He has a duty to serve well and loyally. But the Government also has a responsibility to avoid imposing hardship on any man who has served it faithfully, except on proof of disloyalty or for reasons apart from those we are considering here, such as incompetence.

If disloyalty is not proved but loyalty is doubted, we need not cut off a man's support and place a stigma on him that will make his employment elsewhere almost impossible. He can be shifted to an insensitive job with little difficulty and no danger. We have already damned for life too many humble employees of the Government merely because there was doubt or because our security system was too clumsy to resolve it.

In our courts we have a complex system of rules of evidence to protect a citizen against unwarranted prosecution, to expose liars, and to arrive at facts as far as is possible in the light of human frallties. Undoubtedly we have at times carried this system to extremes and hobbled our procedure unnecessarily. But the system has evolved as a result of a thousand years of experience, and we should not abandon it lightly.

We cannot carry it all over into loyalty procedures without rendering them cumbersome. Still, such procedures place a man in jeopardy—not, to be sure, of life or limb, but of his good name, which may be more precious; and, therefore, the best advice of men learned in the law should be obtained if we are to have a sound and fair system embodying the safeguards that have been found essential for wise judgments.

We have had, recently, some very striking and disheartening examples of how far an unscrupulous liar can go and the harm he can do when proceedings are loose and informal, and he does not have to run the gantlet of vigorous cross-examination.

The Bill of Rights says that a man shall not be twice placed in jeopardy for the same offense. In our loyalty system there is no finality. Important men who could contribute much to the Nation's real security have found it necessary time after time to go through the same rigmarole, filling our forms, appearing before loyalty boards, reassuring their neighbors that constant inquiry does not necessarily mean they are subversive.

Some have also had to spend their own money, time after time, merely defending themselves against ill-founded attacks. This has not generally been the result of new evidence presented. It has just been because we have a clumsy, inadequate system, steeped in confusion. When a man is cleared he ought to stay cleared unless there is new and pertinent evidence that he should not be.

Do we still subscribe to that item of the Bill of Rights? Or do we think it is not jeopardy when a man may lose position, reputation, and friends because of the acts of his government?

The most serious aspect of our system to date has been that it has been used for spite and for thought control. Wholly unsupported charges lodged mainly for spite have been entertained seriously and made the basis for action when a proper court would have completely disregarded them.

The matter of thought control has been more subtle and more disastrous. Apparently the argument goes something like this: A man expressed opinions contrary to those which have been accepted as a government policy. Perhaps he did so in the interests of Russia. We shall, therefore, examine whether his opinions were sound. What a travesty on the ideals of free speech.

And I am not writing merely of cases that have been in the headlines. I have in mind cases of a number of persons that received no publicity. My information about them is fragmentary, and I could prove nothing; for they have been surrounded with all the paraphernalia of secrecy; they have been the subject of star chamber proceedings.

But I believe there has been altogether too much thought control of this kind; for if it has been practiced in the full light of day, as it has, we may be sure it has been practiced far more in secret—sometimes on no better ground than that a man's arguments regarding policy have been found inconvenient.

Now I do not intend to prescribe an ideal system. I hope very much that a fully competent board will be given the task of doing so before more harm is done. But I have three suggestions in that direction.

In the practice of criminal law we have grand juries. They are part of our heritage from the long struggle of the past against arbitrary power. Their power is to protect the individual against capricious acts on the part of government officials. Before a district attorney can jail a man and force him to defend himself in court against serious charges, he must have him indicted. And no indictment will be returned unless the district attorney can convince a grand jury, made up of the man's fellow citizens chosen by lot, that he has a strong enough case to warrant setting all the machinery of the courts in motion.

Under our loyalty system, on the contrary, a man can be suspended and forced to defend himself at the whim of an official who may have only the flimsiest of evidence against him. We need the equivalent of a grand jury in our security system. Such an equivalent would be made up of men who owe no allegiance to any official who may make charges, and it should be rigorously supported and protected in its deliberations and findings.

It could be selected by lot from men in the civil service, as grand juries are selected from the general body of citizens, which would be a reasonable and democratic way of sharing the burden. No machinery of trial should move unless there are serious charges supported by adequate evidence in the opinion of such a group of men. If this had been a part of our system in recent years, a large number of cases that have caused real distress would never have got started.

The relation of a government to its employees is a different matter than its relations to citizens at large. It is, in some ways, comparable to its relation to men in uniform. There are a dependence and an agreement under which both the men and the government have obligations and responsibilities.

When a soldier is subjected to court-martial, the Government furnishes him with counsel. Under the present loyalty system, a man who is accused must defend himself at his own expense. When our system is revised this burden should be lifted. The accused should be furnished with vigorous and capable counsel and should have wide latitude in its selection. He can then add his own counsel if he sees fit.

Such a provision would accomplish a number of things. It would protect the man who is without resources and to whom his job may be highly important. It would put an end to the absurdity of preventing an accused man or his counsel from seeing some of the evidence because it is classified. This would be no more than merely decent and fair.

In addition to positive machinery for detecting and excluding disloyal persons in our midst, there should be equally positive means for insuring that the system is not used for improper purposes—for spite, for thought control, or for political advantage.

A grand jury can report to a court, and often does, if it believes prosecuting officers are violating the law. An equivalent of the grand jury should have a corresponding opportunity in connection with loyalty procedures. And it should report to the top in such instances—to the superiors of the offending official as many steps removed as the circumstances and the gravity of the offense warrant, in its opinion. The public would then have some assurance that the practice under the system is clean.

All that I have said has to do with the security system employed in the executive branch of government. What committees of Congress do is up to Congress and, in the last analysis, up to the public opinion which obtains. Courts, quite properly, refrain from entering into questions of how Congress conducts its business.

But if the executive branch has a really effective system in operation and has cleaned its house, there will be few specific cases to which Congress can usefully direct its attention. We may then arrive at a situation in which Congress examines only into the manner in which the executive branch is operating, instead of attempting, in an exceedingly cumbersome and defective manner, the examination of individual cases, which should be promptly and effectively handled by a system designed specifically for that purpose.

The tide has apparently turned. We are much more sane and less hysterical than a year ago. We are gradually becoming more reasonable in our approach to the problem of subversives. But there is a danger here. Public opinion in this country sometimes swings to extremes: witness the great prohibition experiment.

As the tide turns, we should be on the alert to see that it does not swing too far and leave us complacent. We still, no doubt, have some Communists in our midst; and we still need to be vigilant in finding and removing them from places of trust in government and industry.

It is time for a new system, one that strikes a proper balance, seeking out and removing enemy sympathizers who are doing us harm, but offering reasonable protection to the innocent as it does so; one that will be decent and just and that will not itself subvert those ancient rights of man which are the essence of his liberty.

The Presidential Campaign of 1956

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "A Democrat, if Lucky, Could Win," written by Carroll Kilpatrick, and

published in the Washington Post and Times Herald of March 22, 1955.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

A DEMOCRAT, IF LUCKY, COULD WIN (By Carroll Kilpatrick)

I would like to defy all the political experts and say that a Democrat, if his name is Stevenson, does have a chance of winning against President Eisenhower next year. do not say that the Democrat will win. But I do not believe that President Eisenhower is as certain of victory as a superficial reading of Dr. Gallup might lead us to think.

If the two parties were evenly matched, nothing could stop Mr. Elsenhower but a depression, or a preventable war. But he belongs to the minority party. From his point of view, there are just too many Democrats for comfort. The President's popularity is almost sensational, but he has not succeeded as F. D. R. did, in remaking his party into a dominant coalition. The President is popular; his party is not.

The most persuasive and compelling argument in 1952 was that it was time for a change. Many Democrats accepted that slogan and cast their votes for General Eisenhower. Will not a great many of them

next year return to the fold?

In 1952, also, the South-the stronghold of the Democratic Party-was badly It liked Mr. Eisenhower very much indeed, but it disliked Mr. Truman even more. Next year it will not be voting against Mr. Truman.

As far as the race issue is concerned the two parties are not far apart, and in the minds of southern voters it will make little difference which party controls the Government. In 1952, many voters, including Governor Byrnes, erroneously though it made an enormous difference.

No doubt President Eisenhower will go into the campaign with substantial southern support, but despite his popularity below the Potomac it will be more difficult next time than last to win southern electoral votes.

If you tick off the issues that were controlling in 1952 you find that many of them will have been forgotten by next year or at least will not carry the same wallop. The time for a change argument is one. The Communists-in-Government issue is another. The Korean war is a third. Senator Taft will not be present to rally the dissident right wing. Some farmers and many workers who voted Republican in 1952 may vote Democratic in 1956.

By next year, Governor Stevenson will be better known than in 1952. He will be a more experienced campaigner. He will have more political conditioning. Some of the magic will have worn off the Eisenhower The President may be handicapped

by an unpopular running mate.

A recent Gallup poll said that Democrats outnumber Republicans by some 20 million potential voters. If every American adult declared his party preference, the survey said, there would be 34.3 million Republicans, 54.3 million Democrats, and 9.4 million undecided. While these figures are subject to many qualifications, and are politically unrealistic, the final tabulations of the 1954 congressional election returns also suggest that Democrats do hold a wide lead. L year the GOP lost by 2.2 million votes.

In 1952, Mr. Eisenhower won by 6.4 million votes. To win next year, it would not be necessary for Democrats to make a net gain of 6.4 million votes but of slightly more than 3.2 million.

The shift between 1952 and 1954 from 6.4 million plus to 2.2 million minus was whopping reversal of fortune for any party in such a short period of time-at a time when its leader's popularity stayed extreme-

In 1952, General Eisenhower won 442 to 89 in the electoral college. In 1954, Democrats ran ahead in 28 States with a total of 342 electoral votes while Republicans ran ahead in 20 States with a total of 189 electoral votes.

Of course, there are intangible factors that weigh heavily in President Eisenhower's fa-The American people have seldom refused a President a second term. Mr. Eisenhower has become fixed in the minds of the people as a man of peace. No doubt he is planning to run on the Democratic slogan of 1916: He kept us out of war. No President in this century has been able to hover so high above partisan controversies as Mr. Eisenhower. Any Republican is fair game for Democratic criticism except the Presi-

So the odds are heavily in favor of the President's reelection next year. As of the moment, the only thing he has to fear is the fact that he heads the minority party. His tremendous personal popularity should pull him through. But those who remember that Mr. Truman did not have a chance in 1948 will not count out the Democrats until the votes are tabulated.

By Hindsight

EXTENSION OF REMARKS

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. FERNANDEZ. Mr. Speaker, by unanimous consent, I insert in the Appendix of the RECORD an editorial from the Washington Daily News of March 18. 1955, expressing a sane and sensible view respecting the premature disclosure of the Yalta documents.

The editorial reads as follows: BY HINDSIGHT

Now that the Yalta documents have been published-and we were among those who insisted they should be-it is clear that nothing beneficial is likely to come from their publication. No new official agreements were disclosed. Just some off-the-record side remarks of the principals involved-which do not read well 10 years later.

We hope nothing harmful will come from

their publication.

In charity, what was said by Messrs. Roosevelt, Churchill, and Stalin should be considered in the context of the time. There was bloodthirst and vengeance in the air at Yalta. and it was understandable, although deplorable. The Germans had ravaged Russia, laid waste England's cities, violated all rules of human decency in their concentration camps. So with the Japanese, in their attacks on China, the Philippines, and the United There had been nothing in the con-States. duct of our enemies to endear them to us. Our goal then was to impose unconditional surrender.

By hindsight we expect of our leaders that they should have shown more foresight. But they were riding the crest of the waves of hatred, and were so intent on a Carthaginian peace that they thought not enough of tomorrow. All, that is, except Joe Stalin, who got just the kind of peace he bargained for-his enemy to the west, Germany, and his enemy to the east, Japan, prostrate, and his former allies weakened, bickering, and distrustful.

What happened at Yalta can no more be undone than what happened at Appomattox. President Eisenhower may, if he wishes, repudiate the Yalta agreements, as Senator McCarrny urges. But it will have no more effect than if the Governor of Georgia suddenly should disclaim the terms of General Lee's surrender to General Grant. The Soviets already have ignored all their Yalta promises, just as the Northern reconstructionists ignored those fundamentals that General Grant tried to assure to General Lec.

Why compare Yalta to Appomattox? the latter, conqueror met the conquered; in the former, only conquerors gathered to plan

and plot.

To show the contrast, and to illustrate the truth of the old saying that men learn nothing from history except that they learn nothing from history, we quote from a recent article in the Saturday Review of Literature by that scholarly Richmond editor, Virginius Dabney. He reviews what happened at Ap-

pomattox:
"Lee * * * arrived before Grant. When the latter hurried in he was still in his mudspattered field uniform, for he did not wish

to keep Lee waiting.

"The men had met 17 years before when both were officers in the Mexican War. The conversation turned to those days, and Grant became so engrossed that Lee had to remind him that they had met to discuss the surrender. * * *

"Grant thereupon proposed that officers and men who gave their paroles not to take up arms against the United States be allowed

to return to their homes.

"This will have a very happy effect on my army,' said Lee, as he saw that his men would not be marched off to prison.

"Grant then inquired whether Lee had any suggestions and the latter asked if the Confederate cavalrymen and artillerists, all of whom owned the horses they used in the fighting, would be allowed to take their mounts home for the spring plowing. The Union commander readily agreed.

"Lee again expressed deep appreciation." That was 90 years ago. It had been the bloodiest war of all time, a fratricidal strife engendering bitterness almost beyond belief.

But the leaders of the men who fought held their heads above the mobs.

Mr. Churchill has written that the conflict of our North and South was "the last war fought between gentlemen."

The documents of Yalta do not dispute that thesis.

Adequate Increase for Postal Employees

SPEECH

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, March 21, 1955

Mr. CANFIELD. Mr. Speaker, I am opposed to a suspension of the rules to permit consideration of H. R. 4644. I wish to record myself in favor of an adequate pay increase for postal employees. I am in favor of a bill reported under a rule permitting debates and amendments in accordance with the wishes of the Members of this House. It is apparent from all the discussion that has already taken place on the economic status of our almost 500,000 postal employees that failure to grant an increase that may justly be called adequate would inflict an injustice on our demonstrably deserving Government workers.

The raises granted to the postal workers, as statistical studies show, have always fallen more or less behind living costs, and have given on the whole scant consideration to the improved efficiency of the postal employees.

I hold it therefore time that the postal employee be given his due by an adequate salary increase. And I earnestly hope that the committee will report out a bill calling for adequate salary increases and that this bill will be reported under a rule permitting Members of the House to work their will thereon.

Losing Asia To Save Quemoy Would Be a Rotten Bargain

EXTENSION OF REMARKS

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1955

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following editorial from the Courier-Journal of March 21, 1955:

LOSING ASIA TO SAVE QUEMOY WOULD BE A ROTTEN BARGAIN

What sort of a place is Quemoy, the obscure little dot on the map where World War III might begin? A reporter for the Times of London has described it, after making the 2-hour flight over from Formosa:

"Quemoy is a rocky island of 70 square miles (as against 52 in the city of Louisville). barring the entrance to Amoy, formerly the most important South China port, like a cork in a bottle neck. It is surrounded by gently sloping sandy beaches, easy to assault and separated from the mainland by a shallow arm of the sea which does not allow free passage for deep-draft shipping. Whereas the capture of the Tachen group would have required a full-scale amphibious operation, an assault against the Quemoys would be more like a large-scale river crossing, practicable at night with a landing force of small vessels '

Could anything be less promising from a defense standpoint? Yet this is one of the related positions to whose defense we are getting daily more deeply committed. Here is the blind alley into which we are so

rapidly moving.

1. Secretary Dulles has repeatedly stated that we would defend the offshore islands of Quemoy and the Matsus if a Red attack on them were clearly aimed at the conquest of Formosa. Peiping propaganda daily chants the formula that the offshore islands and Formosa itself must and will be taken. Reds obviously have no intention of leaving us room to back off from Quemoy when the assault occurs without appearing to run in the face of open Communist defiance.

2. Admiral Radford has often said that Formosa and the Pescadores can be successfully defended by American air and sea power. This at least commits us only to the sort of limited war which many Americans seem willing to accept on the theory, expressed by Elmer Davis, that "only foot soldiers have mothers." But it is painfully obvious that the fleet could not operate in the shallow waters off Quemoy, 6 miles from a Red shore bristling with big guns. Such an attempt would be plain suicide.

3. The alternative, then, is to defend Quemoy by the use of tactical atomic weapons. Both Mr. Dulles and the President have spoken of using such missiles against military targets on the mainland opposite Quemoy. It is argued that these weapons would pose no problem of radioactive fallout and would not extend to centers of civilian popu-

But here is a plan of military strategy that completely ignores the facts of politics and human psychology. Any type of nuclear weapon, no matter what its exact nature, is an engine of special terror to most of the people of the world. We have only to imagine what Americans would feel if any sort of atomic shell or bomb were headed in our direction.

Whenever American forces aim a nuclear weapon of any kind at the mainland of Asia, the most powerful propaganda bomb in the world will explode. Everybody in Asia has heard the story that America used its atom bombs in World War II against the Japanese because they are a yellow race, instead of against the white Germans. Even if the engagement near Quemoy could be limited to the exact area and the precise type of weapon we would choose, the simple fact that we were turning our atomic power once again on Asian people would lose all the rest of that vast continent to our cause.

The day may come when we will have to go to war with all the weapons we can command, and with a prayer that ours will prove more powerful than the weapons of our ene-But why risk the ultimate test of strength over such a position as Quemoy? Walter Lippmann has rightly called the offshore islands "a strategic and political lia-

A great many Americans subscribe to the idea that we must draw a line somewhere against aggressive communism, and put a sign on it saying: "Thus far and no farther." But why in the name all that is holy should we choose to draw such a line 6 miles off the China shore, to include a position of no genuine importance which can only be defended by the use of atomic weapons?

There is still time, though barely time, for President Eisenhower to bale us out of this perilous situation. It will be his personal decision whether or not to reply to a Red assault on Quemoy or the Matsus. But if he waits until the attack begins, he puts himself in the position of deserting an ally under fire if he decides against American intervention. That could easily be the straw that would break the camel's back of Chinese Nationalist resistance on Formosa.

All of our European allies are against a defense of the offshore islands. That is important to us, but not nearly so important as the fact that we cannot defend them except by use of the one type of weapon we should withhold for a final test with Communist aggression.

In trying to shield 43,000 peasants and some Nationalist troops holed up on Quemoy. we will risk losing the moral support of virtually every human being on the continent of Asia. That is a rotten bad bargain. President Eisenhower should pull out of it at once while there is still a blessed margin of time.

The Proposed Big Power Conference

EXTENSION OF REMARKS

HON, JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Maybe it Would Help," published in a recent issue of the Washington Evening Star. It deals with the very excellent idea advanced by the distinguished and able chairman of the Committee on Foreign Relations, the Senator from Georgia [Mr. George] on the possibility of holding a big power conference.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAYER IT WOULD HELP

As chairman of the Foreign Relations Committee, Senator Walter George has spoken from an authoritative background and position in advocating that the major powers hold a top-level conference sometime this year. Of course, whether anything will come of the proposal, or whether it will just die aborning, remains to be seen, but the State Department's broad endorsement of the idea strongly suggests that both Secretary Dulles and President Elsenhower are willing to try it out in one form or another.

Mr. George, for his own part, has made clear that he regards such a conference as an undertaking needed to lessen international tension and head off the danger of another general war. Accordingly, he would have France, Britain and the United States meet in talks with the Soviet Union-on a heads-of-government level—as soon as practicable after full ratification of the Paris accords on West Germany. Further, although he seems to share Mr. Dulles' view that Peiping may now be impervious to counsels or restraint from either the Kremlin or any other quarter, he feels that a get-together of this kind could help to promote peace despite the bleak history of similar gatherings in the past. Thus, as he has put it, "I believe we have reached a point where there is real hope of making some final adjustments, of moving toward a more normal world."

Perhaps this is an excessively optimistic view. But if Mr. George-who is not disposed to be a wishful thinker and whose position in the Senate is a highly informed one-has substantial reason to feel that real hope actually exists in the present situation, then his call for a full-dress meeting of the blg powers certainly should receive the most serious attention. True, as he himself has conceded, the record of all postwar negotiations with the Communists serves as a warning that such a meeting would expose the West to a number of pitfalls. However, in his judgment, that is a risk that would be well worth taking because the proposed talks-at which our side would surely alert enough not to fall for the old Red tricks—could be genuinely helpful in de-creasing the threat of war. In any case, it may be assumed that the conference, if the Kremlin agreed to take part, would not be held without thorough advance preparation and some evidence of Soviet willingness to play a constructive role instead of merely propagandizing.

If conditions of this sort can be met satisfactorily, the State Department, as it has just indicated, would welcome favorable action on organizing some kind of meeting with Russia. And that is as it should be For although such a meeting would fall far short of ending all tension, and although it might bog down in futility, it could hardly worsen the present bad situation, and it might even result in agreements sufficiently encouraging to justify the real hope that Mr. GEORGE feels. In any event, the idea deserves careful consideration as one of the possible ways of making today's peace at least a little bit less precarious

than it is.

The Late Senator Burnet R. Maybank

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1955

Mr. RIVERS. Mr. Speaker, on September 1, 1954, I was on an official military inspection trip with my then chairman of the Armed Services Committee. DEWEY SHORT. Our duties carried us to the Headquarters of the United States Army in Europe located in Heidelberg. Germany. On the particular evening of this date we had just finished a dinner given in our honor by the High Commissioner of Germany, the Honorable James B. Conant, when a note was handed to me by the Department of the Army telling me of the untimely death of Senator Burnet R. Maybank. I was shocked and grieved at this tragic news and immediately dispatched my condolences to Mrs. Maybank.

I knew it was impossible for me to return in time for the funeral, accordingly I continued my trip and completed my responsibilities incident to the itin-

erary set by the chairman.

Upon arriving home in late September, I released to the press my feelings on the tragic loss which South Carolina suffered as a result of Senator Maybank's death.

No South Carolinian whom I can recall had more important assignments as a United States Senator than did Maybank at the time of his death. When the Democrats were in power, Maybank was the chairman of the very important Banking and Currency Committee. This committee has jurisdiction in the Senate over almost every phase of our economic life—the banking, the housing, the money market, the securities businessand those things which vitally touch the living mechanism of our breathing economy. Consequently, the working man and the financier alike were affected by the deliberations of this committee.

It was not unnatural that Maybank should head this committee. He distinguished himself early in life at my alma mater, the College of Charleston, as one peculiarly adept in mathematics and economics. He was awarded the mathematics prize at the College of Charles-

ton for excellence.

In the early 30's, Maybank gained national prominence when he solved the financial problems of the city of Charleston during the early days of the greatest depression ever to hit this Nation. For this unusual feat he was called upon to perform important tasks throughout South Carolina during this era when the New Deal was in its infancy. Maybank was loyal to the precepts of the New Deal throughout his political career. He was a liberal in the true sense of the word, but he was a constitutional liberal. However, he never let his enthusiasms for the new order dim or alter his basic philosophy of believing in states rights.

At the time of his death, Maybank was also a member of the important Ap-

propriations Committee of the Senate. He was a member of the Subcommittee on Military Appropriations. He was my greatest help on money for our military, when the Committee on Armed Services authorized projects for the Nation and South Carolina particularly. I recall, vividly, last year it was Maybank alone who assisted me in getting the Navy appropriation raised, thereby assuring the money for the important Navy construction program in South Carolina, notably the Beaufort Air Base.

Mr. Speaker, there has to be teamplay between the House and the Senate. Neither branch can operate effectively without the aid of the other. Each branch is a coequal of the other; unless the House acts, the Senate is helpless; and, conversely, without the Senate's aid

the House is powerless.

Mr. Speaker, despite the great work on the committee on which I hold membership, the obligations and authorizations for construction of the vast military enterprises in my State without the money to carry these on, they would never become realities. In the partnership necessary to effectuate these worthy objectives for our national security, I lost a comrade in Burnet Maybank, whose place it will take many years to fill.

Mr. Speaker, it is not an easy task to serve in the Congress today. The manifold duties and multiplying demands made on Members of Congress in and through all the vast ramifications of this complex and intricate modern day government increasingly draw upon our strength and endurance, adding yearly to the terrific toll of human genius and human life. Anyone who, like Burnet Maybank, survives a political campaign in which his life's history is reviewed in detail and during which he moves constantly and uninterruptedly under the pitiless searchlight of publicity, must of necessity possess some virtue. Maybank remained sweet when accused falsely. He was silent to the tongue of slander. He never once, despite the heat of the campaign, dignified his opponent by answering him according to his kind. He rose to distinction in the Senate because of his personal worth, his mental capacity, untiring industry, and absolute honesty. On such an ascent to the top. the path is steep and rugged. Thorns instead of roses, Maybank endured them all.

Out of this turbulent strife and clash of opinion, out of the heat of debates and conflicting interests, out of the atmosphere of uncertainty which we are all forced to breathe, there come the priceless compensation and the immeasurable joy of mutual confidence and respect, of lasting friendships. In no other body of men do I believe one could possibly find such a fine spirit of generous and wholesome friendships in such a splendid feeling of comradeship.

I suppose this is due to the fact that each of us realizes the baptism of fire which we all daily endure in the performance of our responsibilities in the public interest. When death comes, jealousies are forgotten, individual interests and purposes are buried with the

comrade whom we memorialize today. Beneath it all, personalities and eccentricities are subordinated to unity and interests of mankind.

Maybank died at his post of duty, as he would have it. In the words of the poet he would have said:

Let me live out my years in heat of blood Let me die drunken with the dreamer's wine

Let me not see this soul-house built of mud Go toppling to the dust—a vacant shrine. Let me go quickly like a candlelight

Snuffed out just at the heyday of its glow Give me high noon—let it then be night

Thus would I go.

And grant me, when I face the grisly thing.

One haughty cry to pierce the gap, perhaps

O let me be a tune-swept fiddle string That feels the master melody—and snaps.

He "felt the heat of blood" and went "quickly like a candlelight snuffed out just at the heyday of its glow." At last he has gained rest from his exacting labors and has gone to his reward for having served God and country well.

Mr. Speaker, to Burnet Maybank, in life's relentless journey to the sunset:

But such a tide as moving seemed asleep; Too full for sound and foam

When that which drew from out the boundless deep

Turned again home.

Prizewinners

EXTENSION OF REMARKS

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. TRIMBLE. Mr. Speaker, on the 8th of March we had a group of young people from Arkansas visit Washington on their way to the Columbia Scholastic Press Association meeting at Columbia University, New York City. Included in the group were Patty Bonds, Carolyn Clark, Carole Crockett, Jane Davidson, Jane Donovan, Bettye Fleming, Drew Flora, Richard Forster III, Shirley Gibbs, Margie Giblon, Carol Griffee, Richie Hobbs, Richard Jones, Jr., Mary Elizabeth Lewis, Lucy Ann McAlister, Bob McHenry, Virginia Moellers, James E. Newton, Kay Norman, Syble Owen, Larry Randolph, Vonda Robinson, Ralph Starr, Kathryn Stewart, Chrissy Trusler, Louise Turner, Rose Ann Valenti, Ann Voss, Jerry Voss, Jo Wilbourn, and Mary Youmans. Their sponsor was Miss Hazel Presson. Also accompanying them were Mrs. G. L. Presson and Mrs. Guy Dean.

The Grizzly, newspaper of the Fort Smith (Ark.) High School, won first prize in its class. During the meeting at Columbia University, Miss Carol Griffee, editor of the Grizzly, conducted a student roundtable on Making News Interesting. Drew Flora, who is president of the Arkansas High School Press Association, was chairman of one of the group sessions. Miss Presson spoke at a sectional meeting on Ways To Avoid a Gossip Column.

Carol Griffee and Drew Flora were invited to appear on Dave Garroway's television program. Along with Larry Randolph, they were invited to have lunch in the press bar at the United Nations.

Miss Presson was named a charter member of the National Council of Scholastic Press Associations. This organization is being formed to coordinate the work of scholastic press associations.

Washington was one of the points of interest on the group's trip. It was a pleasure to have them here. They are a credit to all America.

Era of Opportunity in South Carolina

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Era of Opportunity in South Carolina Has Only Begun," written by Charles E. Daniel, formerly a Member of the Senate, and published on March 15 in the State, of Columbia, S. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ERA OF OPPORTUNITY IN SOUTH CAROLINA HAS ONLY BEGUN—STATE IS A SPEARHEAD IN INDUSTRIAL REVOLUTION IN THE SOUTH; MIGRATION OF MANUFACTURERS TO BE GREATER; UNHEARD-OF PROSPERITY IS PREDICTED.

(By Charles E. Daniel)

This country, according to all reports, has just seen its second biggest business year ever. Businessmen, bankers, and Government, working together, rode out a mild adjustment in the economy, recouped and went on to reach new heights of prosperity. The end is not foreseeable and in 1955 this will be topped.

The South was caught in the general upswing—actually we helped to propel it. For we here are riding the crest of an economic and technological tide that can be described only as an industrial revolution, 1954 was a booming banner year for the South.

BRIGHTER 1955 OUTLOOK

The region has been pulled up by its roots. Agriculture, so long the chief means of subsistence, is giving way to industry in many areas and therefore new concrete roots are being planted in the soil. Normal seasonal unemployment and a drop in agricultural income were recorded. Some of this was to be expected. However, the situation was aggravated, as farmers know all too well, by a drought that took its toll of key crops and pastures. However, agriculture has a brighter outlook for 1955. Increased foreign purchases will boost export demand in 1955 and the innumerable new textile plants will reflect greater prosperity for agriculture.

The construction boom offers an insight into the industrial expansion here. Builders have done their share to stimulate it. Public confidence in business has kept construction more than steady; in fact, it is on the increase. In the Southeast, as best we can tell, construction contracts in 1954—industry, residential, industrial, roads—exceeded 1953 by one-sixth. This should continue through 1955.

CONFIDENCE IN GOVERNMENT

Business has confidence and that confidence comes from good government. We have good government now, both in Washington and in South Carolina.

Statistics show that the general increase in business is magnified in the South, which is catching up with some sections in per capita income and leaving many areas behind. The southern people, with larger incomes, now are their own best customers for their own products. Therefore, industries are building more and more plants in the South where they can be close to raw materials, markets, and capable, easily trained, loyal labor.

Looking at textiles, I see more cause for hope and optimism this year than ever before. Like the other phases of our economy, the textile industry, which is the South's most important industry, has experienced a year of adjustment. With the remarkable expansion of textiles in South Carolina to one of the top areas in this industry in the world, we are working hard to keep our newly won position. We outproduce and outsell any other State in this respect.

WOOLEN FIRMS ARRIVE

We became proud hosts last year to a multi-million dollar group of firms in the woolen industry, among the world's biggest and best:

The Wellman Combing Co., recently completed and now operating in Johnsonville.

Santee River Wool Combers, division of Amedee, Prouvost and Sons, Roubaix, France, under construction at Jamestown.

Runnymede Mills, a division of Kent Manufacturing Co., manufacturer of worsted goods, Pickens.

Dixiana Mills, division of Mohawk Carpet Co., Dillon.

Alexander Smith, Inc., carpet manufacturers, Liberty.

The Starr Mills, Starr, S. C., a new synthetic weaving plant.

In addition, there were extensions of consequence to many of our existing plants; all providing many new industrial jobs and additional opportunities for commercial development.

HIGH ECONOMIC HONORS

The list is distinguished and the companies will bring high economic honors to South Carolina—and the South.

The synthetic fiber industry is centered in the South because this region's vast textile industry provides the greatest single outlet for chemicals—about 20 percent of production. Again, last year we welcomed to South Carolina a leader in the field—Owens-Corning Fiberglass Corp., which erected a huge new plant in Anderson. Major additions to the Celanese plant in Rock Hill were finished. The Allied Chemical plants at Hopewell, Va., are now nearing completion.

There are many new industries, greatly diversified in their nature, seeking new sites for their manufacturing operations. I am predicting that the South, especially South Carolina, will get its share of these new plants and that the next 2 years will show a migration of manufacturers to the area greater than any preceding year with an unheard of period of prosperity to the region.

SO FAR THIS YEAR

So far in 1955 the following new industries of consequence have awarded contracts for the construction of multimillion dollar manufacturing plants in South Carolina:

Kendall Co., Bethune, complete finishing plant.

Dewey & Almy Chemical Co.

Division of W. R. Grace Co., Simpsonville plant for the complete manufacture of Cryovac plastic bags used in the processing of poultry, meats, cheese, vegetables, etc.

James Dunn Manufacturing Co., division of Asten-Hill Manufacturing Co., Walterboro, plant for the manufacture of asbestos covering used in the manufacture of paper. Many others are under consideration.

The area of opportunity has only begun.

A Comparison of Armed Forces and Merchant Marine Personnel's Benefits Accrued During World War II

EXTENSION OF REMARKS

HON, CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. ZABLOCKI. Mr. Speaker, in the past, as well as during recent months, I received a number of inquiries about the compensation and benefits accrued to merchant marine personnel and to the personnel of our Armed Forces during World War II.

Information of this kind has not always been readily available in a summarized, convenient form. For that reason, I requested the Legislative Reference Service of the Library of Congress to prepare a memorandum on this subject.

The following study has been prepared by Mr. Julius W. Hobson, of the Economics Division of the Legislative Reference Service. I was very favorably impressed with the results of Mr. Hobson's work, and I wish to commend his report to the attention of my colleagues. Being desirous of sharing this information with the membership of this body, I am inserting the study in the Record. It will undoubtedly prove a valuable reference when pertinent legislation will be considered.

I should like to note at this point that the study does not purport to be all-embracing, because there are many other factors which enter into consideration when one wishes to compare the status and the benefits of merchant-marine personnel with that of our armed-services personnel during the war.

The major factor is, of course, that merchant-marine men were civilians. In general, they were given the opportunity to become members of our Regular Armed Forces. Many of them did not choose to avail themselves of this opportunity. As merchant-marine men. they were not subject to the same degree of strict military discipline which governed all the actions of military personnel. They had more liberal shore-leave rights. They could choose their ships, and sign on a different ship upon the completion of a given voyage. They received higher pay and various bonuses which were not given to members of the Regular Armed Forces.

These and other considerations were pointed out in the course of various hearings held during the past decade before the Committee on Merchant Marine and Fisheries. These factors do not take anything away from the vital service performed by the merchant marine dur-

ing the war. They merely point out that, before comparing the compensation and benefits accrued during the war to merchant-marine personnel and to the Armed Forces personnel, it should be borne in mind that the two did not have the same status, any more than did the defense workers in our factories—who were essential to the war effort—have the same status as the servicemen.

With these reservations, I am pleased to commend the Library of Congress study to the consideration of the mem-

bership of this House:

COMPARATIVE STATEMENTS ON COMPENSATION AND BENEFITS ACCRUED TO MERCHANT MARINE PERSONNEL AND PERSONNEL OF THE UNITED STATES ARMED FORCES DURING WORLD WAR II

(By Julius W. Hobson, Economics Division)
INTRODUCTION

Compensation to the Armed Forces personnel and veterans' benefits are not new either in theory or in practice. Since the early days of organized warfare, governments have made special grants of one kind or another to men and women who have performed honorable military service—not as pay, but in token of their fellow-citizens appreciation.

The people of the United States have been generous in this respect. They have recognized throughout the Nation's history that although military service in the defense of the country is an obligation, it calls forth a return obligation especially when the service

has been rendered in time of war.

The men of the Mechant Marine have also earned the Nation's gratitude. In every war in the history of the country, merchant seamen have paid a heavy price. During World War II this Nation lost 1,554 merchant ships. Of the men who manned these and other ships, some 5,600 were listed as dead or missing, 500 were prisoners of war and an estimated 12,000 were injured at sea or wounded by enemy action.

Merchant marine personnel were paid on a civilian wage scale during World War II, while Armed Forces personnel received a much lower rate of pay for military service. However, benefits to veterans exceeded by far those extended to merchant seamen.

It is in the light of the comparable service rendered the country during World War II by the Armed Forces and the merchant marine that the controversy exists regarding the differences in compensations and benefits accrued that service.

The following is a comparison of these compensations and benefits:

PART I. MERCHANT MARINE PERSONNEL

1. Pensions to merchant personnel: No provision has been made by the Federal Government for the payment of pension benefits to merchant seamen with the exception of those men who suffered permanent total or permanent partial disability as the result of the risks of war or certain marine catastrophes involving their vessels. After exhaustion of the insurance benefits, which will be explained later, no provision existed for further payment, and in order to prevent these permanently disabled seamen from becoming public charges, the Congress enacted Public Law 449, 78th Congress, which amended Public Law 17, 78th Congress. The applicable provision of the former statute read as follows:

"The Administrator, War Shipping Administration, is also authorized to make payments, in accordance with rate schedules provided by the United States Employees' Compensation Act, to a master, officer, or member of the crew of, or any persons transported on, a vessel owned by or chartered to the Maritime Commission or the War Shipping Administration or operated by, or

for the account of, or at the direction or under the control of the Commission or the Administration, for permanent total or partial disability as long as such disability resulting from causes related to the war effort whether heretofore or hereafter arising exists; such payments to commence if and when insurance benefits provided by the War Shipping Administration for such person shall have been exhausted."

Between the dates of October 1, 1941, and March 24, 1943, seamen employed on vessels owned by or under bareboat charter to the War Shipping Administration and/or United States Maritime Commission were eligible for benefits under the Federal Employees' Compensation Act of 1916, as amended, on account of injury or illness incurred in line of duty, and in the event of death due thereto, their dependents were entitled to benefits under that statute. Public Law 17, Congress, which was approved on March 24, 1943, took these benefits away from the seaman and his dependents, and since that time no pension benefits have been payable to such dependents. The pertinent portion of this statute follows:

"That (a) officers and members of crews (hereinafter referred to as 'seamen') employed on United States or foreign-flag vessels as employees of the United States through the War Shipping Administration shall, with respect to (1) laws administered by the Public Health Service and the Social Security Act, as amended by subsection (b) (2) and (3) of this section; (2) death, injuries, illness, maintenance and cure, loss of effects, detention, or repatriation, or claims arising therefrom not covered by the foregoing clause (1); and (3) collection of wages and bonuses and making of allotments, have all of the rights, benefits, exemptions, privileges, and liabilities, under law applicable to citizens of the United States employed as scamen on privately owned and operated American vessels. Such seamen, because of the temporary wartime character of their employment by the War Shipping Administration, shall not be considered as officers or employees of the United States for the purposes of the United States Employees Compensation Act, as amended; the Civil Service Retirement Act, as amended; the act of Congress approved March 7, 1942 (Public Law 490, 77th Cong.); or the act entitled 'An act to provide benefits for the injury, disability, death, or detention of employees of contractors with the United States and certain other persons or reimbursement therefor,' approved December 2, 1942 (Public Law 784, 77th Cong.). Claims arising under clause (1) hereof shall be enforced in the same manner as such claims would be enforced if the seaman were employed on a privately owned and operated American vessel. Any claim referred to in clause (2) or (3) hereof shall, if administratively disallowed in whole or in part, be enforced pursuant to the provisions of the Suits in Admiralty Act, notwithstanding the vessel on which the seaman is employed is not a merchant vessel within the meaning of such act. Any claim, right, or cause of action of or in respect of any such seaman accruing on or after October 1, 1941, and prior to the date of enactment of this section may be enforced and upon the election of the seaman or his surviving dependent or beneficiary or his legal representative to do so shall be governed, as if this section had been in effect when such claim, right, or cause of action accrued, such election to be made in accordance with rules and regulations prescribed by the Administrator, War Shipping Administration."

War risk insurance was provided for merchant seamen and this matter will be covered under that caption. In addition to that insurance, seamen and their dependents have the right to bring suit for damages under the Jones Act (title 46, U. S. C., Ecc. 698).

However, unless the negligence of the vessel can be established, no liability exists and accordingly no recovery can be had.

Education benefits: No provision has been made by the Federal Government for the granting of education benefits to former merchant seamen.

3. Any comparable housing benefits: No provision has been made by the Federal Government for housing benefits for merchant seamen.

4. Insurance benefits: In December 1941 meetings were held in Washington between representatives of the maritime industry, labor organizations, and the War Shipping Administration, and as a result of such meetings the President established the Maritime War Emergency Board. This Board promulgated the insurance coverage and forms of policy hereinafter described.

As a result of decisions of the Maritime War Emergency Board, and effective as of December 7, 1941, all seamen employed on vessels operated by or for account of the War Shipping Administration and/or United States Maritime Commission were protected in accordance with the provisions of the crew life and injury policy against the risks of war involving their vessels by insurance in the amount of \$5,000. This insurance, which was furnished without cost to the seaman, covered loss of life, injury, and disability. The amounts payable for injury and disability are as follows:

"Schedule 2

"Injury: The assurer will pay, in case of loss, an amount to be determined by applying the percentage shown below to the principal sum for which the master, officer, or member of the crew is covered for loss of life under schedule 1.

DOMOGRACIO A.	
Perc	ent
"Life	100
Both hands	100
Both arms	100
Both feet	100
Both legs	100
Both eyes	100
Hand	50
Arm	65
Foot	
Leg	
Eye	45
Total destruction of hearing	50

"The indemnities referred to above are payable, provided loss results directly and exclusively from bodily injuries, within 80 days from the date of accident. Loss shall mean, with regard to hands and feet, arms, and legs dismemberment by severance at or above wrist or ankle, knee, or elbow joints, or the complete and irrecoverable loss of function, with regard to eyes, complete and irrecoverable loss of sight. With regard to hearing, total and irrecoverable loss of hearing in both ears.

"Schedule 3

"Disability: For accidental bodily injury not described in schedule 2 which, within 90 days from date of accident from a cause hereinbefore set forth, results in total disability and which necessarily and continuously prevents the person injured from performing any and every kind of duty pertaining to such person's occupation, the assurer will pay compensation in monthly installments at the rate of 2 percent of the principal sum, beginning with the date of return to a port within the continental United States, during such time thereafter as the total disability persists or until such time as the total of compensation, so paid, shall amount to the principal sum provided for the injured person in schedule 1. This insurance, however, does not cover illness or disease of any kind (except pyogenic infections which shall occur through an accidental cut or wound), nor any disability due to or arising from mental and/or nervous disorders. Nothing herein shall be construed to cover

claims by any member of the vessel's personnel arising from his own willful misconduct.

"This policy is made and accepted subject to the foregoing stipulations and conditions and to the printed conditions on the following pages, which are hereby specially referred to and made a part of this policy, it being understood and agreed in the case of any conflict or inconsistency the foregoing shall prevail over those which follow.

"In witness whereof the War Shipping Administration has caused this policy to be signed by the Administrator, but it shall not be valid unless countersigned by or on behalf of the Director of Wartime Insurance.'

Since this policy was limited to loss of life, injury, and disability, it was necessary to issue additional policies covering other obligations to the seamen, such as loss of personal effects, wages, and bonuses, after casualty and until repatriation to the United States, and the furnishing of emergency clothing, medical and hospital expenses, housing and subsistence, and other incidental expenses incurred while awaiting repatriation. To provide the means of covering these obligations, the crew effects policy. wages, and bonus war risk policy, and the war risk protection and indemnity policy were issued.

It was found desirable to make certain changes in the insurance protection, and the above-mentioned policies were superseded by the second seamen's war risk policy, effective as of March 15, 1943, which was a part of decision 1A of the Maritime War

Emergency Board.

This policy as originally written was limited to war risks, and effective as of April 24, 1943, it was amended to cover certain marine catastrophes; also to include any waterborne conveyance used to transport the seaman to and from the vessel on which he was employed, and any airborne conveyance used to transport him pursuant to instruc-tions or permission of the War Shipping Administration or its agents.

The second seamen's war risk policy also included coverage of personal effects and the wages and bonuses due after the casualty.

One of the more important changes in this policy, as compared with the crew life and injury policy, was the provision in article 12 allowing an additional \$2,500 in monthly payments in those cases where a seaman was disabled through an insured risk to the extent that he was incapable of performing, for remuneration or profit, any work or engaging in any business or occupation.1

During the period April 1943 to December 31, 1946, additional insurance covering loss of life only due to the risks and perils described in the second seamen's war risk pollcy, as amended, could be purchased for a nominal premium by the seamen protected by that policy. This additional insurance could be purchased in units of \$1,000 up to \$15,000.

At the present time, the collective bargaining agreements under which American-flag vessels are manned require that the crews of such vessels shall be protected by insurance in the form of the second seamen's war risk policy, as amended. While the face value of the policy is \$5,000 the amount payable for loss of life and loss of personal effects in certain areas can be increased through collective bargaining.

5. Medical benefits: The following classes of seamen are entitled to the benefits and facilities of the United States Public Health Service without charge, provided they have had 60 days' employment abroad ship and apply for such benefits within 90 days after leaving their last vessel:

(a) Scamen employed on United States registered, enrolled, and licensed vessels, other than canal boats engaged in coasting

(b) Seamen on State school ships or on vessels of the United States Government of more than 5 tons' burden.

(c) Cadets at State maritime academies or on State training ships.

(d) Seamen on vessels of the Mississippi River Commission, and upon application of their commanding officers, officers and crews of vessels of the Fish and Wildlife Service.

(e) Enrollees in the United States Maritime Service on active duty and members of the Merchant Marine Cadet Corps.

The seamen who were disabled during World War II are, therefore, precluded from the benefits of the Public Health Service. However, the Public Health Service will admit to their facilities, on a reimbursable basis, those seamen who are receiving disability benefits under the Maritime Administration's war-risk insurance program and Public Law 449, 78th Congress, upon presentation by them of a letter from this Division asking for the seamen's hospitalization and medical treatment and stating that the Maritime Administration will pay for such service. Other seamen who may have suffered an injury or disability during wartime employment but which is not compensable under the Maritime Administration's war-risk insurance program must bear their own medical expenses at private institutions.

Dependents of merchant seamen are not entitled to the benefits of the Public Health Service.

There are no institutions operated by the Federal Government to provide domiciliary care for disabled and aged merchant seamen.

 Compensation during World War II:
 There were many factors determining the amount of compensation to merchant seamen during World War II. The following table is representative of the average monthly earnings of a crew of a commercially operated Liberty cargo vessel, Southwest Pacific area. These figures are also very close to the amounts received by merchant personnel serving in the Atlantic area.

Average monthly carnings of crew of commercially operated Liberty cargo vessel, southwest Pacific area (rounded to nearest dollar)

Source: U. S. Congress. House. Hearings before the Committee on the Merchant Marine and Fisheries. U. S. House of Representatives, 79th Cong., 1st sess. Benefits to Merchant Seamen, Oct. 18-19, 1945, p. 262.

PART II, UNITED STATES ARMED FORCES PERSONNEL

The following is a brief comparable outline of the major benefits and compensations administered by the Veterans' Administra-tion for World War II veterans, their dependents and beneficiaries in the United States, its possessions and Territories, and in foreign countries.

1. Pension to United States Armed Forces personnel

(a) Pension for service-connected disability—World War II veterans.

Basis of eligibility: Disability must result from disease or injury incurred in or aggravated by active military or naval service in line of duty, and discharge must be under other than dishonorable conditions. Nature of benefit: Rates range, according

to degree of disability from \$17 for 10-per-cent disability to \$181 per month for total disability. Additional amounts payable for specific conditions, such as \$47 for the loss of foot, hand, eye or creative organ. Minimum rate for arrested tuberculosis \$67 per month. Helplessness, blindness, multiple amputations, etc., carry rates from \$279 to \$420 per month. Additional amounts payable to veterans 50 percent or more disabled for wife, children, or dependent parents. Peacetime: All rates are 80 percent of the wartime rates for the same conditions.

(b) Pensions for non-service-connected disability-World War II veterans.

Basis of eligibility: Veteran must be permanently and totally disabled, credited with 90 days or more service, unless discharged sooner for line of duty disability, and discharge must be under other than dishonorable conditions.

Nature of benefit: The rate is \$66.15 per month, increased \$78.75 on attainment of 65 years, or after continuous receipt for 10 years; regular aid and attendance, \$135.45. Annual income over \$1,400 is bar if veteran has no wife or minor children, otherwise \$2,700 limitation.

2. Education benefits

(a) Education and training-World War II veterans (Public Law 348, 78th Cong., as amended).

Footnote at end of speech.

Basis of eligibility: Ninety days' active service, some part of which must have taken place between September 16, 1940, and July 25, 1947. Less than 90 days if discharged for actual service-incurred disability. Discharge must be under conditions other than dishonorable. (The right to initiate a course of education or training under Public Law 346 lapsed for most persons on July 25, 1951.) Persons discharged from World War II service until 4 years after such discharge to commence a course. No training may be afforded beyond July 25, 1956.

Nature of benefit: One year of education or training plus the time the veteran was in the service between September 16, 1940, and July 25, 1947, up to 4 years maximum. All expenses of tuition, books, etc., paid at rate of \$500 per year. Monthly subsistence allowances of \$65 for the veteran without dependents or \$90 for the veteran with dependents. For full-time institutional training-\$75 if no dependents; \$105 for 1 dependent, and \$120 for more than 1 dependent. Lesser amounts for part-time training. Limitation on wages and subsistence under which the combined amounts cannot exceed \$210 for the veteran without dependents, \$270 for the veteran with 1 dependent, and \$290 for the veteran with 2 or more dependents. In event these amounts are exceeded, a proportionate decrease in subsistence is

3. Housing benefits

a. Preference in housing purchase or rental—F. H. A.

Basis of Eligibility: (1) Public Low Rent Housing: Service in World War I or World War II or on or after June 27, 1950, and prior to date determined by President, with discharge or release under conditions other than dishonorable. (2) War and Veterans Housing (Lanham Act): Service in World War II or on or after June 27, 1950, and prior to date determined by President. (3) FHA-Alded Cooperative Housing: Service in World War II or on or after June 27, 1950, and prior to date determined by President.

Nature of Benefit: (1) Preference in occupancy of public low rent housing projects to families of veterans. (2) Preference in rental of certain housing transferred to non-Federal agencies and of rental or purchase of certain temporary housing available for long-term use. (3) Special mortgage insurance benefits for cooperatives having 65 percent veteran membership.

b. Special Housing-Veterans Administra-

Basis of Eligibility: Service-connected disability due to war or peacetime service entitling veteran to compensation for permanent and total disability due to loss, or loss of use, by reason of amputation, ankylosis, progressive muscular dystrophies, or paralysis, of both lower extremities, such as to preclude locomotion without the aid of braces, crutches, canes, or a wheelchair.

Nature of benefit: Grant up to 50 percent of a suitably equipped housing unit and necessary land therefor. Grant may not exceed \$10,000.

c. Loans guaranteed, insured, or made by Veterans' Administration.

Basis of eligibility: (1) World War II: 90 days' active service, some part of which must have taken place between September 16, 1940, and July 25, 1947. Less than 90 days if discharged for service-incurred disability. Guaranty available on loans made by July 25, 1957. Unremarried widow of eligible veteran who died of service-connected causes also eligible.

Nature of benefit: VA guarantees payment of loan made to eligible borrower by lender of own choice. Loans guaranteed if made for purchase or construction of homes, farms, or business property or farm or business equipment. VA will guarantee 60 percent of residential property loan (maximum guaranty \$7,500); or 50 percent of other

real-estate loans (maximum guaranty \$4,000); or 50 percent of non-real-estate loans (maximum guaranty \$2,000). Direct home or farmhouse loans not exceeding \$10,000 by VA authorized until July 1, 1955, under certain conditions in areas where private capital unavailable.

4. Insurance benefits

a. National service life insurance.

Basis of eligibility: Insurance was granted to persons in active service after October 7. 1940, and prior to April 25, 1951. Also, prior to April 25, 1951, insurance was available to a person after separation from service if he had active service between October 8, 1940, and September 2, 1945, both dates inclusive. Lapsed insurance may be reinstated at any time upon payment of required premiums and submission of evidence of insurability. A term policy in force at the expiration of the term is automatically renewed for a successive 5-year period at the premium rate for the attained age. No new insurance issued after April 25, 1951, except to (1) persons who are thereafter released from active service, have a service-connected disability, do not have a non-service-connected disability that would render them uninsurable, and who apply within 1 year from VA finding of service connection; (2) persons ordered into active service for 31 days or more with service since June 27, 1950, who apply within 120 days after separation from such service; (3) persons who surrendered permanent plans of NSLI or USGLI while in active service after April 25, 1951, and who may reinstate or secure new insurance, under certain limitations, upon application within 120 days after separation from such service; and (4) persons whose NSLI or USGLI term policies expire while they are in active service after April 25, 1951, and who may apply within 120 days after separation from active service for term insurance in the same amount at a premium rate for the then attained age. Insurance under (1) and (2) is nonparticipating and involves new premium and annuity tables; insurance under (2) is renewable 5-year level premium term insurance.

Nature of benefit: Death benefits payable in 1 sum (policies maturing on or after August 1, 1946), or under monthly installment plans, as selected. Waiver of premiums during continuous total disability (commencing before insured's sixtieth birthday) which continues 6 or more consecutive months. For an additional premium, total disability income of \$5 per month per \$1,000 of insurance under certain conditions (not applicable to insurance referred to under (1) and (2) of "Basis of Eligibility" column).

5. Medical benefits

a. Types of medical benefits.

Hospitalization: World War II veterans, if discharged or separated under conditions other than dishonorable may be entitled to VA hospitalization under the following priority system:

First. Those needing hospitalization because of injuries or diseases incurred or aggravated in line of duty.

Second. Those with nonservice-connected disabilities who state under oath that they are financially unable to pay hospital charges elsewhere. These veterans must wait until a bed becomes available.

For purposes of hospitalization, World War II veterans who develop an active psychosis (mental illness) within 2 years from the date of their separation from active service are deemed to have incurred the disability in active service and fall under the first priority group above.

Patients requiring emergency medical treatment may be taken directly to the nearest VA hospital but, if possible, the veteran, or someone acting for the veteran, should communicate with VA by telephone or telegraph beforehand.

In all other cases, the veteran, his nearest relative or his guardian or representative should fill in the proper form for hospital care. These forms are available at any VA office.

If admission to a hospital has been approved for treatment of a service-connected disability, Government transportation may be provided to the hospital and, upon completion of treatment, to his or her home. This service may be provided for treatment of a nonservice-connected disability if applicants state under oath they are financially unable to pay for the transportation.

Domiciliary care: Domiciliary care is designed to provide a "home" for those veterans who have disabilities which incapacitate them from earning a living and who require minimal attention.

Eligibility requirements for admission to a home are essentially the same as for hospital treatment. Transportation at Government expense, as a rule, is provided only for the initial admission.

The veteran or his nearest relative, guardian or representative should obtain pre-admission approval from the nearest VA installation having facilities for domiciliary

Outpatient medical treatment: Outpatient medical care is available for veterans in need of treatment for service-connected disabilities.

Under this benefit, eligible veterans may receive treatment at VA outpatient clinics or from authorized private physicians. Each veteran's eligibility must be determined by VA before treatment of this type can be authorized.

Necessary drugs prescribed by the physician authorized to give outpatient treatment to the veteran may be obtained from "home town" druggists at Government expense.

Outpatient dental treatment: Outpatient dental care for veterans may be authorized by VA for three types of cases providing the application for dental treatment is filed within 1 year subsequent to enactment of Public Law 149, 83d Congress, approved July 27, 1953.

The three types of cases are:

- 1. Those having service-connected compensable dental conditions or disabilities.
- Those having service-connected noncompensable dental conditions or disabilities where the dental condition or disability is shown to have existed at time of discharge; and,
- Those having a dental condition whether or not service-connected by medically determined to be aggravating a service-connected physical disability or injury.

The authorization for treatment may be rendered either by a fee basis "home town" participating dentist or in a VA dental clinic.

Outpatient treatment for presumed service-connected disabilities. Several laws provide for outpatient treatment of certain disabilities that are deemed or may be presumed to be service-connected if they existed within a specified time after the veterans' discharge or separation from World War II service. These veterans must have been discharged or separated from such service under conditions other than dishonorable.

For active psychosis, the disability is deemed to be service connected if it existed within 2 years of the veteran's discharge.

For active tuberculosis, the disability may be presumed to be service connected within 3 years of the veteran's discharge, providing he had 90 days of active service.

For multiple sclerosis, the disability may be presumed to be service connected within 2 years of the veteran's discharge, providing he had 90 days of service.

For all other disabilities resulting from chronic diseases, the disabilities may be presumed to be service connected within 1 year from the veteran's discharge or separation.

Those retired from the Armed Forces for disability and receiving disability-retirement pay from the Armed Forces must first elect to take compensation from VA before they become entitled to outpatient treatment.

Prosthetic service: A veteran's eligibility for prosthetic appliances may be established if (1) he has a service-connected or service-aggravated disability requiring an appliance, or (2) if an appliance is determined necessary as a part of hospital treatment or domiciliary care.

Complete information and necessary forms for procuring needed appliances, equipment and repairs are available at any VA office.

Examination: Freed medical examination, if required, will be given to veterans filing claims for compensation or pension.

Veterans needing a physical examination for Government life insurance purposes may receive a physical examination free of charge at any VA medical office.

Free medical examinations also are given at any VA clinic or hospital to veterans filing application for hospital treatment or domicillary care.

6. Compensation of Armed Forces personnel during World War II

Since we dealt with the seagoing merchant marine personnel in the pay schedule of merchant seamen above, a comparable pay schedule for the same type of vessel operated by United States Navy personnel is presented below. This pay schedule can also be compared with the United States Army and United States Marine pay schedules. Personnel of the same rank in the armed services during World War II received approximately the same base pay as Navy personnel,

Monthly pay and average allotment of complement of Navy-operated Liberty cargo vessel

³ Art. 12. Disability and dismemberment: A. Disability: "Disability" as that term is used in this policy means incapacity because of injury proximately caused by the risks insured against herein which necessarily and continuously prevents the insured from performing any and every kind of duty pertaining to his occupation at the time of injury.

In the event the insured elects after such determination to accept payments for such disability under subdivision (2) (a) hereof and if when the total of \$5,000 has been paid him as therein provided, the insured claims in writing, and establishes to the satisfaction of the Administrator, that because of the same injury he is incapable of performing, for remuneration or profit, any work or engaging in any business or occupation, then he shall be paid further benefits at the rate of \$100 a month until the Administrator determines such incapacity has ceased or until a total of \$2,500 is paid, whichever first occurs.

Economic Conditions

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excerpt from a broadcast by Mr. Edward R. Murrow, over the CBS radio network on March 15, 1955, dealing with the President's report on economic conditions and the report of the Joint Committee on the Economic Report.

There being no objection, the excerpt from the broadcast was ordered to be printed in the RECORD, as follows:

EDWARD R. MURROW WITH THE NEWS-CBS RADIO NETWORK, TUESDAY, MARCH 15, 1955

One of the standard procedures of government in this country is for the President each year to make a report to Congress on economic conditions. Then subsequently a joint congressional committee makes a report on this report. The unanimous report of such a joint committee of 14 was published yesterday. Because it was about economics, and not particularly dramatic reading, it did not attract a lot of attention, but it deserves more than it got.

For one thing, it included a bipartisan diagnosis of the Nation's economic health, which in days when stock-market prices have been taking a beating, is timely. All 14 Con-

gressmen agreed that we had a recession last year. They called it that, but they agreed that conditions have improved since late 1954. They found that employment and production has regained about half the ground lost, and unemployment had gone down about one-third. The present recovery, they stated, is sparked by automobile and steel production, home building, and inventory reversal. But they called the advance uneven and stated that certain regions continue to be in very serious economic strains. That is frank language. So is the description of farm income. The 14 agree that the decline in it is expected to continue, though more slowly.

Whether this situation justified the boom in the stock market late last year, or justifies the recent slump in prices, is not for this reporter to say. But the joint committee, after noting that we have not recovered all the lost ground, agreed that more must be done than recover lost ground. "Because of our growing population and technological development, it is not enough," the report said, "just to maintain present levels of employment and production." The 7 Democrats on the committee issued a separate statement in which they criticized the President's report for creating a more highly favorable impression of conditions than facts justify. They also cautioned that the major fields—automobile and home construction—on which the President based confident expectations, may not be sustained during the year. But they emphasized that they were not forecasting a depression or recession.

This separate democratic comment also played up differences over tax and farm policies with the Republicans. And that seems to give the report a formal partisan look. At first glance, this is politics as usual. But it is not. In foreign policy we have something like bipartisanship, and its achievement has been one of the milestones in the history of Congress.

Here is something that goes far toward being bipartisanship in economic principles. There are disagreements, but they are chiefly over details, like methods and timing. Anyone with a recollection of the bitter cleavage between New Dealers and anti-New Dealers in the early Roosevelt days, or remembering the story of the McKinley and Wilson eras, will know that basic economic differences provided the driving power of party rivalry, as, indeed, they have throughout much of our history.

But now the two parties agree that the Nation is growing, and that if it is to be healthy has to go on expanding, and they agree on what in the past had divided them most bitterly, on the desirability of a publicworks program, not one to stave off disaster, but to assure expansion. They want a public-works program already in existence, that can be accelerated when private employment requires. They say that the needs of the Nation have not been met because of war restrictions, and there should be construction now of schools, highways, hospitals, and other community facilities, including slum clearance and public housing. And these, the report says, should go forward more rapidly during the years ahead. In addition, the committee notes that distressed conditions persist in certain industries and regions, even while the economy is expanding, and that much can be done to assist these communities through public works, and that this action is required now.

The report does express the failure to agree about tax adjustments at this time. But it is unanimous on basic tax policy. The object, it says, should be to balance at least the cash budget at maximum employment and production levels. It recommends postponement in the reduction of corporate and excise tax rates. And as to the distribution of the tax burden, it says that "we should continuously strive to improve the distribution

of the tax burden in the interest of economic stability and rising living standards." In other words, the differences over the present tax adjustments are only as to when and how.

Of course it is no discovery of today that many Republicans and Democrats think alike on basic economic questions. This is so, despite the vocal high-tariff enthusiasts, the advocates of balancing the budget at any cost, and those for whom all public spending is anathema. But I suggest that there are about as many such individualists in the realm of foreign policy too. Bipartisanship does not mean unanimity. But with bipartisanship in both foreign and economic policy, the biggest guns of party rivalry are stilenced. No doubt it is a good thing, but will make a big difference to party politics.

Cry of Freedom

SPEECH

HON, J. VAUGHAN GARY

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. GARY. Mr. Speaker, fourscore and 100 years ago today a great Virginian stood in a pew in a small church in my native city of Richmond, Va., and made a speech which will never be forgotten as long as freedom is secure in the world. In St. John's Church, which still stands, Patrick Henry proclaimed:

I know not what course others may take; but as for me, give me liberty or give me death.

That proclamation became the foreword of our early Republic and is today an accepted tenet of our political faith.

The premier performance of the play Cry of Freedom, based on the remarkable career of this great American, will be given next Monday evening at the Lisner Auditorium, here in Washington, under the sponsorship of the District of Columbia Department of the American Legion.

Today, in commemoration of the 180th anniversary of Patrick Henry's famous speech, Mr. Benjamin E. Hinden, coauthor of the play, will deliver an address over radio station WOL.

I take pleasure in inserting Mr. Hinden's speech at this point in the Record:

CRY OF FREEDOM

For many years millions of patriotic Americans have been greatly disturbed about the international Communist threat to freedom and the future of our country. Robert Clark and I decided that something must be done to counteract the poisonous lies being spread by brutal dictatorship and godless tyranny. We are convinced that we have undertaken a project which will prove highly beneficial to all who share America's cause in the battle for the minds of men, a battle we are forced to fight.

As writers, we turned to authentic sources for research and information about these United States—the history book, the National Archives, and the Library of Congress. We searched for an answer to this question: What started our country on the road to freedom? As we progressed, we confided to each other a slight feeling of shame at reaching this stage of our lives, living here in our Nation's Capital, among the very symbols of America's struggle for freedom, and understanding so little of the dramatic story behind these United States.

We soon became conscious that our Founding Fathers furnished a light to guide us. That light was sparked through the efforts of a man determined to be free—a man who inspired his countrymen to rise above subjugation, to assure Americans, then and now, the God-given rights of freeborn people. How many people realize that it was the pioneering work of this man, almost alone, who started the movement for freedom that brought about these United States? That man was Patrick Henry, of Virginia.

Patrick Henry had to battle his own friends in the House of Burgesses, against his contemporaries whom he admired and respected. They agreed the tyrannical rule of King George III must cease, but they disagreed violently in debate as to what course to pursue. During his first term in the Virginia House of Burgesses, Patrick Henry astounded the colonial leaders of his day with resolutions to the King, demanding termination of the infringements of the rights of freeborn British subjects in the Virginia colony. For 10 long years he led his fight calling for action against ever-increasing violations by the British of their own constitution, designed to protect the libertles of British subjects. His popularity spread like wild-fire, not only through the colony of Virginia, but throughout the other 12 colonies as well. He was their champion, their spokesman for what was just and right, a man of action, a true leader.

We set out to tell this story in a way that would be most noticed, because this is a story of supreme importance to all Americans, and to all freedom-loving people. All who are truly interested in the fundamental principles of our Government and its dramatic origin, sooner or later, visit the Nation's Capital. The play, therefore, will be staged in Washington, D. C., not only because it ties in directly with the historic sites of this area, but because it also vividly demonstrates the reasons behind the marble and bronze statues that mark the landscape of the Nation's Capital.

For more than 2 years we continued our effort—research, writing, more research, more writing, inserting, cutting the script. We knew we had to have the best play possible for the American public. If it were less than the best, we would be letting down the public, as well as the very people whose lives we were endeavoring to portray in dramatic fashion. At last we had the script. It was warm and human; it was strong with the fierce conflict of debate, enriched with humor—with the tenderest love story ever told. And Patrick Henry is given his due credit at long last.

This play Cry of Freedom will move audiences. Its strong emotional appeal, its deep conflicts, and, most of all, its patriotic inspiration for each of us today will be long remembered.

The script was finished and we searched for a competent director. Many applicants were considered. The best was selected—a man who has directed outstanding stage plays, as well as acted in them, and who realized the challenge presented by the dynamic theme of Cry of Freedom. He is John X. Ward, creator of the role of Patrick Henry in the production presented in Washington a Iew years ago-Faith of Our Fathers. have an excellent cast of actors and actresses with professional experience, including such Players as James Ward and Theodore Zarpas, Who are TV directors; Edgar Ford, radio and television; and Mary Ford, performer on the Olney Theater stage; and an excellent choir under the direction of Eleanor Starr. Miss Starr has written an original composition called The Ballad of Patrick Henry, especially for this production, and previews of the song indicate that it may catch on as the Ballad of Davy Crockett has captured the American public.

The opening night performance is sponsored by the District of Columbia Department of the American Legion who will receive the entire net proceeds of this performance. Our cast, the director, the stage manager, the authors, the sponsors, are all confident that we are working on a project of importance as a means of entertainment and that it is a device for carrying the patriotic message.

Cry of Freedom was the cry of Patrick Henry and the colonists against tyranny. It will be shown at Lisner Auditorium, opening on Monday, March 28. This patriotic theme based upon the American precedent becomes more and more important and timely. The Communist conspiracy with which we are now forced to grapple desires to humble us in a cold war. This play will fortify the minds that are politically immature to clearly understand the true meaning of our heritage and inspire greater devotion to the fundamental principles of our Government.

The Fallacy of Rigid Agricultural Supports

EXTENSION OF REMARKS

HON, PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. DAGUE. Mr. Speaker, it occurs to me that as we prepare to again explore the fallacy of 90-percent parity as a gadget for maintaining the income of our farmers we should never lose sight of the documented fact that farm prices have fallen some 22 points, while rigid supports were in full force and effect. I want to promote high farm income and agricultural stability, but I shall never accept a program that hides behind high prices engendered by war as a justification for its continuance.

I cannot help but note with some amusement the proposed nuptials between the 90-percent supporters in the farm group and the \$1.25 minimum-wage proponents in the ranks of labor. When Mr. Walter Reuther was before the House Committee on Agriculture he received what amounted to a standing ovation from those who favor the Cooley bill, H. R. 12, and I could only conjecture as to what his reception has been and will continue to be when he invades the districts of those applauding Congressmen for the purpose of organizing his labor groups.

The unnatural alliance between organized labor and the farm organizations supporting H. R. 12 is explored in the news item which appeared in the issue of the Philadelphia Inquirer for March 20, and is included in these remarks as a prognostication of what we may expect in the House when the pending bill is brought up for legislative action:

CITY DEMOCRATS SEEN KEY TO PROP PRICE

(By Paul J. McGahan)

Washington, March 19.—"Will they stand hitched?" That is the \$64 question to be answered by the House late next week when it is expected to vote on the Democratic farm

bloc move to repeal flexible price-support farm legislation.

The Eisenhower-Benson forces won a substantial victory last year in the change from rigid price supports for five basic agricultural commodities to a flexible basis which becomes effective this year.

Secretary of Agriculture Ezra T. Benson, fully backed by President Eisenhower, waged a vigorous fight to put the flexible price-support plan through the House last year by a vote of 228 to 170, a margin of 58.

This year, the Democratic majority of the House Agriculture Committee headed by Representative Harold D. Cooley, Democrat, of North Carolina, with the outspoken support of Speaker Sam Rayburn, Democrat, of Texas, is out to jam the repealer proposal through the House next Wednesday and Thursday. They assert they will win by 40 votes.

Encouraged by seeming support from both Republicans and Democrats which would assure another split vote, some of the leaders assert that the Senate, where action on farm legislation has not been expected until the next session of Congress next year, will take up and pass the repealer before adjourning.

Both sides admit that city Democrats who voted with the administration last year, may desert next week under the pressure of the Democratic leadership.

That is why the question "will they stand hitched?" holds such current interest.

Organized labor has swung into the new picture with unusual vigor. The heads of the two major organizations, Walter P. Reuther, president of the CIO, and George Meany, the AFL president, both gave testimony favoring a return to fixed price supports at 90 percent of parity.

Reuther charged the administration with an unprecedented effort to divide the city

worker and the farmers.

Leaders on both sides in Congress have become aware that organized labor leaders are actively seeking to change the votes this week, particularly those of the city Democrats who joined with Eisenhower-Benson forces last year.

Labor leaders want to get the Nation's farmers more actively identified with their organizational activities. But more especially they want to gain the support of farm bloc legislators for the increased minimum hourly wage of \$1.25. Labor also is concerned about falling employment in industries dependent on the farmer's buying power.

The National Farmers Union recently declared: "Less support for 90 percent is probable from the Republicans this year than last, when only 23 voted against the sliding scale. The outcome apparently will depend on the city Democrats.

"Last year over half of the city Democrats backed 90 percent, with 34 against. About 35 to 40 city Democratic votes for 90 percent are needed from the 34 who voted against it last year and 25 others who are new to Congress or were absent during the 1954 vote.

"Both AFL and CIO are buttonholing city Congressmen to urge votes for 90 percent of parity supports."

Delaware Valley, U. S. A., Congressmen, and others in Pennsylvania, New Jersey, and Delaware are under heavy pressure. Last year the Republican Members from the three States supported the flexible program. They totaled 19 in Pennsylvania, 8 in New Jersey, and 1 in Delaware. Five Pennsylvania Democrats voted against flexible price supports.

Last year six Pennsylvania Democrats supported the Eisenhower-Benson program. These were Representatives Barrett, Byrne, Granahan, and Green, of Philadelphia, Rhodes, of Reading, and Walter, of Easton. In New Jersey, of the 6 Democrats, 5 voted with the Republicans, excepting Hart, who

was paired and is no longer in Congress. The other five were Representatives Addonizio, Howell, who is no longer in Congress, Rodino, Sieminski, and Williams, Jr.

Philadelphia has five Democratic Members of the House. Representative Chunorf last year voted against the administration measure, which had the support of his four Democratic colleagues.

These four, together with Representatives RHODES and WALTER, are obvious targets for the farm bloc-labor drive for the return to

rigid price supports.

The position of Representatives Thompson, Democrat, of New Jersey, and Tumulty, Democrat, of New Jersey, new Members this year, is not known. Last year the Congressman-at-large from Delaware was a Republican who supported the administration. This Congress has Delaware represented by Harris B. McDowell, Jr., a Democrat.

Three Pennsylvania Republicans who voted last year are no longer in Congress. They were Representatives Graham, Bonin, and Stauffer. Their successors, all Democrats, Representatives CLARK, FLOOD, and QUIGLEY, are included in the farm-bloc list of potential supporters of the Rayburn-Cooley repealer.

Thus the advocates of rigid price supports in the farm bloc and labor Democratic groups are working hard to persuade this tri-State group of a dozen or more Members to vote with the forces seeking to repeal flexible prices.

Two Delaware Valley, U. S. A., congressional Representatives, both Members of the House Committee on Agriculture, are standing firm with the administration. They are Representatives Paul B. Dague, Republican, of Pennsylvania, and Karl C. King, Republican, of Pennsylvania. Each signed the minority views filed against the majority report submitted by Chairman Cooley. And each will participate in the floor debate next week for 2 days before the showdown vote.

Address by Secretary-Treasurer William F. Schnitzler, American Federation of Labor, to Labor's League for Political Education, Philadelphia, Pa., February 26, 1955

EXTENSION OF REMARKS

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address:

I want to state at the outset that I am here to receive, rather than to give, inspiration and instruction on matters political. Success is the best advocate, and the success of your campaign to bring better governent and a better Governor, to the State of Pennsylvania speaks very highly, indeed, of the performance of your league.

You have helped to deliver your State, at least in part, from the grip of one of the most deeply entrenched, as well as one of the most backward political machines, in the Nation. If we had done half so well in those States where our friends were defeated by the narrowest of margins our gains would have been sufficient to guarantee a great stride forward toward a better life for every American, rather than the prospect of 2 more years of

minimum action and virtual statemate at the national level.

Whatever I may have to offer in the way of advice or admonition, therefore, is directed, not at any particular situation of your own, but at the larger scene. However, I did just happen to note an interesting item in the New York Times about an event that occurred here last week, which seems to contain a small lesson for all of us—a lesson as to one of the reasons why we must concern ourselves with political affairs in the first place. This news item, under a February 22 dateline, states as follows:

"President Eisenhower was boomed for a second term today by speakers at the 46th annal meeting of the Pennsylvania Manufacturers Association.

"One of the speakers was G. Mason Owlett, Republican national committeeman from Pennsylvania. * *

"Mr. Owlett, president of the Pennsylvania Manufacturers Association, predicted that 'Pennsylvania will join a national vote of confidence for President Eisenhower in 1956."

"'Dwight D. Eisenhower is no mere party leader; he is one of the great spiritual lead-

ers of our times,' he said."

I do not know Mr. Owlett, his qualities, or his record as a corporation official, or as a political boss. I do not know whether he is as competent a judge of spiritual values or of spiritual leadership as he is of company balance sheets and precinct returns, but I have my doubts. I may be wrong, but I am inclined to suspect that most people would prefer to seek spiritual guidance from some other source than upon the advice of the Pennsylvania Manufacturers Association.

I do not know whether the sovereign people of Pennsylvania have grown so docile, dependent, and predictable that they can be safely pledged to any camp nearly 2 years in advance, or delievered wholesale like, so many cattle, to the particular political market that the Pennsylvania Manufacturers Association prefers. But here again, I have my doubts. In the elections of last November they demonstrated their independence of reactionary bossism and PMA politics, and I cannot believe that, having had the experience of good government, they will so soon revert to the old.

But I do give Mr. Owlett and his PMA cohorts credit for this: That they know their own kind and are willing to fight for their own. Therein lies the lesson for us. Unless we are able to demonstrate at least an equal degree of active interest and concern in the character of our Government, we can expect nothing from it. When the people neglect the basic responsibilities of citizenship, the Pews, the Grundys, and the Owletts are always there, ready and eager to assume those responsibilities. It is clearly up to us, as individuals and as trade unionists, to work and to fight for the kind of government that we prefer, for if we do not, no one else is going to do that work for us. Yet, there are those who can hear and read about such exhortations as that which Mr. Owlett addresses to his fellow corporation bosses with great approbation, but who will then turn about and challenge or deny the right of unions of working men to participate effectively in the political life of this democracy.

If we require other reasons to justify our program of political education and action, we need only consider some of the things that happen when the large employing interests of the country gain a stranglehold upon the instruments of government, as demonstrated in the record of this and other big business administrations.

Such administrations never take over on their own merits, frankly presented. The deliverance of Government to the captains of industry and finance is always accomplished under some such guise as the pre-tense of "bringing the best brains to Washington" or getting the Government out of private business, or introducing business management methods, or in that most recent version, "partnership." Yet, somehow, the best brains always seem to come from the board room, the countinghouse, and the realm of the money changer. Getting the Government out of business always seem to involve a giveaway of priceless natural resources to an affluent few, while the people get the business only in the sense of the slang expression. The introduction of business management methods leads us to an NLRB packed with company lawyers and a rich man's tax bill granting billions in tax relief to stockholders and corporations at a time when the budget deficit requires a new increase in the debt ceiling. And "partnership" becomes a deal somewhat like the joint ownership of a cow, in which the public has to buy all of the feed while private interests get all of the milk.

When the people went to the polls in 1952, I am sure that they were under the impression that they were voting for a responsible Government administration. Had they known that they were in fact going to elect, not an administration, but a national brokerage agency, I believe that their decision might well have been different. Yet that is the role that our Government is performing today—not accepting and acting upon, but shifting the burden of its consti-

tutional responsibilities.

When power needs arise in the Tennessee Valley traditionally served by public power, the Government no longer permits the TVA to fill those needs, but acts instead as a broker for the privileged firm of Dixon and Yates. In the face of a grave national emergency arising out of the shortage of educational facilities and resources, the administration today holds out no real hope or promise of timely aid for the school children of America, but serves instead as the agent through which our urgent needs for a vital public service are to be converted into profitable grist for the financial mills of investment bankers.

This is indeed a new philosophy of government, this moderate progressivism or dynamic conservatism, or whatever the expression in current White House vogue happens to be-when bankers and stock-market sharpers, rather than educators, are brought in to testify in support of the administration's so-called school-construction program before a Senate committee. If this philosophy is to prevail much longer, perhaps the teaching methods now practiced in the public schools will have to be revised. Instead of teaching our children about the birds and the bees, perhaps they should be taught about the "bulls" and the "bears." If the administration plan prevails, then maybe the primary curriculum should also be changed from "reading, writing, and arithmetic" to "hedging, margin, and arbitrage" so that our children may be appropriately equipped for a life of dynamic conservatism.

I may be wrong, but I cannot believe that this is what the people voted for in 1952. The current administration practice of advancing unworthy causes under gaudy, liberal-type labels, as well as the present division of control between the executive and the legislative branch in Washington, serve to illustrate the paradoxical nature of the political situation we face today.

The voters of America have shown, time and again and most recently in 1954, a preference for liberal, humane and responsible government. Where a clear choice has been presented to them, unobscured by false or diversionary issues, they have in the great majority of cases chosen the course of

progress as opposed to reaction. Even the most hidebound of politicians acknowledge this preference of the public for they never dare to present a retrogressive, special-interest program under its true colors. They recognize that in order to succeed they must adopt a camouflage of pious pretenses, high-flown slogans and glowing promises—a tactic that reached its fullest development in the 1952 campaign.

There is, I believe, another tendency of the public which, unfortunately, serves often to nullify this preference and to play into the hands of the political promoter and manipulator. That is the tendency to believe what one would like to be true, to follow the minstrel with the siren song and the golden promise, to take appearances at face value and to accept the popular myth without critical examination.

These, I believe, are the conflicting forces that have led us into this paradox, and a condition of political stalemate. In the 1952 Presidential campaign, the people were sold on a popular personality, universally known and admired for his record as a military figure, possessed of an engaging manner and no visible enemies, and advertised as possessing the magic cure for all of our troubles and fears. Taken at face value, such a proposition was hard to resist, and the people were not made aware of the fact that

It had to be a package deal.

They have found out the hard way that the package they won when they went for Ike was not quite what they had been led to expect—that it contained a lot of things they had not bargained for. All wrapped up in the same bundle were Dixon and Yates, Beeson and Benson, McLeod and McCarthy, Jenner and Bricker, Weeks and Reece, layoffs and bird-dogs, giveaways and the "numbers game"—yes, even Natvig and Matusow, and who knows what to come.

There may still be those who think it is possible to take their Ike straight, as advertised, and who prefer to believe that these less attractive aspects of his administration can be safely overlooked, as misfortunes for which he should not be held responsible. The outcome of the last elections would seem to indicate that many of those who voted for Eisenhower in 1952 cannot quite stomach the team he has assembled or the political shysters who cluster about his coattails. There are even those who keep looking for and expecting the "new Ike, the real Ike" to emerge one of these days, to dump the old guard off his back, and to lead a rejoicing people into the promised land. In the light of the record, the persistence of such a dream represents a triumph of hope over experience, of ballyhoo over reality. The great crusade is over— it never got past the feed trough.

But today, almost 2 years before the next elections, the old guard politicos are busy getting the saddle, the bridle and the dopegun ready for another ride to victory on the back of their favorite. The owletts and company have taken full charge of the same man whose advocates at the 1952 Republican Convention accused their old leader, Sanator Taft, of theft and of violating the commandment "Thou shalt not steal", and are halling him now as their "spiritual leader". This much at least can be said of the old guard politician—he is always ready to rise above principle in order to maintain his place at the public trough.

This, together with the type of campaign waged against liberal candidates in many States in 1954, provides ample evidence of the complete bankruptcy of old-guard conservatism as a political philosophy. The members of that school no longer possess the courage to face the public squarely on the merits of the issues. To gain and maintain their positions of power, they now en-

gage in the promotion of a blind idolatry or, through an assortment of fronts, in the exploitation of unthinking passions and hatreds.

The necessity of combating the techniques of the huckster, the political medicine man, and the smear artist so prevalent today present our league for political education with a tremendous task, and a great responsibility. There is always the temptation to reply in kind—to exchange low blow for low blow—but we must resist that temptation. We are not in the smear market. Leave that to the professional poison mongers. In our choice of methods and approaches, let it always be said that we played this political game hard, but we played it straight. If we cannot honestly feel that we have, through our educational efforts, helped to improve the character of American political life, then we have no business in it.

Besides, over the long run at least, the approach that we have adopted is not only better, in the ethical sense, than the technique of smear and vilification. It is, I am convinced, also smarter in the political sense. The progress that is achieved through education, slow and tedious though it may be, endures. That which is achieved by playing upon unreasoning passions and emotions will surely evaporate in the course of time. To believe otherwise is to lose all faith in the democratic processes.

Looking ahead to 1956, I believe that the final decision will depend upon the ability of the public to make the important dis tinction between the attributes of personal popularity and those attributes which are necessary to the highest performance of the arduous requirements of the most respon-sible public office in the world. We have absolutely no desire or intent to injure, to degrade, or to detract in any way from the personal popularity or repute of one who has earned—and who has, indeed, received—so much from his countrymen as has the present occupant in the White House. We are concerned, and vitally concerned, with the content of the policies and programs that issue from the White House, and we intend to speak our minds fully and freely on that

I have no interest in the personal life or habits of anyone in public office. A President who stands up and fights for the rights and interests of the people when the occasion demands it would draw nothing but praise from me, though he played golf, tennis or poker from sun to sun. I am interested in where his heart and mind are, and not his person. And when he speaks the language of liberalism, I want to see him put his budget where his mouth is before reaching any final judgment.

But, regardless of what the Gallup polls, or any index of personal popularity may show, when a person in public office, regardless of rank or party, becomes involved or associated with a position on public issues which we consider to be detrimental to the best interests of the Nation at large, we intend to pull no punches. We shall exercise our right to place responsibility at the door where it properly belongs. In a healthy democratic order, no responsible elected official is entitled to immunity from public criticism, or to the privilege of blind support. We, at least, shall never extend that privilege or that immunity.

We can draw a great deal of encouragement, though we can afford no complacency, from the results of the 1954 elections. Against great obstacles, including a late all-out rescue campaign—with the President taking the high road and Nixon the low road—we made important, though not decisive, gains in both the House and the Senate.

But by far the most significant were the successes that we achiebed at the State and local levels, in the gubernatorial races and in the election of State representatives. These gains are significant because these are the areas where we have been weakest in the past, where the obstacles arising out of undemocratic systems of apportionment are the greatest, and where the most work needs to be done.

We cannot hope to achieve success by working from the national level down; we must work from the local level up. National politics grows out of State and community politics, and its character is largely a reflection of the character and make-up of the centers of political power in the State houses and city halls of America. The trade union movement and its membership can never hope to grow as a factor to be reckoned with in the political life of the Nation until we develop and use the tools and techniques of effective action in the arena of State and local politics.

Furthermore, the "right-to-work" campaign that is now being waged against labor has made it clear that employers have shifted the battleground from Congress to the State legislatures, having prepared that battleground in advance through section 14 (b) of the Taft-Hartley Act. So long as we must live and defend ourselves under an administration which holds a fictitious set of "States rights' in higher regard than basic human rights, we have no alternative but to endeavor to secure adequate representation in the State legislatures of the Nation.

I believe that we are better equipped today to function effectively under this set of circumstances than we have been in the past. The principle of decentralization has been introduced into the structure of Labor's League for Political Education, with the appointment of area directors to work more closely with State and city branches of the league. This should help to make possible a much greater degree of collaboration and cooperation between the various functional parts of our league, as well as to enable us to adapt more realistically to the varying conditions and circumstances that exist in different patrs of the country. 1954 results were, I believe, to some extent, at least a vindication of the soundness of this approach.

I doubt that we can expect soon to balance the degree of influence that the great corporations now exert upon the economic and political life of the various States, but we are certainly justified in working to that end. We cannot hope to compete with their fat purses and open moneybags, but I believe that we have a much broader appealone that merits the support of the rank-andfile citizen and of other public-spirited groups. As one sample of the big business approach, I understand that one of the officials of the United States Steel Co. serves simultaneously as chairman of important committees of the chamber of commerce of at least three different States-at each of which, of course, he expresses his deep devotion to the principle of "States' rights" and local self-government. We do not engage in that type of hypocritical multilateral carpetbagging. The affairs of our local organizations are conducted by local citizens.

I am highly optimistic about the future of our trade union movement. I am encouraged by the positive, vigorous, and healthy manner in which we have responded to the challenge presented by a hostile political environment and by vicious, punitive legislative enactments. I have traveled extensively about the country during the months since I assumed my present post. I have visited many international and State federation conventions, and have talked with hundreds

of those who bear the responsibility of local, State, and international union office. Nearly everything that I have seen and heard has served to reenofrce that sense of optimism and that feeling of encouragement.

I have observed a new spirit and a growing enthusiasm at all levels within the American Federation of Labor. Everywhere there has been a drawing-together, a closing of ranks, and a gathering of strength and vigor. Many factors have contributed to this new spirit. Despite all the obstacles thrown in our way by our adversaries in public and private life, our membership has risen to a record level. Our affiliated unions are sound and stable with larger resources than they have ever had before. The consummation of a no-raiding agreement has served to release energies, resources and organizers hitherto tied down to the unproductive task of defending past gains. International unions are revamping their organizing departments and appointing directors whose sole function it is to organize the unorganized, without the wasted time and talent involved in a host of unrelated tasks.

Union officials and members throughout the country are attending educational, social security, collective bargaining and legislative conferences more frequently, in greater numbers and with more interest than ever before. More local unions, who had previously remained outside the fold, have become properly affiliated with State federations and city central bodies. Our international and State conventions are drawing delegates in increasing numbers. The feeling is becoming general that at last we are on the move again.

At this high point of interest and enthusiasm, the logical climax has now been achieved—the successful negotiation of a merger agreement with the Congress of Industrial Organizations.

The agreement was reached at a time when most of the writers, reporters, and outside observers were busy explaining all of the reasons why it could never happen. Now these same gentlemen, faced with the task of putting their dope stories together, are having trouble in conceiving and predicting what a united labor movement will mean to the working people and the citizens of America.

But we know what it means. We have for years experienced the whipsaw tactics whereby one side has been played off against another to the disadvantage of both by opportunistic employers and politicians. We have seen the waste and duplication of effort, time, and resources, and the lost opportunities occasioned by disunity. We know that disunity drains the energies of labor, for unity is the lifeblood and the heart of the trade-union movement. Unity means the difference between a future bright with hope and promise, and one of perpetual internal conflict, division and weakness.

Labor's league for political education has a vital, central role to play in a united labor movement, if we are to make the most of our opportunities. This role will demand much of you who are most directly responsible for the league's success where that success has first of all to be achieved, locally in the precincts and polling places of the Nation. Yours is a task which requires a higher degree of unselfish dedication and understanding than any other trade-union function-for it may involve no personal advancement, or direct and immediate breadand-butter gain. It will involve many dis-appointments. The only reward we can or should expect is the reward that all citizens will share, regardless of their contribution to the effort-the reward of enlightened, liberal, and humanitarian government, dedicated to the welfare of all of the people.

The State of the Economy

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent editorial entitled "State of the Economy," published in the Washington Post of Sunday, March 20, 1955. It is a very fine exposition of the President's economic report and the report of the Joint Committee on the Economic Report.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE OF THE ECONOMY

The Joint Committee on the Economic Report is justified in its complaint that the President's economic report failed to include a sufficiently clear statement on the goals needed to assure maximum economic opportunities in 1955. The excellent qualities of the President's report, prepared for him by the Council of Economic Advisers, were clouded by this failure to be sufficiently selfcritical and to face up to the inadequacies of the present situation. The joint committee agrees with him that there has been a substantial recovery since the low point of a year ago and that most indices are up. Employment and production have regained about one-half of the ground lost and unemployment has receded about one-third. But the committee is concerned about the prospects for the second half of the year. It properly argues that if the President's report had examined the danger signals more carefully the country would be better prepared for any eventuality.

Perhaps the most significant thing about the report is that Republican and Democratic members are in agreement on so many things. The Democratic majority wrote a supplemental statement emphasizing its views, and three Republicans had a statement of their own. But the full membership agreed on the essentials—a signal tribute to the educational value of service on the committee.

Instead of boasting about what has happened, the joint committee concentrated its attention on the reasons why recovery has not been more substantial. It agreed that more attention must be given the problem of distressed industrial areas and the unfavorable trends in agriculture. Democratic Members made a telling argument against those who have been fighting an inflation straw man at the expense of what should be the primary objectives of economic policy—maximum employment and purchasing power. With more than 3 million persons idle in a Nation with the productive capacity of this one, the primary problem at present is not inflation.

In this connection, the report expresses concern over prospects for the second half of the year when automobile production will be at a much lower level than present. It says the administration and Congress should be ready with a public-works program in support of schools, roads, and hospitals and be prepared to adopt a more flexible tax policy. It is significant that all members of the committee support the President's request for a 1-year extension of the corporate and excise taxes in the interest of a balanced cash budget. Unlike the Ways

and Means and Finance Committees, this committee also unanimously supports the President's request for an increase in the Federal debt limit.

With these criticisms at hand and with the benefit of the joint committee's extensive hearings—and because there are widespread doubts about the economic prospects for the second half of the year—the Council of Economic Advisers should resume the practice of its predecessors and issue a midyear report. Such a report could be of substantial value in promoting an expanding economy throughout 1955.

A New Era in South Carolina

EXTENSION OF REMARKS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Wednesday, March 23, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "A New Era"—referring to the State of South Carolina. The editorial was published on March 15, 1955, in the State, of Columbia, S. C.

There being no objection, the article was ordered to be printed in the Record, as follows:

A NEW ERA

South Carolina truly is enjoying a new era.

Our industrial growth stands out because it so readily can be seen and because it can be reduced to revealing figures, but it is only one phase of the remarkable development that has taken place in our State in the last decade. Our strides forward in education and agriculture, in transportation, in good government, in better living, in religious life, in providing better housing, etc., have kept pace with the marvelous manufacturing expansion that has taken place.

We have often quoted statistics showing that at the end of World War II we had industrial investments of \$500 million whereas now the total is 6 times that amount or, in round numbers, \$3 billion. This total, of course, includes the H-bomb plant, which it should, since it is equipped for peacetime as well as wartime production and has created jcbs—well paying positions—just the same as any privately developed project.

With growth comes problems.

With more people comes the need for more housing facilities, more schools, more to eat—in fact more of everything. That South Carolina has been able to absorb this increase is a tribute to our people.

Our great school revolution has set a standard that other States might well emulate. As the Governor said the other day, we are 4 years ahead of the President's plan for relieving school shortages—so far ahead, and the building program so soundly financed that, small as we are, and poor as we are, comparatively speaking, we would not be eligible under the proposed Federal aid bill for assistance.

Frankly the segregation issue speeded up action on making South Carolina's school facilities second to none in the Nation. But regardless of the reason why, the fact remains that a revolution has taken place, and without endangering one whit the enviable double-a rating of our bonds.

In higher education, too, this State has gone forward. More and more our young people are going to college. More and more they are able to find in the institutions of our State the courses which they need. More and more, thank goodness, they are realizing that while the distant hills look green they have no greater opportunity than right here at home.

In agriculture steady advancement has been recorded. New and improved methods have been introduced and other steps taken to meet the increased demands. We are behind in irrigation, which proved its worth in last summer's drought to those who have it, and the proposed water control law is badly needed, but we have every reason to be proud of our agricultural accomplishments for the past 10 years.

From time immemorial the day has been anticipated when South Carolina, still an agricultural State, would not be dependent upon the success or failure of her crops. The year 1954 proved that this happy day has been reached since the heavy financial loss suffered by many engaged in agriculture did not upset our general economy. Time was when we could have stood last year's farming losses

It is good also that, while cotton is still king, it is no longer an absolute monarch. We now have diversification. Many acres formerly in the fleecy staple have been made available to other use because of improved seed, improved methods of culture. On a normal year we can grow as much cotton now as we did previously on twice the acreage. We have developed new cash crops, the peach being an excellent example. Thirty years ago (or later) we didn't grow a sufficient number of peaches for them to be listed as a commercial crop. Now we are the greatest peach-shipping State in the Union. And so on.

It is important that we absorb our growth instead of letting the growth absorb us.

South Carolina has individuality that must not be sacrificed, has standards that must not be lowered, has qualities that must be retained. In this, so far, so good, but we must ever be on guard lest we lose otherwise while winning commercially. Those assets which we would preserve are the very assets that make us attractive to industry. If we lose those assets, we may lose our appeal.

Right after the last World War was the time of most rapid industrial expansion. This is explainable because of a backlog that had been built up while the conflict was raging. In addition, there was a new appreciation of our advantages. Since then the influx while continuing has tapered off. This year, however, from the way it has started, looks as if it might set some kind of a record. In the first 2 months of 1955 there was more than half the plant construction underway as built during the full 12-month period of 1954.

We now have a double argument. In addition to our natural advantages as a desirable place for manufacturing, there has been developed in this area a sizable market that manufacturers should like to be near. Ten years ago that market did not exist in sufficient volume to be a factor.

For years the economy of the South, and particularly that of South Carolina, was plagued because we had to send our raw materials north and buy them back as finished products. This difinitely upset the trade balance. Now it is different. We are finishing the raw materials right now at home and selling the finished product.

This is not a development that has taken place in the last decade. The change has been taking place over the years, but the influx of industry since 1945 has definitely established, securely, the balance which we so long have needed.

Another progression which is of importance is the change that has come about in financing. There was a time when we were absolutely dependent on banking centers outside the South for capital. Now this is no longer true. Here in South Carolina we have financial institutions capable of providing funds for worthwhile concerns to be established or expanded. Nothing has bolstered our economic independence any more than this.

By any measure, South Carolina has a good State government with a fair attitude toward business, which is all that the high-class industrialist asks. He is not seeking favors, but he does want reasonable protection for his investments. That its situation is healthy is best evidenced by the fact that so many companies that have cast their lot with us have seen fit later to increase their holdings.

We appreciate big corporations, and we hope more of them will locate with us, but frankly nothing beats small concerns locally financed using local products and employing local people. We have many such plants in this State and we hope the number will increase.

There is no place here for the fly-by-night promoters who wish to impose upon a community and conduct business affairs in a shoddy manner. Every now and then such a person wants to locate in this State, but we have kept remarkably free from such intrusions.

We could go on citing developments such as those in forestry, which are well worth writing about or in conservation, but we shan't in this article attempt to deal with everything. Suffice it to say that our progress has been on an even keel and South Carolina is still South Carolina despite the many changes that have taken place.

changes that have taken place.

This newspaper hopes that it has done its share in bringing about the new era and that it may be privileged for many years to come to exert its influence for a South Carolina that is a good place in which to live and in which to make a living.

Echo Park Dam

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement: CIO Voices Support for Construction of Echo Park Dam in Colorado

CIO support for the construction of the Echo Park Dam in Echo Park, Colo., as part of the upper Colorado River storage project, has been voted by the CIO committee on power, atomic energy, and resources development, it was announced today by Chairman O. A. Knight.

Mr. Knight, who heads the CIO Oil, Chem-

Mr. Knight, who heads the CIO Oil, Chemical, and Atomic Workers International Union, said the decision followed an extensive meeting of the committee in Denver late last month.

In reversing its previous stand of opposition to the dam, Mr. Knight said the committee now supports the dam project as a means of securing maximum benefits of water for irrigation and municipal purposes, as well as the development of electric power for expansion of the upper Colorado Basin area.

Mr. Knight's statement:

"From a careful study of the facts which have been presented to me and my com-mittee, I am persuaded that the maximum benefit to mankind will result from the earliest possible completion of the upper Colorado storage project, including Echo Park Dam. The engineering prospects provide facilities for recreation for those now interested in the scenery and wildlife aspects of this area, as well as substantial regulation of the water flow in the river and a head of water for the production of electric power. This power is needed for the expanding population and industrial growth in the Mountain States. Salt Lake City. Utah, and Denver, Colo., and the total area between these two growing cities will greatly benefit from the earliest possible develop-ment of the total upper Colorado storage project."

John R. Mott

EXTENSION OF REMARKS

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. DOLLIVER. Mr. Speaker, John R. Mott, a native son of Iowa, was a great Christian statesman of our time, As part of my remarks, I include an address by Dr. Ralph Dockman, of New York, delivered at the John R. Mott memorial service on February 25, 1955;

JOHN R. MOTT, APOSTLE OF JESUS CHRIST

In front of Trinity Church, Boston, is a statue of Phillips Brooks, the rector who made that parish the preaching peak of his generation. The sculptor depicts the commanding figure of Brooks with another form standing behind and overshadowing him. The other figure is that of Jesus Christ. Phillips Brooks, towering above the pulpit masters of his time, humbly felt himself the servant of his Lord.

John R. Mott has been, and will be, memoralized in many places. His portraits hang on uncounted walls and will be hung on countless more. His life has been incorporated in many books and will be immortalized in many more. But if the portrayals are true to the primary purpose of his life, the figure of the Christ will always be standing over him. He was an apostle of Jesus Christ.

John Mott was prepared for his apostleship by pioneer parents. He was the scion of sturdy stock who left the more settled and sheltered valleys of New York for the more open and isolated plains of Iowa. His alert mind was sensitive to the lengthened horizons of the West. He once said: "I have long thought that is was life on these boundless plains which profoundly kindled my imagination and was a great factor in making me responsive in later years to worldwide visions and plans."

Typical of so many American youth, his mind was awakened by the touch of a local minister who inspired him to read and later influenced him to go to college. His family had become Christian under the influence of a Quaker evangelist, J. W. Dean, State secretary of the Iowa Young Men's Christian Association. Thus was formed the first link in Dr. Mott's life-long connection with the great organization which was eventually to honor him with its highest offices and which he was to lead to worldwide achievements.

The first college to which John Mott went was Upper Iowa University in Fayette. While he was a student there, a Young Men's Christian Association was formed and he became a charter member. Though active in religi-ous work, he looked toward law as a preparation for a political career. One is tempted to let his imagination picture what positions he might have filled had he turned his amaz-

ing talents toward public office.

But at Cornell University, in which he next enrolled, the direction of his life was changed. To that campus came J. E. K. Studd, famous English cricketer and a member of the Cambridge Seven formed under the influence of Dwight L. Moody. Young Mott went to hear Studd. Let Dr. Mott describe the experience: "The first 3 sentences I heard him speak revolutionized my life." Hear them: "Seekest thou great things for thyself? Seek them not. Seek ye first the Kingdom of God and His righteousness." Later a member of his staff was to say: "What I have seen of Mott's leadership in 50 years is convincing evidence that he always lived by the text that changed his life."

Having gotten a new sense of direction, John Mott's dynamic and creative mind would not let him stand still. He set to work. He joined a Bible class in an Ithaca church. He initiated work among prisoners in the town jail. He was elected vice president of the Student Christian Association. Later he became president. And in his senior year was largely responsible for raising the funds to house the student Christian work in Barnes Hall on the Cornell campus.

The stream of John Mott's life, which had risen in the uplands of high personal spiritual experience, was now headed toward the wide sea of God's service. Then a mighty tributary came in to swell the stream. John R. Mott met Dwight L. Moody. How priceless would be the photograph of their first meeting! The bearded Elijah of Northfield must have realized that he was laying his mantle on a young and powerful Elisha whose prophetic work would carry the eternal gospel to the ends of the earth.

John Mott, the enlisted follower of Jesus Christ, was now to begin his work as the ambassador of Christ. The Creator had seemingly put the stamp of leadership on his commanding figure and regal bearing. At his graduation from Cornell in 1888, he became student secretary of the International Committee of Young Men's Christian Associations, but only after prolonged soul searching, for other opportunities beckoned him. In this office he traveled over America, becoming a familiar and electrifying figure

on our Nation's campuses.

In 1891 John R. Mott made his first visit to Europe as a delegate to the World Conference of YMCA's at Amsterdam. Fiftyseven years later I had the privilege of seeing and hearing him in that same city of Amsterdam as he led in forming the World Council of Churches. As I recall him standing majestically in his red academic robes looking out over the assembled throng in 1948. I wonder what memories filled his mind as he thought of the movements in which he had served since his first visit to Amsterdam over a half century earlier. Every great religious cause and every significant ecu-menical conference during those 5 decades had felt his leadership.

His first visit to Europe kindled his enthusiasm for foreign nations. He often admonished young men, "Keep your eyes on the ends of the earth." The lad who lifted his gaze to the broad fields of Iowa was on his way to becoming a world citizen. Personally I have to confess that whenever I looked into the eyes of Dr. Mott, they somehow suggested to me the gaze of an eagle. An eagle seems to look through you and beyond you. So did Dr. Mott. His piercing eyes looked straight at you and yet seemed to see long vistas beyond you. His vision became adjusted to vast distances.

He repeatedly circled the globe traveling over two million miles visiting the leading universities of all lands. I have heard him say humorously that he often felt like asking his traveling companions to place a board at the foot of his bed each morning bearing the name of the country in which he was waking up.

Dr. Mott is credited with having influenced more young men than any other man of his time. May I testify for myself. I saw him first at the student volunteer convention held in Rochester in 1910. Mott at 45 years was a figure a student never forgot. He looked like a statesman. He spoke like a statesman. He was a statesman. If a man like Mott felt that Christian service and foreign missions were big business, they were big business. He captured my imagination. He was no small factor in shaping my choice of work.

John R. Mott was an ambassador of the young King of Calvary to the youth of America and to the students of Europe, Asia, Africa, and Latin America. For over half a century he riveted the attention of the Christian world on youth and helped to rivet the mind of youth on the making of a Christian world. As Prof. Kenneth Latourette has said, "There have been many great missionaries, but no one else has been means of bringing together in cooperation in the spread of our faith so many diverse ecclesiastical groups or on so extensive a geographic scale."

John Mott was an ambassador of Christ to kings as well as to campuses. He visited with the statesmen of the world. He was welcomed in the councils of governments. In 1916 and 1917 at the request of President Wilson he was a member of the Mexican-American Joint Committee and a member of the Commission sent by the President to Russia. His cooperation was sought by governments not only because he was head of the vast and potent Young Men's Christian Association but also because he was John R. Mott.

And we must remember, too, that Dr. Mott was a global worker before we had global wars. And if the churches and peoples of the world had adequately responded to his missionary appeals, the chances are that the last World War would not have occurred. Dr. Mott saw the needs of Japan and if we had heeded his call to Christianize that land, there would have been no Pearl Harbor. If we had shared his ecumenical spirit, there would be no Iron Curtain between Orient and Occident today.

But for us to look back pensively and picture what might have been is hardly in keeping with Dr. Mott's character. I do not know of his ever speaking in the recriminatory vein of "I told you so." heard him bemoan the passing of "the good old days." He was always looking forward to the golden age ahead. Like "Rabbi Ben Ezra" his invitation was always out:

"Grow old along with me. The best is yet to be,

The last of life for which the first was made. Trust God, see all, nor be afraid."

He never complained, saying, "What's the world coming to." He was ever proclaiming what had come to the world in Christ. He was an ambassador of Jesus Christ.

And not only did John R. Mott follow Christ as a humble servant and represent him as an ambassador. He was a creator with Christ. Some persons write books which serve to prolong their memory. Others erect buildings which continue their work. But Dr. Mott is memorialized in living move-If institutions are but the lengthened shadows of men, then his shadow is immeasurable because it is ever growing. Ponder the organizations and movements listed in this program: the Student Volunteer Movement, the World Student Christian Federation, the International Missionary Council, the World Alliance of YMCA's, the World Council of Churches, the National

Council of Churches, the Inter-Seminary Movement, the United Student Christian Council—all these and many others were blessed by his leadership and many more born of his brain. The Young Men's Christian Association was his first love because it was his spiritual parent, but with that as a fulcrum and Christ-like love as a lever he helped to lift the world. The Methodist Church was his ecclesiastical home, but he belonged to the Church Universal, the Body

The inclusiveness of his spirit and the immortality of his influence cannot be better expressed than by the citation given to John R. Mott at the Centennial International Convention of YMCA's in 1951:

Devoted servant of the cause of Christ, pioneer of worldwide Christian movements. brother of men of all races, ceaseless worker in behalf of world peace, welcome guest on all continents, renowned long-time leader and honored statesman of the Young Men's Christian Associations of all countries, friend of youth of all lands."

How could one man's magnetism be felt in so many directions and to such vast distances? There can be only one answer to the secret. He was so superbly a master of men because he was so truly a servant of

Dr. Mott demonstrated the double principle of divine trusteeship. He was so successful in handling the talents committed to him that he was made trustee of ever larger interests. But he also illustrated that other principle which Christ expressed when he said, "If you have not been faithful in that which is another's, who will give you that which is your own?" By his fidelity in guarding the interests of others, he received the rich blessings which belonged to him. A score or more of universities honored him. He was given the Distinguished Service Medal by his own beloved country and was decorated by 15 other governments. He richly deserved the Nobel Peace Prize awarded him in 1946 because he had worked for unity within the churches as well as between governments. He recognized that a divided church could not honestly call for a united world. And he realized that religion offers the greatest channel of hope for world peace because it reminds men of their common membership in God's family.

Some years ago Henry Van Dyke, speaking at the Hall of Fame, gave this definition: "Fame is durable good renown, won by service, approved by the wise, applauded by the common voice." When we look at John Mott we see the embodiment of what the thoughtful American mind calls fame. We see beyond Mott, the man, the mighty movements which he served. We see towering above him the figure of Christ whose apostle he was. We catch a vision of the better world he dreamed. And the world which can produce a John R. Mott must be God's world.

Silly, Isn't It?

EXTENSION OF REMARKS OF

HON. PAUL C. JONES

OF MISSOURT

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. JONES of Missouri. Mr. Speaker, because I think the following letter from my good friend Art Wallhausen, editor, owner, and publisher of the Enterprise-Courier, a newspaper printed and published at Charleston, Mo., sets forth very clearly the desirability, if not the necessity for a change in our postal law, I am inserting it in the Appendix of the Congressional Record. We all remember that some time ago, many of us supported legislation which we thought was in the general public interest, and which especially would help employees of the Railway Express Co. to maintain their jobs, only to find that the express company immediately knocked out any advantage that they might have had from this legislation by immediately increasing rates to drive this business away.

Experience has taught us that the legislation which was passed and which became Public Law 199 was not in the interest of the general public, and that it should be repealed as quickly as possible. Mr. Wallhausen's letter calls attention to the silly procedures which are being followed now, and I hope the members of the Committee on Post Office and Civil Service, as well as those officials in the Post Office Department, who make recommendations for changes, will read this letter.

I have been disappointed to learn that no hearings have been scheduled on bills which would restore some sanity and commonsense to the operation of the Post Office Department, but still have hopes that the chairman and other leaders will soon realize that it is time that Congress acknowledge the mistake it made during the 82d Congress. What seemed to make sense at that time has certainly proved to be asinine.

The above-mentioned letter follows:

THE ENTERPRISE-COURIER,
Charleston, Mo., March 14, 1955.
Representative Paul C. Jones,
House Office Building.

Washington, D. C.

DEAR PAUL: Now that you folks have managed to raise your salaries sufficiently to make your work worth your time expended, you might settle down and unpass a bit of legislation which has caused no end of trouble and confusion in business circles.

I have reference to Public Law 199.

This law, passed specifically for the Railway Express boys, places an arbitrary and silly limitation on weight and size of parcelpost packages mailed between post offices of the first class.

So what happens?

Yesterday one of my customers, for instance, hauled his printed matter from Charleston to East Prairie in order to mail the stuff. His postage bill was \$115.

Then what happened?

A star-route truck picked up the packages (which had originated in Charleston) in East Prairie, hauled them back over the same route, deposited them on the back porch of the Charleston post office, from which place they were dispatched to Chicago, New York, and elsewhere.

Same silly routine is repeated over and over again. We carry our oversize packages to Wyatt or Bertrand or to East Prairie. Then the Government hauls it back to Charleston and redispatches the items. Same holds true of incoming mail.

Not long ago a customer of mine from Wyatt came storming into my office carrying a large parcel. It was a banjo or mandolin which he had ordered from a Chicago mailorder house. It was large and bulky. He had received it via parcel post. (Chicago can mail anything, any size, to Wyatt, which is a third-class post office.

is a third-class post office.

He did not like the instrument, and had driven to Charleston where the said instru-

ment was wrapped and packaged for him. He took it to the Charleston post office, where he was blandly informed that the package was too bulky to be mailed.

Naturally the man was mad and confused. I don't blame him.

After an hour or so of trying to explain this goofed Public Law 199 to this gentleman, he calmed down, hauled it back home and mailed it from Wyatt.

A few hours later a star-route carrier picked up the Wyatt mail, carted it into Charleston, and the same banjo was dispatched from Charleston, which happens to be a central distribution point.

It just doesn't make sense.

It does mean that the Postoffice Department is being deprived of much business it is geared up to handle, and under the present system it means double handling, and useless handling of many items. It would be a great convenience, which almost amounts to necessity, for most businesses to restore regulations in force prior to the enactment of Public Law 199.

If you, my good friend, would concern yourself with this down-to-earth problem, and would get the job done, it would amount to a damn sight more good than a lot of the social "do-gooder" legislation with which Congress is constantly meddling.

Yours very truly.

ART L. WALLHAUSEN.

Cost of Mail Delivery

EXTENSION OF REMARKS

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the Record, I am inserting an editorial from the Thayer News, of Thayer, Mo. Mr. R. H. Williams, editor, has some timely observations regard our postal service:

COST OF MAIL DELIVERY

There has been much talk in recent years that the Post Office Department should be put on a paying basis. It is true that the post office annually builds up quite a deficit and that it is an annual cost to the Federal Government of considerable proportions.

It is also true that Congress has made it possible for newspapers to be delivered at a very low postage cost, has provided for very cheap mailing cost for books, and has provided other services which will never pay for themselves.

Another service which will never pay for itself is rural mail delivery. The post office will probably never be put on a break-even basis as long as free rural mail delivery is given to the rural citizens of this country. We are completely in favor of such delivery, but note that it cost \$192,430,434 in 1953—the last year on which figures are available.

The same can probably be said about second-class newspaper delivery. The newspaper—which is the greatest buy available in the United States today—is almost a necessity and the fact that Americans can enjoy low-cost mail delivery of newspapers is one of the praiseworthy features of our society today.

No doubt some postal rates will need to be increased ever so often by the Post Office Department. However, we would like to see increases in second-class mail come very slowly, are in favor of continuing free rural mail delivery even though the Post Office Department loses money on such operation, and are in favor of low-cost mailing privileges for books and other such material.

Considering the money the Government spends for various less needed programs, we believe a reasonable deficit in the Post Office Department can be tolerated and should be, as it has been for many years.

Greek Independence Day, March 25

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1955

Mr. FLOOD. Mr. Speaker, the celebration of Greek Independence Day is of especial significance for a number of reasons. In the first place, the ancient Greeks, who are renowned for the very high premium they placed on freedom and independence, were, in a sense, the first citizens of the West. They showed the world that they preferred to fight for the preservation of their independence rather than willingly submit to conquering oppressors. In the second place, when eventually they were forced to submit to alien tyrants, the Greeks proudly maintained their spiritual independence for many centuries. Finally, in 1821, when they saw a chance of regaining their national independence, they staged a revolt, which in the course of several years of warfare led to the birth of modern Greece.

In that year, when Archbishop Germanos raised the standard of the cross in his monastery at Patras, few people outside Greece realized that the insurrection started by this intrepid church leader was to bring about complete political independence. But as Greeks of all classes closed their ranks and rallied to the cause of their freedom the world began to see the dawning of a new day in Greece, that cradle of western civilization

At times the course of the struggle seemed uncertain. Even with considerable outside aid the cause of Greece suffered some setbacks. But as these brave Greeks braced themselves in a door-die fight, and as the amount of outside aid was increased, doubts as to the outcome vanished. In October of 1827 when the enemy's fleet was destroyed at the naval battle of Navarino, Greece's independence was assured.

It is simple enough for us to relate in a few sentences what the Greek warriors accomplished in the course of a strenuous and bloody decade. It is easy for us to view those events from a distance and marvel at the brave deeds of those Greeks against their oppressors. But the few words we say here cannot do them adequate justice. Neither time nor distance can dim the admiration with which we regard everything the Greeks did for the realization of their national dream, for the attainment of their national political independence.

In recent years Greek independence has been seriously endangered by aggressors or other evil forces. The memories of World War II and postwar events are still fresh in our minds. If we have learned a lesson from those tragic events, it is that national independence demands constant national vigilance, and it entails supreme sacrifices from all. The Greeks of 134 years ago, as well as those of our own day have proved equal to the task at hand. They have made a remarkable record for themselves by the courageous defense of their national independence. They will deserve the overflowing benefits which hard-won freedom bestows.

I am glad that we in the United States have been in a position to help the Greeks in their ceaseless fight against forces of tyranny and oppression. We are now closely linked to the Greek people in a common defense system, and they can be sure that we will do our utmost to support and protect their freedom. In this fraternal spirit we salute our allies and happily join in the celebration of Greek Independence Day.

The Outlook for Consumers

EXTENSION OF REMARKS

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. VANIK. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Akron Beacon-Journal of March 9, 1955:

THE OUTLOOK FOR CONSUMERS

There was a hint of bad news for the Nation's consumers of natural gas in a dispatch out of Washington reporting the recommendations of a Cabinet level committee named by President Eisenhower.

What seemed to be the most important recommendation was one calling for a voluntary limiting of oil imports to 1954 levels. The committee tied this to national defense on the ground that larger imports of oil would force more coal mines to close down, with possible serious consequences to the defense effort in the event of war.

Almost incidentally, it seemed, the committee added that as far as natural gas is concerned, "sound conservation practices" should prevail, but that Federal regulation should apply only after the gas has entered "an interstate transmission line."

That is what the gas producers have been

saying for years.

This is also what the present Federal Power Commission said—until the United States Supreme Court ruled that the Natural Gas Act compelled the FPC to regulate field prices. The FPC had tried to discard this power, but a suit filed in behalf of gas consumers finally forced the Commission to start regulating again.

From the point of view of gas consumers,

From the point of view of gas consumers, the recommendation of Mr. Eisenhower's Committee is a discouraging sign. It suggests that, since the President is taking advice from men who subscribe to the gas producers' unlimited-free-enterprise philosophy, he might not veto—as former President Truman did—a bill to exempt field gas rates from Federal control.

The Congress as now constituted is one which seems likely to be more responsive to pressures from the gas-producing Southwest

than to pressure from the gas-consuming North and East. The odds are, therefore, that the present Congress will pass a bill directing the FPC to stop regulating field gas prices. One House or the other has approved such bills before, and once both Houses gave approval. That time, President Truman's veto saved consumers from the rate increase which would have been the inevitable result of decontrol of the all-important field price.

President Eisenhower has never said, so far as we know, that he is in favor of leaving public utility consumers entirely to the tender mercies of the producers. But he appointed the Committee which made that recommendation. The Committee was of Cabinet level, which means that the President will give serious and perhaps sympathetic consideration to its recommendations.

The outlook for consumers is not good.

Let's Send MacArthur

EXTENSION OF REMARKS

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the New York Journal-American of Sunday,

LET'S SEND MACARTHUR

March 19, 1955:

On his return from the Far Eastern conferences Secretary of State Dulles pungently described the propaganda strategy of the Chinese Communists.

The strategy is to persuade the Asian peoples that the United States lacks the fortitude to risk another war, no matter what the provocation or aggression may be, and also lacks the fighting strength to win such a war.

"They," Mr. Dulles said, "are persistently trying to belittle our power and throw doubt on our resolution.

"Chinese Communist propaganda portrays the United States as being merely a paper

Mr. Dulles emphasized the sheer necessity of our convincing the east Asians, and the Chinese Communists in particular, that we are not bluffing in the Orient, that we will not capitulate to any aggressive postures, and that war can bring only disaster to our enemies.

Obviously, our weakness in the Far East is not a weakness of spirit nor of military ability.

What we lack over there is unified leadership at the scene of danger. We need the essential symbol of armed strength and moral courage. We need a commanding figure at the scene who can speak wisely in councils and lead effectively in the circumstances of war.

That kind of man is available.

It would be a master stroke were our Government to appoint Gen. Douglas MacArthur as American High Commissioner to Nationalist China. He has the military ability required. The Japanese respect him, the Filipinos venerate him, the Southeast Asians admire him—and the Communists fear him.

Perhaps General MacArthur could not accept the mission, though we know not why. Perhaps the administration would not ask him to serve, though we wonder why.

But questions aside, with General Mac-Arthur on duty, America would have a dominating American voice in the critical area,

and the Communists would know beyond any doubt that America means business.

For Communists understand just one kind of language, and Douglas MacArthur personifies the kind of language they understand.

The Inquiry Into the Stock Market

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

in the senate of the united states Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Economics, Politics Meet in Probe," written by Mr. J. A. Livingston, and published in his column Business Outlook in the Washington Post and Times Herald of March 20, 1955.

The article has reference to the very able study that is being carried on by the Committee on Banking and Currency under the direction of our distinguished colleague, the Senator from Arkansas [Mr. Fulbright], the chairman of the committee. It is a very fine article, and it commends itself to the attention and careful reading of every Senator.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

Business Outlook—Economics, Politics
MEET IN PROBE

(By J. A. Livingston)

In Washington, economics is politics. From that, there's no escaping. Consider these stock-market hearings by the Senate Banking and Currency Committee.

Secretary of the Treasury George M. Humphrey declares that the testimony might precipitate a wave of misconfidence. It might endanger business, cause unemployment.

Fresident Eisenhower seconds the motion. Senator J. W. FULBRIGHT, Democrat, of Arkansas, chairman of the committee, protests. The hearings are having no such deleterious consequences.

And Wall Street—the hero or the victim in the case—can't make up its collective mind.

At one time this year, Wall Streeters went wild about General Motors even as oldtime singers went about Harry. They paid \$107 a share. Yet, on Monday, they were willing to pay only about \$90—a change in their wildness—their esteem—of \$17 a share, or about 15 percent.

A. T. & T. AND U. S. STEEL TOO

Part of this diminution in esteem is real—a result of the issuance by General Motors of new stock. Earnings per share would be elightly diluted. But it was primarily a measure of Wall Street's changeability—its capacity to swing from extremes of hopeful anticipation to pessimism.

Yet, Wall Street can swing back. General Motors sells at about 94. It's come back a sound part of the way. American Telephone & Telegraph, a comparatively stable widows' and orphans' stock—a security which brokers solemnly proclaim to possess superlative investment merit—has swung since the hearings began from 186 to 176 and back to 180. United States Steel has dropped from above 80 to 74 and then climed to 77.

Senator Polission didn't alter the state or condition of United States Steel in any way.

Its magnificent new works at Morrisville, Pa., still blast away rolling out steel; the Irvin works near Pittsburgh manages to feed midwestern automobile, machinery, and farm equipment plants. Production schedules didn't suddenly melt away because witnesses were being questioned.

FUNSTON TO GALBRAITH TO MARTIN

No. indeed. U.S. Steel was the same U.S. Steel on March 3 when Keith Funston, president of the New York Stock Exchange, testifled that he had been buying stocks; on Tuesday, March 8, when Prof. John K. Galbraith, of Harvard (who subsequently broke his ankle), warned that the effervescence in Wall Street and the enthusiasm about the growth of the country could not be dissociated entirely from the spirit of 1929; and on Monday, March 14, when Wall Street seemed to be giving up. Chairman William McChesney Martin, Jr., of the Federal Reserve Board, was that day's witness.

On Funston's testimony, stocks rose. The Dow-Jones industrial average climbed to its all-time high of 419.68. After Galbraith the market faded fast-falling to 409 and subsequently to 391.36. Sounds horrendous—28 points. Actually it's only 7 percent. Martin, a pillar of fiscal and financial respectability, did not stop the downward swish of sentiment. He was on the stand when the

market broke nearly 10 points. In perspective such swings in sentiment are not extreme. The number of points--seems violent. When newspapers proclaimed that on March 8 stocks plummeted 7.7 points and on March 14, 9.7 points, the end of Wall Street's little world seemed at hand. Nineteen twenty-nine came close.

Don't be fooled.

The Dow-Jones industrial average is around 400. A 7-point drop is less than 2 percent. That's no different from a 4-point decline when the average was around 220. The magnitudes are not revealing. The percentages are.

A READYMADE SCAPEGOAT

But this doesn't help Senator FULBRIGHT. He is pictured as a destroyer of confidence. If automobiles don't sell, if manufacturers, who have been expanding commitments for new plant and machinery, decide to curtail, if building contractors suddenly determine that they've overbuilt and had better slow down—if that sequence of events develops, Mr. FULBRIGHT is the culprit. He held hearings which upset Wall Street's equanimity. He gave senatorial prestige to the statements of witnesses-some bearish.

To my mind, the hearings are salutary. As I said in last week's column, they caused a reappraisal-made people wonder: Have we gone too far? Has the increase in security loans (see chart) proceeded too rapidly?

EISENHOWER OWES THANKS

So far as President Eisenhower, Secretary Rumphrey and the administration go, this is all to the good. Early in January, the Federal Reserve Board jacked up margin requirements. For a few days, it affected the market. It was a psychological warning—if speculation gets out of hand, the Government will act.

The Fulbright hearings have underlined

this warning.

The administration ought to be doubly grateful to Senator FULBRIGHT. First, because he has contributed to the cautionto the appraisal-the administration wanted. Second, because if business is hollow underneath, if unemployment should result In the latter part of the year—Republican politicians can say, "See, FULBRIGHT—the Democrats—did it."

The hearings have slowed down the boom temporarily. They've prevented a rise to a higher level and then a fall from that level. Better a recession in March 1955 than a recession-and from a higher level-in March 1956.

Not only does Eisenhower now have a self-appointed scapegoat, Fulbriont, but also, if a drop comes, he will have more time to bring about recovery before November

Economics is economics and politics is politics. And in Washington, always the twain shall meet.

Tabulation of Questionnaire

EXTENSION OF REMARKS

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, early in January of this year, I mailed out a questionnaire to approximately 100,000 of my constituents seeking their views on major national issues. Approximately 9,000 questionnaires have been returned. These have been tabu-lated for me by the International Business Machines Corp. Under leave to extend my remarks, I should like to include the complete questionnaire and the tabulated returns:

TABULATION OF REPRESENTATIVE FRELING-HUYSEN'S QUESTIONNAIRE

I. Do you favor granting Federal financial assistance to the States for school construc-

Yes, 72.7 percent; no, 22.9 percent; no

opinion, 4.4 percent.

II. A citizen's Commission has recommended major salary increases for Congressmen, Supreme Court Justices, other Federal judges, the Speaker of the House of Representatives, and the Vice President. Would you vote for legislation favoring such increases?

Yes, 57.0 percent; no, 33.2 percent, no opinion, 9.8 percent.

III. The administration has announced support of a pay increase for Federal employees, including military personnel. Do you think this is a good idea?

Yes, 72.0 percent; no, 18.7 percent; no opinion, 9.3 percent.

IV. Do you favor continuing the selectiveservice program as long as there are not enough volunteers to meet quotas of the armed services?

Yes, 87.1 percent; no, 8.9 percent; no

opinion, 4.0 percent.

V. Do you favor universal military training (UMT) for all American boys?

Yes, 76.3 percent; no, 18.8 percent; no

opinion, 4.9 percent.

VI. The following have been cited by various persons as threats to the security of the United States. Please check the answer which best describes your opinion of each:

Armed attack by an enemy: Extreme threat, 35 percent; unlikely threat, 53.4 per-cent; no opinion, 11.6 percent.

Internal subversion and sabotage: Extreme threat, 60.2 percent; unlikely threat, 30.5 percent; no opinion, 9.3 percent.

Curtailment of civil liberties through efforts to prevent subversion: Extreme threat, 31.4 percent; unlikely threat, 53.0 percent; no opinion, 15.6 percent.

Regimentation of the United States economy by excessive expansion of the Federal Government: Extreme threat, 35.6 percent; unlikely threat, 48.0 percent; no opinion, 16.4

Economic depression: Extreme threat, 15.8 percent; unlikely threat, 72.3 percent; no opinion, 11.9 percent.

Inflation resulting from an unbalanced budget: Extreme threat, 35 percent; unlikely threat, 51.2 percent; no opinion, 13.8 percent.

VII. Which of the following best expresses your view as to what United States trade policy should be? Please check one:

We should lower our tariffs and trade barriers in order to increase world trade and strengthen the economies of our friends abroad. Trade, not aid, is a good policy, 70.6 percent.

We should raise our trade barriers in order to protect our industries from foreign competition, 18.6 percent.

No opinion, 10.8 percent.

VIII. Which of the following viewpoints best expresses your views on immigration policy? Please check one:

Congress should modify the McCarran-Walter immigration law along the lines suggested by President Eisenhower during the 1952 campaign, and increase the number of people who can settle in the United States, 35.8 percent.

Congress should make our immigration laws more strict and reduce the number of immigrants allowed to enter this country, 30.5 percent.

Congress should leave our immigration laws pretty much as they are, 27.7 percent.

No opinion, 6 percent.

IX. Which of the following viewpoints expresses your views regarding the Taft-Hartley law? Please check one:

The Taft-Hartley law is a slave-labor law which is unfair to unions and the average workingman. Congress should repeal it or completely amend it, 9.5 percent.

The Taft-Hartley law is not strict enough in prohibiting monopolistic, unjust, and dangerous practices by unions. Its provisions regulating union practices should be made even tougher, 19.7 percent.

Experience has shown the Taft-Hartley law to be fair and just. It has contributed to the improvement of labor-management relations. The law may need some amendments, but from an overall standpoint, it is

a good law, 62.6 percent.

No opinion, 8.2 percent.

X. (a) Do you favor further tax reductions?

Yes, 52.2 percent; no, 37 percent; no opinion, 10.8 percent.

(b) If your answer to (a) is "yes," how far would you go to reduce taxes?

Would you cut the military budget? Yes, 22.9 percent; no, 58.4 percent; no opinion, 18.7 percent.

Would you oppose increasing dollar aid to Asia? Yes, 72.7 percent; no, 16.6 percent; no opinion, 10.7 percent.

Would you continue a deficit in the Federal budget? Yes, 22.1 percent; no, 54.1 percent; no opinion, 23.8 percent.

Number of questionnaires mailed, 100,000. Number of questionnaires returned, 8,959.

Irish Cultural Olympics

EXTENSION OF REMARKS OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, March 22, 1955

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of March 7, 1955:

IRISH CULTURAL OLYMPICS

Formal opening yesterday in the new library of Villanova University of the first Irish Cultural Olympics ever to be presented in the United States starts something of immediate and powerful appeal to the hundreds of thousands of Americans of Irish extraction living in Delaware Valley, United States of America.

But the series of nightly events scheduled from tonight through April 1, except on Saturdays and Sundays and March 16 and 17, includes features that cannot fall to interest many without antecedents in the

The event tonight is devoted to the "Irish Contribution to the American Way of Life," an intriguing subject. Those to follow range through aspects of Ireland past and present; its vivid history, its religious character, its philosophy, drama, music, dances, sports,

literature, and industries.

Back of all this, as we know, is a culture that has grown great through long ages. Occurrence of the olympics in St. Patrick's month is occasion for deep satisfaction here where one of the oldest organizations of its kind, the Friendly Sons of St. Patrick, has flourished since colonial times, a sign of the strong impress of Irish-Americans on the life of this community. The olympics will be a welcome reminder of the Ireland whose culture they celebrate.

Retreat From Farm Sanity

EXTENSION OF REMARKS

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. DIXON. Mr. Speaker, because in the immediate future H. R. 12 will be under consideration by the House, I would like to call to my colleagues' attention an editorial published by the Salt Lake Deseret News and Telegram. The editorial calls attention to the fact that the vote in the House Committee on Agriculture was 23 for rigid supports as against 11 in opposition. I agree with the News that H. R. 12 is a retreat from sanity and that the least we can do is to give the flexible supports a chance to operate, which this bill does not do. The editorial follows:

RETREAT FROM FARM SANITY

By any sort of unbiased standard, the recent vote of the House Agriculture Committee to return to high rigid farm price supports is a step away from sanity in government.

The committee action shouldn't be given undue importance, of course. The vote was 23 to 11. But it should be remembered that by its very nature, the Agriculture Committee is made up of Representatives mainly from farm States who are subject to farmbloc pressure. Of its 33 members, 24 are from Midwest or Southern States where opposition to flexible supports has been most bitter.

Nevertheless, it is a straw in the wind and a particularly unfortunate one at a time when what is sorely needed is not less flexibility but more.

What does a vote to return to high rigid

supports mean?

It means, first of all, a vote to scrap something that hasn't even been tried yet. The 82½ to 90 percent of parity plan voted by Congress last year only goes into effect with

the marketing of this year's crops. Therefore, it cannot be claimed that the flexible program is being abandoned because of any degree of failure.

It means, secondly, a vote to return to a program that was a ruinous failure by every measure. Consider the elements of that failure:

1. High fixed price supports did not keep the incomes of farmers high. The net income of farm operators (including supports) fell 25 percent between 1947 and 1954.

2. High fixed price supports created tremendously wasteful and unmanageable surpluses. It is an unchangeable law of nature that an artificially high price is going to increase production and decrease consumption. It is also going to discourage exports, because the only way to export successfully is to underprice foreign competition. All that means surplus. In this country today, despite the most strenuous efforts to cut it down, the crop surplus on hand still runs close to seven billion dollars. In the past 9 months the Government has managed to give, sell, or barter away 800 million dollars' worth of surplus products-at a tremendous loss to the taxpayer. But in the same period new surpluses have piled up more than twice as fast as we could get rid of the old.

3. High fixed price supports have compelled production controls that hamper the freedom of the farmer. These controls, in turn, have invariably diverted acreage to other crops, which in turn have resulted in other surpluses and other demands for supports.

4. High fixed price supports have brought thousands of acres under the plow that should never have been touched. A new Dust Bowl is building on the Great Plains as a result. The Soil Conservation Service right now is getting reports from States and counties on damage to be expected from the March winds now beginning to blow. We will analyze these reports as they are released in a day or two.

All this represents Incontrovertible evidence that the only solution to our farm problem is to go forward with an increasingly flexible support program. It would be the height of folly for the House to follow the lead of its Agriculture Committee.

Inaccurate Story of Hiss Yalta Probe

EXTENSION OF REMARKS

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following open letter from Mr. Hearst to Mr. Sulzberger, which appeared in last Sunday's Journal American, brings out once more the caution with which we should read our morning newspapers, and others.

Slanted news is the order of the day and even newspapers who claim to be on the highest plane now indulge in it.

We now no longer get "all the news that's fit to print" but we get "all the news we think you should read, as we see fit to print it."

INACCURATE STORY OF HISS' YALTA ROLE Mr. ARTHUR HAYS SULZBERGER.

President and Publisher, The New York

DEAR ARTHUR: I want to add my congratulations to the many others you have un-

doubtedly received on the great job members of your staff and you yourself did in publishing a true copy of the Yalta document.

It has at long last forced the obvious reluctant State Department to make them available to the American public, whose right to know about them after our immediate security was no longer involved should never have been questioned.

The Times coverage of this story was magnificient, in general, and in many particulars, but as one newspaperman to another, I must say that in one instance the coverage was less than magnificient. In fact, it was far below the standards and editing and objectivity the American people have the right to expect from all responsible American newspapers.

To my mind and in my copy of your paper it was an example of slanted headline writing and slanted news writing.

Now, if this were one isolated instance I would not bring it up because I know how feverish things must have been in the Times building that night.

But the reason I am writing this letter to you is to point out that it is not an isolated instance.

Examples of slanted heads written by the copy desks and slanted news stories written by Times reporters and slanted book reviews by people hired by Times editors have been all too frequently pointed out by at least two writers I can mention—Westbrook Pegler for one, and John T. Flynn for another.

Granted similar distortions have crept into other newspapers; they are one of the journalistic pitfalls of our era. I call the New York Times ones to your attention principally because of the high esteem in which many people regard almost everything that you print.

By the same token your responsibility to see that everything that you do print is accurate and as your masthead puts it "Fit to Print" is that much greater.

Now, I want to be completely fair about this. I received my copy of the Thursday Times in Hot Springs, Va. My copy was an early edition. The Hiss story was on page 27. The main headline says, "Hiss Parley Role was Minor One."

The story carries a Washington dateline and no reporter's byline, although there are the bylines of three other Times men in Washington on the same page. The Hiss story is simply "Special to the New York Times."

It tells how Hiss nearly didn't get to Yalta because President Roosevelt originally opposed taking along any advisers. It explains how the then Secretary of State, Edward R. Stettinius, Jr., asked Harry Hopkins, then Mr. Roosevelt's chief assistant and, one might almost say, alter ego, to intercede with the President, with the result that Hiss went along.

By the way, Arthur, a news clipping dated June 25, 1953, has been called to my attention. It relates how a former State Department official, J. Anthony Panuch, wrote a memorandum in 1946 warning that Hiss "exercises Svengali-like influence over the mental processes of Junior Stettinius." I mention this parenthetically for your perusal.

Seven paragraphs down in the Hiss story this appears: "Nowhere do the documents indicate that Hiss was a policymaker at Yalta. On the contrary, the records show him as a technician, usually representing the United States Government at a working level with Sir Gladwyn Jebb, now British ambassador to France, and Andrei A. Gromyko, now a deputy Soviet foreign minister."

But the chief point I want to make is that the headline and the story, particularly that clause saying Hiss was only a technician (whatever that means) carry the implication to the reader that he had no influence, that he was sort of a spear carrier in the Yalta opera. In my opinion, Arthur, that is inaccurate and I cannot help but think that it was a deliberate distortion on somebody's part.

HISS' ACTIVITIES

My reason for saying that is this: Earlier in the same story the statement is made that President Roosevelt had banned all advisers from making the trip. Stettinius reopened the question and specifically succeeded in getting President Roosevelt to permit Hiss to go along as "an adviser to the Secretary of State."

The incomplete text of the Yalta papers which was in my edition cites the following appearances and activities of Hiss:

1. Hiss is listed as present (with President Roosevelt-Stettinius and company, the top echelon of the United States mission) at the third, fourth, fifth, sixth, and seventh formal meetings of the Yalta Conference, which were, I gather, the kickoff for the big

2. Hiss is listed as attending three topsecret meetings of Foreign Ministers at Yalta, where the groundwork was laid for discussions and decisions at the plenary meetings. The meetings he attended considered such things as dismemberment of Germany, reparations, the Dumbarton Oaks Conference integration of France into German control machinery, world security organization, Yugoslavian frontiers, control commission in Bulgaria and Hungary.

3. Hiss is listed as attending the third,

fourth, and fifth plenary meetings where the really big stuff went on. These took up the Polish question, dismemberment of Germany, Zone of Occupation in Germany for France, membership of the United Nations and what states should be admitted.

I am informed that in the complete Yalta text in your late city edition, Hiss is listed as having attended 5 formal meetings, 5 meetings of Foreign Ministers, and 6 plenary sessions-16 in all.

I claim this is pretty good going for a man your side story identifies as a mere "technician." I would also say it disproves the headline "Hiss Parley Role Was Minor One."

If this were merely a passing mistake, I could shrug if off. But I submit, Arthur, that it is more than that.

Four years after Yalta, this man Hiss was convicted of perjury and sent to prison. He was convicted for denying he passed secret documents to Whittaker Chambers, confessed member of the Soviet spy apparatus. So, although Hiss technically was convicted of perjury, really he was guilty of trading with the enemy. Isn't that so?

LINGERING SYMPATHY

Continuing along this line of thought, when the Hiss-Chambers controversy was hot, quite a few members of the Washington press corps, and newspapermen elsewhere, I am sure, were on the side of Hiss. I am not speaking now of the Times, but generally. And I think some of this sympathy for Hiss remained during and after his trial and remains to this day.

What I am suggesting is that at least some of the slanted news stories about Hiss cannot be attributed to a temporary absence of news competence. I am suggesting that some of them, at least, are deliberate and that responsible newspapers are taken in by

them from time to time.

To write that Hiss played a minor part at Yalta is a misstatement of the facts.

In fact, I am informed that in the late city edition of Thursday you subordinated the Washington story, although retaining the paragraph about Hiss being a simple technician, and carried a local story in which Hiss himself acknowledged he did play a considerable part at Yalta as concerns the formation of the U. N. as well as at San Francisco, as we know. He is quoted by you as saying "My position at all times was pro-American."

You will excuse me if I swallow hard at that.

The side story on Hiss, I submit, is an example of slanted news against which all papers should be perpetually on guard and which has been creeping into the columns of the Times disturbingly too often of late. Sincerely,

WILLIAM RANDOLPH HEARST, Jr.

Salty Water Made Drinkable at Buckeye Experimental Plant

EXTENSION OF REMARKS OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. RHODES of Arizona. Mr. Speak-er, under leave previously granted, I would like to include the following article from the Phoenix (Ariz.) Gazette of Friday, March 11, 1955, in the RECORD. The article, is entitled "Salty Water Is Made Drinkable at Buckeye Experimental Plant," follows:

SALTY WATER IS MADE DRINKABLE AT BUCKEYE EXPERIMENTAL PLANT

(By C. M. McMillen)

They're making good fresh drinking water out of the salty kind down Buckeye way.

Most crops, too, will do better under irrigation with this demineralized water, if it ever becomes commercially feasible. At present it's an expensive process.

The fresh-water-making plant is being operated about 20 miles west of Phoenix for the United States Department of the Interior under contract by Ionics, Inc., Cambridge, Mass.

Site of the portable plant is next to a well of the Buckeye Irrigation Co. along Buckeye Canal.

E. H. Sieveka, representing the Department of the Interior, and John H. Powell, project engineer of Ionics, gave a chance to see the inside workings of the experimental plant and told how it operates.

The salty water is taken from the regular supply pumped by the irrigation well by a suction line and starts it tour through a maze of pipes. This water, however, is not as salty as sea water. Hopes have been ex-pressed that a process to utilize sea water may be developed.

Sieveka and Powell removed the complications from the process—like it takes the excessive mineral from the water.

Picture sheets of a plastic membrane, one atop another, but separated to make a flat cell or box.

The engineers are going to shuffle the dissolved salt particles around in that cell electrically.

In the Buckeye testing they are putting water into the plant that has around 4,000 parts per million of dissolved salts. In the fresh water output the salts have been reduced to 350 to 500 parts or more per million, depending upon how the flexible unit is being operated.

Many municipalities are serving up water with 350 to 500 parts of dissolved salts per million, and it is good to taste, good for household and industrial use, say the engineers.

Costs in the experimental stages of the pilot plants of various processes are high, but Douglas McKay, Secretary of Interior, has announced in Washington that the goal set on costs is in sight.

At the start the Government program began its work of conversion of saline waters to useful water on both sea water and inland waters that are termed salty, brackish, or alkali in various parts of the country.

Costs of converting sea water at the start were about \$400 to \$500 an acre-foot.

Goals in treating either the sea water or inland salty waters to accepted standards were \$125 an acre-foot for municipal use, \$40 for irrigation.

McKay reports:

"The work accomplished so far indicates that attainment of the first goal of winning fresh water from sea water at a price which municipal users and some industries might pay, and the conversion of brackish waters to irrigation uses, seems to be in sight although much work will be necessary before either can be brought to realization.

"The task of converting sea water for irrigation is more difficult, but the researches continually produce new ideas and one of these may well point a way to its attain-

Release of Yalta Papers "Debunk" Republican Charges

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF TLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD. I include herewith an article by Drew Pearson, which appeared in the Washington Post and Times Herald this morning, March 23, 1955:

YALTA ANGERS FRENCH AT BAD TIME (By Drew Pearson)

The fallout from the Yalta explosion is like the hydrogen. Its devastating diplomatic effect continues long after the original blast. Today the French Senate debates ratification of the German arms agreement, which Dulles for two years has made the cornerstone of his European policy. He took 4 trips to Europe to urge, threaten, cajole French participation, yet just 6 days prior to Prench Senate debate on ratification, he released a document quoting Winston Churchill as saying: "No solution has been found for controlling the French while they are controlling the Germans. If the French wish to be tiresome they could produce trouble in their zone which would cause trouble in the other zones. If we decide to be strict they could be lenient. If we decide to be lenient they could be strict." French diplomats working for ratification of the German arms agreement were dumfounded, the French press furious. Before the State Department released the Yalta explosion stenographers hastily crossed out certain passages with pencils. However, French news-men could see right through the penciled censorship, including the Churchill quote: "I do feel that if the French are given this little sop it will keep them quiet, for I feel strongly that they should not be at this table. This is an exclusive group (smiling) and the entrance subscription is at least million soldiers." Naturally this was headlined in Paris.

What finbbergasted the British was that the Secretary of State himself should leak the documents. They knew, as the entire press and Diplomatic Corps now knows, that it was none other than John Foster Dulles who authorized that two huge volumes be planted with the New York Times, a technique calculated to satisfy right-wing Republicans yet let Dulles tell the British he was against publication. "If that happened in England," remarked one British diplomat, "Eden would face questions in Commons next morning and might have to resign." One Yalta line that especially irked the British was the Churchill quote: "It would be a pity to stuff the Polish goose so full of German food that it would have indigestion."

YALTA WISECRACKS

With the weight of the war on their shoulders, the old gentlemen at Yalta were full of wisecracks, which is one reason Senator KNOWLAND demanded publication. However, Churchill and Roosevelt always wisecracked, war or no war. Here are some Yalta cracks: Churchill: "We are pursuing the Atlantic Charter. I sent a copy of this interpretation to Wendell Willkie." Roose-velt: "Is that what killed him?" Roosevelt "recalled there had been an organization called the Ku Klux Klan that had hated the Catholics and Jews, and when he had been on a visit to a small town in the South he had been the guest of the president of the local chamber of commerce. He had sat next to an Italian on one side and a Jew on the other and had asked the president of the chamber of commerce whether they were members of the Ku Klux Klan, to which the president replied that they were, but that they were considered all right since everyone in the community knew them. The President remarked that it was a good illustration of how difficult it was to have any prejudiceracial, religious, or otherwise—if you really knew people." Roosevelt told this in supporting a Churchill toast for peaceful cooperation with Russia "that the common danger of war had removed the impediments to understanding and the fires of war had wiped out old animosities."

DEMOCRATIC MISS

The Democratic National Committee was either too dumb or too busy playing bridge or unable to read. For the Yalta papers contained good political ammunition. GOP mouthpieces, including David Lawrence's News, also Newsweek, had leaked the story that Joe Lash, one-time friend of Mrs. Roosevelt, and former member of a Communist-front youth group, was to be United States delegate to the United Nations. It now develops that Ed Stettinius, then Secretary of State, didn't know how to spell "Lausche," the name of the Governor of Ohio, and anything but a Communist. Stettinius also listed Harold Stassen to be a delegate. The Yalta papers also show that the chief sponsor for Alger Hiss was Stettinius, former head of United States Steel and former vice president of General Motors, a company not without influence in the Eisenhower Cabinet. Stettinius was brought into the Roosevelt administration as a wartime gesture of cooperation with big busi-Though Senator Knowland cited the Yalta papers as evidence, F. D. R. wanted Alger Hiss to go to Yalta, careful reading shows just the opposite. Here is a memo from Stettinius' diary, written when the Yalta Conference was being organized: "The Secretary [Stettinius] told Mr. Harry Hopkins that the purpose of his 12:30 appointment with the President was to 'bring with him people who will be involved in the forthcoming conference.' The President, Mr. Stettinius explained, did not want anyone to accompany him in an advisory capacity, but he (Stettinius) felt Messrs. Bowman and Alger Hiss ought to go. Hopkins promised to discuss the matter with the President that afternoon."

One document in the Yalta record which neither McCariff nor Nixon is likely to quote is a memo the State Department attributed to Hiss showing he opposed giving two extra votes to Russia in the United Nations. When Stalin wanted the Ukraine and White Russia to get extra votes Hiss wrote this argument to help his superiors; "On

further thought we have become impressed with the Soviet view that the initial members of the United Nations organization should be the signatories of the United Nations declaration. As none of the Soviet republics are signatories of that declaration, Mr. Molotov's proposal that two or three of these republics be admitted to additional membership would be contrary to that principle."

Conserving and Developing Specialized Technical Skills in American Industry

EXTENSION OF REMARKS

HON, PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the Record, I include therein a very discerning and able statement before the House Ways and Means Committee by my friend and constituent, Mr. Henry Woodbridge, of the American Optical Co., Southbridge, Mass.

Mr. Woodbridge's views are particularly pertinent at this time because they relate to the very vital question of conserving and developing specialized technical skills in American industry. His well-documented statement is a distinguished contribution to the discussion of this important subject:

STATEMENT OF HENRY S. WOODBRIDGE, VICE PRESIDENT, THE AMERICAN OPTICAL CO., SOUTHBRIDGE, MASS., BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, FEBRUARY 3, 1953

The American Optical Co., of which I am a vice president, is the largest optical company in America and also the oldest, having been in business since 1833.

As matters of national defense will be the most important subject that I will discuss, I ought to mention that from 1942 to 1954 I have been concerned with military-procurement matters and Government relations on behalf of the company.

This experience has convinced me that there is no single responsible authority to make effective the preservation of skills that are essential to our national security. This is the Achilles' heel of our defense program.

Failure to make provisions for the preservation of vital skills is nothing short of disarmament. In the final analysis scrapping of skills is far more serious than scrapping guns or planes. Unlike ships, these skills cannot be mothballed. Without certain vital skills our country could find itself at a serious military disadvantage in a time of emergency.

There is no responsible person who does not believe that our security requires the preservation of certain vital skills. Statements and evidence to this effect can be obtained from those Government departments and agencies which are concerned with our defense. But, as a practical matter, there is no single place in Government, save in Congress itself, where such a determination can be made effective.

Among these vital skills are those optical hand skills without which the optics for bombsights, rangefinders, periscopes, fire control, and other military optical instruments cannot be made. These are skills: (1) Which require years to acquire; (2) which are lost if not used; and (3) which are found only in the optical industry.

If it were not for defense orders it would be impossible at this very moment to maintain these skills in the face of foreign competition, particularly in the field of microscopes which is the main source of these vital skills.

At this point I would like to emphasize that I am speaking only for my own company. Nevertheless, I think I can say with confidence that what I have to say is probably representative of the thinking of the companies comprising the optical and ophthalmic, glass, lens, and instrument industry. It ought to be made clear that there is a direct and binding relationship between the various divisions of the industry. In the final analysis this small, vital industry must be considered as a whole and not in part. The manufacture of optical glass and the manufacture of optical products are so interdependent that they must be treated together.

I emphasize this as we are entering a

I emphasize this as we are entering a critical phase in the industry. The question we are now facing is: How much longer will we be able to manufacture microscopes and other precision optical instruments in this country? Commercial binoculars are no longer made in any quantity in this country, and if microscopes follow the same route the backbone of the precision optical industry in this country will have been broken. And when that occurs, skills vital to the defense of this Nation will be lost.

Foreign competition is growing more acute. The question will naturally come to your minds as to whether or not this competition is a greater factor than it was 7 or 8 years ago, or even before the war. The figures I am furnishing the committee give the data since the war, and based on these statistics the foreign share of the American market during those years has grown tremendously.

I am unable to give you the competitive figures before 1942, as there are no records available. I cannot personally testify as to the foreign proportion of the microscope market before the war as I was then not working in this industry. I am told by those who were that it was generally considered that foreign microscopes comprised between 10 to 15 percent of the American market. At that time, for all practical purposes, the only foreign microscopes that were imported were those from Germany. Since the war in addition to German microscopes, there have been large importations from Italy and Japan, which countries are new additions to the export field since the war.

The German optical industry, which has been completely revived in West Germany is now, from all the evidences we have, as large if not larger than it was for all of Germany prior to the war. The optical industry behind the Iron Curtain in East Germany, we are informed, is today as large or larger than it was before the war. The total German optical output is conservatively estimated as being twice what it was prior to the Second World War. East Germany's products play no part in the American market directly. Obviously they have an in-direct effect because of their taking a share of the world market outside the United States, which, in turn, makes the United States' market of more significance and importance to the West Germany optical companies. The added competition of Italian and Japanese exports into the American market, which obviously is growing more attractive as the world market becomes more competitive, only increases the difficulties with which we are faced ..

I would like, if I may, to comment on the fact that Japan and Italy followed Germany's lead by developing optical industries between World War I and World War II because of obvious military necessities. The English, which prior to World War I had been dependent on Germany for most of its optical

goods, learned from experience that it was necessary to have an optical industry.

There can be no question that the optical industry is essential to any nation which has to prepare itself to meet a military emergency. Russia, we have been informed by sources in our industry which operate behind the Iron Curtain, has developed an optical industry and a machine-tool industry that in the judgment of competent observers is considered to be the equal of those same industries in the free world.

Those nations which are friendly to us and with whom we want to and with whom we must increase our trade look to us as their main source of defense should another world war develop. It is impossible to conceive that any of these friendly nations would object in the slightest to our maintaining in this country those special hand skills that are vital to meet a military emergency. If we permit ourselves to scrap these skills, which, as I have said before, is a form of disarmament, they will not thank us should we fall them in a military emergency. It seems to us that the best interests of the free nations of the world will be served by stating frankly that for military purposes that affect not only our safety but their safety it is necessary for this country to maintain skills vital for military purposes. We do not believe that there could possibly develop any misunderstanding as to our country's intent as to the development of trade by meeting this problem openly and frankly. It is our conviction that we will be respected for taking this position that is for the benefit not only of ourselves but of the very nations with whom we are anxious to increase trade. * *

We have been told by many Government officials in many different departments of the Government that there is no question but that certain vital skills must be preserved, but that it is a difficult thing to do without creating an umbrella that will result in the inclusion in the list of so many skills that the increased trade that is essential will be defeated. These skills: (1) Must take a long time to learn; (2) will be lost if not used; and (3) should not be found in any other industry except its own.

We are more than willing to present complete data and information to whatever board, agency, commission, or individual that Congress may establish to make determinations in this matter and accept whatever finding is made. We say this because it would be very difficult for you to decide between conflicting testimony that has been given before in this committee without investigation, which is certainly not a matter in which Congress would wish to become involved. I mention this question of conflicting testimony because there appeared before you a representative from the photographic industry who advised you that opti-cal workers had been developed by his company in 6 months during the last war and that his company in case of another war could make optical workers in 3 months. I am sure that his testimony was sincere and given by him in the hope that his testimony would help you to better understand this problem of skills. We are thoroughly familiar with what was done in breaking down many of the optical skills into com ponent parts thereby reducing the training period needed for learning. In fact, we are proud of the job our company did in this very field. Unfortunately, his testimony is not the complete story. There are, to be sure, certain jobs in the optical industry that can be learned in comparatively short times as compared with other optical jobs. On the other hand, there are optical skills that can be learned only over a period of years, and it is these skills that provide the nucleus from which men and women can be Picked to teach the lesser skills so that an emergency can be met. In peacetime it is

not possible to break down optical jobs into separate parts because the volume of business will not permit it, and, furthermore, it is a costly procedure that cannot be afforded in peacetime.

To return for a moment, if I may, to the gentleman from the photographic industry. He said in his testimony before you, and I quote, "I am willing to believe that in special instances there are industries so vital and strategic to our national defense program, that they must be kept alive . We heartily endorse this statement and appeal to you to pass an amendment such as we propose so that the preservation of the skills of these industries may be made effective. This same gentleman from the photographic industry went on to say that he believed such industries should be subsidized. Our purpose in appearing here before you is not to advise you what to do, but rather to bring to you facts and information that may be helpful to you in reaching the decisions you will have to make. I can only speak for our own company although I do add that I think what I have to say may well represent the feeling of the precision optical industry. Beyond that I do not feel qualified to report to you. I do not, therefore, feel it is proper for me to discuss the general economics and philosophy of industrial subsidies. I hope you will forgive me, however, if I make a few comments on the subject of subsidies. I can testify to you that so far as we know subsidies will not work in our industry. In the first place, subsidies cannot be guaranteed over a period of years and are subject to change and, therefore, it is almost impossible to plan ahead if you are dependent on subsidies that are subject to change. Second, subsidies require the choosing of individual companies, as you could not afford to subsidize the whole industry. I imagine that our comsidization program. As a result some other company would not get the subsidy and would thereby be forced out of business. This, in turn, will reduce or, in fact, eliminate competition with all its incentives. Subsidies are a good deal like playing poker for fun instead of for money—the incentives are limited and there are no penalties, which result in sloppiness. Frankly, it is our genuine belief that subsidies will weaken the industry and that the right way to handle the situation is in a competitive climate. This has always provided the incentives which have resulted in the extraordinary achievements of Ameircan industries.

In conclusion, may I say that we are reaching a critical point in our industry which, in turn, means that the situation is growing critical as regards the preservation of vital optical hand skills. To some extent these skills are being protected by Government business. Government business, however, is uncertain and cannot be counted on on a continuous basis over a period of years. The only true way in which to preserve these skills is to have a domestic market which will permit their employment. Even assuming that some of these skills can be broken down, we will still need these highly skilled people, not only for certain highly specialized production work but also for training others in the event this industry is again called upon to expand to the extent it has in past emergencies. And if another crisis should arise, we know we will not have 2 years' warning.

May I say, and I hope you will understand that this is said without any intention of being rude, that our company is not appearing here before you begging for help for financial reasons. If we are forced out of the domestic market in the precision optical field, we will not go out of business. We are fully capable of manufacturing in foreign countries or importing products from outside the United States and using our large and

effective distribution organization, and we are in an excellent position to profit by so doing. Our plea to you is to take steps to preserve domestic markets for precision optical products so that we and other companies in our industry can employ the vital hand skills that are essential to the defense of this Nation. It is right that we should make this plea. In our American democracy this is as it should be. There is no possibility for our Government to know all the details and all the facts about all the industries in this country, and, therefore, it is our duty and obligation to do what we can to bring to the attenion of the Government facts and data that we are genuinely convinced will help the Government in making the decisions it has to make to prepare for any national emergency. It is in that spirit that our company has appeared before you, and we are confident that you who represent the people of this Nation are fully capable of making the right decisions if you have all the facts. And may I say that if there is any further information or detailed data that you would like, our company to the fullest extent of its ability will be glad to furnish them to you.

The Inquiry Into the Stock Market

EXTENSION OF REMARKS

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1955

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Demand To Call Off Market Investigation Proves It Was Due," written by Sylvia Porter, a very fine writer on economic subjects, and published in the Birmingham News of March 18, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR MONEY'S WORTH—DEMAND TO CALL OFF MARKET INVESTIGATION PROVES IT WAS DUE (By Sylvia Porter)

The very demand of Republican Senator CAPEHART that the Senate Banking Committee call off its investigation into the stock market—because it is "frightening" the public and it "caused" the recent violent sell-off in stock prices—proves conclusively how much this investigation was needed.

Senator FULBRICHT'S committee actually may now bid for a place in history as helping to avert a future collapse in Wall Street, a repetition of the dread "1929"—just because it has flashed the warning signals to gamblers and get-rich speculators now.

For these are the facts about the multibillion-dollar slump in stock prices of the past fortnight:

 The crack-up—which wiped out billions in paper profits in stocks before a recovery—never would have happened had the market not been unhealthily loaded with inand-out speculators.

The "big boys," the institutional investors who own vast amounts of stocks, don't dump stocks on moves of this kind. The jittery gamblers do. And the get-rich-quick boys have no place in a sound stock market to start with.

2. After an almost perpendicular, recordbreaking upsurge for 16 months, a decline in prices—what the professionals call a "correction"—was long overdue. The investigation didn't cause the crack. It simply was seized upon as an excuse for the crack.

The probe hasn't brought out one weakness in the economy or the market of which informed people haven't been fully aware.

It has, though, underlined the fact that we are not into a "new era" in which everything is wonderful, prices go constantly up and any buyer of stocks automatically can make money overnight. It was about time this was underlined.

4. The suggestion by CAPEHART and other critics that the testimony caused investors to sell because they are afraid of new con-

trols is downright nonsense.

The Federal Reserve Board has made it unmistakably clear all along that it would not hesitate to clamp down harder on borrowing-to-buy stock if speculation persisted at the frantic rate of November-December 1954. In fact, the statements of Reserve Board Chairman Martin and Treasury Secretary Humphrey—who are the men who count—were reassuring because both policymakers indicated they thought controls right now were quite sufficient. This is good news, not bad.

Since the market slump and the growing condemnation of the investigation, I have gone all over Wall Street asking professionals and objective observers for comments. Here

are revealing quotes:

"I'm relieved that the decline has happened. Now that prices are getting back to more normal levels, I feel more comfortable and can start watching for a place to huv."

"The testimony never would have had the slightest effect if the market hadn't been too high and vulnerable. The weak holders were looking for an excuse to get out and they

got it."

"The real factors behind the decline were: Prices had gone too high too fast; the talk of repealing some of the 1954 tax cuts has been very unsettling; holders of stocks in companies getting blg defense orders naturally were worried when the Senators asked for a list of these orders; war talk is always a force. The investigation? In my office, we have hardly paid attention to it."

"It's a good thing the rise was halted. If it had continued at that rate, I would have

run for cover."

All these are quotes from Wall Streeters—hardly men to grind any political or financial ax for FULBRIGHT, the Democratic Senator from Arkansas, who heads this inquiry.

Of course, if the price slump were to resume and intensify, it would be a threat. For them, as Humphrey emphasized, it could make confidence—a most delicate thing. Then it might scare people who plan to buy cars or houses into holding off on their purchases because they might fear something was really wrong in our land.

But I've found no responsible observer who expects this sort of collapse. Rather, they are now revising upward their forecasts for 1955, beginning to hint 1955 may be the best economic year of all time. Hardly a background for a stock market bust.

If anybody is hurt by this investigation, it will be the Senators themselves—and the more that politics intrudes itself into these hearings, the more open to attack will be the Senators playing political tag on the dangerous battleground of Wall Street.

As for the public-you and me-we are not being hurt.

The market has had a shakeout which was long overdue. Investors who own stocks have lost nothing but paper profits.

The speculating fringe has properly warned against reckless gambling, reminded Wall Street is no playground or one-way street.

Confidence has not been undermined.

The violent uprush of prices—which if it had continued at the late 1954 speed

could only have led to disaster—has been halted.

All this is healthy. All this is sound for our futures.

Panama Canal: The Crack on Contractors Hill

EXTENSION OF REMARKS

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1955

Mr. THOMPSON of Texas. Mr. Speaker, in a significant statement in the Congressional Record of April 12, 1949—volume 95, page A2228— the late distinguished chairman of the House Committee on Merchant Marine and Fisheries, Hon. Schuyler Otis Bland, of Virginia, commented at some length on Slide Problems of the Panama Canal and quoted a technical discussion by Dr. A. Casagrande. Judge Bland stressed the most treacherous formation in Isthmian terrain as of "sinister fame"—Cucaracha.

At that time, however, neither the Congress nor the American public knew of the existence of a crack in Contractors Hill that had been discovered in 1938. Nor had this crack been mentioned in any of the published sections of the annual reports of the Governor of the Canal Zone.

The dramatic disclosure early in 1954 of this crack as indicating a grave hazard to the security of transit produced a national sensation and, for a time, attracted world attention. Panama Canal administrators thereupon took action to meet the threat of closure. Notwithstanding these measures, the fact remains that remedial action was not initiated until the situation had reached critical proportions.

The entire record of the crack in Contractors Hill further emphasized the point stressed by Judge Bland, and other congressional leaders, of the importance of thorough, up-to-date, and objective study and review of all aspects of the canal question before making final decisions on Isthmian policy. The recommendations for constructing a new Panama Canal of sea-level design contained in the 1947 report under Public Law 280. 79th Congress, which was prepared under the direction of routine administrative officials with what appear to have been predetermined objectives, clearly calls for a reassessment in the light of subsequent developments including the H-bomb. The previous failure of the 1931 and 1939 studies on the Panama Canal, which also were prepared under the direction of routine administrators. is conclusive evidence of the necessity for an independent investigation under congressional authorization.

Such an inquiry, it is submitted, can be accomplished only by a broadly based and independent Interoceanic Canals Commission, composed of men of the highest qualifications and character who may not be dominated by administrative controls and who can view all the aspects involved in a purely objective manner. That type of organization does not now exist. To provide one, Hon. Thomas E. Martin and I, early in the present session, introduced identical measures, S. 766 and H. R. 3335, 84th Congress, It is a matter of grave regret that such a body had not been created and in operation before the recent treaty negotiation with Panama was concluded. Had such been the case, the Congress and the executive branch of our Government might have had a wealth of information for use in and about the formulation and approval of the new treaty.

A summary of the present status of the Contractors Hill situation by Charles McG. Brandl was published in the March-April issue of the Military Engineer, volume XLVII, page 93. The issue contains the following sketch of its au-

thor's engineering experience:

Charles McG. Brandl, the assistant project engineer for the Contractors Hill project, is superintendent of Maintenance and Construction for the Southern District of the Maintenance Division of the Panama Canal Company. He has had wide engineering experience in Panama and is a frequent contributor to the Military Engineer. He is a native of North Carolina and a registered engineer in that State.

To make Mr. Brandl's article available to the Congress and other agencies of the Federal Government, under leave accorded, I include its text:

THE CRACK ON CONTRACTORS HILL (By Charles McG. Brandl)

When DeLesseps and the French began their attempt at building the Panama Canal, they chose the low point in the Continental Divide as the place to dig through. location, while a natural one which was later used successfully by the Americans, was chosen apparently without very extensive knowledge of the geology of the area. The low point, which is a saddle between the hills now known as Gold (elevation 650 feet) on the east and Contractors (elevation 410 feet) on the west, is in, and is a part of, an unstable soil area. It is surrounded by the treacherous cucaracha formation, a material so unstable that it has many times closed the Canal channel. This mixture, of weak clay shales, sandstone agglomerate, conglomerate, welded tuff ash flow, and other volcanic ejections, is interspersed with an appreciable percentage of bentonitic matter which, when wet and exposed to air, swells and flows freely on slopes steeper than 3 to 1. Embedded in and supported by this cucaracha are the rock masses of the two hills. Although basically both are apparently stable ,a part of Contractors Hill recently endangered the Canal.

In 1938 a survey party discovered in the tall grass covering the top of the hill a slight crack or fissure. It was noted, and monuments for checking future movement were set astride the crack. In 1939 they showed a total movement toward the Canal of 0.06 foot. This was considered unimportant and no further measurements were made until 1949. Through the years the crack had grown and widened, so in 1949 a schedule of monthly readings was established. These were continued and in the early part of 1953 it was observed that the crack was extending in both directions and additional monuments were established. By check early 1954 the action and development of the crack had progressed to such a stage that the stability of the hill was questionable and the future safety of the Canal became

of grave concern.

Earlier survey work establishing points in the canal's triangulation system had, fortunately, located two control points on Contractors Hill. By using these and other check measurements, it was readily determined that the hill had an irregular crack or split over 8 inches wide along its face. Soundings indicated that the crack was nearly 600 feet deep. It was definitely proven that the mass breaking away was the smaller part of the hill to the east of the crack, moving toward the waters of the canal. (The mass was estimated to be about 4 million tons.) This was found out at about the start of the rainy season. With the coming of the rains a curious action of this free mass was noticed. When water partially filled the crack there was an immediate further movement toward the canal, roughly proportionate to the depth of water. When the rain ceased the water drained away and the free mass moved back toward the main hill. But always the return movement was less than the original outward one so that the cumulative effect of the rains was to push the free mass farther toward the canal. Meanwhile, the canal authorities had begun core drilling to ascertain the exact size and nature of the hill itself. Experts in the fields of geology and soil mechanics were assembled by Gov. John S. Seybold to study the conditions and make recommendations. the watchers above probed and studied, the commerce-laden vessels of the world's maritime nations passed serenely below them in the calm waters of the canal, unconcerned about the looming rock mass above.

Yet, if this mass were suddenly to slide or fall into the narrow Gaillard (Culebra) Cut, it would so dam the canal that months of marine drilling, blasting, and dredging would be required to clear it. And there would be no short cut for ships—only the long voyage around the Horn, costly in time and money. The serious effects of a forced closing of the canal from the military standpoint are obvious.

From the reports of the experts, the engineers developed a plan for removing as much of the rock mass of the hill as was deemed threatening. This plan was sketchy in detail as it had to be, considering the relatively limited data available at that time. Final plans called for the removal of the rock in a series of steps or benches 40 feet high rising up from the 150-foot elevation (the water of the canal is approximately 86 feet) to the crest of the hill which would be cut off to elevation 390 feet on the north end, and to 350 feet on the south end. To be included would be the removal of a certain amount of the shale or cucaracha formation at the north and south ends of the hill.

Since the time element was vital, the canal authorities resorted to limited bidding rather than the usual contractural procedures. Accordingly, some of the outstanding construction firms in the United States and Panama were invited to send representatives to inspect the site and to submit proposals for the removal of the requisite amounts of rock and cucaracha. These proposals were to indicate a bid price for the items based on different quantities which it would be the option of the Government to stipulate: were to include a mobilization schedule for placing men and equipment at work on the site; and were to indicate a method of removal. The Government reserved the right to accept the proposal which it deemed best suited for the successful completion of the project. The initial contract called for the removal of 2 million cubic yards of rock and 350,000 cubic yards of shale. These figures were later amended and, as of February 1, 1955, call for the removal of 1,700,000 cubic yards of rock and 350,000 cubic yards of cucaracha. The contract was awarded in the latter part of May 1954 and by the middle of July equipment was on the Prior to the arrival of the equipment, two items were added to the contract by supplemental agreement; the construction of a crack inspection and drainage tunnel and the removal of a commemorative memorial plaque. The tunnel, a 5-foot by 7-foot arched roof section, approximately 120 feet long, started on elevation 92 feet at the face of the cliff near the canal prism line and ran approximately perpendicular to the canal axis and cliff face of the hill until it intersected the crack. Here an inspection gallery and pumproom were to be built and check points located for measuring any movement in the hill mass after the excavation on top had destroyed the original check points.

The commemorative plaque is the 9-foot by 11-foot has relief bronze sculpture, weighing 1 ton, which was installed in the face of the cliff about 103 feet above the canal waters at the time Culebra cut was renamed in memory of Lt. Col. David D. Gaillard, the engineer in charge of the excavation there from 1907 to 1913. The plaque will probably be reinstalled on the regraded face of Contractors Hill.

Work on the supplemental items proceeded at once and was satisfactorily completed well ahead of schedule. The effectiveness of the tunnel as a drainage facility was such that no pumping or other disposal of the water in the pit floor was required throughout the rainy season. The water seeped through the crack into the tunnel and out into the canal. The removal of the hydrostatic pressure eliminated this force from further adverse pressure against the broken rock.

The actual work of rock removal started ahead of schedule and has proceeded without major interruption following a fixed routine of drilling, loading, firing, and excavating 20 hours a day 6 days a week. The 4-hour interval between the two 10-hour shifts daily is used to check and service equipment as is all the daylight shift on Sunday. As of the 1st of February, the contractor was nearly 2 months ahead of schedule, and barring unforeseen events, should have the 1,700,000 cubic vards of rock and 350,000 cubic vards of cucaracha removed by August 1955. However, the routine nature of the operation was not achieved without careful planning and constant vigilance.

The nature of the rock and its proximity to the narrow cut precluded the taking of any chances. Each blast had to be planned; each element had to be coordinated with the special and peculiar conditions of the exact area or pattern. Each fracture in the rock either natural (the whole hill mass is proving to be a heterogeneous crazy quilt of seams and fissures, or those caused or enlarged by blasting, must be studied and evaluated in to the diameter of the hole, its relation depth, the kind and amount of dynamite in it, the detonator sequence (milisecond delays are used almost exclusively) and these data considered for each of the 20 to 150 charges which may constitute a pattern. blasting astride the crack or between the crack and the cliff face, additional elements of safety must be considered. For example, nothing is allowed to delay or cause alarm to the ships that pass below. No rock must fly when a ship is close nor can any blast, no matter how carefully planned, be fired until any approaching ship has cleared the cut. There must be no possibility of an accidental dislodgment of rock falling into this narrow passage ahead of an oncoming ship. factors place the operation in a unique and special field of interest and concern. There cannot be, and there have not been, any attempts to make short cuts in the elemental safety of the procedures. The contractors' forces have been as careful in this respect as have the Government personnel. Together they are bringing to a successful conclusion an enterprise which will be a credit to American construction skill and a fitting supplement to the similar work done long ago in the same location by the original Canal builders. The material now removed, more than 900,000 cubic yards, has so lessened the upper burden of the rock mass as practically to insure the overall stability of the mass until the job is completed.

To make the texts of the bills, which are identical, readily available to the Congress in connection with the study of Isthmian Canal Policy by its various committees, I quote H. R. 3335:

Be it enacted, etc., That this act may be cited as the "Interoceanic Canals Commission Act of 1955."

SEC. 2. (a) A commission is hereby created, to be known as the "Interoceanic Canals Commission" (hereinafter referred to as the "Commission"), and to be composed of 11 members to be appointed by the President, by and with the advice and consent of the Senate, as follows: One member shall be a commissioned officer of the line (active or retired) of the United States Army: 1 member shall be a commissioned officer of the line (active or retired) of the United States Navy; 1 member shall be a commissioned officer of the line (active or retired) of the United States Air Force; and 8 members from civil life, 4 of whom shall be persons learned and skilled in the science of engineering. The President shall designate 1 of the members from civil life as chairman, and shall fill all vacancies on the Commission in the same manner as are made the original ap-pointments. The Commission shall cease to exist upon the completion of its work hereunder.

(b) The Chairman of the Commission shall receive compensation at the rate of \$20,000 per annum, and the other members shall receive compensation at the rate of \$18,000 per annum, each; but the members appointed from the Army, Navy, and Air Force shall receive only such compensation, in addition to their pay and allowances, as will make their total compensation from the United States \$18,000 each.

SEC. 3. The Commission is authorized and directed to make and conduct a comprehensive investigation and study of all problems involved or arising in connection with plans or proposals for—

(a) an increase in the capacity and operational efficiency of the present Panama Canal through the adaption of the Third Locks Project (53 Stat. 1409) to provide a summit-level terminal lake anchorage in the Pacific end of the canal to correspond with that in the Atlantic end, or by other modification or design of the existing facilities;

(b) the construction of a new Pansma Canal of sea-level design, or any modification thereof:

(c) the construction and ownership, by the United States, of another canal or canals connecting the Atlantic and Pacific Oceans;

(d) the operation, maintenance, and protection of the Panama Canal, and of any other canal or canals which may be recommended by the Commission;

(e) treaty and territorial rights which may be deemed essential hereunder; and

(f) estimates of the respective costs of the undertakings herein enumerated.

SEC. 4. For the purpose of conducting all inquiries and investigations deemed necessary by the Commission in carrying out the provisions of this act, the Commission is authorized to utilize any official reports, documents, data, and papers in the possession the United States Government and its officials; and the Commission is given power to designate and authorize any member, or other officer, of the Commission, to administer oaths and affirmations, subpens witnesses, take evidence, procure information and data, and require the production of any books, papers, or other documents and records which the Commission may deem relevant or material for the purposes herein named. Such attendance of witnesses, and the production of documentary evidence, may be required from any place in the United States, or any Territory, or any other area under the control or jurisdiction of the United States, including the Canal Zone.

Sec. 5. The Commission shall submit to the President and the Congress, not later than 2 years after the date of the enactment hereof, a final report containing the results and conclusions of its investigations and studies hereunder, with recommendations; and may, in its discretion, submit interim reports to the President and the Congress concerning the progress of its work. Such final report shall contain—

(a) the recommendations of the Commission with respect to the Panama Canal, and to any new interoceanic canal or canals which the Commission may consider feasible or desirable for the United States to construct, own, maintain, and operate;

(b) the estimates of the Commission as regards the approximate cost of carrying out its recommendations; and like estimates of cost as to the respective proposals and plans considered by the Commission and embraced in its final report; and

(c) such information as the Commission may have been able to obtain with respect to the necessity for the acquisition, by the United States, of new, or additional, rights, privileges, and concessions, by means of treatles or agreements with foreign nations, before there may be made the execution of any plans or projects recommended by the Commission.

SEC. 6. The Commission shall appoint a secretary, who shall receive compensation fixed in accordance with the Classification Act of 1949, as amended, and shall serve at the pleasure of the Commission.

Sec. 7. The Commission is hereby authorized to appoint and fix the compensation of such engineers, surveyors, experts, or advisers deemed by the Commission necessary hereunder, as limited by the provisions in United States Code, section 55a (1946 edition); and may make such expenditures-including those for actual travel and subsistence of members of the Commission and its employees-not exceeding \$13 for subsistence expense for any one person for any calendar day: for rent of quarters at the seat of government, or elsewhere; for personal services at the seat of government, or elsewhere; and for printing and binding necessary for the efficient and adequate functions of the Commission hereunder. All expenses of the Commission shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the Chairman of the Commission, or such other official of the Commission as the Commission may designate.

SEC. 8. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions and purposes of this act.

The Horizons Beyond in Agriculture

EXTENSION OF REMARKS

HON, HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by the Honorable Ezra Taft Benson, Secretary of Agriculture, entitled, "Horizons Beyond in Agriculture" before the Pacific Dairy and Poultry Association, Salt Lake City, Utah, on March 19, 1955:

THE HORIZONS BEYOND IN AGRICULTURE

I deeply appreciate this opportunity to appear before this 31st annual convention of the Pacific Dairy and Poultry Association. It is always a real pleasure for me to come home to Utah. This visit is doubly enjoyable because so many of my friends in the dairy and poultry industries are here for these sessions.

It seems to me most appropriate that you have selected as the theme for this year's convention "Horizons Beyond." Truly agriculture's horizons of today hold great promise for our farm people and, indeed, for everyone. The forward strides we have made in the broad fields of agricultural research, education, marketing, and technology are unmatched in any other nation. Output per man-hour on our farms nearly doubled in the last two decades as agriculture adopted new and vastly more efficient production methods.

Yet in some new developments, such as the application of nuclear science to farming, we have barely scratched the surface. As we add to our fast-growing fund of agricultural knowledge we become even more acutely aware of the fact that there is still so much that is not known.

It is this constant challenge of the unknown which spurs man ever onward toward these horizons beyond. And however far he travels he finds that there are still new horizons.

The future of American agriculture is closely linked to the future of the Nation itself. I find it impossible to believe that future can be anything but bright.

As all of you know, both the dairy and poultry industries have been going through a rather painful period of readjustment. In both instances, major troubles developed when production outran effective consumer demands. There is another and happier parallel. The dairy and poultry situations both have shown sharp improvement recently. Not all of our problems are behind us yet, but we are headed in the right direction—toward better balance between production and demand and toward the greater price stability which such a balance insures.

It is encouraging to note that the dairy and poultry industries have shouldered the responsibility for making the necessary production adjustments. At the same time they have done an outstanding job of expanding consumption through better merchandising and vigorous promotional campaigns. The evidence of this lies in the fact that consumption of poultry and eggs has been running at record levels while there has also been a marked upturn in the use of most dairy products.

All of this has been accomplished without Government production controls of any kind. In the case of the poultry industry, it has been done without resort to price supports. In fact, the poultry industry rejected Government assistance programs last fall even when prices were at their lowest levels. The wisdom of this decision is confirmed, I believe, by the rapid improvement in the overall situation.

The dairy picture is immeasurably better today than it was a year ago. Here again I believe this improvement has largely come about because both the industry and the Government chose to face the facts. An unrealistic level of price support was adjusted almost 1 year ago. Despite some direpredictions that this move would bankrupt dairymen, there is enough evidence now at hand to prove that the action was fundamentally sound and in the real long-term interests of the industry.

Sometimes we have to look back to see how far we have come. A year ago the Government was getting into the dairy business at an unprecedented rate. Milk production was booming to new seasonal highs month after month. Consumption, particularly of butter, was moving lower, while huge surpluses

of dairy products continued to pile up in Government hands.

All of this was happening under a program of price supports at 90 percent of parity. Obviously the continuation of the very program which had helped to get us into this situation would never get us out of it. Supports at 75 percent of parity for the new marketing year which began last April 1 were set in accordance with the law which directs the Secretary of Agriculture to fix supports at a level that will assure an adequate supply of dairy products. This adjustment was designed to help to close the gap between production and consumption of dairy products.

Now, nearly 1 year later, we are in position to evaluate the results. To me the most significant thing is that dairy production has leveled off, while consumption has been steadily increasing. Government purchase of dairy products are down sharply and, at the same time, we have been able to move large quantities of previously acquired surpluses into channels of consumption.

Milk production in January and again in February of 1955 was slightly below that for the same 2 months of 1954. This was the first time since 1952 that January and February milk production had failed to show an increase over the previous year. Milk production in December of 1954 was also below the corresponding month for a year earlier. This leveling off indicates that milk production during the current year will be about the same as in 1954—around 123.5 billion pounds.

This conclusion gains further support from the fact that the number of milk cows 2 years old and over on January 1, 1955, was 1 percent less than for a year earlier. Numbers of young stock, however, remain large in relation to numbers of mature cows, with heifer calves showing a 1 percent increase over the preceding year on January 1, 1955. More milk cows were culled from the Nation's dairy herds during 1954 than in any year since 1948-both in actual numbers and in relation to the number of cows on farms. This is concrete evidence that the intensive culling program sponsored by the industry, with the cooperation of the Department of Agriculture, has strongly taken hold.

Now that we are on the right road, I sincerely hope that dairymen will not relax in this campaign to rid their herds of poor producing cows—the "boarders" which do not pay their keep. Even though average milk production per cow reached an all-time record of 5,512 pounds per year in 1954, this figure falls far short of the output achieved on our better dairy farms. We still have far to many 3,000-, 4,000-, and even 5,000-pound producers which place a heavy drain upon the farmer's resources and time and which contribute nothing to his profits. This same uneconomic production, however, is a major cause of our surplus-milk problem.

In the last two decades, average milk pro-

In the last two decades, average milk production per cow has increased by about 1,500 pounds—more than one-third. The increase has been substantially greater for cows under test in dairy herd improvement associations. With present known breeding, feeding, and handling techniques, the average milk output per cow could conceivably be doubled over a period of time. Right now California dairy cows are producing well over 50 percent more milk, on an average, than those for the Nation as a whole.

No one can say just what the new developments of tomorrow will add to efficiency in dairying. But certainly there are "horizons beyond." I am convinced that the great gains in the dairy industry tomorrow will come, as they have in the past, through research and education and improved production and marketing methods.

Although milk production today has leveled off at a high point, we are closing the gap between output and consumption. And I know that all of you in this great industry would infinitely prefer to see a balance at-

tained in this way, rather than through a distasteful system of production controls which would have been inevitable had price Eupports been continued at unrealistic levels.

Per capita consumption of fluid milk during 1954 increased by 2 pounds over the preceding year. We anticipate a further upturn in 1955. Coupled with this is the fact that the population of the United States is increasing by about 2.7 million persons each year. This annual growth alone supplies a new market for nearly 2 billion pounds of milk every year.

The special school lunch program, now operating in all of the 48 States and the District of Columbia, has been especially helpful in expanding milk consumption where it is most needed—among our younger people. By mid-February nearly 46,000 of the 160,000 schools in the Nation had been approved for Participation in this project and this total will increase further. Preliminary reports show that schools operating under the program had increased milk use by about 58 percent over normal monthly consumption. In some States the increase was more than 100 percent-indicating what I have long believed: that if milk is made easily available, people will drink it in much larger quan-

We have yet to see the full effects of the vigorous promotional campaign which the dairly industry launched last year in an allout effort to spur increased consumption of the healthful dairy products. Through every advertising medium the public is being told the story of milk—that it not only tastes good but that it is good. Here we have had the finest beverage in the world, but until recently we haven't been trying to sell it. Instead we have been depending upon the consumer to acquaint himself with its merits. In this competitive age, the market goes to the man who creates a demand for his product and then aggressively merchandises it. I am happy to see the dairy industry adopting some of the techniques of its competitors.

Until a few months ago, except at certain hours in the cafeterias, it was impossible to buy a drink of milk in the Department of Agriculture buildings in Washington. Vending machines there are now doing a thriving business. And virtually all of these sales represent additional consumption.

Only a few days ago I observed with con-Eiderable interest that milk vending machines had been installed in the cloakrooms of the House of Representatives in Washington. In those very rooms through the years the problems of the dairy industry must have been discussed upon thousands of occasions. Now Congressmen have the means of attacking the dairy surplus problem through consumption as well as legislation.

I am told that there were approximately 16,000 milk vending machines operated in the United States last year. That represents only 1 machine for every 10,000 people. In contrast there were 210,000 chewing gum mathines and 695,000 soft drink vending

machines in this country last year. Saleswise, vending machines handled \$65 million worth of coffee, \$210 million worth of candy, \$393 million worth of soft drinks, and \$690 million worth of cigarettes andget this—only a little more than \$22 million Worth of milk. Now I do not contend that milk vending machines alone are the answer to all of the dairyman's problems. But the figures I have just cited do illustrate the possibilities of market expansion in a field Which has barely been tapped by the dairy industry. Personally, I am not going to be satisfied until I read that sales of milk through mechanical vendors are approaching the totals recorded for competing beverages. We can reach this goal if we have the will to do it.

I believe most of us agree that increased consumption of fluid milk offers the best hope for a thriving, prosperous dairy indus-

We must not leave unexplored any avenue which will lead to this objective. need to know more about what can be done to increase sales through use of larger milk containers and through additional price incentives to the consumer who takes an extra quart or two at the doorstep or at the store. Perhaps we need to reexamine some of the restrictive marketing practices which bar outside milk from certain areas under arbitrary health regulations. Certainly we must constantly strive for the increased efficiency which stimulates increased milk consumption through the factor of price.

Meanwhile, per capita consumption of some other dairy products has been trending higher during the last year. Reversing the long-time downward move, butter sales during 1954 were some 5 to 6 percent higher than for the preceding year. The average American also consumed a little more cheese and nonfat dry milk last year than he did in 1953. On the other hand, consumption condensed, evaporated and dry whole milk declined to the lowest per capita rate during the postwar period. Ice cream consumption was slightly lower, too.

Nevertheless, the constantly improving balance between milk supply and demand is indicated by the fact that recent Commodity Credit Corporation purchases of dairy products have been far below those of a year ago-after being much higher in the first months of the new marketing year. During the first 11 months of the current marketing year, we bought only about half as much butter as we did during the full 1953-54 marketing year. We bought only one-third as much cheese and about threefourths as much dry milk in those 11 months as in the preceding 12 months.

Government purchases of dairy products dropped substantially by mid-summer of 1954 and the downward trend continued throughout the year. During the month of December 1954 we bought not a single pound of butter. With the flush production season ahead of us, we may reasonably expect to purchase substantial quantities of dairy products again, though at a far lower rate

than a year earlier.

For the calendar year 1954, the surplus production which found its way into Government hands in the form of various dairy products amounted to the equivalent of 9.1 billion pounds of milk-about 7.4 percent of the total production. Nevertheless, this meant that CCC became the owner of 22 percent of all creamery butter produced in the United States in 1954, 35 percent of the cheese production and 50 percent of the nonfat dry milk output. This illustrates how the Government becomes the market for processed dairy products when milk production moves up or demand moves down by only a few percentage points.

Increasing consumption of fluid milk has,

of course, resulted in reduced production of butter and cheese during recent months. As I indicated a few months age, we must continue to emphasize this approach as the only effective solution to the dairy problem.

We have made real progress in moving dairy products from CCC inventories into channels of consumption, both at home and abroad, through a variety of methods including commercial sales, welfare donations, and school-lunch programs. At the beginning of this month we had on hand 253 million pounds of butter. Seven months earlier we owned 466 million pounds of it.

Unsold cheese inventories of CCC have declined from 435 million pounds at the end of last September to 334 million at the beginning of this month. Last April we had 600 million pounds of nonfat dry milk on hand. That had been reduced to 72 million pounds by March 1. Altogether, CCC has disposed of more than 1.6 billion pounds of these products during the last 11 months.

These sales and donations involved substantial losses, in most instances. But the products were moved from storage into channels of consumption.

Pricewise the improving dairy situation is illustrated by the fact that for several months the average wholesale price received by farmers for all milk has been ranging between 84 and 86 percent of parity. Just 1 year ago, when dairy supports were still at 90 percent, the average price received by farmers for all milk was 86 percent of parity.

I am convinced that there are better days ahead for the dairy industry. The many encouraging signs unmistakably point up this fact. It would be most unwise at this juncture-when production and consumption are moving toward a balance-to increase dairy price supports by legislative action. Many of the impressive gains of the past year would be swept away almost overnight. We would only be postponing until another day the readjustment which the industry inevitably had to make—a readjustment which is now well on the way to completion

It is gratifying to me that the Nation's vast poultry industry, in which so many of you have a direct interest, is also emerging from the price problems which plagued it for many months. Despite the rapid recovery in egg and poultry prices, I would strongly urge the industry to move with some caution at this point. As was demonstrated so emphatically last year, even the broad and constantly expanding market which the industry has built will not absorb at profitable prices the entire output of eggs and poultry which existing facilities are capable of producing.

Producers must voluntarily exercise some restraint upon overexpansion and excessive production if we are to have a stable and prosperous poultry industry. We must seek to avoid the violent ups and downs which have too often characterized the egg and

poultry markets in the past.

As you know, the current upturn in egg prices began about 2 months ago at a time when production was increasing seasonally, although egg receipts at terminal markets Egg production estimates were declining. for January and February showed a 3-percent increase over a year earlier for the country as a whole. There were weather factors, perhaps, plus stronger consumer demand stemming from improving general business conditions, which tended to offset this.

Another underlying source of strength in the market-and it may be the most important one of all-is the general belief that there will be a smaller supply of eggs later this year. In each of the last 5 months, fewer pullets were started for laying-flock replacements than for the corresponding months a year earlier. As of Febuary 1, farmers indicated intentions of buying 18 percent fewer chicks for laying replacements than last year. Stronger egg prices may lead farmers to purchase more replacements than they had originally planned. This could have later repercussions.

With the number of layers on farms March I slightly above the same date for last year, egg production also may be expected to run a little higher than a year ago during the next 2 or 3 months. The rate of lay per bird is expected to be about the same as in

1954 for April and May.

Broiler prices into March continued high enough to induce increased placements. The broiler-feed price ratio in mid-February stood at 4.9, as compared with an average of 4.3 for 1954. Chick replacements and eggs set in incubators in specialized broiler areas Guring recent weeks have been almost up to the levels of a year ago. And all of us remember the broiler industry got into serious price troubles in 1954.

The Department of Agriculture has already asked turkey growers to reconsider their production plans for 1955. As you know, an 11-percent reduction in light-breed turkeys had been indicated for this year by producers. On the other hand, intentions were to produce about the same number of heavy turkeys as last year. If these plans are followed through, the total tonnage of all turkeys in 1955 would be reduced by only about 1.5 percent below the record output of 1354.

While I have expressed some concern here over what could happen to poultry and egg markets if production gets too far out of line, I realize that this entire problem is foremost in your minds, too. In similar situations in the past, the poultry industry has moved effectively to avert further over-expansion. I am confident the industry again will act with foresight and resolution.

The poultry industry has made outstanding progress in recent years. The heavy emphasis upon greater production and marketing efficiency has brought poultry and egg consumption in the United States to new record levels through the years. I firmly believe this trend will continue, as a result of these constant efforts. Great as the record of the industry has been, there are still horizons beyond.

Now I should like to turn to a matter which concerns not only the poultry and dairy industries but all of agriculture in fact, all of the people of this Nation. That is the basic question of what kind of a farm program we are to have. Shall we move forward in our efforts to establish a soundly conceived, long-range program designed to bring about better-balanced agricultural production, broader financial stability, and greater freedom for farmers? Or shall we continue the unrealistic, stopgap, emergency program of high, rigid price supports which has already demonstrated its inability to cope with the problems of a peacetime agricultural economy?

Congress clearly rejected this second approach only a few short months ago when it adopted the Agriculture Act of 1954 and voted to permit flexible price supports for the basic commodities to become effective, as scheduled, in 1955. Now the whole issue has been revived. The House Committee on Agriculture has reported favorably a bill which would, among other things, continue rigid price supports at 90 percent of parity for the basic commodities for 3 more years.

The principal argument put forward by the proponents of this measure is that it will halt the steady decline in farm income which has been underway since 1947. What they fall to mention is that this entire reduction has come about while we had rigid 90 percent supports for the basic commodities. What they are recommending, in effect, is another dose of the same medicine that has made the patient progressively sicker.

The fixed price support advocates, reinforced by labor leaders turned farm experts, are shouting from the rooftops that farm prices are being wrecked by flexible supports. It just isn't so. Not 1 bale of cotton, not 1 bushel of corn or wheat, not 1 sack of rice, not 1 pound of peanuts has yet been placed under loan or sold to the Government at less than 90 percent of parity. Plexible price supports don't become operative until the 1955 harvests—still several months away—and even then the levels of support will be unchanged for some commodities and most modest for others, in line with President Eisenhower's recommendation for gradual adjustments.

The attempt to saddle the failures of the old program upon a new one which hasn't even been tested yet is unlikely to meet with very broad acceptance among farmers who know the facts. The issues at stake are of such great importance to every farmer, however, that I believe the record must be set straight for all to see.

Flexible price supports have been a part of our bipartisan farm programs for many years. They have been endorsed at one time or another by every Secretary of Agriculture for the past 20 years and by every major farm organization. They were advocated in the platforms of both major parties during 1948 and by the then occupant of the White House.

In fact, it was from this unanimity of opinion that the Agricultural Acts of 1948 and 1949 were distilled. Both of these measures called for flexible price supports for basic commodities. The effective date of the flexible program was repeatedly postponed, however, the last time until 1955. This year we are finally scheduled to employ the flexible price support provisions which almost everybody once agreed were essential to the effective operation of a long-range, peacetime agricultural program.

For some time now, many would-be political leaders have been using high, fixed price supports as a smokescreen to cover up one indisputable fact—the fact that it was the unprecedented demands of war, together with inflation, that kept farm prices high during the 10 years following Pearl Harbor. The parity ratio averaged between 100 and 115 during those years. Actually, it was ceilings fixed by law at the top—not the 90 percent floor below—which set farm prices. Every farmer knows he would have received even more for his products during this period had there been neither ceilings nor price supports.

Mounting surpluses, increasing costs and decilning farm prices are evidence enough that high, rigid, emergency supports offer no solution to our peacetime agricultural problems. If they were the solution, there would be no problems. Even though farm prices have declined under the program which we inherited from the preceding administration, this administration is willing to assume its share of the responsibility. But let me make it very clear just what our share is.

Between February 1951 and January 1953, when this administration assumed office, the parity ratio tumbled from 113 to 94. This is a downward plunge of 19 points. Since January 1953 the parity ratio has declined from 94 to a current level of 87—a change of 7 points. It has averaged about 90 over the last 2 years.

Thus, it will be seen that nearly three-fourths of the drop in farm prices which has occurred since the Korean war peak in 1951 came under the preceding administration. So, as I have said, we are willing to assume our share of the responsibility. Let our predecessors face up to theirs.

Today it seems to me that the situation which has developed with respect to wheat pinpoints the major fallacles and contradictions of high, rigid price supports. Wheat is a most important crop not only in this area but over much of the United States. And wheat is also the Government's biggest problem in the field of price supports. Here is a commodity which actually has been supported at about 105 percent of modernized parity. And still it is in worse trouble than any other crop.

The United States had on hand for the current marketing year an all-time record supply of 1,878,000,000 bushels of wheat. At the present rate of disappearance, this unprecedented supply is enough to meet all of our domestic and export requirements for more than 2 full years.

The Commodity Credit Corporation today has investment in more than I billion bushels of wheat—660 million bushels owned outright in inventory and the rest held as security against price support loans. This involves a commitment of approximately \$2,700,000,000 of CCC funds. It represents well over one-third of the CCC funds now invested in all price support activities.

For 1955, the national wheat acreage allotment has been reduced to 55 million acres, the minimum provided by law. This compares with a 1954 allotment of 62 million acres and represents a cut of 30 percent from 1953, when no acreage allotments were in effect. Without the minimum amount provided by law, the allotment for 1955 would have been sharply below the 55 million total. In view of the record supplies of wheat on hand for this year, the formula in the law called for a national allotment of only about 19 million acres if no minimum had been provided.

The very substantial cut in our national wheat acreage creates serious operating problems for many farmers. Even after this sharp reduction for 1955, the minimum national acreage will, with average yields, produce almost as much wheat as we are now moving into domestic consumption and foreign markets in a year. Insofar as exports are concerned, we need to keep in mind that at our present level of price support, wheat shipments to foreign countries are made possible only by active programs of United States United States sales of wheat assistance abroad will involve subsidies of at least \$175 million for the current crop year.

One fact that stands out is that this Nation's carryover of wheat next July 1 will be larger than it was a year earlier despite everything we are trying to do to bring about a reduction. Although we have succeeded in boosting wheat exports somewhat during the current crop year, there are limitations upon what the world markets will take even at the Wheat Agreement price or under the new program which permits sales abroad for foreign currencies. There are legal restrictions upon selling wheat in the domestic market at less than 105 percent of parity, plus carrying charges.

With total wheat supplies increasing in spite of production controls last year, it now appears that our carryover in 1955 will approach 1 billion bushels, for a new all-time record. It is expected that CCC will own some 850 million bushels of this vast surplus. The yearly storage charges alone on this inventory, not counting interest or deterioration, will be near the \$140 million mark.

In talking about this wheat-surplus problem, we lump all wheat together—spring and winter, hard and soft, red and white, high protein and low protein. Yet farmers know there can be at least as great a difference between different types of wheat as there is between Holstein and Hereford cattle.

At a time when we have a record-breaking surplus of wheat in the United States, there is an acute shortage of durum wheat and a tight situation with respect to high-protein milling wheat. Flour has been selling at the highest prices since 1920.

Farmers in some parts of the country have been concentrating upon exceptionally high-yielding wheat, rather than upon quality wheat. Since the grain is produced for sale to the Government at a fixed, guaranteed price, rather than for conversion into bread, the sole objective is to grow as many bushels as possible on the allotted acreage.

Unrealistic price supports have brought about a sharp rise in wheat production outside the area we normally think of as the commercial wheat country. The Corn Belt has become the source of more wheat. So have the grasslands of the southern Great Plains and the dairy regions of the Northeast.

In Illinois the 1953 wheat acreage was 51 percent above the 10-year average. In Michigan it was up 46 percent. Even in New York the increase was 36 percent. One Dust Bowl county of eastern Colorado, which reported a mere 5,000 acres of wheat in 1939, had 365,-000 acres in this 1 crop by 1952 as the "suitcase" farmers and speculators moved in.

Now, farmers in the low-cost areas where most of our wheat has been produced in recent decades find themselves in the same production strait-jacket as growers in States less favorably suited to efficient wheat production. The man who has been growing

quality wheat for the market gets cut back on the same basis as the man who grows wheat for the Government loan.

I would like to see us produce wheat in the regions where it can be grown most efficiently. Many of these areas are not well adapted to the production of profitable crops other than wheat.

Wheat growers understandably are dissatisfied with the conditions which have been forced upon them under this system of high, rigid supports. Perhaps more than any other major producer group they are actively seeking a new approach to the whole problem. They want a program which will give them greater freedom, a chance to utilize more fully the potential of their land.

I am sympathetic to those wishes. cently I requested the National Agricultural Advisory Commission to review the entire wheat situation, giving special attention to possible means of expanding consumption, as well as to grades and classes of wheat and land-use programs. The study will also be directed toward the merits of production controls established on a bushel rather than an acreage basis.

I believe the flexible price support program which becomes effective with this year's harvest will help to bring wheat sup-plies and utilization into better balance. But it is going to take the time because of the mountainous surplus built up under

high, rigid supports.

Certainly agriculture has had its problems during this period of adjustment from war to a peacetime economy. Yet it is also true that we are making the changeover this time with far less hardship than farmers experienced in the years following the First World

The flexible price support provisions of the Agricultural Act of 1954 can be of real assistance in making an orderly transition from an emergency program to a permanent, peace-time farm plan. Let us not turn back the clock at this point. Instead, let us give the new program a fair chance to operate.

Let us work toward a well-balanced agriculture-one in which farmers themselves will make most of the management decisions right on their own farms. Let us seek to build a thriving farm economy in which dairymen, poultrymen, and all other seg-ments of agriculture will share fairly and fully.

Our national economy is sound and prosperous. That, in the long run, is the best guarantee of a brighter tomorrow for American agriculture.

Let us push toward those "horizons beyond."

Let us continue resolutely to work toward a stable, prosperous, and free agriculture here in this choice land which God has blessed above all others.

Who's Being Irresponsible Now?

EXTENSION OF REMARKS

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I present a letter received from Walter P. Reuther, president, UAW-CIO, accompanied by his reply to Secretary Weeks. The correspondence is self-explanatory, but I think that the membership of this House will not fail to notice a now familiar strategy of this

administration demonstrated in the past congressional election. Has the reckless tactics of the Vice President in the last campaign now carried its contagion to a member of the Cabinet? For now in the person of Mr. Weeks, Secretary of Commerce, we hear such terms as "scaremongers" and "bogeyman of automation," appellations attributed to Mr. Reuther in his efforts to bring to light a very crucial problem that only dispassionate reasoning will afford a solution. Name calling only serves to cloud the issues behind the smog of catch phrases which are designed to confuse rather than clarify.

My district is in the heart of the automobile industry. The welfare and peace of mind of my constituents, as well as the entire population of the Detroit area, lies heavily in the balance of the outcome of the labor-management negotiations that will take place in the next 2 months. I consider it a disservice to the American people for a highly placed public official to make irresponsible statements that will interfere with the orderly negotiations that must take place if we are to have industrial peace and prosperity. The careless statements of many individuals must sometimes be tolerated by ignoring them; but I feel occupants of high public office should speak in the measured language consonant with the dignity of their position.

The above-mentioned letter follows:

DETROIT, MICH., March 18, 1955. The Honorable Louis C. RABAUT, House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN RABAUT: I enclose a letter and pamphlet which I have forwarded to Mr. Sinclair Weeks. I respectfully urge that you take note of the reckless and irresponsible behavior and statements to which I refer on the part of the Sccretary of Commerce.

Such distortion of the truth on the part of a Cabinet member in an attempt to divide and disunite our people deserves Presidential and congressional attention.

I think you will agree, as I suggest to Mr. Weeks in my letter to him, as Americans we should stand together to protect and respect our right to differ but our differences should be based on facts, not fancy; on knowledge, not prejudice.

Sincercly yours,

WALTER P. REUTHER, President, UAW-CIO.

DETROIT, MICH., March 11, 1955. The Honorable Sinclair Weeks, Secretary of Commerce, Washington, D.C.

DEAR SIR: Your remarks on automation in a recent speech in New York are a startling and shocking demonstration of reckless irresponsibility on the part of a Cabinet officer.

In your references to "scaremongers" who are trying to frighten automobile workers with the "bogeyman of automation," you spoke either in ignorance of the facts or with willful distortion of the facts, as other reckless propagandists, with less stature than your position gives you, have done before.

As a Cabinet officer, it is your responsibility to get the facts and, having got them, to state them accurately and truthfully. is also the responsibility of a public official of your rank to devote his energies to pulling the people of our country together on the basis of a sound, constructive program of united action to meet and overcome the economic, social, and political problems that confront Americans and the free people of

the world generally. The objective results of your uninformed or untruthful remarks on attitudes toward automation are to divide our people into warring economic

While you did not mention the UAW-CIO or any of its officers by name, it is obvious you were referring to us because the distortions you uttered coincide exactly with the false propaganda which has emanated from other sources.

The truth about our position on automation was and is available to you from Government as well as from union sources.

Let me quote to you certain passages from an introduction which I wrote to a recent UAW-CIO publication on automation:

"Automation must be met sanely and constructively so that the miracle of mass production—and the ever greater economic abundance made possible by automation can find expression in the lives of people through improved economic security and a fuller share of happiness and human dignity.

"Sensibly, rationally, scientifically we intend to harness this radical new force in our lives, using its potential to produce an era in which well-being, justice, and peace will be the universal possession of all mankind.

"Historically, the problems of mankind have been set in conflict between people, groups, and nations each engaged in a struggle to divide up economic scarcity. We have had a world divided between the haves and the have-nots-those who were fed and those who were starving. Now science and technology have at last given us the tools of economic abundance, and we are confronted no longer with the need to struggle to divide up scarcity.

"Economic abundance is now within our grasp if we but have the good sense to use our resources and technology, fully and effectively, within a framework of economic policies that are morally right and socially

responsible.

The UAW-CIO and its 1,500,000 members welcome automation, technological progress, and the promise of the peacetime use of the atom. We offer our cooperation to men and women of good will in all walks of life in a common search for policies and programs within the structure of our free society that will insure that greater technological progress will result in greater human progress.
"We in the UAW-CIO believe that we can

solve the problems of UAW-CIO members as wage earners only as we work with other people in our free society in the common effort to find answers to the problems of all the people in our country-and ultimately in the world, for only as we learn to work with people everywhere in finding answers to the problems of the world community can we find answers to our own. As citizens of the stomic age, we have the tools of abundance at our disposal. We are confident that the free people of America, in cooperation with freemen everywhere, will demonstrate the good sense and courage to use the tools of abundance for constructive and moral purposes."

For your convenience, I am enclosing a copy of the publication from which these

quotations are taken.

I would also like to refer you to the transcript of both my prepared statement and my oral testimony before the Agriculture Committee of the House of Representatives on February 25, and also my prepared statement and my oral testimony before the Joint Economic Committee of Congress on February 10, where I elaborated in greater detail on the position of our organization on this subject. I am sure a transcript is available to you. One would think that a Cabinet officer would avail himself of the information compiled by congressional hearings before speaking on matters covered by those hearings. In fact, it would seem obvious that an official with the rank of Cabinet member would find it incumbent upon himself to check all possible sources of information and find out what is going on in particular areas of American life before making public pronouncements that carry the weight and authority of that high office.

The difference, Mr. Secretary, between you, like other critics who have misrepresented our position, and us in the UAW-CIO, is that you are trying to run away from the problems attendant upon automation, trying to sweep them out of sight under the rug, while we are stepping up to our responsibilities by exploring all the problems and possibilities and, within our abilities, taking positive action to assure the maximum social good.

maximum social good.

It is our considered judgment that you owe to the UAW-CIO and to the American people a public apology for your intemperate

and untruthful statements.

Let us as Americans stand together in fully protecting and respecting the right to differ. Let us act responsibly and base our differences upon facts, not fancy; upon knowledge, not prejudice.

Sincerely,

Walter P. Reuther,

President, International UAW-CIO.

Newsletter

EXTENSION OF REMARKS

HON, ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I enclose herewith a newsletter sent by me and published in the East Side News, a weekly newspaper published in my district:

Washington is a busy place these days. There is, of course, always the important and sometimes complex program of legislative action. There is also always and inevitably the clash of party politics. And as background to both, there is the still tense international situation and the concern that many of us feel about our internal affairs, particularly our internal economy.

One of the more ironic indications of party politics was the recent publication of the Yalta papers. There was a great deal of excitement about it, and a sly injection of political motives was apparent. The way I see it, the Republican administration once again yielded to the pressure of its extremist faction in the hope that the revelation of the Yalta diplomatic papers would be good grist for the political mill; and I am sorry to have to say that I think they did it without any regard to the effect of the publication of the papers upon our delicate international relations.

In ail, I think their plan will backfire. There is nothing in the published correspondence that has not already been general public knowledge. There is nothing to show that this is anything more than the hind-sight wisdom of Monday morning quarterbacks.

I don't think the American people can be fooled. Little by little, I am sure, they will realize that what the American delegation, headed by President Roosevelt, tried to do above all was to act on the unanimously given advice of the President's millary advisers: That, at the time of the conference, there was no certainty of the effectiveness of superior weapons such as the atom bomb, that the invasion and defeat of Japan was likely to cost hundreds of

thousands of American lives, and that it was, therefore, in the American interest to work out some deal that would save those lives. Surely it is ironical that an American President should be attacked posthumously for having done his level best to save American lives and to spare the agonies of hundreds of thousands of wounded soldiers, sallors, marines, and aviators, and the torments of their mothers, wives, sweethearts, and families.

If there were less of politics in our international affairs, the publication of the Yalta papers, no matter what is revealed by hind-sight, should have evoked a solemn tribute to the American representatives for their concern with American lives.

One of the early acts of the Congress this session was to increase the pay of Federal judges, Senators, and Congressmen, and a few others in the Federal service. Here again is a case where there has been something of an artificial outcry, but the commonsense of the American voters will no doubt prevail in the long run. They realize, of course, that no matter how big American industry is, there is no business, none in the whole country, that is as important as the business of our Federal Government, and that its compensation must be somewhat in line with the payments in general industrial and mercantile life. No conscientious Congressman serves his constituency only because of congressional pay. But it would be an act of folly to penalize those public servants by compensation that is out of line with general practice. The plain fact is that every committee of inquiry has recognized the inadequacy of Federal pay and has recom-mended a substantial increase. Without such fair compensation the tendency would be to have as representatives only men of wealth who could afford the luxury of congressional service. And nothing could be more destructive of the American purpose to avoid rule by class than a procedure that would automatically make the men of wealth the only representatives of the peo-ple in the United States Congress.

Meanwhile, there is much that is still in the process of public discussion. The Democratic proposal for a \$20 reduction to the small individual taxpayer was completely in the spirit of the Democratic Party's concern for the individual wage earner, small-business man, and farmer, as against the Republican Party's concern last year for the big corporation and the fortunate stockholder.

The senatorial inquiry into the stock market is another indication of the same broad concern for the general public. The last time that Wall Street was looked into was after the event when a crash had already impoverished millions of Americans. The Democratic purpose was to look into the situation in advance so as to have safeguards against such calamity.

The McCarran Act continues to plague us, as it should. A recent television program under the auspices of Edward Murrow brought out again the iniquities of that legislation. With these in mind, I introduced a bill to wipe the slate clean, to return to the state of affairs before the McCarran Act was passed, and to codify our immigration and naturalization procedures along sound and fair lines.

One thing must be clear in this regard: That the national origins quotas, used as the basis for our immigration, are indefensible. Whatever else may be valid about the bill, this aspect, basing our immigration on an archaic and racially minded national origins quota, must go. They are an affront to scores of millions of American citizens. I am sure that as they express themselves a change will be made, and I, for one, am ready to fight for such a change.

Recently I also introduced into the Con-GRESSIONAL RECORD a statement expressing my concern at a report published in the

New York Times that the United States might return the Nazi archives before a full study will have been made. In my remarks in Congress I said—and I stand by—the following:

I am, frankly, very much concerned with the subject with which that story deals. It seems to me that, if what it reports is accurate, it will mean that the United States will give up an invaluable resource in our knowledge of totalitarian conquest. If so, our present efforts to combat another version of totalitarianism, that of international communism, will be seriously handicapped and our intentions thwarted.

The German archives contain, no doubt, material that can shed a powerful light on the goals, methods, and processes of the Nazi conquest of one country, Germany; material about the unutterable plans for the destruction of what they called inferior people, first in their own land and then in neighboring countries. It, no doubt, sheds light on their Machiavellian propaganda techniques, including those by which they contemplated the division of our own country and the weakening of our material and moral strength to resist totalitarianism. Such material is of incalculable historical importance. It must not be jeopardized or lost to us by its casual return to a country where its nationalist forces may be disposed to destroy the full record or to conceal it forever from the scrutiny of the civilized world.

This record must be kept and, in due course, be made available to American scholarship as the all-important source material by which we can learn from the dread recent past and be strengthened by that knowledge to deal with problems that we may well have to meet in the imminent or far future.

I believe this subject is one that ought to be of great concern to all of us. I for one mean to explore it fully so that no step will be taken that will prevent American scholars and historians, the American universities, and the American people as a whole from having access to data that is so important for our understanding of recent world events, and so essential for our own strength in any trials that may lie ahead.

Dinosaur National Monument

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. O'HARA of Illinois. Mr. Speaker, in the district in Illinois which I have the honor to represent there is a keen sense of awareness of the danger now facing our superb national park system. My mail is heavy with letters from my constituents protesting legislative action by this Congress that would lead to the destruction of the Dinosaur National Monument. At the suggestion of Kenneth C. Sears, professor of law at the University of Chicago and nationally renowned as educator and author, I am extending my remarks to include an article by John B. Oakes in the New York Times of March 6, 1955. Those of my colleagues, if any, who are not acquainted with the high standing of Mr. Sears, I refer to page 2380 of volume 28 of Who's Who in America.

The article by Mr. Oakes follows:

CONSERVATION: SAVING WETLANDS—IMPOR-TANCE IS STRESSED OF PRESERVING MANY SWAMPS AND MARSHES

RENEW DINOSAUR FIGHT

Of all the unwise and unnecessary governmentally sponsored schemes to destroy an irreplaceable natural resource, the proposal to build Echo Park Dam inside Dinosaur National Monument in northwestern Colorado is—as readers of this column are well aware—the No. 1 national threat. The Upper Colorado River storage project—a billion-dollar baby of extremely doubtful economic value which includes the controversial dam and for which the entire Nation is expected to pay—was turned down in the last Congress. It is coming forward again under a heavy head of steam.

The Department of the Interior, which is fighting hard for the project with strong support of Members of Congress from the immediately affected areas, has produced evaporation figures showing the superiority of Echo Park Dam over proposed alternatives. But the figures have repeatedly been shown to be erroneous, and have had to be scaled down by 90 percent, so that the differential now-even according to the Bureau of Reclamation's own questionable figures—is relatively slight. Probably the most effective conservation group in this battle has been the Sierra Club, of California (1050 Mills Tower, San Francisco). Its president, Richard M. Leonard, has pointed out in a recent statement the fallacy of the argument now being presented by proponents of the dam that it would actually improve the recreational if not the scenic potentialities of the Dinosaur National Monument. Mr. Leonard

"The reservoir behind Echo Park Dam would be a vast, unslightly, fluctuating reservoir which would be full only once every 30 or 40 years, drawn down to dead-storage level in the same period, and fluctuating between those levels the rest of the time."

Low-water hazards

"Horizontally, the drawback at periods of low water would be as much as 25 miles on the Green River arm of the reservoir and 13 miles on the Yampa arm. This area would be the primary deposition zone for silt, sand, and clay; it would be ooze when wet and cracked mud when dry. About 34,000 acres of stained, drowned, and eroded landscape would be periodically exhumed.

"No permanent vegetation would grow within the fluctuation zone. Fish and wildlife would suffer accordingly. The bottom lands and river shore which now constitute a natural setting would be permanently

obliterated.

"It is not necessary to guess about the aftermath of an Echo Park Dam. The situation at Lake Mead, where progressively new low-level records are being set since the one time (1941) it nearly filled, speak for themselves.

Last year, Congress was asked for \$128,000 to adapt beach development there to the retreating lake in which growth of harmful bacteria required closing some beaches. The lowdown then was 88 feet. It is now 120 and is dropping toward a predicted 150 feet. Some lakeshore development has had to be abandoned. Silt averaging about 200 feet deep extends the 40-mile length of oncestriking lower Granite Gorge.

"The Secretary of the Interior has said: What we have done at Lake Mead and in the Great Smokies is what we have in mind for

Dinosaur.'

On the desirability of subsidizing reclamation projects in this area, Mr. Leonard Observes:

"Whether additional farm lands should be brought under irrigation at the average milehigh, short growing season elevations of the upper basin States at an estimated cost ranging from \$500 to \$2,700 per acre for get-

ting water on the land is a question for the agricultural experts to answer."

Productivity figure

"Dr. Paul B. Sears, president-elect of the American Association for the Advancement of Science, in a recent study indicated that the productivity of millions of acres of land east of the Rockies could be doubled at a cost of less than \$30 per acre.

"Can the American people afford to bring into production relatively poor, agricultural lands at a cost as high as \$2,700 per acre when the same effect can be produced on other lands for \$30 per acre?

"Do the American people want to do this at the price of losing one of the most beautiful units of their superb national park system? We do not think the people will permit this if they know the facts. That is why we are asking conservationists all over the country to jump into this fight as never before to prevent the inclusion of Echo Park Dam in the upper Colorado River project."

Isthmian Canal Policy of the United States—Documentation

EXTENSION OF REMARKS

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. THOMPSON of Texas. Mr. Speaker, since the modification, by order of the Secretary of War—now Army—in May 1942 of the additional facilities for the Panama Canal authorized under Public Law 391, 76th Congress, approved August 11, 1939—Fifty-third Statutes at Large, page 1409—all construction toward the modernization of that waterway has been in abeyance. Meanwhile, the broader problem of Isthmian Canal policy has become a matter of a growing public interest and congressional concern.

Discussion of the entire question of interoceanic canals received a great impetus on December 1, 1947, when the President transmitted to the Congress a report of the Governor of the Panama Canal—now Canal Zone—under Public Law 280, 79th Congress. This report recommended only the so-called sea-level project for major canal construction at Panama.

Significantly, the report was forwarded without Presidential approval, comment or recommendation. The Congress took no action thereon and the report was not published. Congressional leaders, however, recognized the issues presented by its recommendations as affecting policies of the highest national and international importance, with grave implications for the future welfare of the United States.

The first step in the congressional consideration of the canal problem was the passage on February 28, 1949, of House Resolution 44, 81st Congress, authorizing a full and complete study by the Committee on Merchant Marine and Fisheries of the financial operation of the Panama Canal.

For this task, its distinguished chairman, the late Honorable Schuyler Otis

Bland, of Virginia, designated a special subcommittee, of which I was chairman and Representatives Tom B. Fugate, of Virginia, and Edward T. Miller, of Maryland, were members.

After an extended investigation, which included numerous consultations with officials of the Panama Canal, Army, Navy, and merchant marine, and a visitation in the Canal Zone, April 18 to 22, 1949, it became apparent to the subcommittee that the adequate resolution of the canal question could not be limited to statistical studies but would ultimately require consideration of all phases of Isthmian Canal policy. Its studies and recommendations eventually led to the reorganization of the entire canal enterprise under Public Law 841, 81st Congress—the first basic improvement in the administrative setup in the Canal Zone since the Panama Canal Act of 1912.

The subcommittee realized, however, that this administrative improvement was only preliminary to the resolution of more fundamental elements in Isthmian Canal policy that still remain to be redetermined. As an aid in that direction, I prepared a selected bibliography on this policy, which was published in the Congressional Record—81st Congress, 1st session, volume 95, part 16, August 25, 1949, page A5580. The subsequent publication of much additional information requires that this list be revised.

First in importance are the writings of recognized authorities on the Panama Canal. Among these are:

Abbot, Henry L.: Problems of the Panama Canal (2d ed.). New York: MacMillan Co.; 1907.

DuVal, Miles P.:

Cadiz to Cathay: The Long Diplomatic Struggle for the Panama Canal (2d ed.). Stanford University Press, 1947.

And the Mountains Will Move: The Story of the Building of the Panama Canal. Stanford University Press, 1947.

The Marine Operating Problems, Panama Canal, and the Solution. American Society of Civil Engineers. Proceedings, volume 73 (February 1947), page 161; Transactions, volume 114 (1949), page 558.

Goethals, George W., et al. The Panama Canal: An Engineering Treatise. New York: McGraw-Hill Co., 1916 (2 volumes.).

Johnson, Emory R.: The Panama Canal, New York: D. Appleton & Co., 1916.

Sibert, William L. and John F. Stevens: The Construction of the Panama Canal, New York: D. Appleton & Co., 1915.

The great constructive engineering contributions of General Abbot, Chairman, 1907, and chief engineer, 1905–07; John F. Stevens, of the Isthmian Canal Commission; General Sibert, Chairman and chief engineer, 1907–14; and first Governor of the Panama Canal, 1914–16, George W. Goethals; the well-known historical and marine operational studies of Captain DuVal; and the original and fundamental economic studies of interoceanic commerce of Prof. Emory R. Johnson, entitle the writings of these authorities to universal consideration by both professional interests and the general public.

The principal governmental documentation of the Panama Canal, 1901 to 1954, is as follows:

LAWS AUTHORIZING ACQUISITION OF CANAL ZONE, CONSTRUCTION AND OPERATION, OF THE PAN-AMA CANAL, 1902-12

Act to provide for the construction of a canal connecting the waters of the Atlantic and Pacific Oceans. Approved June 28, 1902 (Spooner Act).

Act to provide for construction of a lock canal connecting the waters of the Atlantic and Pacific Oceans, and the method of construction. Approved June 29, 1906.

Act to provide for the opening, maintenance, protection, and operation of the Panama Canal, and the sanitation and government of the Canal Zone. Approved August 24, 1912 (Panama Canal Act).

CANAL TREATIES AND CONVENTIONS, 1901-36

Treaty between the United States and Great Britain to facilitate the construction of a ship canal of November 18, 1901 (Hay-Pauncefote Treaty).

Treaty between the United States and the Republic of Panama of November 18, 1903

(Hay-Bunau-Varilla Treaty).

Boundary convention between the United States and Republic of Panama of September 2. 1914 (Price-Lefevre convention).

Treaty between the United States and Republic of Colombia of April 6, 1914, proclaimed March 30, 1922 (Thomson-Urrutia

General treaty of friendship and cooperation between the United States and Republic of Panama of March 2, 1936, proclaimed July 27, 1939 (Hull-Alfaro Treaty).

United States Army Interoceanic Canal Board, investigation and survey, 1929-31: Public Resolution 99 (S. J. Res. 117), 70th Congress. Approved March 2, 1921.

the Chief of Engineers and United States Army Interoceanic Canal Board, 1931 (H. Doc. 139, 72d Cong.).

Third locks project for increasing canal facilities, 1939-42: Public Resolution 85 (H. J. Res. 412), 74th Congress, authorizing and directing the Governor of the Panama Canal to investigate the means of increasing its capacity for future needs of interoceanic shipping. Approved May 1, 1936.

Report on Panama Canal for future needs of interoceanic shipping (H. Doc. 210, 76th

Cong.).

House Committee on Merchant Marine and Pisheries: Hearings on H. R. 180, H. R. 201, H. R. 202, H. R. 2667, and House Joint Resolution 112, 76th Congress, on March 14, 15, and 16, 1939, concerning additional interoceanic canal facilities.

Senate Committee on Interoceanic Canals: Hearings on S. 2229 and H. R. 5129, 76th Congress, on July 20 and August 3, 1939, concerning additional facilities for the Panama Canal Zone.

Public Law 391, 76th Congress, authorizing construction of additional facilities for the Panama Canal substantially in accordance with plans set forth in a report of the Governor dated February 24, 1939, and published as House Document 210, 76th Congress. Approved August 11, 1939.

Secretary of War's letter of May 23, 1942, directing modification (suspension) of third

locks project.

ISTHMIAN CANAL STUDIES UNDER PUBLIC LAW 280, 79TH CONGRESS, 1946-47

House Committee on Merchant Marine and Fisheries: Executive hearings on H. R. 4480, 79th Congress, on November 15, 1945, concerning investigation of additional Panama Canal facilities.

House report on study of additional Panama Canal facilities, November 16, 1945 (H. Rept. 1213, 79th Cong.).

Senate report on study of additional Panama Canal facilities, December 19, 1943 (S. Rept. 862, 79th Cong.).

Public Law 280, 79th Congress, authorizing the Governor of the Panama Canal to investigate the means of increasing its capacity and security to meet future needs of interoceanic commerce and national defense. Approved December 28, 1945.

House Resolution 36, 80th Congress, passed February 10, 1947, authorizing continuation of investigation by Committee on Merchant Marine and Fisheries begun under House Resolution 281, 77th Congress.

House Committee on Merchant Marine and Fisheries: Report on Operations and Future of Panama Canal, July 2, 1947 (H. Rept. 781,

80th Cong.).

Report of the Governor of the Panama Canal under Public Law 280, 79th Congress, transmitted by the President to the Congress, December 1, 1947, without Persidential approval, comment, or recommendation.

INVESTIGATION OF FINANCIAL OPERATIONS AND REORGANIZATION, PANAMA CANAL, 1949-50

House Resolution 44, 81st Congress, passed February 28, 1949, authorizing an investigation of the financial operations of the Panama Canal by the Committee on Merchant Marine and Fisheries, and submission of a report by June 30, 1949.

House Resolution 337, 81st Congress, extending time for submission of the report under House Resolution 44 to January 31,

House Committee on Merchant Marine and Fisheries: Hearings before Special Subcommittee To Investigate Panama Canal Tolls, under House Resolution 44, 81st Congress on March 14, April 6 and 19, May 23, and June 6 and 14, 1949.

House Committee on Merchant Marine and Fisheries:

Interim Report on Investigation of Panama Canal Tolls, August 23, 1949 (H. Rept. 1304, 81st Cong.).

Second Interim Report, March 2, 1950

(H. Rept. 1728, 81st Cong.).
Third Interim Report, August 25, 1950

(H. Rept. 2993, 81st Cong.).

President of the United States: Report and Recommendations on Organization and Operation of Panama Canal and Panama Railroad, January 31, 1950 (H. Doc. 460, 81st Congress).

House Committee on Merchant Marine and Fisheries: Report on Reconstitution of Panama Canal, August 16, 1950 (H. Rept. 2935,

81st Congress).

Senate Committee on Armed Services. Report on Reconstitution of Panama Canal, September 8, 1950 (S. Rept. 2531, 81st Congress).

Public Law 841, 81st Congress, establishing the Panama Canal Company and Canal Zone government, approved September 26, 1950 (64 Stat. 1038).

OPERATION OF PANAMA CANAL UNDER CORPORATE ORGANIZATION, 1951-54

Comptroller General of the United States: Audit report. Fiscal year, 1952 (H. Doc. 207, 83d Congress).

Comptroller General of the United States: Audit report. Fiscal year, 1953 (H. Doc. 473, 83d Congress).

Committee on Merchant Marine and Fisherles: Hearings on execution of Public Law 841, 81st Congress, June 9, 14, 18, and 28, July 6-7, 1954.

House Committee on Merchant Marine and Fisheries: Interim Report on Operation of the Panama Canal under Public Law 841, 81st Congress, August 4, 1954. Congressonal RECORD (83d Cong., 2d sess.), volume 100, No. 149 (August 4, 1954), page A5766.

The principal articles published since 1945 that are applicable or pertinent to the Panama Canal specifically, interoceanic canals generally, and other aspects of Isthmian Canal policy, some of which have been included in extensions of remarks of distinguished Members of Congress, are listed in a form convenient for reference, as follows:

ISTHMIAN CANAL POLICY

ALLEN, Hon. JOHN J., JR .:

Trans-Isthmian Canal. Extension of remarks quoting an editorial in Marine Progress, February 1951. CONGRESSIONAL RECORD (82d Cong., 1st sess.), volume 97, part 12 (March 19, 1951), page A1526.

Panama Canal. Extension of quoting an article by Capt. Frederick L. Oliver in Christian Science Monitor (Atlantic edition), November 26, 1952, CONGRESSIONAL RECORD (83d Cong., 1st sess.), volume 99, part 9 (February 12, 1953), page A605.

Bennett, Ira E .:

Panama Canal Must Remain American. National Republic (Washington), XL (June 1952), 17.

Same. Congressional Record (83d Cong., 1st sess.), volume 99, part 9 (March 2, 1953), page A1006.

Panama Canal: Today and Tomorrow. National Republic, XLI (August 1953), page 15.

Same. CONGRESSIONAL RECORD (83d Cong., 1st sess.), volume 99, part 12 (July 30, 1953), page A4857.

Bland, Hon. Schuyler Otls: The Panama Canal: Operations or Engineering? Extension of remarks quoting an article by Arthur Stanley Riggs in the USNI Proceedings, December 1947. CONGRESSIONAL RECORD (80th Cong., 2c. sess.), volume 94, part 9 (January 6, 1948), page A19.

Bowles, James T. B., et al.:

The Panama Canal Problem: A Memorandum to the Members of the Congress. Hope-William R. McCann, consulting Va., engineer, 1954.

Same. Civil Engineering, volume 24 (July 1954), page 460.

Same. Concressional Record (83d Cong., 2d sess.), volume 100, No. 79 (April 29, 1954), page 5491, and No. 154 (August 10, 1954), page A5912.

Bradley, Hon. Willis W .:

Let's Have an Interoceanic Canals Commission. Extension of remarks quoting a resolution of the American Coalition. Con-GRESSIONAL RECORD (80th Cong., 2d sess.), volume 94, part 9 (January 27, 1948), page A451.

The Panama Canal Question—Bibliographical List. Congressional Record Cong., 2d sess.), volume 94, par. 11 (June 15, 1948), page A3890. DuVal, Capt. Miles P.:

The Interoceanic Canals Problem Address before the Explorers' Club of New York, November 13, 1951. CONGRESSIONAL RECORD (82d Cong., 2d sess.), volume 98, part 8 (January 15, 1952), page A163.

Summary of same. The Retired Officer (Washington, D. C.), volume 8 (January-

February 1952), page 10.

Isthmian Canal Policy-An Evaluation. United States Naval Institute Proceedings (Annapolis), volume 81 (March 1955), page 263.

Freeland, Stephen L.: New Plans for Panama. Popular Science (New York), volume

151 (July 1947), page 66.

Fugate, Hon. Tom B.: Panama Canal Question. Extension of remarks quoting an editorial in the National Bulletin of the Military Order of the World Wars, September 1950. CONGRESSIONAL RECORD (81st Cong., 2d sess.), volume 96, part 17 (September 19, 1950), page A6653.

Godsoe, Charles H., editor:

A Panama Canal Commission. Marine Progress (New York), volume 18 (April 1950). page 6.

Trans-Isthmian Canal. Marine Progress (New York), volume 19 (February 1951), page 9.

Same. CONGRESSIONAL RECORD (82d Cong., 1st sess.), volume 97, part 12 (March 19, 1951), page A1526.

Harding, Earl:

Will Panama Be Next? Economic Council Letter 341, August 15, 1954. New York. National Economic Council, Inc., 1954.

Same. CONGRESSIONAL RECORD (83d Cong., 2d sess.), volume 100, No. 163 (August 20, 1954), page A6236.

Hobbs, William H .: The Problem of a New Trans-Isthmian Canal. USNI. Proceedings

(Annapolis), volume 76 (February 1950), page 129.

KEOGH. HON. EUGENE J .:

Panama Canal Construction Engineers Favor Interoceanic Canals Commission. Address quoting memorandum to the Members of Congress transmitted by Consulting Engineer William R. McCann, March 24, 1954. CONGRESSIONAL RECORD (83d Cong., 2d sess.). volume 100, No. 79 (April 29, 1954), page 5491. - Panama Canal: Today and Tomorrow. Extension of remarks quoting an article by Ira E. Bennett in National Republic, August 1953. CONGRESSIONAL RECORD (83d Cong., 1st sess.), volume 99, part 12 (July 30, 1953), page A4857

- The Panama Canal Must Remain American. Extension of remarks quoting an article by Ira E. Bennett in National Republic, June 1952. Congressional Record (83d Cong., 1st sess.), volume 99, part 9 (Mar.

2, 1953), page A1006. Little, Captain H. H.:

Let Us Build the Best Canal at Panama. American Society of Naval Engineers Journal (Washington, D. C.), volume 58 (November 1946), page 560.

Same. Marine News (New York), XXXIV

(March 1948), 21.

Little, H. H., Arthur Stanley Riggs, and E. B. Small .

Panama Canal: Operations or Engineering?—Discussion. USNI proceedings (Annapolis), volume 74 (July 1948), page 894.

MARTIN, Hon. THOMAS E .:

An Interoceanic Canals Commission, the Best Solution of Panama Canal Problem. Extension of remarks commenting on a news story by Jules Dubois in the Chicago Tribune. June 13, 1951. CONGRESSIONAL RECORD (82d Cong., 1st sess.), volume 97, part 14 (July 18, 1951), page A4480.

Oliver, Captain Frederick L .:

Panama Canal Seeks Ear of Congress. Christian Science Monitor (Boston), (Atlantic ed.), November 26, 1952, page 16.

Same. CONGRESSIONAL RECORD (83d Cong., 1st sess.), volume 99, part 9 (Feb. 12, 1953), Dage A605

Modernized Canal Put Off. Christian Science Monitor (Atlantic ed.), September 3, 1954, page 10, columns 6-8.

Panama Canal Could Be Improved; We Don't Need a Brand New One. Editorial. Saturday Evening Post (Philadelphia, volume 225 (Mar. 7, 1953), page 12.

Same. Congressional Record (83d Cong., 1st sess.), volume 99, part 9 (Mar. 5, 1953),

page A1102.

Panama Canal Question (editorial). Military Order of the World Wars National Bulletin (Washington, D. C.), XXXI (Sept. 1950), 4.

Same. CONGRESSIONAL RECORD (81st Cong., 2d sess.), volume 96, part 17 (Sept. 19, 1950). Dage A6653

Riggs, Arthur Stanley:

The Panama Canal: Operations or Engineering? USNI proceedings (Annapolis), volume 73 (December 1947), page 1455.

Same. CONGRESSIONAL RECORD (80th Cong., 2d sess.), volume 94, part 9 (January 6,

1948), page A19.

SMITH, Hon. LAWRENCE H: Panama Canal: A Much Neglected Waterway. Extension of remarks quoting a memorandum to the Congress published in Civil Engineering, July 1954. CONGRESSIONAL RECORD (83d Cong., 2d sess.), volume 100, No. 154 (August 10, 1954), page A5912.

Thatcher, Hon. Maurice H: Panama Canal. Remarks introducing Hon. Willis W. Bradley before the Engineers Club of Washington, D. C., February 24, 1949. CONGRESSIONAL RECORD (81st Cong., 1st sess.), volume 95, RECORD (81st Cong., 1st sess.), volupart 12 (March 9 1949), page A1304.

THOMPSON, HOD. CLARK W:

Mr. Speaker, as emphasized in the first report of the Special Subcommittee on the Panama Canal under House Resolution 44, 81st Congress, House report 1304, the history of that waterway has been featured by a series of crises. These, at times, have required vigorous interventions by the Congress and the President. On those occasions, the Government had the benefit of advice by independent canal commissions not dominated by routine administrative agencies. The Panama Canal is now in another critical period in which the toll question and the physical form of the future canal are definitely linked.

In line with historical precedent and to provide the Congress with the best means for obtaining disinterested advice on the gravely important questions of Isthmian Canal policy, Representative THOMAS E. MARTIN-now junior Senator from Iowa-and I introduced or supported measures in both the 82d and 83d Congresses to create an independent Interoceanic Canals Commission. Like measures-S. 766 and H. R. 3335-are now pending before the 84th Congress.

Camp Pickett, Va.

EXTENSION OF REMARKS OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. ABBITT. Mr. Speaker, several days ago I called to the attention of the House a number of typical comments which were being made by editors of newspapers in Virginia relative to the proposal to dispose of Government holdings at Camp Pickett, Va. These views. in my opinion, represent the overwhelming majority of the people of Virginia who feel that the Government is unjustly disturbing the economy of Southside, Va., by its continued uncertainty as to the future of Camp Pickett.

The Army has taken the position that Camp Pickett represents one of the best training areas available to the Army and yet, on a number of recent occasions when the necessity arose for the expansion of training facilities or the utilization of existing facilities, Camp Pickett was bypassed in favor of other camps in various parts of the country. I refer particularly to recent notices in the press regarding the utilization of facilities at Camp Breckinridge, Ky., and announcements concerning the use of certain other areas for National Guard training.

As I have previously called to the attention of the House, Camp Pickett is presently lying dormant, slowly rotting away and, in the meantime, the economy of a large section of southside Virginia is suffering immeasurably by this uncertainty. I do not feel it incumbent upon myself to dictate to the Army or any agency of the Government as to the use it intends to make of any Government facility. I do not propose to offer the suggestion that one single soldier be sent to Camp Pickett merely for the purpose of strengthening the economy of a civilian community. I do feel, however, that the Army and the Department of Defense owes it to the civilian communities surrounding Camp Pickett to make it clear once and for all what use, if any, it is contemplating for Camp Pickett in the foreseeable future. As the situation now exists, there is gross uncertainty on the part of all of the business interests of the entire Southside, Va., area, due to the fact that the Army says one day that Camp Pickett is the best military training camp it has and the next day that they foresee no immediate use of these facilities.

The Members of the House are certainly familiar enough with the military situation to know that we must maintain a strong reserve position in order to protect the future of our county. I feel that in the case of Camp Pickett or any other camp that the Government should take it upon itself to specifically and expressly advise the governing officials of these communities adjacent to military camps exactly what they can look forward to in the way of military activities in the future. It is not fair to the economy of any community to not know from one day to the next whether they will be flooded by the emergence of military personnel or whether their economy is to be drained by periodic deactivations.

Camp Pickett has been opened and closed three times within the past 8 years and I feel very strongly that unless the defense officials can make an announcement with some degree of certainty that Camp Pickett will be utilized in the foreseeable future; then, I feel it only fair, just, and proper that the Army get out and stay out of Pickett so that the economic blight hovering over this great section can be removed, our people allowed to work out their own economy and once again have growing and strong communities as we had before Pickett.

To support this view, I wish to insert a splendid article prepared by Mr. A. L. Singleton, Jr., for the Progress-Index of Petersburg, Va., which appeared on Sunday, March 20, accompanied by illustrations of the many facilities at Camp Pickett:

BLACKSTONE AREA LEADERS CONTINUE CAM-PAIGN TO MAKE PERMANENT, PRODUCTIVE USE OF CAMP PICKETT SITE

(By A. L. Singleton, Jr.)

There's a "ghost town" in Southside Virginia, and a number of residents are trying to do something about it.

One mile from Blackstone, concrete and macadam roads run in neat patterns through an area covered with buildings, including:

Some 500 houses, mostly pre-fabs; 35 warehouses, with railway sidings and unloading ramps at the end of spur tracks; several libraries and club houses; six fire stations; a bakery; a laundry plant capable of handling 100,000 pieces of clothing daily; three 10ton incinerators; 13 chapels; seven movie theaters; a bus terminal; an outdoor ampitheater (seating capacity 8,000); an indoor arena (capacity, 5,000); a sewage disposal plant; a refrigeration plant; motor repair shops; a 2,050-bed hospital; and an airport with control tower and four runways 5,300 feet long and 300 feet wide.

Most of the facilities were heated by a giant central plant, supplied electricity through a Virginia electric and power company sub-station and gas by underground distribution, given telephone service through an exchange handling 2,000 dial phones; and provided water out of storage tanks holding 900 million gallons and purified by a filtration plant with a daily capacity of 6 million gallons.

Today, the buildings are unoccupied, few vehicles move along the streets, and motors and engines are idle.

Around this developed area, thousands of acres of land lie fallow. The total acreage of the tract is 46,000.

This is what is left at Camp Pickett, 3 times a booming Army post, and 3 times a ghost town. It originally was 503 separate tracts, covering 6,500 acres of Brunswick County, 15,116 acres of Dinwiddle County, 50 acres of Lunenburg County, 24,438 acres of Nottoway County, and 259 acres of Blackstone.

The camp was first occupied in 1942 (to house about 80,000 troops). It was de-activated in 1946; reactivated in June 1943; deactivated 10 months later; reactivated in August 1950; and deactivated last year.

Government and business leaders of Blackstone and the four neighboring counties protested often to Federal authorities that the openings and closings of Camp Pickett severely damaged the economy of their communities. After the third closing, they launched a campaign.

R. D. Maben, Jr., town manager of Blackstone, and a leader in the campaign, said it started in earnest January 22, 1954, a date he remembers well.

"It was my 12th anniversary as town manager, we had a terrible snow and sleet storm, and we got the news that Camp Pickett was closing for the third time."

Blackstone area people want the Defense Department to reactivate the camp or sell it as surplus property. Fourth District Representative Watkins M. Abbitt is sponsoring a bill to that effect before the Congress, and the State legislature already has approved a measure permitting establishment of area redevelopment authorities, which could buy and use inactive military reservations for commercial, industrial, agricultural, or institutional purposes.

"Here we have a self-supporting place equal to a city to take care of 15,000 people. If the Federal Government does not want it, why shouldn't the State of Virginia or a civilian agency be able to use it?", Maben

asked last week.

A tall, agile, energetic man, he summed up his case for utilization of Camp Pickett last April before members of the Senate Armed Services Committee in Washington, Among those present, were Senators Flanders of Vermont, Margaret Chase Smith of Maine, and Byrd; Maben, Blackstone's Mayor W. I. Moncure; and Secretaries of the Army, Stevens, and Air Force, Talbott.

"We never solicited the camp, we never opposed it, we are not opposing it now," declared Maben, "but we are opposing, and think we are justified in opposing, the constant opening and closing, boom and bust, tail-tied-to-the-kite idea. No community can stand it indefinitely."

Secretary Stevens commented that Camp Pickett had to be held by the Army on standby basis because 10 percent of the potential mobilization force of 375,000 men could be trained there, and because the National Guard needed it, Maben recalled.

Now, the Blackstone manager pointed out, "they are planning to cut the Army in size, and the National Guard is being encamped at Breckinridge, Ky., and Indiantown Gap,

This indicates to Maben that Secretary Stevens' reasons for holding on to Pickett no longer are sound. Other indications, he explained, are plans for disposing of housing units there. This month, 238 prefab dwellings are to be sold on the site, and 250 others soon are to be moved west to Indian reservations under control of the Department of Health, Education and Welfare, according to Maben.

That's a vicious part of this thing," he said. "If they don't need the housing, why

do they need the camp?"

For months, Maben has visited officials of State organizations, seeking reaction to Federal handling of Pickett. He reported that county boards of supervisors, town and city councils, fraternal and civic groups throughout southside Virginia have passed resolutions urging the sale or reactivation of Pickett. The latest resolution came Thursday from the Virginia Ports Authority.

Maben said he hopes the camp will be declared surplus property and sold for \$1,183,-000-the sum the Federal Government paid

for the land-or less.

"Of course the land has been developed by the Army," he declared, "but when the Government bought it, farmers in the area moved out," and Blackstone and nearby communities thereby suffered severe losses agriculturally.

He also pointed out that private investments of more than \$5 million and capital outlays of some \$1.500,000 (by Blackstone) had been necessary to provide services for an expanding population resulting from activation of the camp.

(In 1940, Blackstone's population was 2,-

700; now it is more than 7,000.)

Maben revealed last week that two small industries had moved into the Blackstone area to take up some of the slack from the latest Pickett closing, but he said that did

not alter the area's major problem.

He recently told the State capital outlay study * commission that Virginia could realize a 20 percent saving if it obtained some of the Pickett land for institutional use, because streets, water and sewer lines, railway spur tracks, and land already are provided.

"What North Carolina did with Camp Butner, Virginia could do with Pickett,"

he said.

Camp Butner, about 15 miles from Durham, was acquired as surplus property by property encompasses some 41,000 acres, 5 .-000 fewer than Pickett.

In operation now on the Butner site are 4 State institutions—a mental hospital, an alcoholic rehabilitation center, a youth center (reformatory), and a school for feebleminded adults and childrens—em-ploying some 750 persons, and 5 industries

with about 450 on payrolls.

Maben has reminded Virginia authorities that recommendations for new mental hospitals, penal institutions, and other public service facilities are being considered by the capital outlay study commission.

Maben, Mayor Moncure, and other Blackstone area citizens are pleased with the support for their campaign pledged by people and organizations in other parts of Virginia.

They had special praise last week for Virginia legislators-in the Congress and the general assembly-who have proposed or supported bills to solve their economic problem.

Representative ABBITT's bill is still before the House Armed Services Committee. If approved there and finally enacted, the State law permitting establishment of an area redevelopment authority could go into effect. The authority would be composed of one representative each of Blackstone and the counties of Nottoway, Dinwiddle, Brunswick, and Lunenburg, and two at-large members.

Blackstone's Manager Maben, speaking for the southside groups hoping the campsite

will be used, said:

"The Army does not intend to use it, but they are fighting against turning it loose. They fought turning loose (Camp) Butner. too. But we do not intend giving up our fight, either."

What if Panama Canal Is Knocked Out?

EXTENSION OF REMARKS OF.

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES Wednesday, March 23, 1955

Mr. MARTIN of Iowa. Mr. President, a very interesting and well-considered article dealing with the Panama Canal appeared on the 20th of this month in the bilingual newspaper published at Miami, Fla. It was written by Harry W. Frantz, of the United Press. Mr. Frantz is a veteran writer-reporter on Latin American affairs and stands high in his knowledge and judgment as to United States and Latin American relationships and the Panama Canal. The newspaper referred to is Diario Las Americas-Spanish section—and the Americas Daily—English section. The article is carried in Americas Daily and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT IF PANAMA CANAL IS KNOCKED OUT? (By Harry W. Frantz)

Fundamental shifts in expert opinion concerning the United States Atlantic-to-Pacific canal policy are indicated by preliminary discussion of bills pending in Congress, ac-cording to well-informed transportation authorities.

The concept of sea-level canal at Panama is believed to be losing ground partly because of recent revelations that the "fall out" from atomic explosions affects an area as large as the entire Canal Zone.

The cost estimate of a sea-level canal is now raised to \$10 billion which would necessitate very high transit tolls for repayment.

The arguments for an improved lock canal at Panama with a future third set of locks competent to handle the world's largest ships has gained support among experts who consider that prospective expansion of world commerce should be the chief criterion in formulation of future policy.

Meanwhile, everyone that studies the question speculates as to whether the exigencies of atomic warfare would justify the construction of an entirely new canal at a distance from the Panama Canal, in order that there would be a second waterway if Panama transits were interrupted by a bomb or a major landslide.

Another school of experts favors a general restudy of all of the transportation methods, such as old and new highways, the Panama Railroad, a transcontinental trunk highway system in the United States, and South American transportation routes.

The theory is that numerous alternative routes and methods would be used to service interoceanic traffic in the event of a knockout to canal facilities.

There's a rapidly mounting volume of unofficial discussion of the canal problem in trade, engineering, and service publications. This public interest is inspired partly by bills introduced in the Senate by Senator THOMAS E. MARTIN, of Iowa, and Representative CLARK THOMPSON, of Texas, for the creation of a trans-isthmian canal commission which would review all phases of policy affecting an enlarged or new canal.

The interest also reflects the negotiation of a new United States-Panama treaty pertaining to relations between the Canal Zone and the Republic of Panama, including increased annuity payment to Panama. treaty has already been ratified by the Re-public of Panama, and will be considered later by the United States Senate.

For more than a decade, Congress has been willing to accept views of Defense Department and executive branch of the Government concerning future canal policy.

President Truman sent to Congress in 1947 an engineers report which contained strong arguments for a sea-level canal at Panama.

but Congress took no action.

The big question for the early future is the nature of the recommendations which the Government departments will make to Congress concerning the creation of a new transisthmian canal commission. If the White House and Pentagon give approval to this project, it would have good prospects for action in present session of Congress, and a "great debate" on long-term policy would logically follow.

The long-range study, if undertaken, would certainly reveal endless ramification in the fields of diplomacy, engineering, the commercial utility of various routes, and

problems of defense.

To illustrate the complexity of this problem, the United Press correspondent asked various experts the hypothetical question: What would happen to approximately 35 million tons of cargo which now moves annually through the Panama Canal if transit should be interrupted by war, sabotage, or a major landslide before an alternative waterway is built?

Experts suggested that with great difficulties and delays that immense traffic would be rerouted substantially as follows:

- (1) United States intercoastal traffic would move in large volume and at greater cost on transcontinental railways and projected new trunk motorways.
- (2) If the Suez Canal remained open a large amount of Asiatic, Australian, and European traffic would be diverted from Panama to Suez-such a possibility must take into account, however, the fact that in a third world war an enemy of free nations would presumably try to wreck both canals.
- (3) A large volume of traffic which now moves via Panama, as for example that of South American west coast countries, would resume the historical route between Pacific and Atlantic by way of the Magellan Straits or around Cape Horn.

Such rerouting if long continued would raise major international questions of shipping security. British war vessels protected this route in earlier decades, but both Argentina and Chile now have greater power in the area.

Antarctic bases probably would become necessary to the defense of the straits be-tween Cape Horn and Palmer or Graham Land, and the Antarctic area would have a vastly increased strategical importance, with greater intensity of rival territorial claims.

(4) Peru would have a special problem because of frontiers on both the Pacific Ocean and the Amazon Basin, presently serviced by ships moving through the Panama Canal. Peru would have an obvious interest in improving overland communications across Peru.

(5) The overland routes in Central America, Mexican isthmus of Tehuantepec, and between Chile and Argentina, would attract an increasing volume of transportation on rail and motor routes.

(6) The Panama Railroad, which presumably could be restored before the canal could be reconstructed, would have a tramendous utility and could be supplemented by motor transportation.

God's Answer to Communism

EXTENSION OF REMARKS

HON, WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 23, 1955

Mr. HORAN. Mr. Speaker, under the privilege to extend my own remarks in the Appendix of the Record, I am pleased to include a radio talk by a constituent of mine, the Reverend Clay Cooper who wrote this from Salgon, Vietnam.

The Reverend Cooper conducts the Church of the Air in Spokane, Wash., and I feel that his reactions to what he sees as he visits in one of the truly distraught areas of our globe is worth reading. His solution is one with which we can all agree and undoubtedly the solution he suggests is the one that will succeed.

The address follows:

Gop's Answer to Communism
(By Rev. Clay A. Cooper)

"The only solution is Christ. We should not waste our time on anything else. Theoretically, Christians believe the only solution is Christ, but in actuality they often go overboard on other ideas and panaceas," is the studied opinion of former Communist Helen Sigrist.

That Christianity holds the only real answer to communism is a conviction being shared more and more by the greatest champions of human rights which our generation knows. General of the Army Douglas MacArthur, whose men fought it to a standstill in Korea; Generalissimo Chiang Kai-shek, who first embraced its tenets to later repudiate them as a fraudulent scheme to enslave the world; Syngman Rhee; President of United States Dwight Eisenhower. The list grows impressively with the passing of time.

Tragic indeed that such a simple and workable solution is not implemented by those who "go overboard on other ideas and panaceas." What fools we mortals be, to keep on believing that regimentation, militarization and a host of other substitutes can provide the universal remedy.

In our current struggle with the hammer and sickle we could learn valuable lessons from the recent past. In pulling down the Swastica, and the emblems of Fascism and the Rising Sun, we put forth monumental efforts and sacrifices. Yet where is the elusive peace? Just try to imagine the state of our world today if but a portion of the price of World War II (§4 trillion in money and 40 million casualties in men) would have been devoted to foreign missionary enterprises prior to 1939. What poor economists we are to invest trillions in munitions and trifles in missions.

This is no pacifist's plea, however. It is certain if our world is not staffed with missionaries, it will have to be policed with marines. Our youth will either go to the ends of the earth with God or guns and if our professedly Christian America does not soon come to regard foreign nations as mission fields she must continue to deal with them as battlefields. Still, it is not so much a choice between Chapels or cruisers, Gospels or grenades, Bibles or bombs. At the end we shall learn that even released nuclear energies can never liberate minds and hearts but that it is Truth, in the person of Jesus Christ, that "makes men free."

What is God's answer to Communism? Is it the launching of an international crusade against this monstrous evil? No: A thousand times no. Such an approach is entirely too negative and too late. Simply getting down to the business of giving Christ to the world is God's plan and purpose. I have seen this method work on hundreds of mission fields in foreign lands the world around, even where Christ's cause was understaffed, underfinanced and underequipped. Yet where in spite of such needless limitations the superiority of the Christian message and its dynamic in human experience triumphed over every obstacle. I challenge, I defy, anyone to sell a Communist bill of goods to any nation or any people once the Gospel of Christ has effectively taken root in a sufficient number of individual hearts and lives. The two are diametrically opposed.

God's answer to communism is the same as His answer to other isms stalking our world. Both it and they will disappear like dew before a Sahara sunrise once His church, like a sleeping giant, awakes from her torpor, takes His marking orders to heart, marshalls her men and materiel for the world objective of propagandizing the earch with Truth, of preaching the Gospel to every creature.

Yes; for communism, the handwriting is on the wall. Light is stronger than darkness, love than hate, and Jesus Christ is alive and Karl Mark is dead. Since it is foredoomed and on its way out, let's hurry it on its way. It's our generation that needs Christ promised the "might deliverance. of hell" should not prevail against His allies when dedicated to such tasks, how much less the might of Moscow. A militant program of prayer, of sacrificial giving, going, and sending; a stepped-up foreign missionary progression to an unprecedented pace, can and will solve the Communist-created chaos in our world and at the same time make its inhabitants "heirs of God and joint heirs with Christ" eternally. Christianity, to quote an apostle, holds the "promise of this life and that which is to come."

Finally, communism being the true enemy of the people is the enemy of God and as such is destined to destruction. There is no question but that sooner or later the Biblical pronouncement will be realized and Hts enemies "shall lick the dust" (Micah 7: 17). If eventually, why not now?

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of specches in pamphlet form.

our professedly Christian America does not LAWS RELATIVE TO THE PRINTING OF soon come to regard foreign nations as mis-

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which I shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

EXTENSION OF REMARKS

HON, CLIFTON (CLIFF) YOUNG

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. YOUNG. Mr. Speaker, it was recently my good fortune, although perhaps not entirely my pleasure, to spend some time at the Naval Medical Center at Bethesda, Md. During my confinement there. I was impressed with the quality of medical care and overall excellence of this outstanding institution. It reflects favorably on the men in charge and is a credit to our naval forces.

While such care is partly the result of fine facilities, it also depends upon the skill and training of the personnel involved. Evidence of these qualities, I might say, was manifest at all levelsdoctors, nurses, and corpsmen. As I observed some of the more highly trained experts performing their duties, several questions came to mind. What are the attractions of military service for such well-trained men who could obviously receive more remuneration in a civilian status? Are we losing the services of such men at a dangerous rate? What needs to be done, if anything, to improve their position and insure a sufficient number of such personnel in the

Upon several occasions I talked with some of these men to determine their attitudes on a military career. It was pointed out to me that already some of the highly trained medical personnel have left the service and that others are dissatisfied with their present status and military hopes for the future. While the dissatisfaction results in part from the pay differential, this is not the entire story.

During my study of this problem, I encountered an article by Col. Oliver G. Haywood, Jr., which appeared in This Week magazine on March 28, 1954. This article very forcefully presents reasons why some of our best soldiers are leaving the services. With world conditions so unsettled, the need of highly trained personnel in the armed services, not only in our medical centers but in other units, is extremely important. While the House of Representatives has recently taken steps to raise the pay of military personnel, there are other aspects of this problem which merit attention. I commend this stimulating article to those who are interested in

Stop Driving Our Best Soldiers Out of maintaining the strength and efficiency of our national security program.

> STOP DRIVING OUR BEST SOLDIERS OUT OF SERVICE

> > (By Col. Oliver G. Haywood, Jr.)

I have recently resigned by commission in the United States Air Force because I believe this Nation is imposing conditions of secondclass citizenship on its professional military

My resignation was not prompted by any feeling of personal hardship. It was one individual's protest against policies which I consider a threat to the safety of every American. Now that my lips are no longer sealed by military regulations, I am free to speak of these policies of expediency, in-difference, and discriminatory legislation which are making military careers less and less attractive when our Nation most needs top-caliber leadership.

It is my deep conviction that if present trends continue our country will enter any future conflict with a second-class Army. Navy, and Air Force, regardless of how many billions we pour into defense. And may God protect the Nation. The Armed Forces will not be able to.

My resignation from the military-an act by which I chose to forfeit all retirement pay and other benefits-follows 22 years of serv-It was a hard decision, for my military service has been interesting and varied. I graduated from West Point in 1936. I have known the life of a line officer, having served as a company and battalion commander. I have soldiered in places as far apart as Germany and Bikini. In the scientific line, I have had tours of duty working on atomic-energy problems at the Los Alamos Laboraand in the Manhattan engineer

I resigned not because I was personally dissatisfied but, as I wrote in my letter of resignation, because, "As a senior officer I must impose on able and patriotic subordinates conditions of second-class citizenship. The degradation of military status must lead to a decline in the quality of our Military Establishment."

SERVICE CAREERS FALLING OFF

I believe that to remain in such a career merely helps to conceal a condition more dangerous to the future security of our Nation than any number of Russian bombs. This is the declining attractiveness of the military career-a situation which is causing trained officers and men to leave the service and forcing young men to refuse service careers.

I intend to document here some ways in which this Nation has whittled away at military careers. But I'd like to emphasize that no single example is in itself decisive. Each example is important only as a development in a general trend. Soldiers are aware that as times change certain traditional advantages may be taken away.

But if the services are to represent careers that will attract and hold capable young men instead of mediocrities, the loss of certain benefits should be compensated by the creation of some new ones. The last 20 years have certainly seen a substantial increase in the standard of living of the civilian

population. But for the military-and this is provable statistically or any way you want—the last two decades have seen all the major advantages of military service reduced or eliminated.

Let's take the question of retirements. It is a good example of the way Congress has repeatedly welshed on its agreements with the military. When I came into the service, one of the advantages of a military career was the promise that officers could retire with a pension after 30 years' service, enlisted men after 20. Recently Congress began a series of changes in retirement regulations that were so bewildering that it has become im-possible to plan for the future.

For instance, Congress decided 2 years ago that no officer could draw retirement pay even after 30 years' service unless he had also reached his 60th birthday. Under this provision a man like Gen. Lucius D. Clay, former military governor of Germany who retired at 52 years of age, would have left the service without benefit of pension.

There were a number of exceptions to this ruling. One exception provided that a 30year man could retire with full pay even if he was still under 60 years of age-providing he had proved himself an incompetent officer. In other words, if an officer does his work poorly enough to be judged incompetent he receives retirement pay for life. It is only those who do their work well who are released with nothing.

NO CHOICE

In my letter of resignation I observed that loyalty should go down as well as up, and it's an important principle to me. soldier has no choice but to live up to his end of the contract with Uncle Sam. should Uncle Sam be entitled to break his promises once the soldier is committed to a military career?

In civilian life, a man can quit or go to court if his boss violates his contract. In the military there have been periods when you couldn't even resign your commission. My own resignation was in process exactly I year. At the time I submitted it, military authorities were not accepting resignations of regular officers except in hardship cases, After many months and a change of policy my resignation was accepted. But I know several officers whose resignations have been summarily rejected. For these men military life has become involuntary servitude of indefinite duration.

Congress has over past years been making frequent assaults on so-called fringe benefits-commissaries, post exchanges, dependent medical care, etc.-which in effect formed part of military pay. Because military pay has always been low in comparison with civilian salaries the Nation traditionally has tried to bridge part of the difference by providing essentials such as staple foods, drugs, etc., at virtually cost prices.

ITS OWN COMMUNITY

Also, because soldiers are frequently transferred from area to area—and this is particularly true of combat pilots in such vital duties as the Strategic Air Command-officers and men rarely have opportunity to adjust to the community around them. In fact communities have been known to be mighty hostile to a sudden influx of military personnel. So the military tries to create on its military posts its own community—its own clubs, doctors, food stores, theaters, etc.

Let's take the fate of the commissaries—food stores which primarily benefit married enlisted men. Yielding to lobbying by retail-store associations, Congress passed legislation intended to close down the majority of these stores. By so yielding to the pressure of the retailers the Congress made plain its willingness to aid civilian merchants at the expense of individuals in the military service.

Since I entered the service, this congressional attitude has taken many forms. The post exchanges—which have always been operated without expense to the taxpayer—have become of little value because outside pressure has reduced the variety and quantity of goods available. In line with this trend the quality of military housing has declined; retired pay for the physically handicapped has been reduced; recreational and social facilities on military bases have been curtailed, and dependent medical care has been made uncertain.

The impact of all of this is clearer if you look closely at military salaries. A second lieutenant graduating from West Point receives \$338.58 a month, including all allowances. This is a little more than base pay of an able-bodied deckhand. An Air Force captain with 8 years' experience, including Korea jets, draws \$593.25 a month. An airline pilot with 8 years' seniority averages over \$1.000.

The take-home pay of an Air Force major general is less, dollar for dollar, than it was 30 years ago. Let me repeat, in dollars—with no adjustment for the way dollars have shrunk to a fraction of their former value. Income taxes and lowering of flight pay have taken away far more of the general's salary than has been provided by infrequent pay raises.

In fact, if you adjust for the cost-of-living index, the modern-day Air Force general has less than a third of the purchasing power possessed by his counterpart of 30 years ago. And he has no expense account. Is such a statement true for the top leadership of any other profession?

ARBITRARY CHANGES

There is an interesting test of congressional attitude when you compare Uncle Sam's treatment of his soldier employee and civilian employee. Concerning the very vital matter of pay, civil-service employees back in 1951 were granted a 10-percent increase, with retroactive features. A year later Congress gave the military an increase averaging 5 percent and with no retroactive provisions. Thus the benefits granted the civilians averaged just about double those granted the men in uniform.

Sudden arbitrary changes in regulations can hurt officers and their families in ways that would probably surprise civilians not accustomed to the hazards of a profession which as part of its duty must move long distances from post to post. (In my 17 years as an officer my family moved 11 times.) Consider the impact of the recent ruling reducing from 12,000 to 9,000 pounds the amount of household furniture a senior officer and his family could transport at Government expense. Nine thousand pounds constitutes 4 rooms of furniture, and not even that if you include a refrigerator, a home freezer, or a plano.

Look what happened to the military personnel in Japan who were on duty in 1950, the year the war in Korea exploded. All the families had traveled to the Orient under the old regulations permitting the transfer of 12,000 pounds of furniture. Then in 1952, when many of the officers were fighting for their lives and ours in Korea, the weight al-

lowances were arbitrarily reduced. On transfer back to the United States these officers had to sell their excess goods locally or bring them back at their own expense, in either case at a substantial loss.

This business of always getting the short end of the stick is probably most irritating when it results from the indifference of your own military leadership or of the Defense Department. I am thinking of an incident in my last 2 years of service when I was Chief of the Air Force Office of Scientific Research.

MATTER OF POLICY

selected three young officers to go to Belgium for some scientific work. There was transport available to take their families, and housing was available at their destination. But my requests for orders for their families were denied. Now it is my firm belief that individuals are entitled to dignified and considerate treatment, even though they are in the uniform of their country. I, like many others in the service, like to assist my wife in the complicated business of breaking up one home and moving to the next. So I offered to delay the orders of the three officers until their families could go with them. But the Pentagon said it was a matter of policy that families could not travel as units. husband went first and the family followed after—often long after. Why? We could never figure it out. For in the same period State Department and other Government officials were having no difficulty traveling to overseas posts with their families.

Because of prolonged overseas assignments without families, the divorce rate in the Strategic Air Command recently shot up to a record of 1 breakup in every 3 marriages. Surely there is enough separation of military families in war and cold war without inflicting it on them unnecessarily and in peacetime.

I hope that in outlining some of the grievances of the military I have not sounded petulant or one-sided. I certainly have no personal axe to grind, as I could not go back into the regular service even if I wanted to. But it is my belief that the justified problems of a military career have not been clearly placed before the American public, and that this is one reason the grievances remain. What it all comes down to is this: a profession either attracts competent people by offering a respected and worthwhile life or an attractive salary, or the promise of great reward to the successful few who reach the top. Today the military offers none of these advantages.

ARMY OF EXPERTS

Just what is the role of the professional soldier? As distinguished from the man who obtains a commission during an emergency or for a specific assignment, the professional or regular military man devotes the prime of his life and skill to preparing for the day of crisis. Today the breadth of knowledge these professionals must possess is unprecedented. They must be experts in science, management, procurement, public relations, budget, atomic energy jet engines, psychological warfare, etc.

As we learned during the occupation of both Germany and Japan, today's officers must know not only military strategy but must understand economics, the structure of government, and political theory. Remember that one of our greatest soldiers, Gen. George S. Patton, was relieved of his command in Germany not because of a military blunder but because in a thoughtless moment he commented that, "This Nazi thing—it's just like a Democratic-Republican election fight." General Patton stubbed his toe on political theory.

The importance of America's corps of regulars was pointed up in World War II. In that era just over 11,000 Regular Army officers developed a ground force that successfully

fought the Germans and the Japanese on many fronts. This small nucleus of professionals trained, administered, supplied, and deployed a mammoth army that eventually totaled 930,000 officers and 12 million men.

Although public ignorance and national apathy are partly responsibile for the state of affairs in the professional Military Establishment, Congress obviously cannot escape a large share of the blame. The open hostility of Congress to the regular-officer personnel has been expressed in speeches, press releases and in legislation such as I have described. There have been many instances when discriminatory legislation was voted into law without reference to the congressional committee that the Congress itself had set up for the purpose. Congressional hostility in itself would have been enough to make me desire to leave the service.

Although the congressional speechmakers invariably mention the so-called "brass"—that is, the generals and the admirals—much of the discriminatory legislation hits hardest at the young officers and enlisted men. A rider in the 1952 appropriations bill was announced to the press and public as slowing down the promotions of the "military brass."

BLAMED THE PENTAGON

The rider was so ill-conceived and poorly worded as to have little effect on senior officers, but it made a drastic impact on promotion opportunities of young officers. Several thousand Navy lieutenants would have had to be demoted if the next session of Congress had not taken prompt action to correct the more glaring errors in the original wording. But the Congressman who authored this "rider" was not at all embarrassed by his error. He blamed the Pentagon. He felt the Pentagon should have told him how to word his rider so that it would hurt only the "brass," as he had intended.

Now, as this Nation faces new crises, what are the overall effects of a policy of constantly whittling away at the military profession?

Here are some statistics that help to tell the tale.

Resignations of cadets at West Point reached 109 in 1952 and 95 in 1953, with many youngsters frankly stating that they were leaving because of better career opportunities in civilian life.

The Air Force is having difficulty retaining its skilled technicians. These airmen, who are expensively trained and invaluable in the jet age, are turning down offers of reenlistment at the rate of 200,000 a year.

Another spectacular example of young Americans' attitudes toward professional military careers is afforded by the Navy's Holloway plan. Under the plan the Navy provides financial assistance and naval training to selected college students in return for the pledge by these students to serve for 2 years after graduation, as Reserve officers. After the 2 years of Reserve training are over, the students are offered commissions in the Regular Navy. A year ago the first group of 800 Holloway plan officers completed their required 2 years. Nearly 90 percent rejected careers as Regular officers in the Navy.

The question before Congress and the people, as I see it, is whether this is the time to subtract additional prerogatives and prestige from the Regular Military Establishments, or whether the time has come to make military careers more attractive than ever.

Can we risk the kind of Military Establishment that for want of better must take in a large proportion of mediocrities?

Docs America want its military leadership of tomorrow to come from the bargain basement?

More Secret Conferences Yet?

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Thursday, March 24, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "More Secret Conferences Yet?" written by David Lawrence and published in the Washington Star on March 22, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

More Secret Conferences Yet?-Proposals FOR TOP-LEVEL WORLD PARLEYS VIEWED AS INCREDIBLE AFTER CASE OF YALTA, WHERE PRINCIPLES WERE TRADED

The news continues to be incredible. One would have thought, after the publication of the Yalta papers, that the world would have had its fill of secret conferences at which statesmen trade away the principles of international morality for which American boys gave their lives. But just the same, the proposal now is being made that some more "top-level" conferences be held—this time between Marshal Bulganin of Soviet Russia, President Eisenhower, Prime Minister Churchill and the Premier of France.

Senator George, of Georgia, venerable Democrat, who is chairman of the Senate Foreign Relations Committee, has brought the idea of a top-level conference into the headlines, though he frankly says the conference shouldn't be held till after France ratifies the new European agreements to permit Germany to rearm.

This is substantially what Secretary of State Dulles has outlined as a possibility after the Paris accords with Germany are ratified. But Mr. Dulles qualifies it a bit by pointing out that America would have to see a demonstration of good faith and tangible evidence that a conference would be able to accomplish something.

Again and again the argument for toplevel conferences has been advanced by political factions in Europe on the Socialist side Who feel that the peace urge of the people everywhere can be satisfied politically by conferences with the Communists. The idea is that there is some magic in personal meetings between heads of states--as if the ambassadors regularly assigned to world capi-tals cannot negotiate when there is something to negotiate.

Prime Minister Churchill, long accustomed to the deals of diplomacy, has sponsored the conference idea on the assumption that something might possibly be accomplished. He knows, of course, that the chances of any Worthwhile agreement are practically nil, but he favors a meeting anyway, if only to placate the elements in opposition to him in his own country which keep bringing up the subject. Similarly leftwing groups in Germany and France continue to harp on the proposal.

The Communist propaganda all over the world, moreover, emphasizes that it is the Western World which refuses to sit down to talk things over. This intensifies a feeling among so-called neutral nations like India that the West is bellicose and unwilling to make agreements to solve world problems.

What the Moscow government knows, of course, is that international meetings such as were held in Berlin and Geneva afford a big opportunity to divide the Western allies. For the Communists can count on the pressure of the Labor-Socialist group to keep the Conscrvative government of Mr. Churchill

and Mr. Eden at odds with America. What finally results is a conference for the purpos of wearing down the adherence of the United States to moral principles.

The Yalta Conference was a secret affair. It tore to pieces the Atlantic Charter. The Congress of the United States knew nothing about its details or its giveaways until it was too late to do anything about them. It now is proposed that secret diplomacy be utilized to make a deal with the Communists and that the heads of the major powers sit down to try to appease the Soviets in their drive of world dominion. The hopes of millions of people in satellite countries would thereby be crushed. The end result might well be further manifestations of arrogance by the Communists which could only be resolved by an atomic war.

The Soviets have gained in the cold war through the conference method. They won their biggest victory at Geneva last year, and they were aided in that victory by the weakness of Great Britain and France.

The idea that 3 or 4 men can barter away the ideals of the world for expediency's sake is not new. It happened at Munich because of a craven refusal to face the facts of an aggressor's insatiable thirst for power. And yet, after the exposure of what went on at Yalta, the suggestion of more "Yalta Conferences" now is seriously advanced. It is incredible news and can be explained only on the theory that many people here and abroad have been so frightened by the Communist propaganda about atomic war that they are ready for peace at any price. This is the way to bring on world war III, just as World War II came 1 year after the Munich Conference gave encouragement to the aggressor.

More Shipbuilding on West Coast

EXTENSION OF REMARKS OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES Thursday, March 24, 1955

Mr. BIBLE. Mr. President, on March 22, the Senator from Washington [Mr. Magnuson), chairman of the Senate Interstate and Foreign Commerce Committee, delivered a very informative and factual address to the Western States Council at San Francisco, Calif. I ask unanimous consent to have a report on this address, which appeared in the New York Times, March 23, 1955, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORE SHIPBUILDING ON WEST COAST IS PRE-DICTED BY A SENATE LEADER—MAGNUSON TELLS 11-STATE COUNCIL HE IS "VERY HOPE-FUL" THE ADMINISTRATION WILL REVISE POLICY NOW FAVORING THE EAST

(By Lawrence E. Davies)

San Francisco, March 22.—Senator Warren G. Magnuson, Democrat, of Washington, predicted today a brighter era for west coast

The chairman of the Senate Interstate and Foreign Commerce Committee told the Western States Council he was "very hopeful" the Administration would revise its present policy and give the West greater opportunities.

This would be done, he said, by allocation of a specific number of vessels in any Government-financed shipbuilding program to the Pacific Coast, to be bid upon by West Coast yards.

"At present," he asserted, "we are penalized 15 to 16 percent of the cost of ships, in bidding against East Coast yards, because of labor and materials prices."

Senator Magnuson forecast the construc-tion on this coast of 3 to 4 big new tankers, They would be part of a program of 10 to 12 tankers soon to be authorized by the Federal Maritime Board, he said. They would be built for private operators, with the Government insuring up to 100 percent of 871/2 percent of the cost and retaining the right to buy them back in 10 years.

His committee, the Senator announced, rould report out tomorrow or Thursday,

bills to provide:

That the Civil Aeronautics Board give permanent certification to feeder air lines, most of them west of the Mississippi River. Thirteen of them, he said, now are operating under three-year permits, giving them no opportunity for permanent planning.

That the Civil Aeronautics Board have ju-

risdiction over what airlines will fly to United States Territories. This would deprive the President of the right of veto over Board deci-

sions in this respect.

EASING OF PROBLEMS SEEN

Senator Magnuson said the White House welcomed this prospective legislation because of the headaches it would save President Eisenhower. Pressures were tremendous, he indicated, prior to recent issuance of Presidential directives as to what lines should fly to Hawaii and Alaska. Actually, the present law was not intended to give the President the right to say what lines should operate to our Territories, but only to foreign countries, he said.

The Senator defended subsidies, both for steamship and airlines. Total subsidies to the whole American merchant marine this year, including some back obligations, did not exceed \$60 million. He said, adding:
"That literally is less than the subsidy
we pay for peanuts."

He told the council members, who include executives of State, county, and local chambers of commerce of the 11 Western States, that unpublished census figures he had just seen in Washington gave these estimates:

A present population of 23,400,000 for the Western States, compared with 19,600,000 in This 19 percent increase is more than double the national growth rate.

A population in 1960 of 30 million, or a gain of more than 28 percent in the next 5 years. This would be double the estimated national rate of growth, he said.

TRANSPORT CRISIS CITED

"The East is in a deep freeze on transportation problems," Mr. Magnuson declared. "We can't afford to let that happen to us, with these great problems we face accompanying enormous population gains. We ought to have a political-economic revolt on questions affecting us in a nonpartisan way."

The council adopted resolutions reiterating its positions on shipbuilding, mining, air transportation and other matters after hearing testimony on these subjects.

The 134th Anniversary of Greek Independence

EXTENSION OF REMARKS

HON, PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Thursday, March 24, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent that a statement prepared by me on the 134th anniversary of Greek independence be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MCNAMARA

Tomorrow will be the 134th anniversary of Greek independence. It was on March 25, 1821, that the Greek people began their struggle for freedom in the modern world. As His Excellency, the Ambassador of Greece to the United States, George V. Melas, said just a few days ago, "The 25th of March could readily be compared with that other great date in history, the Fourth of July. For similar ideals, that same craving for liberty, that same yearning for independence, that same determined love of democratic institutions have been the bases of the erection of both countries, America and Greece, into independent states."

The contributions Greece has made to the pattern of western civilization cannot be overestimated. Plato and Aristotle in the world of philosophy, Homer and Sophocles in the realm of literature, Phidias in the field of architecture, Euclid in science and Pericles in the field of statecraft are only a few of the examples of Hellenic influence on our history.

As the Greek people fought against tyranny in the 19th century, so too in this country, they battled courageously against Communist attacks in Korea. As an American I am proud that our country, at the initiative of President Truman in 1947, sent military and economic aid to help the Greeks in their struggle to recover liberty for themselves. I am glad to recognize Greece as our staunch ally in the Mediterranean region and as a member of NATO.

Here in the United States, Americans of Greek birth and blood have continued their heritage of leadership and have enriched our Nation by their activities both as individual citizens and through their great fraternal organization, the Order of Ahepa.

I am sure that we are all glad to join the valiant Greek nation and people of Hellenic origin everywhere in the celebration of Greek Independence Day.

The Columbia River Dams

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1955

Mr. NEUBERGER. Mr. President, the completion of Bonneville Dam in 1937 laid the foundation for the opening of a vast new inland waterway down the Columbia River, with river tonnage increasing 30 times over the last 18 years. The completed McNary and Bonneville Dams, along with the Dalles and John Day Dams yet to be completed, will open the Columbia River to ocean and river tugs to Pasco, Wash., the year round. The Columbia Basin irrigation project has greatly increased the need and use of this great inland waterway. The great wisdom which prompted the construction of the Columbia River dams, planned and begun during the Roosevelt Administration, has shown itself once more in the development and use of our great inland waterway.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a most informative editorial from the Sunday Oregonian of March 20, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIFEBLOOD OF COMMERCE

Bonneville and McNary Dams have removed some of the thrills that steamboatmen once knew on the upper Columbia. The Dalies Dam will remove some more, when it is finished within the next 3 years. John Day Dam, above The Dalies, will complete a planned series of pools that will back up water from Bonneville to the lower Snake.

Today the Columbia is carrying immense loads of cargo, not by steamer but by diesel Through Bonneville locks tugs and barges. last year went 1,377,819 tons of goods, including 642,159 tons of petroleum products. In 1937, the year before Bonneville was finished, the total through Cascade locks was only 52,473 tons. This is about the same as the annual quantity of anhydrous ammonia alone which Shell Chemical Corp. and Tidewater-Shaver Barge Lines plan to carry by ocean and river tugs and barges from Pittsburg, Calif., through Portland to the new distributing plant dedicated the other day at Pasco, Wash. When the Dalles Dam is finished, it will

When the Dalles Dam is finished, it will be possible to move the 252-foot seagoing ammonia barge, Ammonia Mariner, which can carry nearly 1,700 tons at a time, all the way from California to Pasco 4 months of the year. When John Day Dam is built the seagoing rig will be able to reach Pasco the year round. Now the load is transferred at Portland to a specially constructed river ammonia barge for shipment to Pasco.

Meanwhile a trip down the Columbia on a tug and barge rig, which a representative of this page was able to make recently, is both a revelation of the Columbia's importance as a natural artery of commerce, and an adventure which still contains some of the thrills experienced by pioneer steamboatmen.

From the windows of the high pilot house of the tug Rampant, not only the river itself was revealed as a vital carrier of commerce. From midstream one sees also the railroad on either side of the river, over which long trains roll on the easy water-level grade, and the highways over which trucks carry commodities and supplies to and from the rich Inland Empire. The river and its two banks all are part of the artery which gives Portland and other lower river communities a big trade advantage.

The adventure comes from riding a 90-foot tug and a 158-foot barge—nearly 250 feet of powerfully engined metal—through the rapids and narrow passages between rocks which have challenged rivermen for a century. Capt. Wayne (Bud) Bateman named off the stretches of fast water and cuts through the rock as he steered his vessel through them. Squally, Canoe, Indian, John Day, Hell Gate were some of the names that boatmen over the years have given these difficult sections.

One fast-water stretch is known as Miller's Drift. The story is that the name of an old-time pilot on the Columbia, Charlie Miller, became associated with this sharp turn below Blalock island because he stopped the paddles and drifted around it. The tug boats of today slide around the bad spots. It takes skill and years of experience to know when to stear off a range so that the current will swing the long tow just right to avoid the rocks,

All manner of transportation appears to be prospering in the Inland Empire. At Pasco, near the two large anhydrous ammonia spheres built for Shell Chemical Co.,

Tidewater-Shaver has a farm of 40 petroleum tanks, other ammoniia-storage facilities, and cement tanks, all built within the past 3 years at a cost of several millions of dollars. Oil pipelines from Utah and to Spokane are tied in with the petroleum tanks. Rail cars and trucks distribute the various products over a wide area in the Inland Empire. There are many other upriver installations also. Inland Transportation Cooperates a barge service of comparable size. Increased barge and pipeline transportation does not appear to have hurt the railroads. The Northern Pacific is constructing a \$5 million hump freight yard at Pasco.

The transportation investments are indicative of the effect the Columbia River Basin irrigation project is having on the Northwest's economy. The ammonia, of course, is used to considerable extent on the constantly growing irrigated area, as well as on wheatlands, to add nitrogen to the soil, and to improve and increase the

yield.

The consumption of gasoline and oil is tremendous. Despite the newly come pipeline, barging of petroleum products through Bonneville locks increased in 1954 over 1953, from 582,242 to 642,159 tons. Last year's barged petroleum was not far from the peak of 749,991 tons in 1952.

Growth can be expected as land continues to be placed under water in the Columbia Basin. Portland will be affected favorably as it comes. For the Columbia with its barges, railroads, and highways make our city the natural outlet and inlet for the wide country that is shedding its sagebrush for crops.

Diplomatic Papers

EXTENSION OF REMARKS

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 24, 1955

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Diplomatic Papers," written by Irving Brant and published in the Washington Post and Times Herald of March 22, 1955. Mr. Brant is a distinguished historian, and the article is most interesting and timely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIPLOMATIC PAPERS—HISTORICAL POLITICAL WEAPON

To get a proper perspective on Secretary Dulles' release of the Yalta papers, one needs to go back to a time when diplomatic dispatches were the principal weapon in American politics. That was in the first decade of the 19th century, when politics and diplomacy were really boiling in the United States and the world was as much of a madhouse as it is today.

In that decade—near the high point of Napoleon's colossal power—England and France were engaged in a hot war with each other and each of them in a cold war with the United States. Charges of French influence were hurled at leaders of the Democratic Party (then called Republican) as zestfully as 20 years of treason is today. Diplomatic dispatches were held back or published with one eye on Europe and the other on American politicians and newspapers, but with differences more important than the resemblances to the Dulles pattern.

The campaign literature which was used to elevate James Madison to the Presidency in 1808 consisted of diplomatic letters, about half of them written by himself as Secretary of State. These letters were given to Congress and the press in two batches—one of them so voluminous that it filled the newspapers for 2 months. And all were written within a year, not held back 10 years. However, everything that would have betrayed confidential talks with European officials was pared out, as such material was in a dozen other releases of papers by the Presidents in that era—releases regularly made in connection with their annual messages to Congress.

Individual Senators were as irresponsible and unethical then as now. To emphasize the wickedness of Bonaparte and the "treason" of Democratic officials, Federalist Sen-ators surreptitiously secured the publication of dispatches from Paris sent to the Senate in confidence-an action which made Minister Armstrong's position at Napoleon's court almost untenable. Again, a British diplomatic dispatch mysteriously appeared in the American press. It looked as if British Minister Erskine had slipped it to a news-Paper to hurt the President. But he had a simple and convincing explanation. To protect himself against Federalist criticism, he had shown the dispatch in confidence to two Senators of that party and one of them secretly copied it. Such incidents, however, were not the official acts of responsible officers of government.

Had some counterpart of the Yalta papers been given to the press in 1810, with all the circumstances corresponding to the course pursued by Mr. Dulles, the manner of it—not the presumed motive—would have shocked the country. It would have been shocking on four accounts, all deeply

grounded in American politics:
1. Not one of the Presidents w

1. Not one of the Presidents who held office in that decade—John Adams, Thomas Jefferson, James Madison—would have dreamed of disclaiming responsibility for the action of his Secretary of State. Any one of them might have called it a Cabinet action, in which he shared, but to say publicly that he had no part in it would have lowered him in the eyes of every American.

2. Lumping Presidents and Cabinets together, not one of the Executives in that decade would have published such a set of Papers under pressure from Congress, or togain political advantage, if such action adversely affected the country's interest or its international standing.

3. Not one of the Secretaries of State in that period—not even the incompetent Robert Smith—would have said at one moment

that the papers would not be released and released them the next.

4. Not one of those Executives would have released the papers in opposition to the Wishes of a friendly European statesman concerned in them, or even, one could safely say, in violation of the amenities towards an unfriendly statesman.

The year 1810 is taken as an example because such an issue arose at that time. In the preceding fall, President Madison cut off all diplomatic relations with British Minister Francis Jackson—in effect ordering him out of the country—because he felt personally insulted by that Minister's conduct. The political heat that followed was terrific—Federalists supporting Jackson and Democrats upholding the President. And everybody asked: How would England react to the dismissal?

Bailing ships sped eastward across the Atlantic and beat their way slowly back. Four months passed without a word. Crucial spring elections lay just ahead—elections of State legislatures which would choose United States Senators.

Then, on March 12, the administration's chief newspaper organ published a little item. The Secretary of State had received

a private note from the American Minister in London, saying that Lord Wellesley "did not attempt to vindicate Mr. Jackson," but admitted he was in the wrong and would recall him.

Here was a statement which upset the Federalist election campaign. They called the letter a forgery, a thing which did not exist. Produce it, they cried. The House of Representatives, coerced by the minority, passed a resolution asking the President to transmit late dispatches from London. Madison replied that none but this private note had come, and "personal considerations of a delicate nature" forbade its disclosure.

After Congress adjourned the cries of forgery became a veritable scream when it turned out that Wellesley, in recalling Jackson, gave him praise instead of censure. Every political consideration now demanded publication of the private note. Continued silence would cast doubt on the President's integrity and imperil Democratic chances in

the congressional election.

Why not publish this brief record of a confidential talk, which furnished evidence that a British Foreign Minister had said one thing and done the opposite in a controversy with the United States? Why not add American Minister Pinknew's later statement that Wellesley had changed his attitude when he learned that the Federalist Party in the United States was supporting the ousted British diplomat? There were two reasons for not doing so: It would weaken Pinkney's position in London and would be a discourtesy to the British Foreign Minister.

The President said nothing. The Federalists were still crying "forgery" when Madison received this personal note from Pinkney:

"I am glad you refused to lay my private letter before the Congress. The publication of it, which must necessarily have followed, would have produced serious embarrassments."

In that same decade. European diplomats called the United States a nation ruled by public opinion. So it was, but it was a nation ruled by the opinion of an informed public, wise in political ways and contemptuous of men who lacked the nerve to stand firm against political clamor.

Program of Northeast Pennsylvania Industrial Development Commission

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. FLOOD. Mr. Speaker, in order to show that a valient effort is being made by the leading citizens of the coalfields of northeastern Pennsylvania to help solve the economic problems of the area, I sumbit the following statement of program of the Northeast Pennsylvania Industrial Development Commission on the occasion of a visit to the Atomic Energy Commission in Washington today:

REGIONAL OBSERVATIONS ENTERED BEFORE THE ATOMIC ENERGY COMMISSION AND THE JOINT COMMITTEE ON ATOMIC ENERGY, CONGRESS OF THE UNITED STATES, BY THE NORTHEAST PENNSYLVANIA INDUSTRIAL DEVELOPMENT COMMISSION, SEEKING CERTAIN INDUSTRIAL DEVELOPMENT CONSIDERATION FOR DISTRESSED AREAS IN PENNSYLVANIA AND ELSEWHERE, MARCH 24, 1955, WASHINGTON, D. C.

(Note.—Release of atomic energy has changed the whole of mankind; imaginative

industrial development through atomic energy can insure stable manpower conditions throughout the Nation.)

I. DISCUSSION

In a copywrited story in the March 18, 1955, issue of U. S. News & World Report, entitled the "Atomic Revolution Is Here," John J. Hopkins, president of the General Dynamics Corp., builders of the first atom submarine, declared: "There is a tremendous economic revolution involved. And we've got to look at it as much more of a revolution than the industrial revolution was, because you are dealing with many more hundreds of millions of people. You had a handful of people to deal with in the old days of the industrial revolution. Now you have a really serious situation."

We are all aware of the universal and national importance of our nuclear future. We know and feel, as Mr. Hopkins, that our economic and social future is dependent upon atomic energy.

It is this awareness that prompts a civic group from northeastern Pennsylvania to

make these observations.

(a) Future industrial development: Under the Atomic Energy Act of 1954, there appears latitude for AEC to continue the rapid pace of Government research and production and authorization to additional installations. Likewise, the congressional effort to stimulate greater private industry participation under the act also provides many new and expansive industrial development opportunities.

(b) Manpower in northeastern Pennsylvania: In a population pool of 1 million people, there are upwards to 100,000 idle but willing workers. In 5 counties alone, there is in excess of 12 percent unemployment, thereby listing this area in the Department of Labor's "very substantial labor surplus" category, or on the technical map, a class

4-B region.

Last May 11, our Northeast Pennsylvania Industrial Development Commission pleaded with President Eisenhower for some Federal assistance to alleviate the growing economic paralysis that is gripping our section of Pennsylvania as well as other distressed areas in the Nation.

On August 10, Under Secretary of Commerce Walter Williams, who coordinated President Eisenhower's recommendations to NPIDC, reported among other objectives that "it is the policy of the Atomic Energy Commission to give consideration to labor-distressed areas when letting contracts, and they have instructed the prime contractors to give the same consideration when letting subcontracts."

II. PROBLEM

Our problem before both the AEC and the joint congressional committee is simply this-we want to link the industrial development of nuclear energy with our heavy unemployment surplus and substantially reduce the great number of thousands of our idle workers. We feel that employment through atomic energy projects—government or private, or subcontracts-holds great social, economic and military significance, We know that a nation is weakened where great pockets of chronic idleness continue to exist when the Government can provide assistance and guidance. We are not making this plea without calling attention to the great community efforts that are being made in this region toward industrial diversification—accomplishing a shift from coal mining, an industry that is now being further impaired by thorough increased utilization of atomic power.

III. CONCLUSION

We ask the Atomic Energy Commission and the Joint Congressional Committee on Atomic Energy to give "distressed areas" utmost consideration in planning and executing all future Government projects. We ask both groups to implement the President's recommendation by positively suggesting to all prime and subcontractors or licensees that they consider "distressed areas" and in our particular situation, northeastern Pennsylvania, when they contemplate new construction and placement of additional installations for both research and production.

We are in great need of assistance and we feel that our Government's atomic agencies can, in a large measure, provide at least a partial solution to our unemployment problem—one whose "chronic condition" deserves the immediate attention of the research and industrial development groups of the nuclear energy program.

Vice Chairman.

Yalta Repudiated by Release of Documents, Lane Declares

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Thursday, March 24, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, an article entitled "Yalta Repudiated by Release of Documents, Lane Declares." The article is based on a statement made by our former distinguished Ambassador, Arthur Bliss Lane, and was published in the Washington Evening Star of March 22, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YALTA REPUDIATED BY RELEASE OF DOCUMENTS, LANE DECLARES—EX-DIPLOMAT SAYS ACT SIGNALS END OF APPEASEMENT

(By L. Edgar Prina)

Former Ambassador Arthur Bliss Lane said today that publication of the Yalta papers is an implied repudiation of that wartime Big Three agreement by the United States

Three agreement by the United States.

He asserted that "this thought, if properly conveyed" by the Voice of America and our overseas information programs, could have a profound effect behind the Iron Curtain.

"It would indicate to those sad and silent

"It would indicate to those sad and silent peoples that the United States no longer stands for a policy of appeasement, containment, or peaceful coexistence, whatever that last expression means," he said.

Mr. Lane was named Ambassador to Poland by President Roosevelt in 1944 and served until 1947. He then retired, after 31 years in the Foreign Service, so that he could speak out against what he calls "the gravity of the crime of Yaita."

INDEPENDENT IN POLITICS

He has been especially concerned with the effect the February 1945 agreement had on the Polish people. His book, I Saw Poland Betrayed, was published early in 1948. He is an avowed political independent, although a vigorous supporter of the Eisenhower foreign policy.

According to the former envoy, publication of the Yalta papers has this educational value: "It will teach the American people that the executive branch should not be allowed to take action in changing frontiers and peoples without the consent of the Senate."

Mr. Lane's principal criticisms of the Yalta Agreement are that the United States signed a pact "putting millions of Poles into the Soviet Union" (by changing that nation's frontiers) and "giving Poland a Communist government without consent of the Polish people."

LACKS DEMOCRATIC GUARANTIES

While the Soviet Union pledged free elections for Poland at Yalta, Mr. Lane said that the United States did not exact the guaranties to assure such a democratic processes.

"It is not enough to say that Stalin violated the agreements," Mr. Lane declared. He recalled that he pointed out to Secretary of State Stettinius in December 1944, that the United States was contribuing millions of dollars' worth of military equipment to Great Britain and the Soviet Union and had the most powerful army, navy, and air force in the world. Therefore, he told the Secretary, the United States should and could see that the Polish people were given the chance to select their own government.

PEOPLE WERE STUPEFIED

Mr. Lane branded as preposterous the Soviet concession to broaden the Moscow-dominated Lublin regime in Poland by including other political parties. He said that "once you have a Communist core in the government you have a nation controlled by Communists."

He disclosed that he found the Polish people stupefied by Yalta, adding:

"They wondered why the principles of the Atlantic Charter—for self-determination by peoples—were violated by that pact."

The U. S. S. R., while not an original party to the Atlantic Charter, later said they agreed to its principles.

The retired diplomat said that he hoped the American people realized "that we cannot give up certain basic principles • • • merely for the sake of expediency. • • We cannot sell into slavery millions of people or be a party to the wiping out of freedom of the press, religion or thought."

Expatriated Citizens

EXTENSION OF REMARKS

HON, ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1955

Mr. CRETELLA. Mr. Speaker, I have introduced H. R. 5186, which provides for certified copies of citizenship to be furnished to repatriated American citizens who voted in an Italian election or plebiscite during the years 1946 and 1948.

Under the provisions of the McCarran-Walter Act, those citizens who so voted may be repatriated under certain conditions, but under the provisions of law they are not entitled to certified copies of their citizenship once repatriated. There are now thousands of persons awaiting this documentation which would enable them to be registered voters, or to qualify for employment where citizenship is essential, and for countless other activities in which positive American citizenship must be established.

There appears to me to be excellent justification and a basis for this legislation caused by the recollection that great numbers of prominent and nationally known groups and civic organizations put on a tremendous campaign between 1946 and 1948, for American citizens in Italy, to cast a vote against the Communist candidates in these elections and plebiscites.

Through the dissemination of millions of letters, telegrams and circulars and other material to Italy, the Christian Democrat Party led by Alcide de Gasperi was able to defeat the Communist and other radical left wing parties in the opposition and preserve Italy to the free world. One such organization in the United States, the Order Sons of Italy, during its annual convention in California in 1946, was one of the spearheads in the nationwide efforts to defeat the Italian Communists. Many thousands of dollars contributed by this organization and its members were used during these 2 years to contact friends, relatives, and countrymen and urge them to cast a vote against the Communist candidate.

There were also many broadcasts made to Italy during this time as a direct appeal to Americans to vote in the elections. Certain officials of the United States Government did, in fact, appear on these broadcasts in strong support of this move.

Following such action, those who had participated in these elections lost their American rights but they were later repatriated by legislative action. My bill would enable repatriated citizens to obtain upon request, an exact copy of the certificates of citizenship which are supplied to the Department of Justice and State Department. This would end a great deal of confusion which exists today for these people, and would entitle them upon request to immediate documentary proof furnished by our Government of their American nationality.

I trust that the appropriate committee to which this legislation will be referred will take immediate action and that this legislation will receive the wholehearted support of my colleagues.

Greek Independence Day

EXTENSION OF REMARKS

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. FORAND. Mr. Speaker, I am happy to join with my colleagues to once again, on Greek Independence Day, pay a tribute to a gallant people.

Tomorrow, March 25, is the 134th anniversary of Greek independence. The great Hellenic culture has had a profound and lasting effect on the freedom-loving nations of the western world. The Greeks, as did the Americans, fought hard and long for their independence, and they are ready and willing to fight just as hard and long to retain it. We Americans are proud to have the Greck Nation as a true and stanch ally in the continuing struggle for freedom for all

peace-loving people throughout the world.

The history of the valiant Greek Nation reveals that its life has not been any easy one. Greece maintained its freedom from foreign domination from 1827 to 1941, and the world will not soon forget the heroic struggles of the Greek people against fascism, and how they overcame great odds in driving back Mussolini's army in 1940. When the Nazis joined the fray, however, the Greek Nation was overwhelmed, its people subjugated, its earth scorched, and its economic resources systematically destroyed by Hitler's hordes.

The Greek Nation was once again liberated, through the assistance of the British in 1944, but over 400,000 Greeks died of starvation during the period of

this ruthless occupation.

After World War II, liberated Greece found its chief ports in ruins, threefourths of its merchant fleet destroyed. the vital Corinth Canal blocked by mines, major rail lines torn up, and with more than 1,500 villages and towns destroyed. Thousands of people were homeless, and living standards reached an almost impossible low level.

It was in this moment of Greek national weakness that the Communists struck. Unable to win a strong voice in the Greek Government, the Reds formed guerrilla bands, to terrorize the villagers and to prevent them from carrying on their essential task of rehabilitation. This Communist move was intended to deal a death blow to the wartorn economy of Greece and to force the country to accept its orders from the Kremlin.

Early in March of 1947 the Greek Government appealed to the United States for assistance. With a great example of courage and foresight, and in full recognition of not only the humanitarian needs of the Greek people, but also of the danger of international communism to the security of the free world, and to the United States, President Truman responded boldly, with the initiation of What is now known as the Truman doctrine for Greece and Turkey.

The President then secured from Congress his initial request for \$300 million Which went into guns and equipment for the Greek army, as well as foodstuffs and other necessities for the population, and the Greek people were again on the way to the establishment of decency and free-

Aided by an American military mission, a revitalized Greek army defeated the Communists and established peace and order in October of 1949. Continued United States aid has helped rebuild Greece's economy and has enabled the Greek people to strengthen their army against another Communist attempt to seize power.

It is also significant that the Greeks, having defeated the Communists at home, had a military unit fighting with other United Nations forces in Korea.

Greece and the United States share defense responsibilities as NATO partners. With some 200,000 men under arms, Greece has a larger percentage of its population in active military service than any other European NATO nation, and this force, we are told, can be doubled on short notice.

Today Greece stands as a fortress of freedom in the Mediterranean. She is of great importance, strategically and geographically, to our own national defense and security. She is a true and staunch ally, and the investments of the United States in this cradle of western civilization were wise and judicious. Our firm stand and financial assistance to Greece has resulted in uniting Greece, not only internally but also with other freedom loving countries in their stand against aggressor forces.

Here, in our own country, the Greek-American community has made a great contribution to our culture, to our economy, and to our democratic spirit. We owe a great debt to the Greek mind and

to the Greek spirit.

On this 134th anniversary of the independence of Greece, we join in its celebration and hope that this anniversary will always be celebrated in peace and freedom.

The Farm Problem and Price Supports

EXTENSION OF REMARKS OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to direct the attention of the House to strong and unwavering opposition of the Illinois Agricultural Association to H. R. 12. I hope that every Member will read the following sane analysis made by Mr. Otto Steffey, president of the Illinois Agricultural Association, and note how unqualifiedly this great agricultural association of Illinois goes on record in favor of continuing flexible price supports:

ILLINOIS AGRICULTURAL ASSOCIATION, Chicago, Ill., March 21, 1955 Hon. MARGUERITE S. CHURCH,

House Office Building,

Washington, D. C.

DEAR CONGRESSWOMAN CHURCH: The House Agricultural Committee has voted out House Resolution No. 12. It is my understanding that the bill will be discussed on the floor and acted on within the next few days. The bill contains in part the following features:

1. Provides 90 percent mandatory price supports for wheat, cotton, corn, peanuts and rice through 1957.

2. Provides a choice of two systems for

supporting wheat prices:

A. Return to 90 percent supports with marketing quotas—the same program which was in operation prior to the Agricultural Act of 1954.

B. A multiple price plan whereby bread grain would be supported at 100 percent of parity and wheat for export and feed at some lower level.

3. Provides for raising the minimum level at which dairy prices must be supported to 80 percent of parity.

In regard to point No. 1, concerning the continuance of 90 percent of parity on basic commodities we have had such a program since the war. It has tended to stimulate production while depressing markets, has led to the greatest surplus situation in the history of the country and, at the same time, it has failed to maintain farm prices. In the light of this unfavorable experience it seems to me that we should give the 1954 Agricultural Act an opportunity to work. You are, of course, aware that nothing has yet been sold under this program.

Point No. 2, providing for a choice of two systems for supporting wheat prices, in my opinion would encourage further unneeded production. The current wheat surplus of 1,100 million bushels (quantity held by CCC, both inventory and loans, as of January 31, 1955) is one of the most baffling problems before us today. If this bill should pass and large quantities of wheat were released on the feed market, it would create disastrous conditions for corn and feed grain producers. As you perhaps know, grain prices are already weak because of extremely heavy supplies.

In regard to point No. 3, concerning 80percent support on dairy products, it appears that milk production and demand are currently moving toward a better balance but we are still in a surplus situation. It would be unwise at this time to take any action which would reverse this trend.

In the interest of a strong and prosperous agriculture in Illinois, I trust you will use your utmost influence to prevent the passage of this bill. This action would be in complete accord with the policy of this organization as established through 1,200 local policy development meetings held over the State of Illinois during 1954 and adopted by the voting delegates at the annual meeting in November.

Sincerely yours, ILLINOIS AGRICULTURE ASSOCIATION. OTTO STEFFEY, President.

Comments by Hon. John J. Dempsey, of New Mexico

EXTENSION OF REMARKS

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. FERNANDEZ. Mr. Speaker, by unanimous consent, I insert in the Con-GRESSIONAL RECORD comments of my colleague, the Honorable John J. Dempsey. in his weekly newsletter for release to the press tomorrow on the subject of the Yalta documents:

NEWS AND VIEWS FROM YOUR NATION'S CAPITOL (By JOHN J. DEMPSEY, Congressman from New Mexico)

WASHINGTON, March 24 .- Nearly three centuries ago one William Shakespeare provided the most fitting title for the now subsiding Yalta papers episode in the Nation's Capital-Much Ado About Nothing—at least about nothing new. It is a combined comedy and tragedy. The bungling, inept handling of the whole affair by the State Department, coupled with the all too apparent political motive which inspired it, has backfired as far as American public opinion is concerned, Only the political alarmists sought to blow up the revelations to elephantine proportions. Their efforts have been providing the comedy but have resulted also in tragedy insofar as this Nation's world relationships are concerned. There is no question, in my opinion, but what our diplomacy has suffered a serious setback.

Secretary of State Dulles, who admits there is nothing new in the disclosures, allowed himself to be maneuvered into a leak of the Yalta records—somewhat expurgated, he explains—to a New York newspaper. He could not have been naive enough to believe, having ordered dozens of copies of the 500,000-word Yalta dossier runoff for confidential distribution, that such a leak would not occur. If he was he should not be Secretary of State of our great Nation. He knew it would leak and that the demands of his political cohorts would be satisfied.

What the Secretary of State, of all men in our public life, did not appear to foresee was the worldwide repercussions that would follow. Sir Winston Churchill and the British people in particular waxed angry. They had a right to do so. The loss of confidence we have suffered in Britain alone may well be incalculable. The facts of the Yalta agreement were known to the British, as well as to our own people, but the informal—and admittedly rather tactless—discussions among the Big Three leaders at Yalta were not common property. Making them so accomplishes no peace-advancing purpose. It has nullified in no small part the friendships we have been spending billions of dollars to build up in all of the free nations.

Sir Winston also charges that the released Yalta papers are erroneous in many instances. That is understandable in view of the admitted fact that they are not stenographic transcripts, but rewrites from hurriedly made notes and jottings from memory—a very fallible source. Their value, therefore, is dublous.

The grins in the Kremlin are wide, indeed, over the loss of face America has suffered by this diplomatic faux pas. The Communists are enjoying the comedy and chortling over the new strain we have placed on our free-world relationships, not to mention the threat to congressional bipartisan accord on foreign affairs. My own conclusion is that Mr. Dulles' State Department efforts could be better devoted to keeping alive the spark of international peace rather than snuffing it out in the ashes of the dead past.

Growing Nationalism

EXTENSION OF REMARKS

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Concord Monitor, Concord, N. H., of March 22, 1955, entitled "Growing Nationalism." This is a timely and thought-provoking editorial on one of the biggest and most important issues facing the country today, namely, international trade:

GROWING NATIONALISM

The Congress still has not completed final action upon extension of the Reciprocal Trade Act, and shortly it must take up consideration of revisions negotiated in the General Agreement on Trade and Tariffs, better known as GATT.

These two instruments are the foundation of a conscious effort by the Government to

establish some rules or principles as to the imposition of tariffs in order to remove this problem from legislative logrolling. Long experience revealed the inadequacies of trying to write tariff schedules in the Halls of Congress. That way the national interest came last.

Neither the Reciprocal Trade Act nor GATT are perfect organisms. Their past acceptance, and their present status, is based upon exceptions to the general rules established, whereby they are made sufficiently asceptable to be approved by the Congress. There are signs that these exceptions may not at present be enough to win their extension.

Should these two instruments of trade and tariffs be defeated in the present Congress a backward step will have been taken which can become an additional breeder of world conflicts.

Trade between nations upon this earth is still beset by many problems. A principal irritant is the nonnegotiability of many currencies. Outside the Iron Curtain there are dollar and sterling areas, and little else. Many nations still have multiple exchange rates. Economic sanctions operate as part of the cold war. Our own subsidy of agricultural products for export is an exception to the general rule. Commonwealth concession not granted to third nations is a British exception. Import and export controls other than tariffs are more or less common-

Despite this confusion the situation is more stable than it would be without the two implements whose extension is being considered at this session of the Congress.

Normally, trade is the principal consideration of international diplomacy. If international trading arrangements are satisfactory as between nations the dangers of war are greatly reduced. So is the tendency to resort to political extremes involved in totalitarian policies adopted by "have not" nations.

Without some general rules international trade becomes almost anarchial. It is every nation for itself. Strange alliances become commonplace. Unrealistic balances of power are generated. Unsound economies are developed by almost all nations, Corrective and progressive national economic development is delayed everywhere. Politics gain priority over national productivity.

Unfortunately, political pressures adverse to maintenance of an ever-increasing orderliness in world trade, with mutual benefits to all nations, seem to be on the rise again in this country.

Part of this pressure is a result of the failure of those associated with declining industries to recognize the impact of new industrial forces which are, as they always have, constantly expanded the economy of this Nation. So the attempt is made to save what must inevitably recognize change by international trade barriers, whereas such barriers will not prevent oil and natural gas from causing further declines in the use of coal, for example, or the use of substitute materials devised by chemistry as a substitute for cotton or woolen goods.

This is a strange Nation. It has undergone more changes than any other on earth in less time. But the vast adjustments it has made in this perpetual process of development of the highest standard of living upon this earth are now being forgotten in more and more quarters and the resistance to further expansion is increasing in a false effort to preserve the status quo in industry after industry.

This is the sort of reaction which comes following periods of excessive international strain. It is a nationalistic reaction not uncommon elsewhere on this earth, but of which we are critical except as we ourselves indulge in it.

The Independence Day of Byclorussia

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. FLOOD. Mr. Speaker, on March 25, 1955, Americans of Byelorussian origin and Byelorussian immigrants in the United States are solemnly celebrating the 37th anniversary of the proclamation of the independence of the Byelorussian National Republic.

Byelorussia, a country of 250,000 square miles and 18 million population, is situated in eastern part of Europe, between Poland and Russia—Ukraine, Lithuania, and Latvia. Byelorussia has become better known to the West as Byelorussian Soviet Socialist Republic, a charter member of the United Nations since 1945.

In the past Byelorussia was an independent nation and played a great part in the medieval history of eastern Europe. Under the conditions of the time Byelorussia appeared under the name of Kryvia and later on—the 13th century—it was known as a Grand Duchy of Lithuania; since 1795 forcibly incorporated into imperial Russia.

For several times Byelorussians have tried to reestablish their sovereignty; in 1912 with the help of Napoleon, in 1831 and 1863 by armed uprising in alliance with Polish insurgents. With the start of the First World War Byelorussians again took the opportunity to liberate themselves from the Russian slavery. Through the coordinated effort of all Byelorussian organizations a general national representation, consisting of 1,167 delegates from all the corners of the country, gathered in Minsk on December 14, 1917. This first all Byelorussian Congress became the actual constituent assembly of Byelorussia, it elected the Rada-Council-and its Presidium as its executive bodies, which have assumed the responsibility for the fate of the nation.

On March 25, 1918, Rada of the Byelorussian National Republic solemnly proclaimed the independence of Byelorussia and published its third constitutional act containing the official text of the proclamation. That was the birthday of the new Byelorussian State under the name of Byelorussian National Republic.

Byelorussian Government quickly set to work to expand its activities in all fields of the national life. In spite of great difficulties connected with the war and the devastation of the country the Government made significant advances in the fields of economy, defense, education, culture, social protection, etc. Byelorussian National Republic was recognized de jure by Austria, Czechoslovakia, Estonia, Finland, Georgia, Latvia, Lithuania, Poland, and Ukraine and de facto by Bulgaria, Denmark, France, and Yugoslavia.

The new republic could not resist for too long a time the pressure of Russian imperialism without any help from outside and soon fell the victim of new occupation, this time by Red army. It was finally liquidated by the Riga Treaty of March 1921, and its territory divided between Poland and U. S. S. R.

The Russian sponsored B. S. S. R. took her place, created on January 1, 1919, in Smolensk as a Communist counterweight to the democratic republic established in Minsk in 1918. This union republic with its puppet government is still in existence within the structure of the Soviet Union.

Ever since the Russian Communists took over the country its population has been subjected to a violent and ruthless persecution for its unabating love of freedom—in soviet official language, "national-democratic" deviation—in addition to the "normal," social, and economic experimentation and irresponsible manipulation with people's property and life by Communists. But in spite of this, and in spite of thwarted uprisings, trials, shootings and deportations, the people of Byelorussia did not accept the government forced upon them, they still resist it.

The legal Government of Byelorussian National Republic was compelled to go into exile in order to continue the struggle against communism for restoration of the Byelorussian democratic independent state. After 34 years of difficult life the Government is still in existence and leads the best forces of the nation in the fight for freedom and justice.

The Yalta Explosion

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting and truthful editorial on the release of the Yalta papers which appeared in the Daily Evening Item, Lynn, Mass., Monday, March 21, 1955:

THE YALTA PAPERS

Release of the mammoth 500,000-word State Department account of the famous Big Three conference at Yalta in early 1945 likely will fuel more controversies than it settles.

For years some Republicans have been assailing the historic meeting as a "sell-out" to the Russians which opened the floodgates to the spread of communism across Asia and Eastern Europe.

They have demanded to see the full record. Now we have all the record that was kept except for a few parts deleted by the Department in the national interest or to avoid undue offense to certain nations.

This was the conference, remember, at which President Roosevelt and Prime Minlster Churchill handed Premier Stalin the Japanese-held Kurile Islands, the southern half of Sakhalin Island, and large rights in China, particularly Soviet access to the warm-water Manchurian port of Dairen. In addition, plans were made for the postwar partition of Poland, and for establishment of democratic regimes in other eastern European lands, now under Soviet domination.

The documents do not appear to support the allegations of a sellout. Even hastily scanned, they make it abundantly clear that the great aim at Yalta was to bring World War II to the quickest possible end and with the least cost in allied lives.

Toward that goal, American military and diplomatic officials were convinced it was absolutely essential to bring Russia into the war against Japan. They felt it would take 18 months after Germany's surender to subdue Japan. Actually, Japan fell 3 months after V-E Day.

Time and again, before, during and after Yalta, the record shows that when Mr. Roosevelt and others felt concern over puzzling Russian attitudes and behavior, the military advised caution, advised doing nothing to upset the prospect of drawing Russia into the Far Eastern war.

At Yalta the United States representatives knew we might have an A-bomb by August 1, 1945, but they could not be sure. Not even the scientists knew it would work until one did actually explode in New Mexico on July 15, 1945, 5 months after Yalta.

Thus all war calculations left the A-bomb out of account. This is the context in which the Yalta concessions must be read.

So long as we believed we needed Russia against Japan, we were in a weak bargaining position at Yalta. As it was, we resisted some Soviet demands, but we felt we had to give enough to assure Soviet entry into the Asian war.

It is a tragic fact that it turned out we did not need Russia. But it has not been shown that this misjudgment was a deliberate sellout. Our leaders were acting always on the military's advice. The documents make plain that Alger Hiss, former State Department officer convicted of lying about Communist affiliations, played only a notetaker's role at the conference.

Evidently we had poor intelligence or badly evaluated intelligence on the matter of Japan's capacity to continue fighting.

Other than this, the great fault at Yalta seems to have been not only our misplaced trust in Russia (a fault shared by millions at that time), but the rather glib, naive notion of our leaders that they and their wartime allies could in effect make over the world in a week's time.

Greek Independence Day

EXTENSION OF REMARKS

HON, HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. ZELENKO. Mr. Speaker, on the occasion of Greek Independence Day, March 25, it is well that we salute our many great Americans of Greek origin and to point out that the United States of America and Greece have always been closely bound by ideals of liberty, freedom, and democracy.

When Congress assembled in December 1823, President Monroe made the revolution in Greece the topic of a paragraph in his annual message, and, on December 8, Daniel Webster moved, in

the House of Representatives, the following resolution:

Resolved, That provision ought to be made, by law, for defraying the expense incident to the appointment of an agent or commissioner to Greece, whenever the President shall deem it expedient to make such appointment.

Our Nation, and particularly this House of Representatives, can take pride in the fact that these were the first official expressions by any government supporting the independence of Greece and that these few official words contributed immensely in creating a feeling throughout the civilized world which led eventually to the liberation of a portion of Greece from Turkish domination.

On January 19, 1824, this House of Representatives resolved itself into a Committee of the Whole, took the above resolution into consideration and listened to a speech by Daniel Webster on the resolution and the revolution in Greece. That speech contained many remarks apropos today.

Webster's interest in the revolution of Greece was motivated not by the glories of ancient Greece but rather as an American question. He said:

What I have to say of Greece, therefore, concerns the modern, not the ancient; the living and not the dead. It regards her, not as she exists in history, triumphant over time, and tyranny, and ignorance; but as she now is, contending, against fearful odds, for being, and for the common privileges of human nature.

We are called upon, by considerations of great weight and moment, to express our opinions upon it. These considerations, I think, spring from a sense of our own duty, our character, and our own interest. * * Let this be, then * * * purely an American discussion; but let it embrace, nevertheless, everything that fairly concerns America. Let it comprehend, not merely her present advantage, but her permanent interest, her elevated character as one of the free states of the world, and her duty toward those great principles which have hitherto maintained the relative independence of nations, and which have, more especially, made her what she is.

The self-interest Webster spoke of is strikingly similar to that of our own age, the contest between absolute and regulated governments. At that time the continental European powers were reiterating the divine right of kings theory and advocating a forcible maintenance of the status quo, including denouncements of the Greek revolt against Turkish oppression.

The force of Webster's speech is felt even today, for our official statements of support in 1823 have brought us dividends of the highest order. Greece's entry into World War I in 1917 with Greek troops winning an important victory on the Balkan front helped speed the end of that war; her defeat of Mussolini's troops for 7 months in the winter of 1940-41 necessitating Hitler's sending in panzer divisions to subdue the Greeks fired the imagination of the free world and is cited by many military analysts as the key to the eventual defeat of the Axis; and most recently Greece, in defeating Communist aggression in a bitter war, again dealt tyranny and governments based on absolute power a severe blow. It should be noted that this was the first and only time the Communists have been completely defeated by force of arms.

The history of Modern Greece is the history of the gradual liberation of Greek inhabited territories. For example, the Ionian Islands were ceded by Great Britain to Greece in 1864 after a prolonged period of constant struggle; Crete and the Aegean Islands were liberated from Turkish yoke after the victorious Balkan Wars, 1912-13. The Dodecanese were ceded by Italy after World War II and the currently publicized struggle on Cyprus dates back to the days of the Turkish occupation. Today Cyprus represents the only Greek island still not free. Webster, in his speech, actually commented on the Turkish massacres in Cyprus in which the ranking members of the Greek community were executed on the charge of conspiring with the insurgents in

American-Greek relations from the 1820's until the present have been of the highest order. The principles of our own revolution and its flames were carried over into Greece and she is today one of our most ardent champions on the Continent. This also explains her disbelief in our failure to support the principle of self-determination for Cyprus and the ensuing demonstrations.

The United States can look back on 1823 as an act of statesmanship which has brought us great dividends from a moral as well as a realistic viewpoint. Today the United States has a continuing interest in the future of modern Greece. As a military bastion of NATO and as the pivot in the Balkan alliance, Greece is our one tried and true ally in the eastern Mediterranean. As the only nation to have defeated the Communists by force of arms, she stands on Russia's doorstep as a symbol of freedom and determination.

It is only natural that the United States salute the freedom-conscious people of Greece on this occasion. We join with them in celebrating their independence and we are not only aware of Greece's ancient glories but we recognize her contemporary importance to a free world. Greece has influenced all aspects of civilization and she has been a brave and noble ally. She adds proof to the contention that the support of free institutions can hold us in good stead today.

Lithuanian Appeal to the Pope

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. FLOOD. Mr. Speaker, under the leave to extend my remarks in the Record, I include a copy of an unusual letter from the Lithuanian people which was

addressed to our Holy Father, the Pope. Six men carried the letter on a dangerous route through East Prussia, Poland, and the East German Zone into the free world in 1948. Four sacrificed their lives on the mission. The message contained herein is a sign of the times and needs no further commentary:

[From the Catholic Standard and Times of Philadelphia]

Holy Father, shepherd of all Catholics: we Roman Catholics from the Republic of Lithuania humbly entreat Your Holiness' intercession. Faced with extermination, subjected to a reign of terror, hungry, naked, accustomed to much bloodshed, deprived of all rights and cut off from the rest of the world, we ask your protection and assistance.

During the past 9 years we have lived under an occupation of terror and violence. With our lives at stake, we send this message to Your Holiness about the sufferings of our people and herein render an account of the 20th century merciless godlessness that is communism and unveil the manifold lies concerning religious freedom in the Baltic lands. As long as the great oppressors have not liquidated us entirely, we will continue to proclaim the clear truth about the impending tragedy of our people. This is the testament of our dying fatherland. Fortunate are those who have not lived to see what is happening to our country.

Holy Father, forgive us if we who are alive seem to be jealous of the dead. No man can ever imagine what we have lived to see—no man shall ever be able to imagine it. There is no comparison even with the dreadful assaults of the Tartars. In June 1940, within the space of 3 days, almost 40,000 Lithuanians, men, women, and children, the aged and the sick, without any respect for condition and without any judgment or court sentence being passed, were herded into crude carts and taken away to Siberia.

We can still hear the cries of the dying from those carts. The persecution that began in blind fury has today become a well-planned extermination of our country, a crucifixion under the Russians. It is estimated that it will take 10 years to carry out this plan in all its details.

Five years have already elapsed and we exist no longer as a nation. Eighty-seven percent of the Lithuanian people are Catholics and the influence of religion on our people was, and is today, very great. Communists know all too well that as long as the influence of religion remains unimpaired, our people will be able to offer resistance. The newly appointed priests are difficult to distinguish from political agents. Their god is a god who has borrowed his strategy from Lenin.

On the other hand, the priest who is free from blame is stamped as a thief, a murderer, a robber whom a court of justice "out of respect to his holy orders" sentences to 15 years of hard labor in Siberia.

Eighty percent of our priests have either been banished to Siberia or are living in various hiding places throughout the land and belong to the underground movement in our forests. The corpses which are thrown from the carts or even lie in front of the church are only imaginary representations to the outside world, while the naked, scarred bodies of men and women which lie here for days—until their mothers or children identify them—are dread realities to us.

Holy Father, we ask ourselves day by day: Where are the Nations of the civilized world, where are the hundreds and millions of Christians? Do men exist who will fight for truth and the rights of humanity? Are these men found no longer? Have the Christian nations of the world been asleep in a dream of a false sense of security? Do they think that the hordes from the East

will stop with our extermination? Communism is preparing to lay waste the entire world, our civilization, culture, and Christianity itself.

No one can afford to let himself be blinded to this fact: Communism waits only for the the opportune moment. When this letter reaches Your Holiness, perhaps we may no longer be alive; when it reaches the outside world, many of those who carried it on their person will have fallen before Communist bullets. Holy Father, grant us, who are dying for our faith, for our country, your blessing. Praised be Jesus Christ, Lord of the living and the dead. The Roman Catholics in the Republic of Lithuania.

Coming to Grips With Civil Defense

EXTENSION OF REMARKS

HON, HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. OSTERTAG. Mr. Speaker, the President has recently asked for an appropriation of \$12 million for civildefense planning, and the request will soon be before this House for approval. We shall certainly make no mistake in making these funds available. Just as our Armed Forces have been faced with the necessity for developing new strategies, as result of nuclear weapons, so our Civil Defense Establishment is faced with vast new and complex problems, which must be analyzed and solved at the earliest possible moment. Congress can expedite that vital task by making available the funds the President has requested.

Under leave to extend my remarks, Mr. Speaker, I include in the Record an editorial from today's issue of the New York Herald Tribune, bearing on this important matter:

COMING TO GRIPS WITH CIVIL DEFENSE

President Eisenhower's request for \$12 million for civil defense planning is a necessary first step toward meeting a swift-changing problem. World War II proved that many previous ideas on this subject needed revision in the light of experience. The atomic bomb forced a drastic alteration in plans based on conventional bombing. The hydrogen bomb and the development of guided missiles have introduced new factors of great importance into the equation.

The first defense against the H-bomb, of course, is to make certain that it will not be used. But given the character of the Communist regime, no final reliance can be placed on efforts to end war or the use of weapons of mass destruction. Cities must have the ability to mitigate the effects of bombing; the technical skills that have made nuclear war possible must be applied to protecting threatened populations against its effects.

This is a huge and complex task. To evacuate an island city like New York (where only one borough is on the mainland) would require the most careful planning, with due allowance for all the changes that might be necessary under different circumstances—a warning period shorter or longer than might be anticipated, the loss of one or more means of transportation, uncertainties of weather and of the time of day or night. New means of departure, strict control of pedestrian and vehicular traffic, ac-

curate estimates of the personnel essential to maintain services during an evacuation, food and quarters for the displaced, are all parts of the problem. Much has been done in this direction, but revision and refinement are always necessary, particularly since it is only recently that the scope of the H-bomb threat has been known.

Congressional committees, under Democratic leadership, have been critical of lack of centralization in civil defense spending. It is perfectly obvious, however, that many agencies must take part in the actual work of civil defense, and the Democratic cuts in appropriations for this purpose cannot be justified. Centralization in planning is necessary and this will be provided if the President's request is granted. Congressional consent to the appropriation cannot be withheld without jeopardizing national security.

Sermon of Archbishop Cushing on Feast of St. Patrick

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following text of the sermon delivered by the archbishop of Boston, the Most Reverend Richard J. Cushing, on a subject matter which is close to the hearts of all persons of Irish extraction and one which His Excellency has given a great deal of thought and study.

On several occasions Archbishop Cushing has made pilgrimages to Ireland gathering up on these occasions information and facts concerning the history of St. Patrick and the traditions, customs, and habits of the Irish people. Since he is well versed on this subject matter, I submit his interesting remarks for the attention of the Members of Congress.

The complete text of Archbishop Cushing's sermon delivered at a pontifical Mass in Holy Cross Cathedral on March 17, appeared in the Pilot, Saturday, March 19, 1955, and is as follows:

ARCHBISHOP HAILS SPIRITUAL GENTLENESS OF IRISH—TRAIT NATIVE TO IRELAND STRONGER ENHANCED BY FAITH AND TRIBULATION

"To no man rendering evil for evil. Providing good things not only in the sight of God, but also in the sight of all men. * * * Be not overcome by evil, but overcome evil by good." (Words taken from the Epistle to the Romans, ch. 12.)

Each nation in Christendom rejoices in a dominant characteristic by which it may be identified. That characteristic represents the nation in its highest and best aspects. A people may have faults, serious and glaring, but those who love them, and particularly their brethren in the faith, think of them gladly in terms of their outstanding favorable characteristics.

Thus in the family of Christian nations Spain is no doubt distinguished for her flaming, holy pride in the uncompromising possession of the fatth. Italy is perhaps best loved for her humanity in the genial living out of Christian values. France is beloved for the chivalry of her catholicism. Catholic England lays just claim to the recognition of her enlightened practicality in piety and in

the profession of the faith. The typical characteristics of other ancient Christian nations are familiar; that of our own Nation is perhaps not yet formed, at least in its final nation.

The national personality of Ireland among the nations which comprise the Christian commonwealth is the proper subject of our affectionate meditation on the feast of the patron of the Irish people. That personality warrants our speaking of Ireland as the nation of spiritual gentleness and our hailing the gentleness of the Irish tradition as the dominant trait of Erin's spiritual portraiture.

Gentleness is probably not the first characteristic which one might expect of a people whose history is so filled with violence as is that of the Irish nation. So much bloodshed, so many exiles, such cruel hardships have the Irish people suffered that one might easily expect to find them a militant people, even a valiant people, but a spiritually hard and unbending people withall. Yet I venture the thought that it is precisely their sufferings and the injustices to which they have been subject which have produced the spiritual gentleness which is the characteristic of St. Patrick's people.

That gentleness is in accord with the lofty ascetical ideal which Paul preached to the disciplined Christian community in Rome: "Be not overcome by evil, but overcome evil by good." Thus does crueity beget gentleness and does gentleness conquer adversity.

We discover the character of a people not so much in their occasional moments of conspicuous greatness as in the everyday routine of their lives. By this test the spiritual gentleness of the Irish people reveals itself at every turn. One sees it in the modest demeanor of the people at prayer in the pro-Cathedral of Dublin or in any of the churches of Ireland. One hears it in the soft speech of the marketplaces and the streets. It is almost tangible in the deference and quiet manners of crowds like those we met at Droghera, Armagh, and Galway, crowds which were characterized, as crowds elsewhere rarely are, by great gentleness, the gentleness that is everywhere in Ireland.

NATURAL DISPOSITION

The gentleness of the Irish people has acquired its spiritual overtones and its almost ascetical quality from centuries of patience under suffering. But it corresponds to something almost native to the Irish temperament, something which must have been in the Irish character long before the conqueror came or even the gospel. Perhaps this gentleness is a byproduct of the very climate and geography of a country where rain, rolling hills, the colors of the land, lake, and sky all blend to produce the effect of "softness" in the sense of gentleness, but not in the sense of weak or undisciplined. Nature herself predisposed this people for the gentleness that God's grace has perfected in them.

GENTLE TEACHER

The grace of God came to Ireland chiefly through the preaching of St. Patrick. Gentleness pervades that preaching. St. Patrick is one of the few major apostles to Christian peoples who has left behind him an authentic self-portrait. The self-portrait of Patrick comes down to us in the religious autobiography called the Confession of St. Patrick. It is an intensely personal document and forever reflects the personality of the man and the saint. It is also a fountainhead of inspiration for later Irish literature. The quality of gentleness, so marked in the man and his writing, entered Irish Catholicism with the preaching and influence of Patrick.

Patrick began his account of his life and the declaration of his credentials to be heard as God's spokesman with words of disarming humility: "I, Patrick, a sinner, most ignorant. * * *" So he began and then he told of his calling by God, his vigils and austerities, his holy aspirations for the people to whom he had been sent. In all his writ-

ing and in anything he said, we seek in vain for violent words of rebuke or upbraiding. Authority is there, and also the dignity of one who speaks of Christ, for Christ, and in Christ. But the all-prevailing spirit and the least letter of what the apostle preached are warm with that gentleness which adversity was later to deepen, not destroy, in Patrick's people.

That same quality of spiritual gentleness is echoed in the writings of the religious and literary children of St. Patrick. One of the earliest Latin hymns in the Irish church is also one of the earliest Eucharistic hymns still extant in the Universal Church. Whoever writes of the Blessed Sacrament writes with gentleness; it cannot be otherwise. So with those who write of the Blessed Mother, and nowhere are her praises sung so early and so tenderly.

The monks who went from Ireland in the

The monks who went from Ireland in the days of St. Columba, and later Columbanus, brought the Faith back to whole areas of Germany, Gaul, Italy, and the East. They did not go as chaplains accompanying military chieftains or political conquerors. Their sole weapon was the gentleness with which, in the faithful pattern of St. Patrick, they preached the Gospel to rude peoples whose refined descendants remember them still for the meekness and clemency of their ways.

This typical gentleness of the Irish spiritual tradition is mirrored in the story of St. Columbkille, sometimes hailed as the supreme type of Irish genius. He was a scholar as so many of his race have been. He was an administrator, a diplomat, and a born leader. He was of course, a saint. But it is his gentleness which stamps him with the authentic seal of characteristic Irish spirituality.

WORK OF RECONCILIATION

His mighty missionary enterprise did not begin as a heroic response to a glorious call from God; neither was it launched as a campaign conceived in overpowering ambition to accomplish a resounding victory for the church. It began as a quiet man's effort to atone for an injustice, to repair by gentleness the damage done in a battle. His work, conceived in a spirit of gentle reconciliation, began in suffering and in sacrifice. It eventually bore its fruit in a spiritual harvest which probably has no par-But the point is that all the allel in history. historic accomplishments of Columbkille, his chain of monastic foundations and unique record of administration, began with the gentle decision of a peace-loving man to devote himself as best he could to a work of reconciliation, not of reform and least of all, of revolution.

Who can fail to see how this is typical of the saga of Irish spirituality from Patrick professing his sinfulness and ignorance down to Matt Talbot, the gentle, penitent recluse of our own generation? Whether we test it in the stories of the missionary monks, in the cheerfully accepted privations of the Irish exiles, in the penitential austerities of a Father Willie Doyle—it is always the same.

The gentleness, the invincible meekness of characteristic Irish spirituality, finds its inspiration in the words of Jesus: "Amen, Amen, I say to you, unless the grain of wheat falling into the ground, die, it remaineth alone. But if it die, it bringeth forth much fruit." It is taught in the line which sums up that school of Catholic asceticism which the Irish have always found so congenial: "If you wish to conquer, first learn to suffer." It is proclaimed in the phrase of St. Paul with which we began, a phrase which sums up at once the history and the spiritual portrait of St. Patrick's people: "Be not overcome by evil, but overcome evil by good."

May God give us generously of the grace to be gentle in good times as in bad. May St. Patrick, patron of our people, preserve in us the gentleness that we have loved in him.

Washington's Big Brawl: Dixon-Yates

EXTENSION OF REMARKS OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. ARENDS. Mr. Speaker, just what is the real meaning and real purpose of all this political frenzy created by the Democratic Party leadership over the Dixon-Yates contract?

Nothing has been more deliberately and more grossly misrepresented than this particular matter. They have misrepresented the facts in order to conceal the real issue.

William Hard, one of our very best political reporters, who has been an observer of the Washington scene since Woodrow Wilson's administration and is a profound student of national politics and public affairs, has written an article on this subject. It is entitled "Washington's Big Brawl: Dixon-Yates," and appears in the April 1955 issue of the Reader's Digest.

He makes a keen and penetrating analysis of this issue. He takes the facts, and only the facts, and explains clearly and concisely exactly what they mean. This article should be read by every American that he may know the truth.

The article follows:

WASHINGTON'S BIG BRAWL: DIXON-YATES

(By William Hard)

Poor Mr. Dixon, poor Mr. Yates. A ago they were reasonably obscure, private businessmen operating successful electricutility companies westward and southward from the Government's Tennessee Valley Authority electric-service area.

There was a crisis, though, in that area. Congress had declined to make an appropriation to the TVA for a new electric-generating plant at Fulton, in western Tennes-The Memphis region was threatened with a power shortage. Mr. Dixon offered to relieve the shortage by selling power to the TVA out of his own nearby system at a rate satisfactory to the Government's Federal Power Commission. Mr. Dixon thought this offer obviously fair. The TVA did not accept it.

Then, at the instigation of the Government's Budget Bureau, Mr. Dixon and Mr. Yates signed a contract with the Government's Atomic Energy Commission. Mr. Dixon and Mr. Yates (meaning, of course, their companies) together would build a plant to supply power to the TVA's powerhungry Memphis region; and the TVA would thus be enabled to continue supplying largescale power to the AEC's installations at Paducah, Ky., and Oak Ridge, Tenn.

So now the hot air rising from Washington's political furnaces has wafted Mr. Dixon and Mr. Yates from reputable obscurity to the heights of oratorical infamy.

We are assured that the Dixon-Yates contract is a scandal, a steal, and a multimillion-dollar giveaway. Representative CHET HOLIFTELD, of California, Democrat, a member of the Congressional Joint Committee on Atomic Energy, and Senator CLINTON P. ANDERSON, of New Mexico, Democrat, now chairman of the committee, are so shocked that they have promised vigorous committee action against the contract. State Senator Foutch, of Tennessee, Democrat, has proposed a State appropriation of \$100,000 for the hiring of criminal investigators to ferret

out the improper pressures brought to bear upon Washington officials by Mr. Dixon and Mr. Yates-or others.

Clearly, Mr. Dixon and Mr. Yates are now political personalities of the largest magnitude. So let us take an awed look at their contract, as it reads at this writing, even though its ultimate fate is uncertain.

Mr. Dixon's company, Middle South Utilities, operates through a subsidiary in Arright across the Mississippi from the TVA. And it is in Arkansas, at West Memphis, that Mr. Dixon and Mr. Yates plan to build their new plant under the name of a new joint company called Mississippi Valley Generating Co.

A year ago Mr. Dixon was wholly unknown to the head of the AEC, Lewis Strauss. He was also unknown to the head of the Budget Bureau, Joseph Dodge. Yet his contract was approved by all the present members of the AEC, and passed on by the Budget Bureau, and also by the Federal Power Commission, the General Accounting Office, the Department of Justice. Surely no unknown has ever before subverted so many Federal Government agencies in so short a time.

Let us therefore look at the principal "smart tricks" that Mr. Dixon is accused of having put over on these agencies. There are four.

Trick 1: It is charged that Mr. Dixon and Mr. Yates persuaded the AEC to give them the contract through negotiation without any competitive bidding.

What is the explanation? Last August Mr. Stephen Mitchell, then chairman of the Democratic National Committee, thought he knew. You see, Mr. Yates, of Committee, Dixon-Yates, is chairman of the Southern Co. And the Southern Co., through a subsidiary, sells power and light in Georgia. And President Eisenhower plays golf at Augusta, Ga., and knows Bobby Jones, who is reputed have played golf quite well himself. And Bobby Jones is a director of the Southern Co. The conclusion seemed to Mr. Mitchell to be obvious. Here was corruption at the White House level.

If Mr. Mitchell had really believed his appalling charge, he would have sought the President's impeachment by the House of Representatives for high crimes and misdemeanors. He didn't. His charge fell to

What, then, is the true explanation of the lack of competitive bidding in the Dixon-Yates contract?

In 1950 and 1952, under President Truman's administration, the AEC signed contracts with two groups of private electric companies for power to be delivered to its installations at Paducah, Ky., and at Portsmouth, Ohio. These contracts were negotiated. In neither case was there any competitive bidding. And the Democrats were quite right.

When you want electric power, the custo-mary thing is to get it from the nearest companies. These companies already have generating capacity which can be used to pump power to you in an emergency. And there are always emergencies.

Consider, for instance, the new plant that Mr. Dixon and Mr. Yates are going jointly to build. It will have 3 generators. From time to time 1 of them is bound to be out of commission for repair. Then Mr. Dixon and Mr. Yates will be able to make up for the incapacitated generator by supplying the authority with power from their presently existing nearby generating systems. And they are obligated under the contract to do so. The TVA is thus protected in its power requirements from the new plant.

Trick 2: It is charged that Mr. Dixon and Mr. Yates persuaded the AEC to allow itself to be overcharged for the new power from the Mississippi Valley Generating Co.

Let us compare the charges made to the AEC under its Democratic contract at Paducah, Ky., and under its Democratic contract at Portsmouth, Ohio, and under its Republican contract with Mr. Dixon and Mr. Yates' new company at West Memphis, Ark. With the same cost of coal the charges per kilowatt-hour stand thus:

		Mills
Democratic	Paducah	4.08
Democratic	Portsmouth	3.97
Republican	West Memphis	3.99

The Democrats at Portsmouth get power for the AEC two one-hundredths of a mili cheaper than the Republicans at West Memphis. On the other hand, the latter are going to get power for the AEC nine onehundredths of a mill cheaper than the Democrats at Paducah. Surely it will take an extremely good political mint to change hundredths of mills into political dollars.

Trick 3: It is charged that Mr. Dixon and Mr. Yates persuaded the AEC to give them a contract under which they are guaranteed a profit on the \$5,500,000 of stock which their companies are going to put into the new Mississippi Valley Generating Co. But what does the contract really say and do?

It puts a ceiling on the company's profit and then it goes further; it puts the profit on a descending escalator. The contract's target estimate of the cost of the project is \$107,250,000. If Mr. Dixon and Mr. Yates can keep the cost down to that estimate, the return on the company's stock will be 9 percent, which (as the Federal Power Commission's figures show) is less than the average stock profit of electric companies in the United States. But the cost of construction has risen considerably since the target esti-mate was fixed, and it may well continue to rise. If then the cost of the new project rises to \$113 million, the profit of Mr. Dixon and Mr. Yates, under the contract, will sink to 6 percent. If it rises to \$120 million, the profit will sink to zero. What sort of guaranteed profit is this?

It would certainly seem that Senator J. WILLIAM FULBRIGHT, of Arkansas, Democrat, and liberal, had ample justification for telling the Senate: "The Dixon-Yates contract has been unfairly and viciously and erroneously attacked."

There must be some impelling backgroundforce behind attacks so erroneous. Now we are beginning to come to it.

Trick 4: It is charged that Mr. Dixon and Mr. Yates persuaded the AEC to let them include taxes in the rates to be charged to the Commission by the new Mississippi Valley Generating Co. Well.

The Republicans on this point are again admiringly imitating the Democrats. are included in the rates charged to the Commission under its Democratic contracts with private companies at Paducah and Portsmouth. And taxes are taken into consideration by all private companies as an element of cost in the prices of all things that they sell to the Government. Basic question: Should the Government buy anything from private companies?

"Not electric power for use by us," say multitudes of enraged citizens in the TVA's electric-service area. "This Dixon-Yates contract is with the AEC," they say, "but it is for power that we are to consume. want no private power. We want public

power only."

And that is the true vortex of all the hurricane that is beating upon the Dixon-Yates contract. The big thing that is being decided is the TVA's future. That future will profoundly affect the whole nationwide struggle between public power and private

power. Let us try to forecast it.

The TVA is no "inefficient governmental bureaucracy." From the engineering point

of view it is admirably operated.

There are few people in public life who have any idea of legislating TVA out of existence. Nor has that idea any influential support among the managers of adjacent privately owned electrict utilities. I have heard Mr. C. Hamilton Moses, chairman of the board of the Arkansas Power and Light Co., say: "We must learn to live with—and work with—the TVA." The TVA will thereupon remain, I calculate, as a public "yardstick" with which to measure the performance of the privately owned utilities.

What, then, is the real complaint against the TVA? It is increasingly voiced by moderate men in both public and private life. The TVA yardstick is unfair, for two rea-

1. The TVA, except on a relatively tiny bond issue bought by the Government, pays no interest on the immense sums of money advanced to it by the Government for the construction of its powerplants. Those sums will presently amount to approximately \$1 billion. A privately owned electric utility, when it raises construction funds, pays interest averaging over 3 percent. How can it match its kilowatt costs against a virtually interest-free TVA?

2. The TVA pays no Federal income tax. It pays local taxes to the extent of 5 percent of its gross receipts from private customers. Middle South Utilities, by contrast, pays to the Federal and local governments 23 percent of its gross receipts. Again, how can a privately owned electric utility match its owatt costs against so lightly taxed a TVA?

This is what makes it easy for TVA to attract new business customers into its area, and what makes it difficult for privatepower areas to win those customers away from TVA. Arkansas recently tried to attract a new atomic-energy undertaking.
Arkansas' Senator Fulbright reports: "We had everything the undertaking neededexcept one thing. The TVA power rate.

Surely that kind of competition is what the Federal laws expressly condemn in pri-

vate enterprise: unfair competition.

By such unfair competition the TVA could undoubtedly supply Memphis with cheaper power than can be supplied to it by the interest-paying, tax-paying Mississippi Valley Generating Co. of Mr. Dixon and Mr. Yates. That is, it could do so if the Congress would give it money for the new steamplant it wants to build near Memphis. Why is it, then, that it has repeatedly failed to persuade the Congress to appropriate that money? The reason is, I think, that in Washington an "agonizing reappraisal" of

TVA is underway.

This reappraisal has two forms. Both have

been expressed by President Eisenhower. First. "If," says the President, "the Federal Government assumes responsibility for providing the TVA area with all the power it can accept, it has a similar responsibility with respect to every other area and region and corner of the United States."

Such a responsibility, extended to the whole country, would involve outlays of scores of billions of dollars. The Congress would never enact it. Accordingly, in the President's view, the Government's policy in the TVA area itself should be reexamined.

Second. Could not the Federal Government make the TVA yardstick fairer? The President's answer to that question, the first that any President has ever attempted, has historic significance. It appears in his recent message to the Congress. Summarized, it is as follows:

The President will send legislation to the Congress for obliging the TVA to pay "an adequate rate of interest" to the Treasury on construction funds advanced to it by the Congress. And the President has said that TVA is studying "the possibilities of financing further expansion of its power system by means other than Federal appropriations. Which means, presumably, that the TVA would raise further expansion funds by issuing "revenue bonds" and selling them, just as is done by numerous public "bridge authorities" and "turnpike authorities."

These reforms would not make the TVA yardstick completely fair. But they would

make it immensely fairer.

It is horrifying, though, to think of the anguish that they will cause in the Tennes-see Valley area. The inhabitants of that area have not gone "Socialist." just like the inhabitants of every other area. Once accustomed to any kind of Federal

stimulant, they become addicts and feel "just awful" when it is taken away. And they realize that the Dixon-Yates contract is a symbol of the President's inclination to take it away from them and prescribe un-

stimulated local exercises.

That is the real root of the convulsive opposition to the Dixon-Yates contract. TVA, in the course of the years, has bought billions and billions of kilowatt-hours of electricity from adjacent private utilities. It has bought millions from Mr. Dixon's own Middle South Utilties. But those purchases did not portend any change in TVA's essential nature. The policy behind the Dixon-Yates contract does.

Let us imagine that Dr. Eisenhower's prescription has been accepted by the Congress. Where would the TVA be then? Why, it would merely be in the position already occupied by hundreds of American municipally owned electric-power systems and by Ne-braska's public utility districts which cover the whole State. Those public-power or-ganizations get no Federal appropriations. They raise their own funds. TVA would do

In other words, Dr. Fisenhower, who has a degree in middle-of-the-road philosophy, is not prescribing the death of public power. He is simply suggesting that it should walk more on its own local feet.

And that is all that there is to the furor

over the Dixon-Yates contract.

Coal Facts

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

COAL FACTS

(By the National Coal Association)

Delivering many millions of tons of coal a year requires an intricate pattern of transportation systems. However, the high freight rates of these systems and the resultant high cost of delivered coal have priced coal out of many traditional markets. This situation is paradoxical. While income from coal freight contributes greatly to the welfare of coal's transportation systems, the rates required by those systems are injurious to the point where coal traffic actually decreases.

Take railroads, for example. Tonnagewise, coal is the most important commodity hauled by rail. Approximately 80 percent of all coal produced in the United States is moved by this method, making up the railroads' largest single source of freight revenue. Now, railroad freight rates account for about 40 percent of the delivered price of industrial coal. Due in great part to these rates, the percentage hauled by rail has been steadily decreasing over the past several decades. Forty years ago, 97 percent of United States coal mined was hauled by rail. Despite the fact that railroads offer not only flexibility but a capacity to haul coal difficult to duplicate in another system, the present cost structure of hauling coal by rail will probably cause railroads to lose even more tonnage in the future.

Coal has proved a substantial source of revenue for trucking companies, also. Trucks now move over 10 percent of total coal production. Although State regulations restrict their operation, trucks offer the advantage of great flexibility and speed. However, trucking costs are high, even higher per ton-mile than by rail for long hauls. Because of this, truck haulage is limited principally to short hauls and small lot de-

About 8 percent of all coal mined is transported by inland waterways. This is a slow method and, unless supplemental transportation is used, coal moved in this manner can reach only users close to water routes. However, coal is becoming a bigger user of the waterways. Of necessity, new powerplants being planned-will locate near water sources and thus be in a position to use coal moved by water, taking advantage of the lower transportation rates.

Naturally new and better means of transportation are under consideration. One such technique is to use conveyors which could carry coal many miles on a moving belt. Another possible transportation medium is pipelines through which a mixture of crushed coal and water would be forced. Either method would reduce transportation costs while offering speed and flexibility, and are regarded with great interest by the coal industry.

There Is Widespread Sentiment Among Members of the Legal Profession in Favor of the Van Zandt Bill (H. R. 855) Designed To Extend Coverage Under the Social Security Act to Lawyers

> EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. VAN ZANDT. Mr. Speaker, because of the numerous requests I received from lawyers in the State of Pennsylvania that members of their profession be included for coverage under the Social Security Act, I introduced H. R. 855 on January 5, 1955, when the 84th Congress convened.

Since the introduction of H. R. 855. which is now pending before the House Ways and Means Committee, I am amazed at the many letters I have received from attorneys in various States expressing warm approval of my legislative proposal. In addition to individual communications, I have received favorable letters and copies of resolutions adopted by county bar associations and State bar associations in the several States which disclose that there is a lively interest on the part of lawyers throughout the Nation that social security coverage be extended to members of their profession.

At this point in my remarks, I should like to call attention to the provisions of H. R. 855, which reads as follows:

H. R. 855

A bill to extend the Federal old-age and Survivors insurance system to individuals engaged in the practice of law.

Be it enacted, etc., That section 211 (c) (5) of the Social Security Act and section 1402 (c) (5) of the Internal Revenue Code of 1954 are each amended by striking out "lawyer,".

SEC. 2. The amendments made by the first section of this act shall be applicable only with respect to taxable years ending after 1954. For purposes of section 203 of the Social Security Act the amendment made by the first section of this act to section 211 (c) (5) of the Social Security Act shall be effective with respect to net earnings from self-employment derived after 1954; and the amount of net earnings from self-employment derived during any taxable year ending in, and not with the close of, 1955, shall be credited equally to the calendar quarter in which such taxable year ends and to each of the three or fewer preceding quarters any part of which is in such taxable year. Net earnings from self-employment so credited to calendar quarters in 1955 shall be deemed to have been derived after 1954.

As stated previously, H. R. 855 is pending before the House Ways and Means Committee and because of the keen interest manifested by lawyers in securing its approval, I am hopeful that the legislation will be scheduled for early consideration.

What Secretary Humphrey Said

EXTENSION OF REMARKS

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1955

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting the editorial appearing in the March 17, 1955, St. Louis Post-Dispatch correcting the injustice done Secretary of the Treasury Humphrey in a previous editorial, to which I referred in my remarks made during the debate on H. R. 4725, a bill to repeal sections 452 and 462 of the Internal Revenue Code of 1954:

WHAT SECRETARY HUMPHREY SAID

We are indebted to Congressman THOMAS B. CURTIS, of Webster Groves, for calling our attention to an injustice to Secretary of the Treasury Humphrey in these columns last Sunday.

We took Mr. Humphrey to task for seeming to duck responsibility for the "blooper" which has turned up in last year's tax bill, by which corporations can get double deductions for certain expenses. Mr. Humphrey has admitted that the loophole was an error which should be corrected, but the Associated Press quoted him as telling members of the House Ways and Means Committee:

"You gentlemen passed the law. We did not. If you made a mistake, I'm sorry."

This quotation, on which we based our comment, evidently was taken out of context and did not accurately express the full sense of Mr. Humphrey's testimony. Representative Curris tells us that the unrevised transcript of the hearing shows the Secretary as saying to Representative Wilbur D. Mills, of Arkansas:

"Answer. Well, Mr. Mn.Ls, I don't know what it is you are trying to dive at. You gentlemen passed the law. We did not.

"QUESTION. That is the point I am driving

at, Mr. Secretary.

"Answer, If you made a bad error, I am Jurst sorry. For our participation in it, I am sorry. I regret that it happened, and I am trying to correct it as quickly as possible.

And I am not trying to pin it on you.

"QUESTION. Mr. Secretary, my point is this, exactly the point you make. You attempt to lay the blame and the responsibility on this committee.

"Answer. No; I am not."

At another point in the hearing, Representative Curits reports, Mr. Humphrey referred to the loophole as "a mistake that we made in the Treasury in the first instance * * * a mistake that you gentlemen and all of us participated in as we went along." Again he said: "We will take our full share of responsibility for it. I think we are all involved." We are glad to set the record straight, and we thank Mr. Curits for helping us do so.

Georgetown Founders Day Convocation To Hear Clare Boothe Luce; Three Honorary Degrees To Be Awarded

EXTENSION OF REMARKS

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks, I include a Georgetown University news statement:

EORGETOWN FOUNDERS DAY CONVOCATION TO HEAR CLARE BOOTHE LUCE; THREE HONORARY DEGREES TO BE AWARDED

Georgetown University will celebrate the 166th anniversary of its founding at a special Founders Day convocation on Friday, March 25, at 3 p. m., in McDonough Memorial Gymnasium on the university campus, 37th and O Streets NW.

The Very Reverend Edward B. Bunn, S. J., Georgetown president, will confer three honorary degrees at the convocation—on Clare Boothe Luce, United States Ambassador to Italy; Dr. Michael X. Sullivan, noted chemist and professor in the university's Graduate School, and Dr. Thomas J. Tudor, heroic "country doctor" from the mountain area of southwestern Virginia.

Ambassador Luce will deliver the convocation address.

The convocation will open with an academic procession of faculty members garbed in caps and gowns of universities from many parts of the world. Among those present will be numerous righ-ranking members of Washington's diplomatic corps.

Also to be honored at the ceremony are 9 members of the university's faculty and administrative staff who will receive the vicennial medal, denoting 20 years of service to the institution. The gold medal for full-time service will go to Prof. Leon E. Dostert, director of Georgetown's Institute of Languages and Linguistics; Dr. Charles B. Murto, professor of crown and bridge at the School of Dentistry; Margaret C. O'Byrne, Medical-Dental School librarian; and Dr. James F. Leahigh, political science professor in the Foreign Service School.

The silver vicennial medal, for part-time service, will be awarded to Dr. Garnet W. Ault, professor of surgery in the Medical School; Drs. Philip A. Caulfield, and Leo B.

Gaffney, associate professors of surgery; Al Philip Kane, professor of medical jurisprudence; and Francis C. Nash, professor of law.

Certificates of merit, also denoting 20 years' service, will be presented to Bernard C. O'Leary, superintendent of buildings at the university's Medical Center, and J. Russell Rice, superintendent of buildings at the Law Center.

Ambassador Luce, who took up her duties at Rome in April 1953 has supervised American participation in the numerous programs being operated by the United States and Italy, especially those involving military and economic assistance, and immigration. Before her appointment to Rome she had served as United States Congresswoman from Connecticut for two terms.

Mrs. Luce has achieved fame as a play-wright, scenarist, author, and magazine correspondent. Among her better-known works are the play, The Women, the movie, Come to the Stable, and a series of articles, The Real Reason, published in McCall's magazine in 1947, describing her conversion to the Catholic Church the year before.

Dr. Sullivan, research professor of chemistry, has been at Georgetown since February 1931. He has the bachelor of arts from Harvard University, and the master of arts and doctor of philosophy from Brown. He has conducted research for the Bureau of Solls and the United States Public Health Service, and is a recognized world authority on sulfur metabolism in health and disease. He was a pioneer in the study of pellagra and has done important research in muscular dystrophy. He is now doing research in the relation of biochemical amines to health and disease. He has published 190 research brochures covering practically the entire field of biochemistry.

Dr. Tudor, for 45 years by day and night, has been a man of medical mercy to the isolated families in the mountains and valleys of the area around Norton, Va. He is the very symbol of the ideal American doctor. He is 75 years old.

The community of Irish-born nuns of the Poor Servants of the Mother of God, conducting St. Marys Hospital at Norton, went into that hostile country 6 years ago with just their stout hearts and bare hands. They met with so much opposition that they were on the verge of defeat. The suspicious mountain people would not be patients at St. Marys Hospital.

It was Dr. Tudor who turned defeat into victory by sending all his patients to St. Mary's. His prestige as a great doctor and a great man in that vicinity, and the confidence which people had in him, turned the tide. Dr. Tudor is not a Catholic.

When the nuns sought exemption from State and town taxes, the town of Norton opposed them and the case was taken to court. Dr. Tudor—alone among the local doctors—came to court to testify in the sisters, favor.

Now the scene has changed and all the doctors, with one or two exceptions, send their patients to St. Marys.

Dr. Tudor has been diligent in searching out Catholics in the mountains who needed a priest and the Sacraments, and has been equally diligent in searching out priests to minister to their spiritual needs. Three years ago he insisted on bringing a Hungarian priest from 220 miles away at High Point, N. C., to hear the confession of a Hungarian mountain women.

The Virginia physician is a man of substantial wealth which he uses for such charitable purposes as putting poor boys through college and professional schools. He asks no medical fees from the poor people of the mountains, and sometimes takes a gift of food along when calling on the very poor.

Many Masons Among Americans Who Signed Declaration of Independence and Constitution

> EXTENSION OF REMARKS OF

HON, HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, March 24, 1955

Mr. BAKER. Mr. Speaker, under leave to extend my remarks, I include an article from the Knoxville Journal, written by Mr. E. E. Patton, a distinguished historian of Tennessee, entitled "Many Masons Among Americans Who Signed Declaration Independence and Constitution."

The article follows:

George Washington, our first President, became a member of the Masonic Order when he was barely 21 years of age and 14 of his successors were also Masons. There has been much discussion, pro and con, in regard to the number of Masons who signed the Declaration of Independence and the Constitution of the United States. It is my purpose to give the exact number in each instance of the Masons who participated in the formulation of those great documents-the bulwark of our safety and security as a Nation.

Paul Revere, who warned the patriots at Concord and Lexington, was one of the leading Masons of Massachusetts, along with John Hancock and Samuel Adams, two firebrands of the Revolution. One of the many favorable features of Masonry is that it never permits politics to enter the lodge rooms. One Mason who was the nominee of his party three times was defeated twice by one Mason and the third time by another mem-

The Presidents who were members of the Masonic fraternity were: Washington, Thomas Jefferson, James Madison, James Monroe, Andrew Jackson, James K. Polk, James Buchanan, Andrew Johnson, James A. Garfield, William McKinley, Theodore Roosevelt, William H. Taft, Warren G. Harding, Franklin D. Roosevelt, and Harry Truman.
